The Builder

THE J. PAUL GETTY MUSEUM LIBRARY

The Builder.

AN

ILLUSTRATED WEEKLY MAGAZINE,

FOR THE

Architect, Engineer, Archæologist, Constructor, & Artist,

CONDUCTED BY

GEORGE GODWIN, F.R.S.

Fellow of the Royal Institute of Architects, and Honorary Member of several Societies.

"Every man's proper mansion-house, and home, being the theater of his hospitality, the seate of selfe-fruition, the comfortablest part of his own life, the noblest of his sonne's inheritance, a kinde of private princedome, nay, to the possessors thereof, an epitome of the whole world, may well deserve, by these attributes, according to the degree of the master, to be decently and delightfully adorned."

"Architecture can want no commendation, where there are noble men, or noble mindes."—SIR HENRY WOTTON.

"Our English word To BUILD is the Anglo-Saxon Bỳlsan, to confirm, to establish, to make firm and sure and fast, to consolidate, to strengthen; and is applicable to all other things as well as to dwelling-places."—DIVERSIONS OF PURLEY.

"Art shows us man as he can by no other means be made known. Art gives us 'nobler loves and nobler cares,'—furnishing objects by the contemplation of which we are taught and exalted,—and so are ultimately led to seek beauty in its highest form, which is GOODNESS."

VOLUME FOR 1854.

LONDON:

PUBLISHING OFFICE, YORK STREET, COVENT GARDEN.

GETTY CENTER LIBRARY

INDEX TO VOLUME XII.

ABBEY: St. Alban's, 431; see "Westminster"
Abbeys, Welsh, state of, 478

PARISH of BIRMINGHAM.—TO SURVEYORS AND VALUERS.—Notice is hereby given, that the Guardians of the Poor of Birmingham, will at their weekly meeting, to be held on WEDNESDAY, the 18th day of JANUARY, proceed to APPOINT a competent person to fill the office of SURVEYOR and VALUER, for the purpose of surveying, valuing, and assessing, from time to time, all property referred to him by the Board of Overseers, and attending to, and performing the several other matters enumerated in the list of duties, a copy of which may be had on application to me. The party appointed will be required to devote his whole time to the service of the parish. The salary will be 250l. per annum, but office accommodation, and all necessary books and stationery, will be provided by the Board. Applications in writing, with testimonials enclosed, superscribed "Application for the office of Valuer," addressed to the Guardians of the Poor, to be forwarded to the Parish Offices, Birmingham, on or before SATURDAY, the 14th day of JANUARY. Canvassing the Guardians personally, or by agent, or in writing, is strictly prohibited, and will be considered an entire disqualification of any candidate pursuing that course. No party is to attend the meeting of Guardians unless written to officially for that purpose. By order of the Board,

JAMES CORDER, Clerk to the Guardians.

December 14, 1853.

METROPOLITAN BUILDINGS' ACT.—Office of Metropolitan Buildings, 6, Adelphi-terrace, Strand, 2nd January, 1854. NOTICE. An Examination of Persons desirous to obtain a CERTIFICATE of QUALIFICATION for the office of DISTRICT SURVEYOR will take place on THURSDAY, the 26th day of JANUARY instant. Persons desirous to be examined, must apply on or before the 24th instant, and the application must be accompanied by a preliminary statement, according to the course of examination prescribed in the rules for that purpose, copies of which may be had at the office, or at Mr. WEALES, Architectural Bookseller, 59, High Holborn.

ARTHUR SYMONDS, Registrar of Metropolitan Buildings.

COMPETITIONS.

TO ARCHITECTS.

THE WAKEFIELD LOCAL BOARD of HEALTH are desirous of receiving PLANS, ELEVATIONS, SPECIFICATIONS and ESTIMATES for the ERECTION of suitable OFFICES for the said Local Board and their Offices, upon a Plot of Land in Wood-street, Wakefield, adjoining the Sessions House. The building to comprise a boardroom, with three ante-rooms, a committee-room, offices for the clerk to the board, the acting surveyor, the accountant, the collector, and the inspector of nuisances, with proper lobbies for deeds and other documents, two spare or waiting rooms, two sheds for fire engines, carts and water barrels, all the ground floor to be arched so as to allow rooms being hereafter made thereunder if required; the front and ends of the building to be of stone, and the back of good stock brick, according to a plan and sections of the ground, and printed particulars, to be obtained of Mr. CLARKSON, the Acting Surveyor of the Board, at the Town Clerk's Office, Wakefield, on and after the 18th DECEMBER instant. A statement of the various quantities to be sent with the Plans. The whole expense of the erection, including the heating and ventilation, not to exceed 5,000l. A premium of 50l will be paid by the Local Board for the best set of plans, with quantities, and 25l for the second best, with quantities; such plans to be retained as the property of the Local Board. The Board do not hold themselves to employ the architect whose set of plans may obtain either of the premiums; but if they do, the amount of the premium is to be deducted from the architect's commission. All the plans are to be on a scale of four feet to an inch, and to be sent under motto with sealed names (carriage free) to the Clerk of the Board, addressed to "The General Purposes Committee of the Wakefield Local Board of Health," on or before the 28th of FEBRUARY next.—By order,

JAMES WHITHAM, Clerk to the said Local Board.
Town Clerk's Office, Wakefield, 15th December, 1853.

TO ARCHITECTS AND BUILDERS.

THE Town Council of St. Alban's are desirous of receiving, on or before the 1st day of FEBRUARY next, PLANS and ESTIMATES for ERECTING a NEW MARKET HOUSE and CORN EXCHANGE on the site of the present Market House. The plans to consist of ground plan, elevation, and sections and to prepare one. The new building not to exceed in height the present Market House at the ridge, and the total cost not to be more than 1,000l. A premium of 25l will be given for the plans, &c. most approved of. Further particulars may be obtained on application to Mr. T. W. BLAGG, Town Clerk, St. Alban's, Dec. 1853.

CONTRACTS.

NEW FOREST.—To LAND DRAINERS.

By order of the Commissioners in charge of her Majesty's Woods and Royal Forests. Notice is hereby given that TENDERS are per Rod are required for UNDERDRAINING with Pipes and Collars about 30 ACRES of Land on New Park Farm, three miles from Lyndhurst, and one mile and a half from Brockenhurst, in the New Forest. The supply of pipes and collars to be drawn from the Victoria Tilery in the New Forest, from two and a half to three miles distant from the land to be drained. Plans, specifications, and particulars of the drainage, and of the pipes which pipes can be obtain at the Victoria Tilery, may be seen on application to Mr. L. H. CUMBERBATCH, at the Queen's House, Lyndhurst. Hants. Persons tendering are required to state their qualification for the undertaking, and will be required to be bound, themselves in the sum of 100l. and two sureties in the sum of 50l each, for the due performance of their contract, to the satisfaction of Mr. L. H. CUMBERBATCH, the Deputy Surveyor of the New Forest, and Mr. WILLIAM DICKINSON, the lessee of New Park Farm. Sealed Tenders to be addressed "Tender for New Park Drainage," will be received by the Right Hon. T. F. KENNEDY, Office of Woods, &c. No. 3, Whitehall place, London, until TWELVE o'clock at noon, on FRIDAY, the 13th JANUARY, 1854. The lowest Tender will not necessarily be accepted.

Patterns of Girders, Columns, Balconies, Railing, Ornamental Carriage and Park Gates, Lamp and Street Posts, Tanks, Pipes, Wheels, Pinions, Lattices, and Steam engines, Range and Hot plate Metal. An improved Soot Door, adapted for internal work.

A large stock of Rain-water Pipes, Plain and O G Gutters, Airbricks, Sash Weights, Air-tight Sewer Grates, Stable Fittings, Hurdles, &c.

Plain and Ornamental Vases 20 per cent cheaper than Terracotta.

Estimates given for Iron Buildings, Wrought-iron Roofing, Greenhouses, Staircases, Wrought-iron Girders, Fireproof Doors, Book-safes and Strong Rooms, Tanks and Boilers, and every description of ironwork to specification, and the work executed with every attention to quality and despatch.

GLOVERS' IRONWORKS, 168, DRURY-LANE, and CHARLES-STREET.

AUSTIN'S IMPERIAL PATENT SASH and BLIND LINE, can be obtained of all ROPEMAKERS, IRONMONGERS, FACTORS, AND WHOLESALE HOUSES IN TOWN OR COUNTRY.

THE attention of Builders is directed to the important improvement in WEBB and GREENWAY'S PATENT DOUBLE BOLT, by which the bolts cross on the back, consequently can be fixed in much less time than the old tower or barrel bolt.

WEBB and GREENWAY also draw attention to their Patent Brass Barrel Bolt.

Patent Brass and Iron Casement Stay and Fastener.

Patent Double Action Spring Hinge.

Patent Brass and Wood Knob Cupboard Turns, with regulating Spindles, Brass Gothic Drop ditto; China and Glass Knob ditto.

Patent Wrought Iron Door Latch.

The above can be had from all Ironmongers throughout the United Kingdom, and from the Manufacturers WEBB and GREENWAY, Brassfounders and Locksmiths, Steelhouse-lane, Birmingham; sole Agents for Mortimer's Patent Mortising Machine.

HIGGS and GEORGE, Wholesale and Export Ironmongers, Agents for the sale of the Patent Wrought Nails, Cannon-street and College-hill, London. (Removed from 13, Borough.) HIGGS and GEORGE beg to acquaint their friends and the public that they have removed to the above central and extensive premises where they keep a large stock of Nails, generally, and the Patent Wrought Nails, for the supply of the same and export demand.

GEORGE and SAMUEL CUTLER, WENLOCK IRON WORKS, 8, Wharf, Wenlock-road, City-road, Lead Merchants for Castings, Tanks, Cisterns, Pumps, Soil-pipes, Traps, Ogg Apparatus (now in use erected complete by the Manufacturers), Corrugated and Plain Iron Roofing for Railway Stations, Sheds, Warehouses, &c. &c. executed on the most reasonable terms. Sash Tubes, Weather Range Boards, and every description of Smith's Work. Of the best materials and workmanship.—N.B. Improved Slide Valves, Cross Bars, and Screws, Nuts, and Nuts, of all sizes, kept in stock.

FENDERS, STOVES, and FIRE-IRONS.

—Buyers of the above are requested before finally deciding to visit WILLIAM S. BURTON'S SHOW-ROOMS, 39, Oxford-street corner of Newman-street, Nos. 1 and 2, Newman-street, and Perry's-place. They are the largest in the world, and contain such an assortment of FENDERS, STOVES, RANGES, FIRE-IRONS, and GENERAL IRONMONGERY, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisite-ness of workmanship. Bright Stoves, with Ormolu ornaments and two sets of bars, 2l. 14s. to 5l. 10s.; ditto with ormolu ornaments and two sets of bars, 3l. 15s. to 12l. 12s. Bronze Fenders complete, with standards, from 7s. to 3l.; Steel Fenders from 2l. 5s. to 6l.; ditto, with rich ormolu ornaments, from 2l. 12s. to 7l. 7s.; Fire-irons, from 1s. 9d. the set, to 4l. 4s. Sylvester and all other Patent Stoves, with the last improvements, always on show. He is enabled to sell at these very reduced charges.

First. From the great number and extent of his purchases; and

Secondly. From the small profits he requires, being exclusively for cash.

DISH COVERS and HOT WATER DISHES

in every material, in great variety, and of the newest and most recherché patterns. Tin Dish Covers, 6s. 6d. the set of six; Block Tin, 12s., 14s., to 28s. 9d. the set of six, elegant in dern patterns, 18s. to 38s. 6d. the set. Britannia Metal, with wood handles, 3l. 3s. the set of six; Sheffield plated, with silver plated handles, 7l. 6d. to 11l. 6s. 6d. the set; Sheffield plated, 10l. to 15l. 15s. the set. Block Tin Hot Water Dishes, with wells for gravy, 12s. to 30s.; Britannia Metal, 22s. to 77s.; Electro plated on Nickel, full size, 11l. 11s.

GAS CHANDELIERS and BRACKETS.—

The increased and increasing use of gas in private houses has induced WILLIAM S. BURTON to collect from the various manufacturers all that is new and elegant in Gasoliers, Pendants, and Chandeliers adapted to offices, passages, and dwelling-rooms, as well as to have some designed expressly for him; these are now ON SHOW in one of his TEN LARGE ROOMS, at 39, Oxford-street, for novelty, variety, and purity of taste, an unequalled assortment. They are marked in plain figures, at prices proportionate with those which have tended to make his Premises the largest Establishment the large-t and most remarkable in the kingdom, viz. from 12s. 6d. (two light) to 16l. 6s.

LAMPS of all SORTS and PATTERNS.—

The largest, as well as the choicest, assortment in existence of PALMERS MAGNUM and other LAMPS, CAMPHINE, ARGAND SOLAR, and MODERATEUR LAMPS, with all the latest improvements, and of the newest and most recherché patterns, in ormolu, Bohemian, and plain glass, or papier mâché, at WILLIAM S. BURTON'S, and they are arranged in one large room, so that the patterns, sizes, and sorts can be instantly selected.

WILLIAM S. BURTON has TEN LARGE SHOW-ROOMS (all communicating) exclusive of the shop, devoted solely to the show of GENERAL FURNISHING IRONMONGERY (including cutlery, nickel silver, plated and japanned wares), iron and brass bedsteads, so arranged and classified that purchasers may easily and at once make their selections.

Catalogues, with engravings, sent (per post) free. The money returned for every article not approved of.

39, OXFORD-STREET (corner of Newman-street); Nos. 1 and 2, NEWMAN-STREET; and 4 and 5, PERRY'S-PLACE.

HEATING by HOT WATER.—J. JONES,

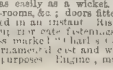
Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK; also fire and furnace bars, ornamental and plain supply-cisterns, double doors and frames, fire-cheeks, ash doors for the same, hot-water pipes, elbows, tees, syphons, throttle valves, stop cocks, flange and socket elbows, &c.; also, trough pipes, for conveying the heat from a flue alone, on application to J. JONES, Iron-bridge-wharf, No. 6, Bankside, London, near the Southwark-iron bridge.

TO ARCHITECTS, TIMBER MERCHANTS, and BRICK MANUFACTURERS

THE best and quickest drying of the wood, bricks, and houses, is obtained by the BOILESVE'S PATENT CALORIFERE, evaporating in twenty-four hours about 6,000 lb. of water, without altering the finest forms or injuring the quality of the most precious articles. The Calorifere works by hot air only, without any machinery or power. Small rooms is required; no repair necessary for many years. A great deal of fuel, large stores, or wharf-room, and rent thereby considerably reduced by the use of the above valuable stove. It is in operation at Woodyard's Company's Works, Pimlico; at Mr. Mackenzie's, Architect, of Victoria-street, Westminster; Vegan, Son, and Raymond, Ice Breakers, Ice vernal mulberry, millers, and manufacturers, London and country. Apply per post to T. BOILESVE, Engineer for French Flour Mills, Turbines, &c. 65, King William-street, City.

THE MOST APPROVED STOVES.—The

demand for the CHUNK and VESTA STOVES (separately patented), still continuing unabated, and numbers having been sold last season (in all upwards of 14,000), through the patronage of families who have had experience of their economy and superior qualities, WILLIAM S. BURTON has renewed confidence in recommending them for their cleanliness, economy, and safety. During the extensive years they have been before the public, great comfort in the bed-room of the invalid, affording a uniform temperature throughout the day and night, with one supply of fuel, without attention. Particulars sent postage free. Chunk, 30s. to 80s.; Vesta, from 3gs.; stoves for warehouses, &c. from 14s. each. Joyce's patent fuel, 4s. per sealed bag.



WILLIAM S. BURTON has TEN LARGE SHOW-ROOMS (all communicating, exclusive of the shop, devoted solely to the show of GENERAL FURNISHING IRONMONGERY, including cutlery, nickel silver, plated and japanned wares, and iron and brass bedsteads), so arranged and classified that purchasers may easily and at once make their selections.

Catalogues, with engravings, sent (per post) free. The money returned for every article not approved of.

39, OXFORD-STREET (corner of Newman-street); Nos. 1 and 2, NEWMAN-STREET; and 4 and 5, PERRY'S-PLACE.

NEW HOUSES OF PARLIAMENT.—

DEFRIES'S GAS STOVES, RANGES, and BATHS, just completed for two kitchens in the above building. A great variety in stoves upon the same principle. Gas Baths from 7l. by which warm baths may be obtained for three halfpence. Gas Cooking and Heating Stoves for all classes, from 1l. Defries's celebrated Dry Gas-Meters, 50,000 in use. Testimonials at the office, 145, Regent-street. Manufactories removed from Hampstead-road and St. Martin's-lane to more extensive premises, New-road, near Albany-street.

WARMING by HOT WATER.—

J. WEEKS and CO. King's-road, Chelsea, Hot-water Apparatus Manufacturers, beg most respectfully to solicit the attention of architects, builders, &c. to their superior apparatus for warming churches, mansions, halls, baths, offices, and public buildings, by the circulation of hot water.—See WEEKS and CO.'S Illustrated Catalogue.

THE LATE JOHN SYLVESTER, C.E.—

The undersigned beg to announce that the Warming, Ventilating and General Domestic Engineering Business of the late Mr. John Sylvester, is still carried on by them at 26, Great Russell-street, Bloomsbury. SYLVESTER and CO.

January 1, 1854.

COLLINGE'S PATENT HINGES.—Sole

Manufacturers, CHARLES COLLINGE and Co., 83 and 65, Brydges-road, Lambeth, where a great variety are always on view for church, park, railroad, coachhouse, and other gates and doors of large and small dimensions, a gate of a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and self-closing spring hinges, and supreme gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, patent, Lambeth." Plain and ornamental cast and wrought iron work, for building and other purposes. Engine, machinery, patent axle-trees, sugar-mills, &c.

MOTT'S PATENT STOVE, suited for a

Cupboard or Warehouse, in first-rate condition, TO BE SOLD CHEAP. Also, a Double Iron Chest, 3 feet by 4 feet, and 8 feet high.—Apply, 21a, Savile-row, Regent-street.

WARMING by HOT WATER.—NOTICE.

WM. HILL begs very respectfully to tender his best thanks to the nobility, gentlemen, architects, and the public generally, for the encouragement he has received, and also for the many unsolicited testimonials forwarded to him, to the satisfactory working of his apparatus.

W. HILL again solicits renewed commands, and assures those who may honour him with their confidence, that his work is of the best in fact, and his arrangements are guaranteed to produce the most satisfactory results.

The Apparatus of W. Hill's Boilers is daily becoming appreciated; and for economy are unequalled, as the following testimonial conclusively shows:—

"To Mr. Hill. "Poles, Herts, March 5, 1853.

"SIR,—We are quite satisfied that your Boiler is more economical in fuel than those we have hitherto used, to the extent of TWENTY per cent. (Signed) ROBERT HANBURY."

WM. HILL, WARMING AND VENTILATING ENGINEER, HORTICULTURAL WORKS, GREENWICH.

PARNELL'S PATENT DEFIANCE LOCKS.

DEPOT, 52, STRAND, LONDON.

Messrs. PARNELL and PUCKRIDGE respectfully inform the public, that they have a stock of these Locks ready for insection. To give a detailed description of the Lock within the limits of an advertisement is impossible. Messrs. P. and P. must therefore content themselves with saying, that it is not one lock, but several locks in one; that no instrument but its own key can possibly open it; that it cannot, by any art or ingenuity, be picked; that the principles of it are simple, and applicable to locks of all sizes; that it cannot be put out of order; and, notwithstanding, that it is moderate in price.

Messrs. P. and P. satisfied of the peculiar excellence of this Lock, respectfully, yet with great confidence, place it before the public as being what they have called it, THE DEFIANCE LOCK THAT CANNOT BE PICKED.

Messrs. PARNELL and PUCKRIDGE have also a stock of Fire-proof Safes of the best make, Deed and Cash Boxes, Copying and Lever Presses.

PARNELL'S PATENT NOISELESS BOX STAPLE & STRIKING PLATES,

52, STRAND, LONDON.

This very simple and efficient invention entirely obviates the slamming of doors, and the consequent jarring disturbance caused by it in every house. Indeed, it may truly and fearlessly lay claim to the title of "one of the wants of the age;" for it has been wanted for a very long period; and in looking at it one involuntarily exclaims with surprise, that it has never been discovered before. The Patent Noiseless Box Staple is made of strong malleable iron of the best quality, and is adapted for use in all situations, and for every purpose for which the present box staple is used: for dead-locking, it possesses double security to the present article, and at very little more cost.

Sold by M. L. PARNELL, Inventor and Patentee of "Parnell's Patent Defiance Lock," and may be had of every Ironmonger in Great Britain.

RECENT TESTIMONIALS
of the practical worth and efficient security of
CHUBB'S LOCKS AND STRONG-ROOM DOORS.

CHUBB and SON beg to lay before the public the two following Letters, which they have lately received, as affording further proof of the security of their Manufactures:—

Ineffectual Attempt upon the Strong Room of the London and North-Western Railway, Liverpool.

"London and North-Western Railway Company,
Liverpool, 17th Nov. 1852

"Gentlemen,—I have much pleasure in bearing testimony to the efficiency of the Iron Door and Locks of your make, which secure the Strong Room at this Office, and which completely baffled the efforts of one or more burglars to get at the money-chest on the night of Thursday last, although it is evident that considerable force was used to break open the door.

"I am, Gentlemen, your obedient servant,
"Messrs. Chubb and Son." "GEO. PALMER.

From Mr. Otway, Superintendent of Police, Division.

"8, Great Vine-street, May 6, 1851.

"Gentlemen,—I have the pleasure to inform you, that having one of your Locks on the street door of my house, preventing my being robbed that night. The thieves tried to open it but not succeeding, has so damaged it that I have sent it to you for inspection, and shall feel obliged if you will have it repaired.

"I am, gentlemen, your obedient servant,
C. OTWAY,
Superintendent C Division of Police.

"Messrs. Chubb and Son."

CHUBB'S LOCKS, with all the recent Improvements; Cash, Deed, and Paper Boxes of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms, all fitted with the new Keyhole Locks. Complete Illustrated Lists, with Prices and sizes, will be sent on application.

CHUBB and SON, 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley-fields, Wolverhampton.

A PRIZE MEDAL for SUPERIOR LOCKS

was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, which invites attention to the Stock of Ironmongery, Brass Founding, Nails, Wrought and Cast, Copper and Zinc; Patent Locks of all descriptions; Chains, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, and the new registered Venetian Ventilator, so much admired, &c. &c. 68 Sash Line,

Best Patent Sash Line,

3-feet self-acting ditto, ditto, 24s. each.

Air Bricks, 3s. 6d. per doz.

Best Town Glue, 48s. Ditto, Scotch, 7s. per cwt.

1	2	3	4	5	6
4s.	5s. 6d.	5s. 6d.	7s.	8s.	10s. 6d. per gross.

And every material required in the building, bell-hanging, upholstery, and brass-founding trades on the most reasonable terms.

List of Prices had on application at the Warehouse, or by letter prepaid.

FIRE-PROOF CONSTRUCTION.—

FOX and BARRETT'S PATENT

This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION of BUILDING, whether public or private.

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or filled iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; this structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for ceilings, girders and brick arches, and as forming the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the patent,—Mr. BARRETT, 19, York-buildings, Adelphi.

TO BUILDERS, CARPENTERS, AGRICULTURISTS, AND GARDENERS.

BENNETT and NAYLOR, GENERAL

IRON MONGERS and FACTORS, Sole West-end Agents for PARKES' Hide Winton Patent celebrated STEEL PRONGED FORKS and TOOLS, as per the only efficient STEVE, with or without a Flue, suited for Greenhouses and Conservatories, patronised by her Majesty, price from 15s. upwards, at the Great Western General Iron Ware House, 5 Oxford-street, the corner Park-street and North Audley-street, established for Lamps and Descriptions of Ironmongery at wholesale prices. Sheet, Hoop, Rod and Bolt Iron. Lock-smith's and Bell-hangers.

HART and SON,

WHOLESALE AND EXPORT IRONMONGERS AND MANUFACTURERS,

53, 54, & 55, WYCH-STREET, STRAND.

PITT'S PATENT DOOR FURNITURE.

LOCKS, LATCHES, HINGES, &c.

212 SAFES.—MILNER'S HOLDFASTS,

fire-resisting by means of the only perfect non-conductor, vapourisation, are the strongest and most secure, because the only effective safeguards against the robbery of valuable property, deeds, cash, or valuable documents. The Chancellor of the Exchequer, in announcing his approval of the construction of MILNER'S SAFES, was pleased to observe, "the most safe plan had been astonished to find such strong evidence of their usefulness, up to this hour he had no idea that there were any human means of so successfully preserving papers from the action of fire. It was a point rather for me to know that there was such invention, by which valuable documents might be rendered secure, notwithstanding the calamity of fire." As to whether it is useful, it has been allowed on all hands; in fact, it is one of the most marvellous preservative against fire, little else remains perman ently fixed to artificial combustible vessels, and has very recently passed the test for the best means for the water or moisture, and then it is turned into steam, and the steam moistens the substance that is to be preserved, and so it is an effectual guard against fire.—Mineral Phosphate Works, Liverpool. London Depôt, 47A, MORGATE-STREET, City, London.

SAW-MILL MANUFACTORY, Chelsea,

London.—WORSSAM and CO. invite the attention of all engaged in sawing, planing, and moulding wood, to the simplicity and compactness of their machines over the old system in use, which are both cumbersome and expensive. Drawings and prices sent on application. Estimates given for complete saw-mills for exportation or others.

WIRE STRAND FENCING,

as furnished with all its fittings, by R. S. NEWALL and Co. having received the unanimous approval of the Royal Society, is confidently recommended as the very best, for field and farm enclosures, or subdivisions, for temporary agricultural inclosures in front of any kind of hurdles, for rabbit and other warrens.

The PATENT WIRE STRAND FENCE possesses an economy, security, and durability, not to be found in combination in any other fence hitherto introduced. Plans, prices, &c. to R. S. Newall and Co. after the model of the fences of this material in the Temporal Hyde Park, at Wylam-on-the-Tyne, and in other parts of the country, may be had in Ireland, under any variations of temperature.

Estimates given at so much per running yard, for fencing, with or without specimens, sketches, or any other particulars will be forwarded by post on application.

OFFICES, Gateshead-on-Tyne;

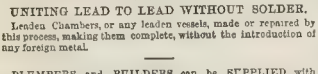
Dr. Arnott's Ventilators, 4s. 6d. each.
An extensive stock of bar, rod, hoop, and sheet iron.

TO BUILDERS, CARPENTERS, UPHOLSTERERS, SMITHS, BELL-HANGERS, AND THE TRADE IN GENERAL.

WHOLESALE IRONMONGERY WAREHOUSE, 18, Blandford-street, Manchester-square (running out of Baker-street, Portman-square), where a large stock is always kept on hand for the exclusive supply of the above trades.—JOHN YOUNG, Birmingham and Wolverhampton, Agent and Factor.



TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,
THE BEAR GARDEN LEAD WORKS, SOUTHWARK,
Invite the attention of Manufacturing Chemists to their Patent method of
UNITING LEAD TO LEAD WITHOUT SOLDER.
Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

BUILDERS, Contractors, Carpenters, and others are invited to inspect the stock of NAILS, TOOLS, BRASS, AND GENERAL IRONMONGERY, at PEELL and STEDALL'S, Nos. 5 and 6, BROAD-STREET, BLOOMSBURY.
The prices will be found the lowest, and the stock one of the largest in the trade. A price list sent on application.

RICKARDS'S PATENT TONGS, for screwing iron piping for gas or other purposes.

These Patent Tongs possess many advantages over the old tongs. One pair will take four sizes, or any intermediate size, and hold perfectly tight, without any force being used by the hands, which is not the case with the old tongs; as when the gripper part becomes worn, and the pipe runs smaller than the usual size for the tongs, the workman requires to use packing. This is not necessary with Rickards's Tongs, which can be set to the size required, by moving the nut at the end of the top and movable part of the tongs, which lifts up to enable the workman to fix it on the pipe as you would put on the old ones; the groove turned in the brass nut drops in the fork on the bottom part of the tongs, and by the least movement of the nut the grip is sure and perfect. The pipe may then be screwed, without any power being lost, in the same manner as in using a common nut-wrench. The price is as follows:—

	Inch.		Inch.	£	s.	d.
No. 1, to take	¾, ½, ¾	Barrel, and	½ Socket	0	7	0
No. 2,	¾, ½, ¾	"	¾ "	0	9	6
No. 3,	1, 1¼, 1½	"	1¼ "	0	15	0
No. 4,	1½, 2,	"	2 "	1	0	0

For further particulars, apply to C. RICKARDS, 5, Great Charlotte-street, Blackfriars-road; or may be had through any Ironmonger or Gasfitting Manufacturer, in town or country.

By Her Majesty's — Royal Letters Patent.

THE SILICEOUS STONE COMPANY are now prepared to UNDERTAKE CONTRACTS for the EXECUTION of WORKS of an Architectural or Ornamental character. This stone is composed of sand-stone grit and other siliceous material, combined by means of flint (dissolved by the patent process), the result being a material most indestructible in its nature, and by its freedom from stratification, protected from those injuries to which natural stone is liable.

Specimens may be seen on application at the Office, and a variety of designs in open Terrace-work, Balustrades, Copings, Fountains, Tombs, Chimney-pieces, Pavements, Ecclesiastical and other decorative work.

Attention is also particularly requested to the Ashlar for facing buildings, and to Austin's Patent Hollowed and Dovetailed Building Blocks, manufactured in the siliceous stone, which combine great strength, with economy and speed in erection, are perfectly fireproof, and offer peculiar facilities for ventilation and the circulation of warm and dry air.

8, John-street, Adelphi. E. MENDHAM, Secretary.

PAVING, in great varieties.—Sinks, sills, steps, &c.; rubbed coping; tooled ditto; rubbed and tooled sills; Harehill and self-faced slab; rubbed York paving, pipes, pots, &c. all at low prices. Builders and masons are invited to inspect a list sent free on application to E. and W. STURGES, Bridge-wharf, City-road.—Established 1821.

MARBLE.—Mr. J. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined, Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.—Office, 8, Crescent-terrace, Millbank. Mr. THOS. THOMPSON, Agent.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bancor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. MARTIN and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. BATH STONE DEPOT, Great Western Railway, Paddington.—EDWARD PLESTER respectfully informs Builders, Masons, and Others that he continues to supply the Box-hill Ground Stone, Corsham-down, Combedown, and Farleigh-down Stone, of the best quality, and at the lowest prices. Painswick and Forest of Dean Stone in blocks, steps, landings, or slabs of any thickness. N.B. Stone and other goods landed and carted.

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.

(DEPOTS.)

Great Western Railway Station....	PADDINGTON.
Great Western Railway Station....	BRISTOL.
Hope-street, Mount-pleasant	LIVERPOOL.
Castle-fields	MANCHESTER.

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

GRANITE.—The Cheesewring Granite Company, of Liskeard, Cornwall, are now prepared to supply Granite of excellent quality, and the largest sized blocks. Prices may be ascertained on application to N. TREGELLES, 3, Pinner's court, Old Broad-street, City; or to JAS. J. TRATHAN, Liskeard.

CORSHAM-DOWN and other BATH STONE.—Prices for the above, delivered either in town or country, may be had on application to MARTIN and WOOD, Market-wharf, Regent's-park-basin.

THE PIMLICO SLATE-WORKS. Patronized by Royalty, the Heads of the Nobility, the Clergy, Architects of Eminence, Builders, Railway Contractors, and the Public generally.—MAGNUS'S ENAMELLED SLATE meets with standing the vile imitations and infringements of his patent that are attempted), continues to grow in favour with the public, being handsomer, more durable, and very much cheaper than marble.—Price-lists and a sheet of drawings, sent to any part of the kingdom gratis. Cisterns, Filters, Dairy and Larder Shelves, Wine Cellar Fittings, Slabs, and every variety of plain Slate-work, at prices that defy competition.—39 and 40, Upper Belgrave-place.

BANGOR SLATES.—J. EASTWOOD and SONS have some cargoes now arrived, consisting of DUCHESSES, COUNTESSES, and LADIES, of first quality. Ready for delivery at their Wharf, Surrey Canal-bridge, Old Kent-road.

SLATE PAVING.—The Trevalga Slate Company, Baltic Wharf, Commercial-road, Lambeth, beg to inform their numerous correspondents, both in town and country, through an advertisement, that their PAVING, planed on the face and squared, fitted to lay in runs, is 4½d. and fine sanded, 5½d. per foot net. They warrant each slab to be as strong as 3-in. York. For kitchens, greenhouses, and boshouses, it will be found truly invaluable, being not in the slightest decree porous. Cisterns and every description of slate slab-work at prices that defy competition.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and Messrs. Braby's, Belvidere-road, where terms may be obtained.

INSTITUTED 1831.

SCOTTISH EQUITABLE LIFE-ASSURANCE SOCIETY.—Incorporated by Royal Charters, and Special Act of Parliament.

Head Office—Edinburgh. 26, St. Andrew-square.
MANAGER—Robert Christie, Esq.
London—126, Bishopsgate-street, Cornhill.
Glasgow—173, St. Vincent-street.

The Scottish Equitable Life Assurance Society is an institution peculiarly adapted to afford Provision for Families. It was established in the year 1831, upon the principle of Mutual Contribution, the surplus or profit being wholly divisible among the members; and the additions which have been made to policies at the periodical investigations of the Society afford satisfactory evidence of the prosperity of the Institution, and the great advantages derived by its members. The following examples exhibit the additions already made:—

A policy for 1,000*l.* opened in 1832, is now increased to £1598 9 4
A policy for 1,000*l.* opened in 1836, is now increased to 1407 18 1
A policy for 1,000*l.* opened in 1840, is now increased to 1207 15 7

The profits are ascertained and divided triennially amongst policies of more than five years' duration.

The annual revenue is upwards of 130,000*l.*

The amount of assurances in force is upwards of 4,000,000*l.* sterling.

The amount paid to the representatives of deceased members exceeds 500,000*l.* sterling.

The total amount of vested additions allocated to policies exceeds 600,000*l.*

The accumulated fund is upwards of 700,000*l.*

Loans granted to members to the extent of the Office value of their policies.

Copies of the annual report, forms of proposal, and all information may be had on application at any of the Society's Offices, in town or country.

W. COOK, Agent.

Henry Lawson, esq.	

This Society is established on the tried and approved principle of Mutual Assurance. The funds are accumulated for the exclusive benefit of the Policy-holders, under their own immediate superintendence and control. The profits are divided annually, and applied in reduction of the current premiums.

The Annual General Meeting of this Society was held on the 26th of May, 1853, when a Report of the business for the last year was presented, exhibiting a statement of most satisfactory prosperity. It appeared that whilst the Assurances effected in 1851 were 41 per cent. beyond those of 1850, nearly 70 per cent. beyond those of 1849, and 130 per cent. beyond those of 1848, the Assurances effected in 1852 considerably exceeded those of 1851, 325 new Policies having been issued in that year, covering Assurances to the extent of 198,000*l.*, the yearly premiums on which amounted to 6,616*l.* 15*s.* It also appeared that the transactions of the first five months of the present year were greater than those of the corresponding months of 1852, or of any preceding year, whilst during the whole period referred to, the claims arising from deaths were much below their estimated amount. A resolution was thereupon passed, continuing a reduction of 30 per cent. on the premiums payable on all Policies on the participating scale, on which five or more annual premiums shall have previously paid.

Credit is allowed for half the Annual Premiums for the first five years.

The following Table exemplifies the effect of the present reduction:—

Age when Amount Assured.	Assured	Annual Premium at Interim paid.	Reduction of 30 per cent	Annual Premium now payable.
	£	£ s. d.	£ s. d.	£ s. d.
20	1,000	20 17 6	6 5 3	14 12 3
25	1,000	23 0 0	6 18 0	16 2 0
35	1,000	31 13 0	13 3 0	39 12 6
45	2,000	81 11 8	24 3 0	66 8 8

Fire, Life, and Life Insurance, and Annuities and Reversions. Cornhill and Pall Mall, London. Established 1803. Empowered by special Acts of Parliament.

Capital—One Million sterling. The whole paid up and invested.

NOTICE.—The Stamp Duties on Life Policies are paid by the Company.

The New Succession Duties are best provided for by Life Insurances. Every class of Fire and Life Insurance transacted. Medical Fees generally paid. Forms and prospectuses, with full particulars and tables, may be had at the offices of the Company, and of any of the Agents.—By order of the Board

WILLIAM NEWMARCH, Secretary.

THE PATENT

SELF-BALANCING SHUTTER AND SASH,

FOR MANSIONS, PUBLIC BUILDINGS, DWELLING-HOUSES, OFFICES, AND WAREHOUSES.

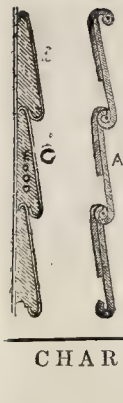
Invented and Patented by J. P. PRITCHETT, Jun. Sept. 2nd, 1853.

OFFICE, 5, NEW BRIDGE-STREET, BLACKFRIARS.

The advantages of adopting this principle of Window SHUTTER, instead of the common one, are that,—
1st.—They take up less space, working in one groove.
2nd.—They are closed and opened with greater facility, as one action works and fastens both.
3rd.—They look neater, by HAVING NO CORDS IN SIGHT, and being all in one plane.
4th.—They are more secure, affording no space for crow bars.
5th.—They work more steadily and easily, the balance being more perfect and connected.
6th. They are not so liable to get out of order, being simpler in construction.
7th.—They are warmer by affording an air-tight meeting-joint.

The cost is no more than that of the ordinary Sliding Shutters.

They are made in Wood and Iron, can be applied inside or outside of the window, and to old as well as new buildings.



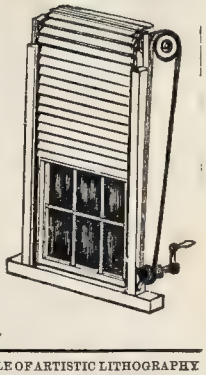
The same principle is applied to SASHES by two plans:—
1st.—By having both hung in one groove, so as to open in the middle; particularly suited for windows opening to the floor.
2nd.—By being hung in two grooves, so as to pass each other and open simultaneously,—thus ensuring perfect ventilation.

Lists of Prices, Terms of Licence, and any further information given, and large working models to be seen at the Office.

N.B. Agents Wanted.

PATENT DATED 9TH DAY OF OCTOBER, 1852.

CLARK & CO.'S



NEW PATENT COMBINED IRON AND WOOD

REVOLVING SHUTTERS,

AND

NEW PATENT RECTILINEAR REVOLVING SHUTTERS.

The annexed woodcuts, A and C represent three of the laths of the above Patent Shutters in section.
A is an improved form or curve for the Laths of Iron Shutters, whereby they are much more securely connected together, greatly facilitating their application.
C represents the section of three laths of CLARK'S PATENT COMBINED IRON AND WOOD REVOLVING SHUTTERS, the wood being covered or faced with thin iron, securely fixed by being drawn over it, rendering it impossible for the laths to split, and combining the lightness of wood shutters with the durability and appearance of iron.
CLARK and CO. have also patented the application of Revolving Shutters, fixed complete in sash frames, for private dwelling-houses, thereby saving a large item in their cost (the fixing), and are prepared to supply sash-frames, with sashes hung and Revolving Shutters fixed complete, to architects and builders, at remarkably low prices; the whole can be wedged into its place in less than one hour, as shown by annexed Woodcut. They answer the purpose of Sun-blinds by day, as well as Shutters by night.

IMPROVED DRAWN BRASS SASH-BARS AND STALL-BOARD PLATES.

ENGRAVING IN THE FIRST STYLE OF WORKMANSHIP.

PROSPECTUSES, ENGRAVINGS, AND TESTIMONIALS FORWARDED, ON APPLICATION TO

MANUFACTURING JOINERS,

121, BUNHILL-ROW, FINSBURY, AND BOW, MIDDLESEX.

N.B.—ORDERS RECEIVED AT THE COUNTING-HOUSE, 121, BUNHILL-ROW, ONLY.

JAMES MILES,

CHEAP ENGLISH AND FOREIGN WINDOW GLASS WAREHOUSE,

18, CHURCH-STREET, SHOREDITCH, NEAR EASTERN COUNTIES TERMINUS.

Builders supplied with every description of
CROWN, SHEET, PATENT PLATE, AND ROUGH PLATE GLASS AT VERY LOW PRICES.
Also Sheet Lead, Lead Pipe, Brass Taps, Pumps, Closets, White Lead, Oils, Colours, Varnishes, Brushes, Paper Hangings.
Glazing for the Trade with despatch.
OLD LEAD BOUGHT OR TAKEN IN EXCHANGE IN ANY QUANTITY.

REVOLVING SAFETY WOOD and IRON SHUTTERS.—SNOXELL, Patentee, 96, Regent-street, and at his Steam works, 135, Old-street. These shutters have fully borne out their superiority over other revolving shutters for security, durability, and simplicity. References can be given to noblemen whose mansions are fitted herewith, and numerous large establishments, where some are fixed measuring upwards of 400 square feet in one shutter, and which are opened and closed in a few moments with the greatest possible ease, without the use of machinery. The Patentee manufactures Brass Sash Bars, Stall Board Plates, &c.

DISSOLUTION of PARTNERSHIP.—HENRY PARK (late Johnson and Park), Baker-street, Clerkenwell, Sash, Shop Front, and Door Maker to the Trade, begs to inform his customers and the public generally that he intends carrying on the business as usual, and solicits a continuance of their favours, which shall meet with his prompt attention.

N.B. By inclosing a postage stamp a full list of prices may be had by return of post.

TO BUILDERS, BUILDING MATERIAL DEALERS, &c.
WANTED to PURCHASE, immediately, for CASH, in large or small quantities, new or second-hand DOORS of various sizes.—Apply, by letter, with full particulars, to A. B. 28, West Strand.

JENNINGS'S PATENT SHOP SHUTTER-SHOE and FASTENER costs HALF the PRICE of the unsightly SHUTTER BAR.
May be had from any Ironmonger, or from the Patentee, GEORGE JENNINGS, 29, Great Charlotte street, Blackfriars-road.

FARMER and CO. Sash, Door, and Staircase Manufacturers.—Counting-house Fittings, Shop and Public-house Fronts on the shortest notice. Estimates given for contracts of any description. By enclosing a postage stamp, a list of prices will be returned for any kind of joiners' work, &c.—18, St. John-street-road, and No 1, Edward street, Pentonville, Pentonville.

J. MILLS (late Shop Foreman to Messrs. Lawrence and Sons), JOINER to the TRADE, 7, Princes-street, Stamford-street, Lambeth. Shop-fronts, fittings, staircases, &c. Well-seasoned materials and superior workmanship, at the lowest possible prices. A quantity of doors and sashes always in stock.—By enclosing a postage-stamp, a full list of prices will be returned.

J. ROGERS, No. 3, Sidmouth-place, Gray's-inn-road—Sashes and Frames, Shop Fronts, Doors, and every description of Joiner's Work made for the Trade, materials and workmanship guaranteed. By enclosing a postage-stamp, a full list of prices will be returned.

ROYAL POLYTECHNIC INSTITUTION.

Prince Albert.—Magnificent Photographic Pictures, prepared expressly for this Institution by Monsieur Ferrière, of Paris, exhibited on a surface 33 feet by 28, with an entirely new series of Dissolving Views, daily, at a Quarter-past Four. Lecture by Dr. Bachhoffner on Wilkins's New Patent Universal Electric Telegraph. Lecture by J. H. Pepper, Esq., on Spontaneous Combustion, with brilliant experiments. Last week of an Historical and Musical Lecture, illustrated with Dissolving Scenery, entitled "The Road, the River, and the Rail," by J. L. Carpenter, Esq. assisted by Miss Blanche Younge, every Evening, except Saturday, at Nine o'clock. Open Mornings and Evenings. Admission, 1s.; Schools and Children under Ten Years of age, Half-price.

COLOSSEUM, REGENT'S PARK.—ADMISSION ONE SHILLING.—The original Panorama of LONDON BY DAY is exhibited de ly from Half-past Ten till half-past Four. The extraordinary Panorama of LONDON BY NIGHT, every evening (Saturday excepted), from Seven till Ten; Music from Two till half-past Four, and during the evening Several favourite songs by Miss Schwiese.

CYCLORAMA, ALBANY-STREET.—LISBON and EARTHQUAKE.—This celebrated and unique moving Panorama, representing the destruction of LISBON BY EARTHQUAKE in 1755, is exhibited for a short time in all its original splendour, and by the aid of new machinery, with numerous startling effects. Daily at Three; Evening (Saturday excepted) at Eight o'clock.—Admission One Shilling. Children and Schools half-price to either Exhibition.

CHELTENHAM GREAT EXHIBITION of Horticulture, the arts and sciences connected therewith, and designs taken therefrom. To Open on the 1st June, 1854.—Programmes are now ready, containing rules, regulations, schedules of prices, &c. &c. and may be obtained on application to the Secretary, Mr. HENRY J. COCHRANE, 123, High-street, Cheltenham.

THE HIGHEST STYLE OF ARTISTIC LITHOGRAPHY WILL BE FOUND IN THE WORKS PRODUCED BY

DAY & SON,

LITHOGRAPHERS TO THE QUEEN.

Landscapes, Architecture, Shipping, and Figure Subjects. Portraits direct from Life on Stone, or from Paintings, Drawings, or Daguerreotypes—Medical and Scientific Subjects, executed in a superior style peculiar to this establishment. Calotypes copied.

The large Staff of Draughtsmen required by Messrs. DAY and SON to execute the

MAPS, PLANS AND SECTIONS, DIAGRAMS, &c. &c.
FOR HER MAJESTY'S STATIONERY OFFICE,

Offers to solicitors, engineers and surveyors, stationers and printers, throughout the country, great advantages for the rapid and economic execution of their Lithography. If required, a plan received by the morning post may be lithographed and despatched by the return post.

To meet the growing demand upon
LITHOGRAPHY FOR COMMERCIAL PURPOSES,
Messrs. DAY and SON have just erected the largest premises for the purpose in the world. In soliciting orders from Manufacturers and others for

PATTERN-BOOKS, SHOW-CARDS, LABELS, &c.

And every other description of Lithography and Colour Printing, Messrs. DAY and SON promise a style of work of unequalled excellence, with economy and rapidity of execution. The smallest consumers of the productions of Lithography in any part of the kingdom should apply to Messrs. DAY and SON for estimates, and it will be found, owing to the extent of this Establishment, that its manifest advantages, viz superiority of work, great speed, and moderate charges, can be secured with satisfaction and saving to the customer.

PRINTING IN COLOURS,

As perfected and practised by Messrs. DAY and SON, has assume a position hitherto unattained for artistic excellence, rapidity of execution, and economy of production. The first and only perfect realization of a painting in colours, "The Blue Lights" (after Turner), executed at this establishment, secured for itself the designation of a Painting Print. Other examples of great merit, more particularly illustrating rapidity and economy of production, combined with artistic excellence, will be found in the three important works by

MATTHEW DIGBY WYATT, Esq.

Namely, "THE GEOMETRICAL MOSAICS OF THE MIDDLE AGES," "METAL-WORK AND ITS ARTISTIC DESIGN," and "THE INDUSTRIAL ARTS OF THE NINETEENTH CENTURY."
These works, although elaborately printed in colours and gold, have been sold at the price of uncoloured works. The last-named, consisting of 160 plates, issued in Fortnightly Parts of four plates, proves the possibility of adapting Chromolithography to Periodical Works—to book plates requiring large numbers cheaply and quickly—and to geological or other coloured maps.
Messrs. DAY and SON are prepared to estimate and undertake Works of any extent, and to meet every requirement as to quantity and speed, or necessity as to price.

STEEL AND COPPER-PLATE PRINTING OF EVERY DESCRIPTION.

LADIES, Amateurs of Drawing, will find the reproduction by themselves of their own Sketches, by means of Lithography, a most delightful occupation for leisure time. Materials and instruction can be had of

MESSRS. DAY AND SON,
LITHOGRAPHERS TO THE QUEEN,
17, Gate-street, Lincoln's-Inn-fields, London.

SURVEYING, ARCHITECTURAL, and ENGINEERING ESTABLISHMENT.
For preparing Gentlemen for Surveyors, Architects, Engineers, Levellers, Draughtsmen, Measurers, Valuers, &c. and for giving EVENING INSTRUCTION, in Architectural, Civil Engineering and Mechanical Drawing, Colouring, Perspective, Mathematics, Mechanics, Specifications, Taking out Quantities, Preparing Estimates, &c. &c. Terms very moderate.—For prospectuses, &c. apply at the Offices, 21, Guildford-street, Russell-square.

POPULAR SCIENCE.

NEW WORK BY PROFESSOR JOHNSTON.

THE CHEMISTRY OF COMMON LIFE.

BY JAMES F. W. JOHNSTON, M.A. F.R.SS. L. AND E. &c.

Author of "Lectures on Agricultural Chemistry and Geology," "A Catechism of Agricultural Chemistry," &c.

It is the object of the Author, in this work, to present such a view of Chemistry as may enable the intelligent reader to understand the operations going on around him in the familiar things of daily life, and to render him observant of the means by which good results may be secured, and of the causes of failure in his domestic economy. It will be found to illustrate in a popular manner the principles of the following subjects:—

1.—THE AIR WE BREATHE.
THE WATER WE DRINK.
2.—THE SOIL WE CULTIVATE.
THE PLANT WE REAR.
3.—THE BREAD WE EAT.
THE BEEF WE COOK.
4.—THE BEVERAGES WE INFUSE.
5.—THE SWEETS WE EXTRACT.
THE LIQUORS WE FERMENT.
6.—THE NARCOTICS WE INDULGE IN.
7.—THE ODOURS WE ENJOY.
THE SMELLS WE DISLIKE.
8.—WHAT WE BREATHE AND BREATHE FOR.
WHAT, HOW, AND WHY WE DIGEST.
9.—THE BODY WE CHERISH.
THE CIRCULATION OF MATTER. A RECAPITULATION.

Nos. 1 and 2 are published, price Sixpence each.

A CHILD'S FIRST BOOK of GEOGRAPHY, containing the Definitions and Elementary Lessons, with Questions and Exercises, and Descriptions of the Principal Countries, Islands, and Seas, edited by the Rev. G. R. GLEIG, M.A.

Also, in 12mo, 3s. 6d. cloth, price 3s. 6d.

A New and Improved Edition of Mr. W. HUGHES'S GEOGRAPHY of the BRITISH EMPIRE, and GENERAL GEOGRAPHY for the Use of Beginners.

LONGMAN, BROWN, GREEN, AND LONGMANS.

Just published, in One Volume, price 7s. 6d. cloth,

THE FOREIGN TOUR of Messrs. BROWN, JONES, and ROBINSON; being the History of what they saw and did in Belgium, Germany, Switzerland, and Italy.

By RICHARD DOYLE.

BRADBURY AND EVANS, 11, Bouverie-street.

ENGLISH MONASTERIES. DUGDALE'S MONASTICON ANGLICANUM; a History of the Abbeys, Monasteries, and Cathedral and Collegiate Churches in England and Wales. A new and beautifully printed Edition, illustrated with 300 Engravings, in Eight Volumes, cloth boards, price 36s.

JOHN WEALE, 59, High Holborn, London.

NOW READY, MR. DODD'S PEERAGE, &c.
New Edition for 1857, thoroughly revised, with many improvements.

PEERAGE, BARONETAGE, KNIGHTAGE, &c. for 1857 (Fourth Year)

By CHARLES R. DODD, Esq.
Author of "The Parliamentary Companion," "Electoral Facts," &c.

Foolscap 8vo handsomely bound in cloth, gilt.
WHITTAKER and CO. Ave Maria-lane.

On the 15th of January will be published, price 3s. in cloth,

THE FOURTH VOLUME of the HOUSEHOLD NARRATIVE of CURRENT EVENTS of 1853

*** The First, Second, and Third Volumes, being a Record of Public Events for 1850, 51, and 52, may always be had, price 3s. each, neatly bound in cloth.

Orbell, Wellington-street North. Sold by all Booksellers and Newsmen.

KELLY'S PRACTICAL BUILDERS' PRICE BOOK; or, Safe Guide to the Valuation of all kinds of Art ficers' Work; with the Modern Practice of Measuring, and an Abstract of the New Building Act for regulating the Construction of Buildings. By WILLIAM KELLY, Certificated by Metropolitan Board of Works. Revised and Corrected by Mr. Collingridge, Architect, Metropolitan Board of Works. Assisted by an Architectural Draughtsman, and Practical Assistant Surveyor. Illustrated with Plans, Sections, and Elevations, engraved on Steel. Uniform with Kelly's Practical Bricklayer's and Mason's Guide. Royal 8vo, 36 steel plates, neatly bound.

London: published by T. KELLY, Paternoster-row; SIMPKIN and MARSHALL; and by all Booksellers.

Of whom may be had, New Editions, in 8 parts, of the following Practical Architectural Works:—

1. PETER NICHOLSON'S PRACTICAL CARPENTER, JOINERY and CABINETMAKING Revised by TREDGOLD; being a New and complete System of Lines, for the Use of Workmen, founded on Geometrical and Mechanical Principles. Ten Parts at 3s. 6d. each, or 2 vols. 12s. cloth lettered, and 31 Plates in Wood and 14 Steel Plates, 12s. boards.

2. PETER NICHOLSON'S PRACTICAL MASONRY, BRICKLAYING, and PLASTERING Revised by TREDGOLD; both plain and ornamental; containing a new and complete System of Lines for Stone Cutting, for the Use of workmen; the Formation of Mortars, Cements, Concrete, to which is added a variety of new designs for Mural Tablets, Tombs, Gravestones for Cemeteries &c. &c.; and a description of the various materials employed. Ten Parts at 3s. or in boards, 30s.; containing upwards of Seventy Steel Plates and numerous Woodcuts.

3. TREDGOLD and NICHOLSON'S Theoretical and Practical treatise on the FIVE ORDERS of ARCHITECTURE, containing plain, simple Rules for Drawing and Executing them in the proper style; including an historical Description of each Order, illustrated by upwards of one hundred and fifty Engravings, Arts of first rate Execution, including numerous Diagrams, &c. Twelve parts at 3s.; or in boards, 36s.

4. DESIGNS for COTTAGE and VILLA ARCHITECTURE, containing Plans, Elevations, Sections, Perspective Views, and Details, for the Erection of Cottages and Villas. By S. H. Brooks, Architect. Beautifully engraved on steel, with Descriptions and Estimates of the Cost of each Edifice. Twelve parts at 3s.; or in boards, 36s.

5. DESIGNS for PUBLIC BUILDINGS, consisting of Plans, Elevations, Sections, Perspective Views and Details of Churches, Town Halls, Markets, Almshouses, Club Houses, Market Houses, and other buildings for public purposes. By S. H. Brooks, Architect. Beautifully engraved on steel. Ten Parts at 3s. or in boards, 30s.

6. THE HOUSE DECORATOR and PAINTER'S GUIDE; containing a series of Designs for Decorating Apartments with taste, and suited to the various styles of Architecture. By W. and A. Arnot, of the House Decorators of her Majesty. Ten Parts, at 3s.; or in boards, 32s.

7. THE HOUSE PAINTER, or DECORATOR'S COMPANION, containing a complete Treatise on the Art of House Painting, Graining and Marbling; including the Origin of Colour, the Laws of Harmonious Colouring, the Manufacture of Pigments, with Examples &c. By W. M. Hopkins, Esq. Accompanied with Coloured Specimens of Graining, Marbling, and Marbling. Ten Parts, at 3s. or in boards, 32s.

THE ENGINEERS' and MECHANICS' ENCYCLOPÆDIA, a new and enlarged edition, comprehending Practical Illustrations of the Machinery and Processes employed in every department of Manufacture of the British Empire. Illustrated by upwards of 400 Wood Engravings, by LOUDON. Edited by Mr. Gilbert. The Publishers of Mechanics Magazine have devoted much care to the important facts since the first publication, in 1836, of the Encyclopædia. The Inventions and Discoveries made during that period, have attracted the Editor's attention, and as the value of each was tested by experiment, a description was accordingly prepared. By the selection of new articles such as were of the most general use, this work has become systematically enriched; so that it may be received as fully and faithfully expressing "the existing state of Engineering and Mechanism, as applied to the wants of Practical Men." In two large 8vo volumes, cloth, lettered, price 30s.

THE "RAISING of JAIRUS'S DAUGHTER," by STROTHING; a fine Picture, suitable for an Altar or Gallery. Size of canvas 15 feet 8 inches wide, 11 feet 6 inches high. The above is on VIEW TO-DAY (Saturday) and for a few days, and cards to view, apply to Messrs. DOLMAN, 10, Acton-street, Greenwich.

DECORATIVE ARTISTIC PAINTING.—Mr. F. SANG, from the Royal Academy at Munich, whose works may be seen in the Art-Union and private exhibitions in the metropolis and the country, draws the attention of the public to his new and unique DESIGNS for PAPER-HANGINGS. Further particulars and cards to view, apply to Messrs. DOLMAN, 10, Acton-street, Greenwich.

ENGINEERING DRAWINGS for the Office or Workshop prepared with accuracy and despatch.—Address, 1 and B A care of Mr. Batsford, 52, High Holborn.

REVOLUTION in LITHOGRAPHY.—TO PUBLISHERS, PUBLIC COMPANIES, TRADE, AND THE TRADE.—MACKIE, MACDONALD, and MACGREGOR, sole patentees of the great NEW PRINTING LITHOGRAPHIC MACHINES, by steam power. By means of these machines the science of lithography is successfully extended, with the best press printing in despatch and cheapness, and producing beautiful specimens of ordinary pieces, exhibiting the great power possessed by the patentees. 27, Walbrook, Manufactory.

BILLS of QUANTITIES, &c. Lithographed with the greatest celerity, and on the lowest scale of charges. Maps, Plans, Sections, and Angel Architectural Engineering, and Mechanical Drawings executed in a superior style of plain or tinted lithography.—ANDREE and DANGERFIELD, Architectural and Engineering Lithographers and Draughtsmen, 23, Bedford-street, COVENT GARDEN, LONDON.

QUANTITIES, SPECIFICATIONS, SCHEDULES of PRICES, WORKING DRAWINGS, &c. copied, lithographed, or printed.

ALSO, TRACINGS, DRAWINGS of MACHINERY, &c. lithographed or engraved.

ARCHITECTS and CONTRACTORS' ACCOUNT-BOOKS; DRAWING PAPERS; ditto, mounted and continuous; TRACING PAPER and CLOTH, ditto in lengths.

GENERAL STATIONERY, for the use of BUILDERS, ARCHITECTS, SURVEYORS, and ENGINEERS, at the lowest current rates.

WATERLOW and SONS, 65 to 68, London-wall; and 49, Parliament-street, London.
Contracts for the supply of large establishments.

The Builder.

VOLUME FOR 1854.

IN the opening note of our last volume we mentioned the inauguration of the Dublin Industrial Exhibition and of the Crystal Palace at Sydenham, for the opening of which May had been named in both cases, as likely to be amongst the most important and pregnant events of the year; but suggested at the same time that the completion of the latter building in time was scarcely possible. The Dublin Exhibition was opened and is closed. It was a great success in many points of view, and will bring advantage to Ireland. It has taught many lessons; has stimulated energies, has awakened minds; and by showing the working-man what may be done by patience and rightly-directed labour, and how many men like himself have fought their way to honour and reward, has enabled him to hope,—and hope is the parent of exertion. The Dublin Exhibition, then, as we have said, is a fact accomplished: it has flowered, and scattered its good seed widely. But the accomplishment of the second event is left for the new-come year; and it appeared to us that we could not select a better subject for the illustration of our opening number in 1854, than the first completed section of the Sydenham building,—the POMPEIAN COURT,—of which very successful production we now give an engraving.* In the first instance it was proposed that this should simply be a refreshment court decorated in Pompeian style, not a complete reproduction. As the arrangements were proceeded with, the idea of refreshments there was given up; and the endeavour has been made to produce a perfect type of domestic habitation,—atrium, tablinum, peristyle, triclinium, and cubicula; the floors paved with mosaics, the walls covered with paintings.

And here at starting let us correct a mistake which our esteemed contemporary, the *Art Journal*, and some other papers have fallen into, touching the production of this court. It was designed and has been carried out by Mr. Digby Wyatt, and not, as stated, by Signor Abbate: the latter gentleman is an artist, apparently an able one, and to him is strictly due the whole merit of the *painted decorations* of the Pompeian house, but nothing more. He is not an architect, and has never been one: his knowledge of every detail connected with Pompeii is very great, and he has doubtless given the full benefit of his judgment in the architecture, as the architect has afforded him whatever advice he could beneficially offer throughout his work. We have seen the original sketch made by Mr. Wyatt at Naples, which shows that the idea was fully conceived before even the assistance of Sig. Abbate was positively engaged. The size of every room was arranged at Naples; and then, with Sig. Abbate, the various paintings to be reproduced on every wall were selected, and the latter gentleman remained there to make his tracings and cartoons, which he brought complete to this country. Before his return to England the working drawings had been made, and the works considerably advanced. Owing to the backward state of the building it was some months after his arrival before he could begin his work, and much of that time was spent in completing the cartoons, arranging them to suit some variations which had been made in studying out the details and in trying experiments as to media and pigments. The moment the walls were in a fit state to begin upon, proper ornamental painters were supplied him, for the most part by Mr. Bibra, and Sig. Abbate began his work. Mr. W. A. Parris, the son of Mr. E. T. Parris (who will hereafter, we suppose, be called St. Paul's Parris), has throughout acted as his deputy, assisting him in setting out the decorations and mixing all the tints. Mr. Thomas Hayes has been Mr. Wyatt's deputy as superintendent of the architectural arrangements. Let us add that Mr. Falkener has aided with some valuable hints, and that most of the ornamental portions have been modelled by Signor Monti.

There is no jealousy between the architect and painter: each knows to what the other is entitled; but on the principle we maintain of giving every man his due, we have thought it right to make their respective positions clear, giving Mr. Wyatt his rights; and having done so, we heartily congratulate them both on the result of their joint labours in this the first completed portion of what we thoroughly believe will be the most instructive, extraordinary, and beneficial work of its kind that the world has ever seen.

Our engraving represents the view looking across the atrium into the peristyle. Those of our readers who have not visited the disentombed city, nor read Sir William Gell's book, have lingered over Bulwer's magical "Last Days of Pompeii," and know what was the general arrangement of a first-class Pompeian house, and they will find few departures from this at Sydenham. Let us indicate briefly the principal divisions. Entering by the narrow *prothyrium*, or vestibule, on either side of which is a slave's room (and you may do so without fear of the dog, though the mosaic floor will of course bear the inscription *Cave Canem*), you find yourself in the *atrium*, or hall, where the clients and visitors were received. The centre of the hall is uncovered, and in the pavement beneath the *compluvium*, or roof opening, is the *impluvium*, with fountain, statue, and well at the side. Around three sides of the *atrium* are *cubicula*, or chambers; the recess, right and left (some chairs and a table mark it in our view), is an *ala*, or business-room, and near one of these, namely, that on the right, may be seen the money-chest of the master of the house. Immediately opposite the entrance, and in the centre of our view, is the *tablinum*, or drawing-room, so to speak. This opens on the other side to an oblong colonnade called the *peristyle*, the centre of which is laid out as a small garden. A curtain separates the *tablinum* from the *peristyle*. On each side of the *tablinum*, separated from it by a passage leading from the *atrium*, is a *triclinium*, or dining-room, with the door from the *peristyle*; and against the sides of the *peristyle* are a summer dining-room, the *æcus*, a room for taking wine and desert in, the bath, and the *culina*, or kitchen, not forgetting a *porta postica*, or back door for the servants, though followers were not allowed. The *peristyle* is supposed to be *impluviatum*, or one from which the water is conducted to the outside of the house, as was usually the case when the *peristyle* was small. From the capitals of the columns of the *peristyle* hang garlands of flowers. The *atrium* and its apartments up to the line of the *tablinum* were public for clients and visitors: the portion beyond that was used only by the family and intimate friends. The *lararium*, or altar, will be seen at the back of the *peristyle*, on the left hand side.

The *atrium* and *tablinum* will be paved with tessellated pavement now making by Minton. The roof tiles were made by Blashfield. The colours have been supplied by Robinson, of Long acre, and their quality does him credit. The *atrium*, we should have said, is Tuscan. On the pilasters at each side of the entrance, are placed the celebrated "figured capitals," and the doorway is a modification of that of the house of Pansa. The whole house is supposed to occupy an entire island, too, as that of Pansa does. In judging of the general design, several points should be borne in mind,—the difficulties presented by the position of the iron columns and girders, which have led to much complicated construction,—the necessity for keeping every opening large, not only for the admission of light everywhere, but to allow free ingress and egress. Hence, in one or two instances, strict precedent was obliged to be departed from; but, with the exception of such necessary variations, every feature has been moulded in the closest imitation of features actually existing.

The effect, when quite completed, will be charming. Even as it is, look into the *triclinium*, and you may see, with the mind's eye, the magnificent Glaucus at a repast with his friends. He has just thrown his costly ring into a crystal cup, to enhance the value of the gift, and presented it to the profligate Clodius, who has risen from his elbow to drink "the beautiful lone." Pansa, the dandy Lepidus, and the caustic Sallust, are present, and if you listen, you may hear Nydia, in the *atrium*, singing:—

> "Buy my flowers—O buy, I pray!
> The blind girl comes from afar:
> If the earth be as fair as I hear them say,
> These flowers her children are.
> Do they bear beauty's hues?
> They are fresh from her lap, I know;
> For I caught them fast asleep
> In her mantle's folds of snow."

With such speculations, and the ideas which the place induces, we might fill a page, but we must close our notice, simply saying of the paintings for the present that they are, for the most part, exact copies of existing decorations, are exceedingly well executed, and make a much more harmonious whole than would be supposed from a verbal description of the colours used.*

We have offered no greetings to our visitors on the opening of the year, made no promises of increased exertions to maintain and improve the character of the journal,—they will, we hope, believe that we mean both. To us, as to every one, the New Year has suggested thoughts, and though they do not relate to bricks and mortar, or even to Pompeian decorations, we are tempted

See page 7.

* A paper by the artist, on the Decorative Painting of Pompeii, with reference to this work, will be found in our [illegible] June, p. 242.

to jot them down for the consideration of our readers, pleading the license of the season, and the weakness we acknowledged last week, as an excuse, if it be needed:—

THE EVE OF '54.

New Year! who thus floats coldly in,
What hold'st thou 'neath thy wing?
Who may foretell to Man and State
The change, the doom, you bring?

The church-bells clang to welcome thee,
In country and through street;
And men and maids wait anxiously,
Thy coming-in to greet.

A mystery is about you, Year!
Of solemn, gravest cast,
Which makes you, younger though than all,
More mighty than the Past.

Ten thousand lives, ten thousand hopes,
Beneath each pinion lie;
'Till one by one the feathers drop,
As swiftly forth you fly.

Swiftly and sure,—no pause you'll make,
But drag us on with thee;
Relentless and inscrutable,—
Forward the course must be.

Forward the course must be, 'tis true,
We stop not if we would,
But we ourselves may *choose the goal*:
In every ill find good.

So clang the bells, and welcome in,
With joy, the coming Year:
We trust that Love which rules the World,
And Hope has conquered Fear.

GEO. GODWIN.

ANCIENT DOORWAY, KILLESHIN CHURCH, QUEEN'S COUNTY.

IRISH ANTIQUITIES.

THE above is an attempt to restore a most interesting and beautiful doorway belonging to the ruins of the ancient church of Killeshin, Queen's County, Ireland, and situated about two miles from the town of Carlow. It is to be regretted that the original is greatly defaced, not so much, it is said, by the natural decay of time, as through the wantonness and vandalism of the ignorant. Mr. Wakeman in his work ("Handbook of Irish Antiquities"), makes mention of this doorway, and illustrates it by two perspective views of its capitals. Dr. Petrie does not seem to notice it in his exquisite work "On the Round Towers of Ireland," but gives many views of doorways and chancel arches, evidently contemporaneous with this, whose construction he assigns to the *eighth* century, and repudiates, I think with justice, the common notion of this style being Norman, and is of opinion it was introduced directly from the East, undergoing changes which adapted it to the peculiar genius of the people, and thus gaining a distinctive character, which entitles it to be called *Irish* Architecture, as much so as that of any other national architecture being called after the nation of its invention or improvement. The principal distinguishing feature of this style is to be seen in the graceful and peculiar tracery of its capitals, which is formed by the interlacing of the hair of the masks placed at the angles, typical, it is said, of eternity. All the ornamentation is in low relief, or *Inciso*, a great portion being merely engraved: a legend runs round the abacus, most likely a scriptural text, but now illegible: a high-pitched canopy stands over this doorway, and serves in a great measure to protect it from the weather.

RICHARD JOHNSTON.

WICKE'S SPIRES AND TOWERS.—It is but right we should supply an omission in our notice of this work last week, which may lead to an erroneous impression of its practical utility. The view of St. John's, Louth, which we presented to our readers, was *selected* from Mr. Wicke's plate by about *one-half*, in addition to bring it within the limits of our page; and by this means (in addition to the loss of the softness and beauty in wood-engraving which lithography possesses) the rich elaboration of detail could not be expressed as it is in this, and indeed all the plates of the work itself.

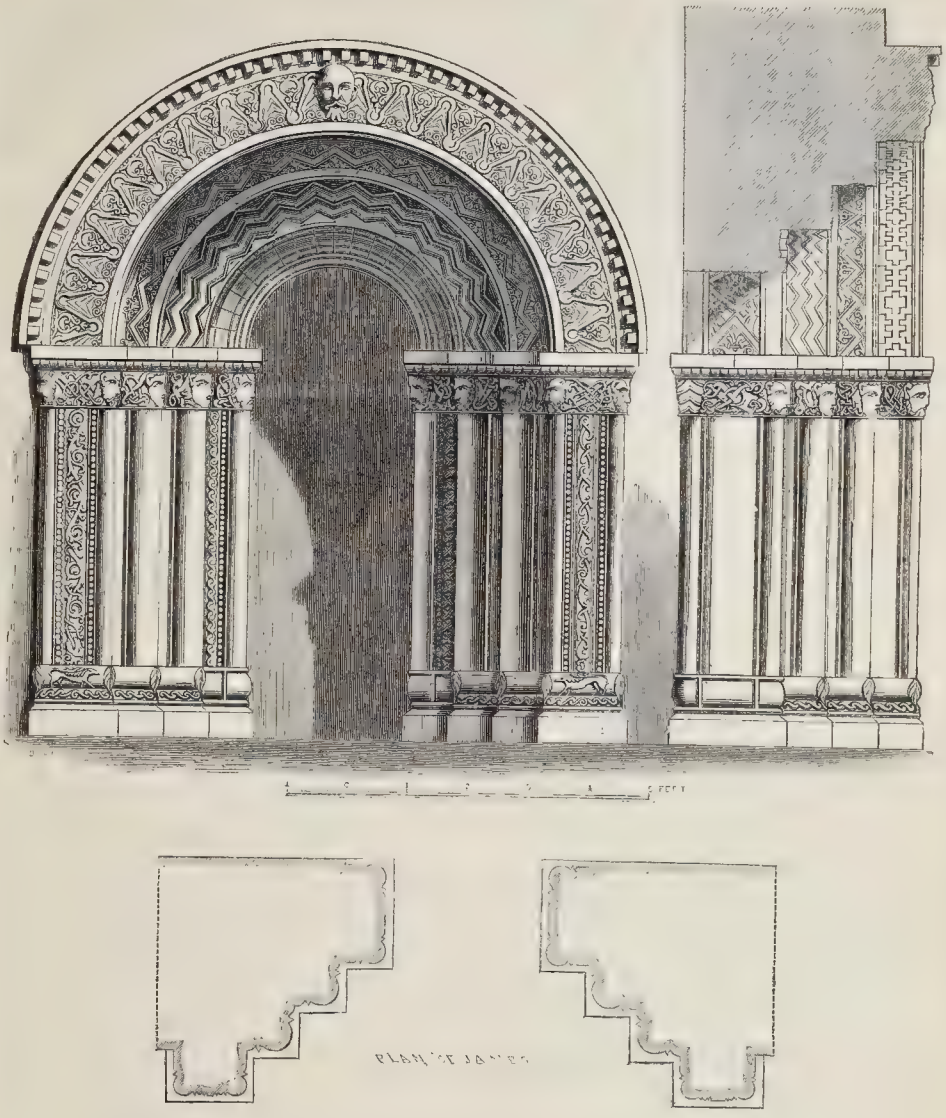
A VISIT TO THE ISLE OF DOGS.

THE WORKS OF MESSRS W. CUBITT AND CO.

"Where could I wish myself now?
In the Isle of Dogs, so I might 'scape scratching."
Beaumont & Fletcher.

THE curious inquirer into the topography of the British metropolis must have observed that the course of the Thames is in several places distinguished by those sharp and sudden curvatures known in the SAXON language as *reaches*, which add much to the picturesque beauty of the river, and serve the purpose of retarding the velocity of its currents. The most remarkable of these fluvial phenomena is undoubtedly the magnificent curve in the form of a horse-shoe, which commences at Limehouse, sweeps round by the Greenland and Deptford dock-yards, passes the verdant shores of Greenwich, and finally terminates at a point seven miles from London-bridge, where the basin of the West-India Docks communicates with the river at Blackwall. Within the boundaries of this horse-shoe curve lies embosomed the greater part of a tract of low marshy land,—in the parish of All Saints, Poplar, in the hundred of Ossulston, in the parliamentary division of the Tower Hamlets, in the county of Middlesex, which is known by the singular denomination of the "Isle of Dogs." Its claim to be ranked as an island is indisputable, although nature only intended it to be a peninsula; for it is bounded on three sides by the natural waters of the river; and on the fourth side by the artificial water of the City Canal, which joins the two opposite shores of Limehouse and Blackwall. It is scarcely necessary to add that the island measures about five miles in circumference, which is also known as Stepney-marsh and Millwall. It has been recovered from the Thames by means of embankments, the origin of which has been referred to the Roman era; but at any rate they were well known to the compilers of the Doomsday-book. Finally, the island, according to one account, derives its name from being the depôt of the spaniels and greyhounds of Edward III.; and to another from the great number of dead dogs which, having been drowned in the river, have had their bones deposited on the slope of its embankments.

Half a century ago this island was not only absolutely destitute of the great manufacturing establishments which now belong to it, but it was almost entirely without inhabitants. The only points of interest it possessed were the ruins of an ancient chapel, whose origin was shrouded in mystery, and its singularly rich pasture-land, which was celebrated for curing horses and cattle of distemper. Even yet, if we keep its factories out of sight, it is a place of no interest whatsoever to the compiler of pictorial hand-books. A very enthusiastic Presbyterian clergyman, who has lately published a history of the island, tries hard to get hold of some feature in the subject upon which to expend the exuberance of his poetical imagery. But it is of no use; the case is hopeless. He can only rest content with a song of lamentation. "We have no lofty mountains or splendid lakes, with overhanging woods;—we have no ruined castles, ancient abbeys, or venerable cathedrals;—we occupy no well-known place in the page of history; nor can we point to poets, statesmen, divines, and philosophers, who were here born or made this their chosen habitation. It is true we have ramparts and ditches by which we have for a thousand years been protected. All that time Old Father Thames has besieged us; but in vain. He has environed us, and well nigh overtopped our walls. On one or two occasions he has brought his artillery to bear on a devoted spot; but the breach he has effected has been repaired, and we have expelled the invader."*



Not bad at all say we: too good, perhaps, for the subject-matter. Our author might have added, that in the days of the English poets from whom we have quoted, the place was probably used as a retreat from the strong arm of the law in regard to the matter of bilking a creditor.

It was in pursuance of the inquiry which has given rise to our notes on the building trades, that we found ourselves, on one of the cold, raw, gusty days that preceded Christmas, voyaging across the River Thames from Greenwich Pier to the Potter's Ferry in the Isle of Dogs. We found nothing, it is true, in the aspect of the country to awaken such fervid eloquence as that we have alluded to; but there were, nevertheless, many objects preserved of very great interest indeed in our practical estimation of things. Extending all along the embankments, from the eastern to the western sides, are to be found the industrious seats of some of the most important metallic and fictile and chemical manufactures indigenous to the metropolis. There is the celebrated engineering establishment of Messrs. Seward and Capell, distinguished for the great extent of its British and foreign contracts, and for the invention of the Cycloidal paddle-wheel. There is the active and crowded engineering and iron ship-building establishment of Messrs. Scott, Russell, and Co. from whence the war-steamers *Grappler* and *Megæra* were launched, and where the practical application of the wave-line theory of the distinguished proprietor—one of the secretaries of the Great Exhibition—is fully carried out. There are the extensive works of Messrs. Morewood and Rodgers, where iron is galvanized; of Mr. Walker, where galvanized iron is turned into houses for Australia; of Swayne and Bovil, where the iron is turned into springs and wheels for railway-carriages. Sir Charles Price and Co. have still their old-established mills, where oil is crushed from seeds, and where spirits of turpentine are distilled from Stockholm Tar. Rope-works are there, where huge cables are made from Riga hemp; and rope-works, where cables are made from iron wire. Blashfield's works have for nearly forty years been known for their manufactures of Roman cement, Portland cement, plaster of Paris, and useful and ornamental works in terra-cotta. There are chemical works, where ammonia is prepared from the bones of the dead dogs; smelting works, where gold and silver are reduced from their ores; disinfecting fluid works, where preparations are made for pouring down cesspools; ironworks, where all the old iron of her Majesty's dock-yards is puddled into new rods and bars; and, finally, there are Messrs. W. Cubitt and Co.'s works, where curious machinery is used for cutting wood; and where bricks, cement, and drain-tiles are manufactured upon a large scale. It is to the last-mentioned works we mean to direct the attention of our readers; but we may state here, before leaving the subject, that this island, so long a tract of barren and unproductive marsh land, and still the greater part of it 7 feet below high-water level, is now in a flourishing condition. It has a population of 5,000 people; a rateable property of 20,000*l.* in value; 530 houses; sixty manufactories; four places of worship; one or two good school-houses; ten excellent public-houses; a doctor (no lawyer!); a house-agent; a gas-work; an omnibus; a post-office; and a station for the Thames police.

It is now some ten or eleven years since Messrs. Cubitt and Co. established their extensive works in the Isle of Dogs. Alderman Cubitt has obtained on a long lease from the Countess of Glengall more than a mile of river frontage, extending from the ferry to the Folly House, as well as a considerable quantity of land adjacent. Upon this property several important improvements have been effected, by means of new roads, drains, and embankments; and there have been erected upon it several extensive establishments,—the port of London mooring wharfs; the patent metallic lava works of Messrs. Orsi and Armani; the rolling-mills of Messrs. Johnstone, and some others. A considerable space fronting the river, and lying opposite Greenwich Hospital, is held by the commissioners of that hospital, and appears intended to be left unoccupied. The chief establishment on the property is of course that of Messrs. Cubitt, which is one of great extent. It covers in all about twenty-five acres of land. It consists of timber-wharfs and saw-mills, with joiners' shops; a cement-factory; a pottery for the manufacture of all kinds of ceramic ware; and several large brickfields. We had the opportunity, through their kindness and under the charge of the principal clerk and engineer, of giving to each of these

* "A Descriptive, Historical, and Statistical Account of the Parish of All Saints, called the Isle of Dogs." By H. D. Chapman, Esq. Published by Robert Baynes, White Lion-court. 1853.

ANCIENT DOORWAY, KILLESHIN CHURCH, QUEENS COUNTY, IRELAND.

departments a considerable share of attention; and we will now ask our readers to accompany us in a hurried run through the works. We begin with the prime mover of all the operations,—with the steam-engine.

The engine-room is decidedly the most attractive department in the whole works. In a spacious well-lighted room with a lofty ceiling, stands a splendid 50-horse engine, by Rennie, with its ponderous beam and connecting-rod, moving as smoothly and with far less noise than the little ornamental engines we see in coffee-shop windows. This engine is constructed on the combined principles of condensing and high-pressure. The boilers underneath are 25 feet long, and 6 feet in diameter; the fire-box of each is 6 feet long and 4 feet wide; and the steam chest with which each of them is provided, measures 3 feet in height and 3 feet in diameter. The cylinders are 32 inches and 16 inches diameter respectively (the first is the condensing and the second the high-pressure cylinder). The beam is 28 feet in length, with a 6-feet stroke, and the fly-wheel is 28 feet in diameter. This engine, we may add, is kept in splendid condition. We do not indeed recollect of ever seeing a steam-engine more scrupulously clean. The cylinders are encased with framed mahogany and slate panels. The base and capital of the slender columns which support the entablature of the frame, the parallel motion, the extremities of the beam and connecting-rod, are polished as bright as steel. Some people entertain the opinion that this is superfluous labour, but we differ from that opinion. A good steam-engine should be treated with all the care and attention which is bestowed on a good horse. It has heavy work to perform, and it requires continual looking after. We never hear the puffing and blowing of a worn-out engine, without calling to mind the puffing and blowing of a broken-down horse; nor the clanking and rattling of loose bearings and bad joints, without reference to an omnibus hack which has come down on its front knees.

Leaving the engine-room, we passed to the principal building in which are the saw-mills and the carpenters' shops. In the basement of this building are situated all the wheels and shafts, and intricate gearing, which give the requisite impulse to the machinery in the saw-mill above. We counted here, in a short space of time, thirty or forty drums on the shafts; and as for the cranks and eccentrics, we marked them in our notes as "beyond computation." The noise in this place was extremely loud, and there were various currents of air created, which made us

glad to ascend to the first floor. This we found to be the saw-mill. Here were, in full operation, one circular and three vertical sawing machines. The circular saw is so well known to our readers, that we shall take leave to pass it over without notice. But the vertical sawing machines must not be so easily dismissed.

Every master builder who has had experience among working men, must acknowledge the extreme difficulty he has always found in his dealings with wood-sawyers. We believe we are warranted in stating that the wood-sawyers are, as a body, the most dissipated set of men connected with the building trades. This may be accounted for in two ways. First, their muscular labour is unusually severe and protracted. Nothing has a greater tendency to urge working men to dissipation than a long-continued drain on the animal fluids and the respiratory organs. The true secret to preserve the equilibrium is to eat highly nourishing food, qualified with a fair amount of good beer. But the wood-sawyers generally fly to ardent spirits as a restorative to tired nature. The second cause is rather more singular. It arises from the utter dependence of the sawyers upon each other. If the topman sets off at a tangent, the pitman is, to use the technical phrase, left in the hole. We know of no spectacle so disconsolate as that of a man sitting idle on the end of his log, when every artizan is busy around him, waiting for the return of his comrade, who is perhaps lounging at the bar of the next public-house. While he can wait there is hope of the other's return; but he grows weary and exasperated, and sets off to bring his mate by the collar. He must hunt him to the public-house, and when he gets there the rest is soon told: neither of the pair is to be seen again that day.

The vertical sawing-machine has almost entirely superseded the muscular labour of the wood-sawyer. The invention, we understand, is due to Mr. Nicholson, the chief engineer at the works in Gray's-inn-road. It consists of a strong upright wooden frame, furnished with slides, in which a saw, consisting of one, two, or even six blades, is made to work vertically by means of an eccentric motion or a crank. Its rate of speed may vary from 60 to 120 strokes a minute. A horizontal frame, or rather railway, is laid on the floor, upon which a carriage, drawn by a wheel driven by the motion of a ratchet and pall, impels the log to be cut backwards and forwards. It has also attached a machine called a "horse," a sort of carriage for removing the logs; and a man attends to the whole process. The work performed by these saws is very wonderful. For example, a log 24 feet by 18 inches, by 18 inches, is cut into joisting in twenty minutes—a process which would occupy two sawyers a whole day. And in the cutting of deals from battens, there are produced 120 per day, multiplied by any number under ten ($120 \times 10 = 1{,}200$ deals); for it is of no consequence whatever the number of saws affixed to the frame, which pass simultaneously through the log.

The next great improvement we saw in the same apartment was the "planing-machine." This machine consists of a table furnished with a number of wheels, some of which are provided with steel cutters. One is slightly corrugated, and serves to draw the deal into the machine; the second, to preserve it in its place; and the third to give the planing and tonguing to the deal. The planing-irons are three in number, and project from the under surface. Indeed, this machine is in all respects like a large joiner's plane turned upside down, with three irons in place of one, over which the wood is drawn and preserved in its place by friction rollers, in place of the mere pressure of the hand. It is no matter whether the deal is to be planed or tongued, planed on one side or on two sides. It is all the same. The rollers on this machine are ten in number. It disposes of the deals at the rate of 30 feet per minute.

We were next carried up to the uppermost story, which we found to consist of the joiners' shop; where, if we except sundry little arrangements of steam-pipes for warming, cooking, and heating glue, there was nothing remarkable in the mechanical processes. But there was a point in store of another kind. This we found to exist in the building itself, or rather in the roof of the building, from which was suspended the floor. It had been found of great inconvenience in the workshops at Gray's-inn-road to have pillars placed in the saw-room; and it was resolved to do away with them altogether in this shop. But here arose the great difficulty. The building is 100 feet in length, and 50 feet in breadth. No system of beams, it was plain, could support such a floor without pillars; but the difficulty was met by hanging the floor to the roof! We cannot convey a more popular idea of the method which was adopted than by referring to the roof of any railway station, and supposing the transverse girders made to support a floor. In this case the principle rafters are made of great strength. They consist of double beams, each 9 inches by 12, fixed at the wall plate and at their junctions in the groins with cast-iron shoes, and they are secured together by malleable iron tension-rods. From these horizontal tension-rods are suspended, at intervals of 12 feet, 2½-inch iron suspension-rods, the extremities of which pass through girders and are fixed by screws and nuts. Upon these girders the floor is sustained. Corbels of stone project from the walls under the extremity of every girder in case of an accident to the iron rods. But these corbels are purely ornamental. They support no weight whatever, for the girders do not even touch them.

Passing the subjects of brick-making, cement, and earthenware, which would demand more space than we can now afford to give,—we will conclude with a few notes on the condition of the workmen.

There are employed at these works from 300 to 500 hands, according to the season of the year. The wages vary considerably. The labourers receive from 16s. to 18s.; the mechanics from 25s. to 30s. per week, and the brick-makers are paid by the piece. A movement is going on for the establishment of a benefit society, which will include the other tradesmen on the island. A great social improvement may be expected to arise from a munificent act on the part of Mr. Cubitt, who has built in the neighbourhood of the works, at his own expense, a capacious church. The building stands on the south-east extremity of the island, and is rather a conspicuous object both from the river and the land. It is a plain and unpretending structure in the Early English style, built with bricks and dressings of Portland stone. Respecting the church a circular has been issued to the inhabitants, wherein the worthy alderman announces—

"That the building is nearly completed; that he intends placing a clock and a peal of five bells in the tower; that an organ is being built, that the gas will be laid on, and that stoves are provided; and that the church, with an acre of ground, will be vested in the Church Building Commissioners, for the use and benefit of the locality; and that its patronage, with the consent of the authorities of Brasenose College, the patrons of the living of the parish, and with the sanction of the rector, will be placed in the hands of the diocesan, the Bishop of London."

This noble act deserves to be widely known; it sheds lustre on the ISLE OF DOGS.

CLOSING OF THE LONDON GRAVEYARDS.—Lord Palmerston's Orders relating to the Metropolitan Graveyards came into operation in several parishes on the 1st of January, 1854, *one* good beginning for the new year, at all events!—and in connection with the subject, we find that the parish of St. Luke has contracted with the enterprising inventor of the Patent Funeral Carriages for the conveyance of its deceased poor and mourners to the Victoria Park Cemetery; and that St. Olave's Union, Southwark, has also entered into a similar contract. We had occasion recently to inspect some of the new carriages Mr. Shillibeer has constructed with the view of affording still greater facilities for extramural burial than heretofore, and must say they seem admirably adapted in every respect for the purpose intended,—particularly on the score of economy and utility, combined with the most perfect decorum. We sincerely hope that Mr. Shillibeer, who has for years past practically laboured to abolish the difficulties attaching to extramural interments, may, through the operation of recent legislative Acts, yet reap that advantage to which his endeavours so eminently entitle him, but which he has hitherto, we fear, too sparingly enjoyed.—*Bell's Weekly Messenger.*

THE STYLE OF "THE STONES OF VENICE."

SIR,—Not a little was I gratified by your able contributor Mr. S. Huggins's defence of "columnar architecture" against Mr. Ruskin's intemperate and even absurdly-extravagant censure,—or rather virulent abuse of it *in toto*. In fact, so very far is the author of "The Stones of Venice" from dealing in calm and impartial criticism, that he knows no medium between downright savage hatred and the most hyperbolic laudation. It is not judgment, but vehemence, that is his *forte*, he either being, or affecting to be—

"For ever in a rapture or a rage."

He accordingly almost invariably overshoots the mark he aims at, and, what is more, actually contradicts himself over and over again. Therefore, although he fain would, and with superficial readers may, pass for a profound writer, he will not stand the test of sober examination on the part of those who are not to be imposed upon by inflated language and magniloquent yet generally meaningless phrases. A great artist in words he may be, but he assuredly is a very small, or at any rate a very one-sided, critic in matters of art. To say the truth, so little power of æsthetic criticism has he, that in order to conceal his deficiency therein he has recourse to the most extraneous and far-fetched topics, which he not only drags in by the neck and shoulders, but in several instances dwells upon them so long that he seems quite to forget his professed subject.

Nay, it looks very much as if he made architecture only a stalking-horse, masked by which he shoots forth opinions and tirades nowise related to it; while he passes over a very great deal indeed, which has been touched upon so carelessly, or else so lightly, by others, that ample room is left for fuller and more accurate discussion. Possibly, the injudicious compliments bestowed upon Ruskin for his eloquence, by those who could judge only of his manner, and who were struck by its singularity, have had the mischievous effect of rendering him ambitious of maintaining a character for it; and have, if not seduced him into, encouraged him in, the mistake of making his proper subject-matter quite subordinate to manner and literary execution. Of his "eloquence," I myself am anything but an admirer, for it strikes me as being in exceedingly bad taste: let it, however, be admitted to be such, and to be so in a very superior degree: what then? Of what value is the eloquence that is employed only in the cause of error,—in the attempt to persuade people into believing that two and two make only three, and that Greek, Roman, and Renaissance are so utterly base and vile,—such mere —— "clouts" and "rotten rags?"

Fortunately, people are now beginning to find out Ruskin's real value as a teacher of architecture and its æsthetics. Not very long ago, he was mauled, and very cleverly, too, in the *Edinburgh Advertiser* (of November 22); and two weeks ago the *Illustrated News* took him to task; at some length for the shallowness and one-sidedness of his views in regard to architecture.

While his teaching is mere moonshine, he himself appears at times to be actually moon-struck. What meaning can possibly be extracted from such oracular profundity as the following?—"It is this last cause of the grotesque which we have finally to consider, namely, the error and wildness of the mental impressions, caused by fear operating upon strong powers of imagination, or by the failure of the human faculties to grasp the highest truths." Well, it sounds finely to the ear, and, therefore, might pass for eloquence in a lecture before an auditory, but it looks no better than high-flown nonsense when put into print. Though a hearer may be tickled by it, a reader is apt to feel stupified, and to get a headache in the vain endeavour to get at the sense of it. What has either fear or inability "to grasp the highest truths" to do with the grotesque in architecture, or with any kind of the grotesque at all?

A writer upon art should not affect mysticism, yet it is in mysticism and mystifying that our author's *forte* lies; and it is one of his peculiar fancies to attribute positive and direct moral qualities, both for good and for evil, to an art

which admits only of the expression of æsthetic ones. There is no more of either Paganism or piety in the particular form of a column, or any other architectural member, than there is in the forms of tables and chairs. Nevertheless, the author of the "Stones of Venice" frantically denounces Grecian architecture and the styles derived from it, as being nothing less than actually *impious!* and talks of the "lascivious" Renaissance, and of the "obscene" ignorance manifested in works belonging to what it pleases him to call the "Grotesque Renaissance." With him everything is decidedly "base" or "worthy," "lovely" or "detestable;" and work is either "noble" or "ignoble," according as the workman is rude and undisciplined, or well-trained in his craft,—tutored skill and neatness of execution being, in his opinion, rather a fault than a recommendation, whereas clumsiness, or, as he calls it, "savageness," is what he terms "frank and fearless" work. Our satisfaction ought, it seems, to be derived not so much from the actual work itself, as from perceiving, or else fancying, that the workman must have taken delight in it, however poor his performance may be.

Strange and most fantastic doctrine that; yet not more preposterous than a great many other, or, indeed, most of Ruskin's opinions. Nevertheless, absurd as they are, the vehemence and insolent self-confidence with which they are put forth, calculated to impose upon those who possess either no knowledge of architecture, or but a very superficial knowledge of it, but know that he has gained credit with many as being a powerful writer and a philosophical critic; know also, that his doctrines tend to bring the whole of present architectural practice into contempt, yet do not attempt to gainsay him; consequently, the natural and almost inevitable inference is, that they are wholly unable to refute, not indeed his arguments, because he deals in none,—but his dictatorial and offensively dogmatic assertions.

By no means can I agree with those who profess to think it not worth while to contradict formally such a false teacher and disseminator of error,—one who would fain put us quite out of conceit with all modern architecture, whether it be that of our own or other countries. Architects, and those who have really applied themselves to the study of architecture although not professionally, are in little danger of being misled by the *ignes fatui* of Ruskinism. It is from another quarter that the danger likely to ensue from his teachings, or rather his preachings, is to be apprehended. It is from the public,—that is to say, that class of it who are the employers of architects, and to whose prejudices the latter must defer,—with whose fancies, however unreasonable, they must comply.

Most of his reviewers, the majority of whom, perhaps, never penned a line upon the subject of architecture before, have extolled Ruskin for merits, either real or supposed, merely literary. His doctrine, with its tendency and consequences, has given them no concern. What was it to them if he upset the whole of established architectural teaching and practice? And if those whose immediate interest it was to put down Ruskinism, did not care to oppose it, it was no concern of other people.

Such, I conceive, is the construction likely to be put upon the silence of professional men, more especially of those among them whose position marks them out as called upon to reply to calumnies which they are able to refute, if not, perhaps, with equal eloquence, with far less empty vapouring, silliness, and nonsense.

AN ARCHITECT.

LAYING PIPE-DRAINS.—Lately visiting some work of this description I am employed on, I found the clerk of the works allowing the junctions of 4-inch with 9-inch pipes to be made, by inserting a length of 6-inch between them, wedging it at the ends with bits of brick, and cementing it over. The traps were being done in brickwork The reason given me, when I accidentally discovered the workmen in the act, was, "There was difficulty in obtaining traps and junctions of the sizes required." If I had not fortunately discovered this mode of executing the work, of course any failure would be attributed to the pipes. I believe this may serve as a hint as to where the cause of failure may in many cases rest.—R. H. P.

THE LABOUR QUESTION IN THE NORTH.

SINCE we last alluded to this question, many workers have returned to their senses and their work; but the question is as far perhaps from being finally and completely settled as ever. The most recent report from Preston intimates that no less than 15,720 unemployed hands are still receiving relief to the extent of some 3,000*l.* a week. Not only so, but we are now informed that the dispute has just led to a lock-out of thousands more at Glasgow. The Preston report states that the total amount disbursed by the committees, now exceeds 36,000*l.* Even this of course is not all that has been spent in the north during the late strikes, nor even one half of it; and we do not here refer to loss from idleness, but to hard cash expended in keeping up the struggle for the stereotyped 10 per cent. while even where mills are at work, they are very generally working short time, and under increasing disadvantages. At one of the recent meetings of workmen in Preston, it was stated that the trades of London were resolved to sustain the cotton-spinners for three months more if need were, in their resolve to force the 10 per cent. out of the masters; and Mr. Cowell, the chief leader and delegate there, in wishing his unfortunate and starving clients a "happy new year,"—God save the mark!—said he "hoped that before another year had rolled away, this question would be settled, *and their (the delegates') occupation would be gone.*" Would it were gone! The boasting mockery about "another year" must have appalled the hearts of hundreds of his hearers. One speaker at a meeting of this kind, Mr. Kinder Smith, who it appears is president of the delegates, said that, if the employers were determined to persevere in their present course, there was no alternative left to the operatives but that of raising funds to work for themselves. It was true that there was a diversity of opinion upon that subject; but, however, he believed that, if other people could realise mills and mansions of their own in a few years, the operative might do the same for himself, if he had only been as diligent on his own account as he was for others. If capitalists were determined to reduce the wages of the operatives, then they ought to endeavour to place themselves in an independent position, so that they might bid defiance to those who would crush them. It had been said that, with the money which had already been lost by the operatives of Preston in this strike, they might now have had three or four thousand individuals working for themselves, and enjoying the fruits of their own industry. He hoped the operatives of this town would take the hint, and endeavour, by the co-operative principle, to work out their own salvation."

Pity they had not taken the hint in the outset. Our serious opinion is, that it would have been infinitely more desirable, even had every penny been lost in the vain endeavour to establish such a principle, than that the money should have been expended in keeping workmen in idleness, and fostering hopes that even though fulfilled we believe would only vitally injure one of the most important branches of manufacture of which our country can boast.

A penny pamphlet, titled, "Strikes superseded by Self-employment; an Address to the Operatives of Great Britain; with a Plan for the Formation of Industrial Societies, by the present Trade Societies, or a similar Organization," has just been published by "The Association for promoting Industrial and Provident Societies," and may be had at 34, Castle-street East, Oxford-street. We may briefly give some idea of the purpose of this pamphlet by quoting a proposal for the working of the plan suggested:—

"Suppose a union, consisting of 1,000 members, in ten branches, subscribing upon an average 1s. a week each, and suppose 2,000*l.* required in the particular trade to set up an establishment which will give employment to fifty persons.

Then at the end of the first ten months the union could set up one establishment; and, since the subscriptions from the branch where it was set up would continue as repayment of advances, in another ten months it could set up a second, and so on until in less than seventeen years it could give employment to the whole 1,000 members, *without taking into account the number who would find employment from the growth of the different establishments set up*, which it must be observed would not be impeded by the necessity of using their profits for the repayment of the capital, since this repayment would be made out of the subscriptions of the members.

The case put has been purposely one of those in which a large amount of capital per head is required. In trades where so large an amount of capital is not needed, as, for example, in the Tailor's business, where 20*l.* a head might be sufficient, the operation would of course go on much more rapidly.

But the plan must not be looked at as a means of setting up such establishments as have been mentioned with the capital of those who are to work in them only. If well managed, it might be made a means of drawing in capital from many other sources as an investment, as has been the case with building societies."

We are very reluctant to offer any opinion on the co-operative scheme, its past history has been one of so very unsatisfactory a nature: it must here be allowed, however, that the author of the pamphlet referred to has kept this history in view, and aimed at an avoidance of the causes to which he considers that its failure must exclusively be attributed. For our own parts, we fear there is something more than this requisite, namely, mental and moral cultivation, with a clearer manifestation of a spirit of mutual forbearance, moderation, and justice than many of the mill-workers, even in the present instance, display, in tyranizing over their fellows, both by forcing them to quit employments they desired to continue in, and by compelling them, under threats and actual ill-usage, to contribute in supporting strife with employers.

Another pamphlet has been recently issued (Chapman, Strand, publisher), in which a Manufacturer, in form of a letter to the Preston operatives, deals with the question.

In this letter some sound advice is given to the workers now virtually on strike in Lancashire,—virtually on strike, we say, even while locked out; inasmuch as it is their stubborn, and, indeed, under the changing circumstances of trade, absurd persistence in a demand for 10 per cent. of increase, on wages which they no longer possess, that alone leads to their continued lock-out by the masters, who have now entered into a more perfect mutual understanding than ever to resist the undisguised struggle for sheer *mastery* over the trade, for *that is now the real point at issue.*

In the letter referred to, the author declares that the leaders, who are literally *compelling* the unemployed to resist, and the employed to sustain them in resistance, are inevitably disorganizing the trade as well as ruining their fellows,—that a mill is not a republic, to be governed by a mere subservient of the workers,—that nevertheless the interest of the master is tied up with that of his servants,—that the latter have a perfect right to ask what they like for their labour as a commodity, but not to compel their employers to purchase it, or to force other operatives to refrain from disposing of theirs,—that the workers, by their present course, are virtually and really trying to drive the capitalist, their employer, to America or elsewhere abroad; while the capitalist in striving to reduce the prime cost of home labour &c. in manufactures, is essentially doing his best to preserve to his workers that livelihood which foreign capitalists and workers are ever striving to withdraw from both him and them; for that three-fourths to four-fifths of all the cotton they spin or weave is exported in direct competition with the labour of other countries, as well as with the home labour, now extending, of those countries where our exports are sold, and where we can continue to sell them only so long as ours are cheaper,—that if the capitalist cannot get 10 per cent. more *for himself*, he is not likely to be able to get it for his workers,—that wages will be reduced instead of raised by the present attempt, from the introduction of machinery in every possible shape,—that the working classes cannot be masters till they be paymasters too, and had better erect mills with their money than support the present strife for the mastery,—that their agitators are leading them the like silly dance that poor mad O'Connor led thousands who were fooled out of not less than 100,000*l.* in spite of all endea-

vours to undeceive them,—that if they want to know how labour gets on as master without capital, or with capital as servant, let them look to the past in Ireland, now beginning to prosper in circumstances the very reverse,—that the working classes ought to establish their own independence by saving, by education, forethought, and prudence, and by total abstinence from intoxicating drinks more quickly than by anything else,—that then they might compete with other capitalists, by joint-stock mills, but not till then,—that then they will find that even they must buy the labour they employ as cheaply as possible in mere self-protection, and in duty to their workers as well as to themselves,—that as it is they are not only losing both time and money, but ruining themselves and their families, especially their children, physically and morally. Education for themselves and their children, adds the writer, is what the working classes want to render them thoroughly independent.

Lord Palmerston, as Home Secretary, has written a long and feeling letter to the operatives of Preston, in reply to a memorial for the aid of Government in the settlement of their dispute with their employers. While regretting the inability of Government to interfere [and how could they, to any good purpose, however willing?—and, indeed, does not this appeal just show what unsubstantial and impracticable shadows the disputants will grasp at in their very natural but not very enlightened attempts to improve their condition?], and while remarking that he is not sufficiently acquainted with the real state of the question in dispute,—his lordship expresses his great sympathy with the operatives, and his deep regret that such a misunderstanding should exist. The evils arising from extensive and general strikes he justly regards as probably greater than those that would even ensue from really inadequate wages. He fears that an increase of wages may check the masters in their hard race with the similar manufactures of other countries, and so injure the interests of the operatives themselves, by diminishing an apparently flourishing trade, which depends on that very cheapness which moderate wages render practicable, and he suggests the reflection that it is unfortunate this very prosperity of export trade, so dependent on the rate of wages, should have concurred in inducing the operatives to look for a rise in wages, which may thus tend so materially to frustrate its own end.

A letter recently published in the *Times* casts a new light on the real nature of the present struggle; for in it a Preston mill-owner confidently states that the operatives have had an organized design to *strike in detail*, and so compel some masters piecemeal to raise wages, while others are supporting those on strike by help of the wages given to their own workers. And knowing that this same system has been adopted of late in the metropolis, we are fully induced to believe in the probability of the assertion, and deeply regret it, much more on account of the fatal consequences to the operatives themselves than to their employers, to which the successful accomplishment of such a subversion of all order would inevitably lead.

DISCOVERIES AT TARRAGONA, SPAIN.

This ancient locality has been, for some time past, a source of interesting archæological discoveries. As early as 1851, an Egyptian tomb had been found near the harbour, and shortly after a Roman Mosaic pavement came to light. But it soon appeared, that *below* the stratum containing the Roman ruins, another species of ruined buildings was to be met with, as large stone capitals of a simple, most antique shape came to light, resembling those of the Hercules temple of Kora. In 1852, on making the foundations for a garden wall, another fragment of Egyptian hieroglyphs and characters came to light; and somewhat later, a fragment of a celestial planisphere of the northern heavens was discovered. At the beginning of this year, the Academy of Madrid sent a commission to the spot, under whose direction the following discoveries have been made. First, some fragments of vases of an Etruscan pattern, some with Iberic legends, and some Iberian coins, with letters in that language. This recals to our mind a passage of Strabo (lib. iii.), where he speaks of Iberia as possessing a literature 6,000 years old. At the same time the head and chest of the statue of a god were found. It is made of the stone found about Tarragona, and bears the Egyptian beard: on the chest is a Scarabæus of very high relief, and the lower part of the fragment is covered with hieratic inscriptions. During the same excavation were found a great many fragments of a *stucco*, of superior fineness and polish, which had served for the coating of the walls, also with fine colours and hieratic signs, as well as some friezes of buildings, with Ovolo ornaments of a very antique character. Moreover, the remnants of a floor, made of a mass of great hardness and fine polish, were found. All these fragments were scattered within the area of a building of 8 *mètres* long and 367 *mètres* broad, whose walls had yet the height of nearly 6 feet, and had been coated with the stucco alluded to. It is thought, that these ruins belong to an epoch much anterior to that of Roman civilization. Equally interesting are some considerable remnants of a Cyclopic wall found on the hill near the harbour of Tarragona, which at some places are 7 *mètres* high and 5 *mètres* broad, and *upon which* rest other ruins of an Iberic type.

NOTES AND INQUIRIES.

ARCHITECTURAL AND ARTISTICAL.

Flues.—By the Chimney-sweeping Act we are forbidden to make a smoke flue less than 14 inches by 9 inches. We all know that there are many occasions and places where a flue 9 inches by 9 inches would be far preferable, and where a circular one 10 inches diameter would be still better; so that we must either build illegally or act contrary to our judgment and experience. I confess that I do not hesitate to adopt the former course. What is the course taken by others? S.

Sound.—I shall be glad to be informed of a non-conductor of little weight, and not likely to harbour vermin, that will prevent sound from passing through the partition when a room is divided into two by means of a boarded division, or of one formed by lath and plaster? A.

RAILWAY MATTERS.

It is stated that the forthcoming dividend of the Great Northern Company will be at the rate of 4¼ per cent.; and as the returns have now risen above 3 per cent. on the capital, the wages of the *employés* are to be raised 10 per cent.——The coal trade which the company have originated at Grantham is rapidly increasing.——The directors of the Great Northern Railway Company have given orders for the application to all their passenger-trains of an invention to enable the guard in the last break-van to communicate, in cases of danger, with the engine-driver. The apparatus consists of a large hand-wheel fixed on a dead-centre in the break-van, a cord passed under all the carriages of a train by means of swivels, and a cup-bell about a foot in diameter placed near the engine-whistle. By means of this contrivance the guard will be enabled, when required, to attract the attention of the driver by turning the wheel in his van, which will sound the bell near the driver. We hear that this invention is now being adopted generally on the narrow-gauge lines, and that all the Great Northern passenger-trains will be supplied with it by 1st of February.——The bridge at Asnières for the Rouen, Havre, Western, Versailles, and St. Germain Railways, has been reconstructed. This bridge, which is of iron, and has four lines of rails, has been constructed in the same direction as the temporary wooden bridge erected after the destruction in 1848 of the original bridge. The new bridge runs, in fact, under the temporary bridge, the difference of level being 1 mètre 25 centimètres. The necessities of the service, says *Galignani*, only allowed three hours each night for the new work, and the last operation was to gradually bring down the level of the old rails to that of those on the new bridge. 400 men were employed each night.

PROPOSED RESTORATION OF ULM CATHEDRAL.

At Ulm, once a free imperial city, now an important frontier town, of the kingdom of Würtemburg, and in the centre of Germany, there is found one of the finest buildings of mediæval architecture, erected at a period when the building art was at its culmination. It is, however, like that at Cologne, unfinished. For the completion of the latter, the sympathies of all Roman Catholic Germany have been invoked with success ever since the discovery of its original design, by the indefatigable Boisserée, gave an impulse to finish it.

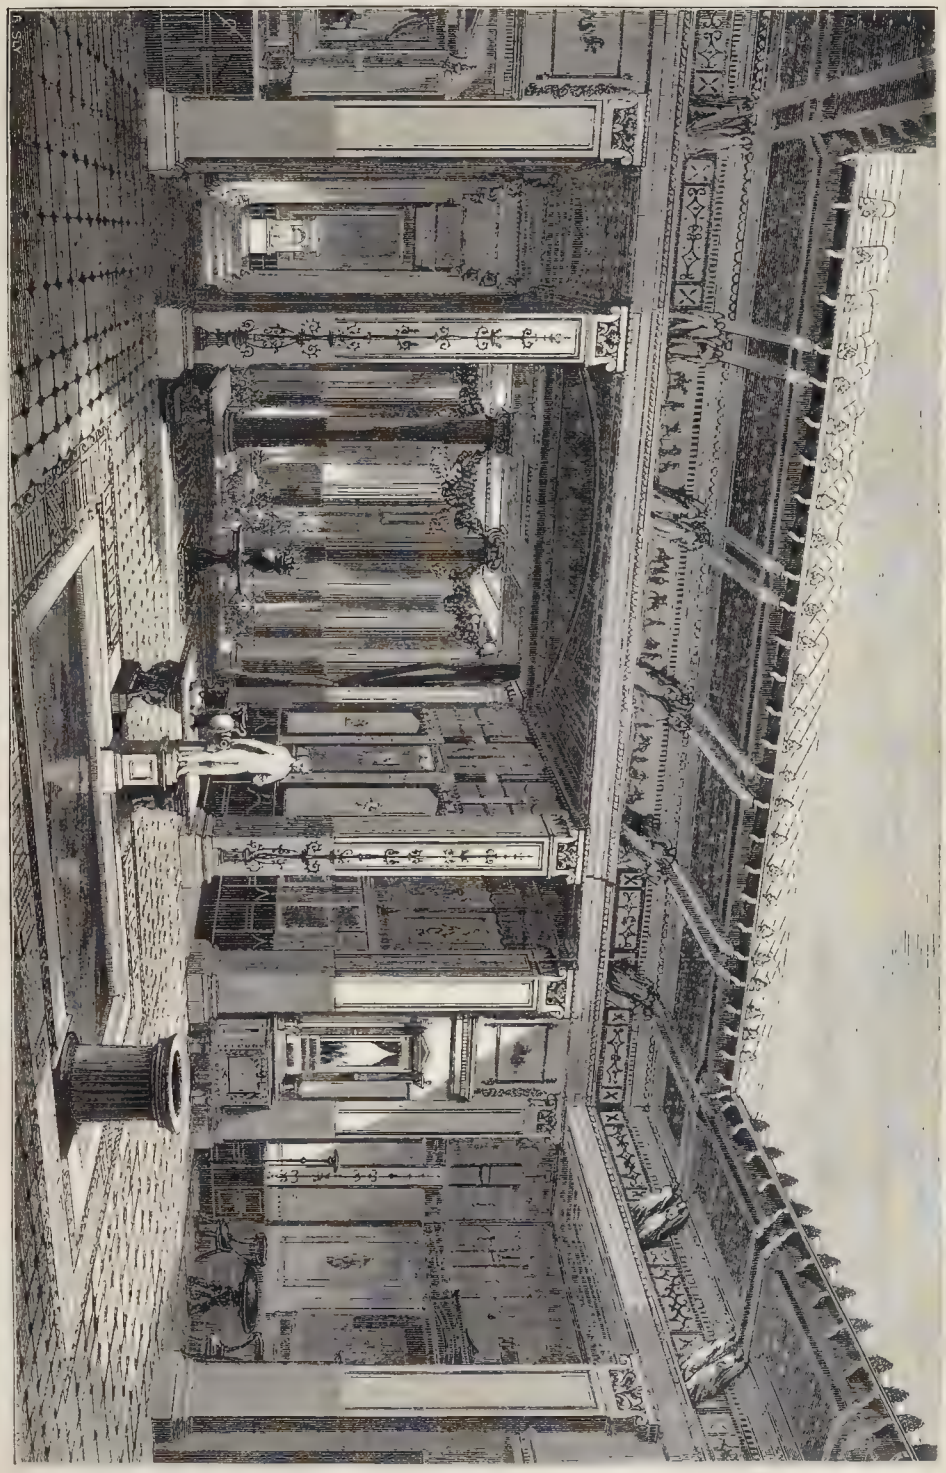
Ulm is now a Protestant Church, a worthy rival to the Roman Catholic Cathedral in grandeur, art, and beauty, but like that only partially completed. An appeal has gone forth to enlist Protestant sympathies, and those of reformers of all creeds in its favour, but more especially have the lodges of Freemasons in all countries been invited to aid in perfecting a work, which would be one of the most beautiful works of Gothic architecture, and one of the largest temples of Christian or Pagan worship in the world, as some of its dimensions will testify. It is 416 feet long, 166 broad, inside measure, and 141 feet high, including the thickness of the stone vaulting. The western tower will be 520 feet high, equal to the height of the highest pyramid, and surpassing St. Peter's dome at Rome, by 2 feet; Strasburg spire by 46 feet; St. Stephen's, at Vienna, by 67 feet; Salisbury, in England, by 130 feet. The spire will be the most beautiful specimen of that reticulated work which has been aptly termed petrified lace, so much admired at Antwerp, Strasburg, and Batalha Abbey, in Portugal, of which a curious specimen is given in Müller's "Denkmaler der Deutschen Baukunst."

It is intended to form a committee for the reception of British contributions, for the completion of this great work.

WILLIAM BELL, Ph. Dr.

NEWS FROM IRELAND.

Armagh.—We find that Mr. M'Cathy has been commissioned by the primate to superintend the finishing of the works at the cathedral, which have been suspended for seven years, and they are to be recommenced on next St. Patrick's day. The dimensions in clear are 220 feet by 80 feet, exclusive of transept, which is 120 feet by 30 feet in clear. The plan comprises nave with aisles, choir with aisles, transepts, two towers at west end, and a large tower at crowning of nave and transepts. At present the building is erected to a level of top of aisle-walls without mullions or tracery in windows. The style is Perpendicular, and the architect who designed the original edifice was the late Mr. Duff.



Dublin.—The long talked of additions to the Royal Dublin Society house are now likely to be matured, and the plans, we are told, have been prepared at the Office of Public Works, and forwarded to the Treasury for approval. It seems, therefore, that Government is aiding the Society in this matter, for we are aware that plans were prepared more than two years since, but could not be carried out owing to want of funds.——A new line of street is proposed to connect the Broadstone at Upper Dominick-street with the locality of the Four Courts, but we would (in conjunction with the local press) impress upon the corporation the necessity of keeping the present streets in something like a *passable* state before new ones are thought of.

Naas.—The Catholic church here is to have a new tower and spire, and the cutting of the stones is proceeding. The total height will be 200 feet.

Ossory.—A new R. C. cathedral is proposed, and we are told some important subscriptions have been received.

Trim.—The town commissioners here have been bestirring themselves with energy. Gas-works have been built, and the town lighted, to the great satisfaction of the inhabitants.

Londonderry.—A new Wesleyan chapel has been erected on the site where the late Dr. Adam Clarke commenced his missions.

THE POMPEIAN COURT, IN THE CRYSTAL PALACE.—Mr. M. Digby Wyatt, Architect.

[See page 1 *ante*.

PROVINCIAL NEWS.

Leyton.—On 18th ult. the church of Leyton, in Essex, was reopened for Divine service, having been repaired. Instead of the high pews, it has been refitted with open oak seats. A new pulpit and reading-desk have been provided, and a stained-glass window placed over the communion-table.

Wisbech.—At Duddington Church, near Stamford, a memorial window has been put up in the eastern end of the chancel, by Mr. Baillie, of London,—a gift of Elizabeth, widow of Mr. Hugh Jackson. It is a triple lancet window, of Early English character. In the centre compartment is the figure of our Saviour, with orb. The upper portion consists chiefly of crocketed canopies, pinnacles, &c.; the lower, of the Pelican, with text. On the right of our Saviour, in the side opening, is the figure of St. Peter, with emblem. The architectural canopy is of the same character as the centre. In the lower part is the cross, with text: the remaining opening is occupied by the figure of St. Paul, with emblem: in the lower part is the anchor, with text.

Madresfield.—The new church of St. Mary here, according to the *Worcester Journal*, was consecrated on Thursday week. It has been erected on the site of the old church, and entirely at the expense of the late Earl of Beauchamp, at a cost of 1,900*l.*

Newport.—The new parish church of Risca was consecrated on Thursday in week before last. It stands on the site of the old church, and is in the Decorated style of architecture (middle period), and was commenced about eighteen months ago under the superintendence of Messrs. Habershon, of London and Newport, architects. Messrs. James and Hardie, and subsequently Mr. B. Farmer, were the contractors. The building is of Pennant stone, with Bath-stone dressings. The nave and chancel roofs are carved with open tracery. The paving is of Painswick stone, laid in diagonal squares. There are six stained-glass windows, all presented by different promoters of the new building. The rest of the windows throughout the building are of cathedral glass.

Bangor.—Preliminary arrangements for the erection of a new church in Bangor have been completed. The Hon. Colonel Pennant, M.P. has given a site, in addition to 500*l.* The church is to contain 600 sittings, one-third free.

Menai-bridge.—It is also contemplated to erect a new church at Menai-bridge. This neighbourhood is very populous, especially during summer, and the present little church is insufficient. The Dowager Lady Willoughby de Broke has promised to give 500*l.* towards the new building.

Eccleston.—The church here was reopened on Sunday in last week. The improvements just completed consist of widening the church at west end to full width of nave; removal of the octagonal apse, or chancel end squared to full length of original, and a chancel 20 feet by 12 feet added, which is divided from the church by an arch. The iron windows have been removed, and jambs, mullions, and tracery of stone built in their stead. The stone screens separating the transepts from the nave have been removed. A new vestry has been built on the western side of north transept. The tower has been repaired and strengthened. The whole of the old pews have been removed, as also the flooring, and the old cumbrous heating-chest which stood in the centre. The construction of the floors is hollow, and air circulates freely underneath. The drainage has been made more complete, and the outer sides of the foundations have concrete banked up against them, and covered with flags: the lower part of the floors has also been concreted. Various other improvements and alterations, particularized in the *Chester Chronicle*, have been effected. The church is warmed with pipes and apparatus after Sylvester's patent, fixed by Mr. P. Leigh, of Salford. The whole of the works have been executed from the designs and under the personal superintendence of Mr. Edward Hodkinson, of Chester, architect. The contractors were Mr. Dean, of Leftwich, for masonry and flooring; for carpenter and joiners' work, Messrs. Bellis and Williams; plastering, &c. Mr. Josh. Jones; painting and gilding, Mr. John Morris; and plumbing, Mr. John Moore, all of Chester. The whole of the works were completed at the expense of the Marquis of Westminster.

Great Crosby.—A new church was consecrated here on Sunday in last week. It is dedicated to St. Luke, and is built on a site to the right of the village, entering from Liverpool. Its ground-plan is cruciform, the church having a nave, transepts, and chancel. It is 108 feet in length from west to east: the width of nave is 40 feet: the transepts are each 28 feet in length: the general height of the walls is 20 feet to the cornice or spring of the roof, and 40 feet high to the apex or ridge. At the western end there is a tower and spire, rising to the height of 120 feet. Interiorly the roofs are lofty, supported upon arched open timber framings, intersecting in the form of a groin at the junction of the transepts with nave and chancel: the material, as well as that of the pew divisions, is of stained pine. The transept windows are tall, with slender mullions and tracery, the intervals filled by stained glass. The chancel, which is octagonal in form, has its ceiling painted in deep ultramarine, studded with golden stars: its windows are filled with stained-glass, the principal ones occupied by designs representing the Annunciation and the Birth of Christ: the side windows are decorated by shields bearing armorial devices. The chancel floor is laid with a tesselated pavement of Minton's encaustic tiles. The pulpit is ornamented by devices of carved white stone, the interstices between filled up by rock-face work of pale blue stone. The font is carved of Bath stone. The stained glass was provided by Messrs. Pilkington, of St. Helens. The edifice is in the Decorated style, and dedicated to St. Luke. It has been built from designs by Messrs. A. and G. Holme, of Liverpool, architects, and is constructed chiefly of Stourton-hill stone, filled up with rock-faced stonework from the quarry of Upholland. The building has been finished at a cost of 3,500*l.* contributed in voluntary subscriptions,

Birmingham.—The town-council having remitted to the inhabitants, for their sanction, a resolution authorising an application to Parliament for power to levy a penny rate to maintain in a proper state any land which might be obtained for the purpose of forming public parks, on Friday in last week, the necessary public meeting was held at the town-hall, the mayor in the chair, when it was announced that Lord Calthorpe had offered forty acres of the most valuable of his land near the Bristol road, and close up to the town; that Mr. Alderly (the donor of all the land on which have been established the reformatory institutions near the town) had offered a plot of equally eligible land in another quarter; and that Mr. Joseph Sturge will give a valuable piece of land in Edgbaston for the same good purpose. The application to Parliament for power to levy the rate was sanctioned by the meeting, and the town-clerk was instructed to prosecute the Bill in Parliament.

Stockport.—Two stained-glass windows have been put up in the chancel of the parish church, one over the priest's door, given by Mr. Thomas Hill of Portwood; the other, near the nave on the south side, the gift of Mrs. Robinson, of Spring Bank. In the former are two scenes representing respectively the captive Israelites by the waters of Babylon, and our Lord predicting the destruction of the temple at Jerusalem. The latter has also two compartments, in one of which is depicted our Lord teaching his disciples, while the other represents St. Thomas putting his hand to the Saviour's side. A mural monument of white marble has also been erected in the south aisle.

Mottram.—At a recent meeting of subscribers to the restoration of the parish church, as reported in the *Manchester Courier*, it was stated that 1,800*l.* and upwards had been realized. The senior warden then explained that the works required to restore the edifice would involve taking down the whole of the clerestory, and the roof from the side aisles, leaving only the outer walls, the tower, and the chancel standing, and rebuilding on a similar plan, with only such alterations as would be necessary to make the new parts correspond with the original architecture of the church. Mr. E. H. Shellard, of Manchester, was appointed architect.

Chorlton-upon-Medlock.—The newly-erected church of St. Stephen, in the district of St. Saviour's, was consecrated on Friday in last week. The site is Milton-street, Stockport-road. The church is in the decorated Gothic style, and consists of a nave, two transepts, with a tower at the corner of the nave, facing Milton-street and Everton-road. On the tower is also a spire with ornamental pinnacles, with flying buttresses at the angles of the tower and the base of the spire. The tower is 56 feet high. The length of nave is 80 feet 7 inches by 41 feet. The two transepts from each end of the wall are 78 feet 9 inches, and are each 26 feet wide. At each end of transept is a large ornamental window, and the nave is lighted by small windows of a similar description. The main entrance is through the tower, and there is another entrance from Milton-street. The nave is one complete roof, and at the tower end of it there is a large ornamental window. All the seats are open, and are to be stained and varnished in imitation of dark oak, as also the gallery fronts and timbers of the roofs. Around the church fronting Milton-street is a low stone wall. The edifice is intended to accommodate 1,019 persons, 6-feet sittings, 369 free. The parsonage, which adjoins the church, is in the same style of architecture. Both are built of Yorkshire stone. The architect was Mr. E. H. Shellard, and the builder Mr. Mark Foggett. The contract for the church was 3,360*l.* The total cost of church and parsonage will be upwards of 5,810*l.*: of this sum 300*l.* are still unsubscribed.

RUINS.

In gazing on the ruins of some noble edifice, one might almost imagine its architect had even bestowed some thought on the appearance it would make when fallen into such a condition, at the time it issued from his hands in its original symmetry and completeness. When so much regard was necessary to be paid to the means for obtaining great convenience with beauty, it is not probable that it entered into his head to conceive what would be the effect of the structure when it should become a ruin. If such an idea occurred it would show him to have been a benefactor to posterity, as well as an enthusiast in the work produced for his own generation to admire. It is certain, however, that the finest edifices make the grandest ruins. Time, which gives its venerable aspect to all things, batters and shapes many of them into beauty. But much of the emotion such relics excite depends on that architectural character which years are unable wholly to efface,—character arising out of the excellent qualities of the structure, such as the permanent nature of the materials employed, the colour and tints of the stone or marble, natural or acquired, the taste in the finishing and care of the details, and the skill displayed in their construction. Other causes are also contributory to this effect, namely, their situation and accompaniments, whether of a pastoral, wild, savage, lovely, romantic, or tremendous kind.

There are some fine old parish churches in England which have little yielded to the effects of time, a fact owing not so much to excellence of material but to the skilful manner of employing it,—to the perfection attained by the workmen in the management of it, through careful practice, the walls of many of these edifices consisting of a mixture of squared flints inserted amidst a framework of freestone, producing, it is true, with the help of good cement, a firm and durable fabric; yet the use of this rugged material was suggested by considerations of economy, as good stone could only be got from distant quarries.* In some parts of the country one sees buildings of a ragged, mouldering, ruinous appearance, owing to the quality of the red sandstone of which they are constructed, although these may not always be of very ancient date. Others, as in castles anciently strongholds of great military importance, exhibit, in the stage of demolition to which storms and violence have reduced them, thick double walls, the intervening space of which was filled up

* Pugin's "Examples of Gothic Architecture," vol. i. p. 44.

with stones and hot cement, the whole of which was concreted into one solid mass of such strength as to have rendered them as fortresses nearly impregnable.

It is refreshing to the spirits to come to some ruins, not of great consequence in an architectural sense, but startling by being placed near ordinary houses, but of small extent yet of singular beauty, making a very altar in the sequestered green spot in which they are situated; some small rustic chapel, sculptured fountain, grotto, or gateway,—objects not unfrequent in this and other countries.

No less the far-famed temples of Greece; those, for instance, at Olympia, Sunium, Ægina, are in lonely scenes secluded from the commonplace things of the world—solitary sanctuaries, where, in such silence and solitude,—their proper accompaniments—they exert their full effect on the mind, when they can be carefully observed and fairly appreciated. Majestic ruins! what wonder so many travel far and endure much to contemplate you? Well might Gibbon conceive the idea of writing his great history whilst meditating among the ruins of the Capitol! Well might Shelley* lead his poet to wander among

"The awful ruins of the days of old;
Athens and Tyre, and Balbec, and the waste
Where stood Jerusalem, the fallen towers
Of Babylon, the eternal pyramids,
Memphis and Thebes, and whatsoever of strange
Sculptur'd on alabaster obelisk,
Or jasper tomb, or mutilated sphinx,
Dark Ethiop art on her desert hills
Conceals."

When it is considered that the nature of the country surrounding some of these celebrated ruins rendered it capable of producing little else but pasture for cattle, and offered no convenience for, sometimes put difficulties in the way of, commercial industry, we shall admire the energy and refinement of the inhabitants who, at great cost and labour, must have executed works of this kind. A modern traveller† justly remarks that such results can only be accounted for by what Horace said of the Romans—

"Privatus illis census erat brevis,
Commune magnum."

The ruins scattered over Italy and her provinces show what a people could effect when actuated together by this liberal spirit; what the contributions of a few communities could do: many of those works that now raise astonishment—that have been over and over again surveyed, measured, and booked—were erected at private expense; and almost all—for example, the theatres, baths, and aqueducts—were intended for public benefit.

Still, the greatest number, as well as the most considerable of the Roman edifices were raised by the emperors who possessed so unbounded a command both of men and money.‡ Augustus, Agrippa and the Antonines left behind them monuments which were the glory of the Eternal City, the ruins of which have attracted thither countless visitors, and added immensely to the revenues of Government.

"Under the reign of the Cæsars (writes Gibbon), the proper Asia alone contained 500 populous cities, enriched with all the gifts of nature, and adorned with all the refinements of art. Eleven cities of Asia had once disputed the honour of dedicating a temple to Tiberius, and their respective merits were examined by the senate. Four of them were immediately rejected as unequal to the burden; and among these was Laodicea, whose splendour is still displayed in its ruins. Laodicea collected a very considerable revenue from its flocks of sheep, celebrated for the fineness of their wool, and had received, a little before the contest, a legacy of above 400,000*l.* by the testament of a generous citizen. If such was the poverty of Laodicea, what must have been the wealth of those cities whose claim appeared preferable, and particularly of Pergamus, of Smyrna, and of Ephesus, who so long disputed with each other the titular primacy of Asia. The capitals of Syria and Egypt held a still superior rank in the empire: Antioch and Alexandria looked down with disdain on a crowd of dependent cities, and yielded with reluctance to the majesty of Rome itself."

* "Alastor, or the Spirit of Solitude."
† Bowen's "Mount Athos, Thessaly, and Epirus"
‡ Gibbon's "Decline and Fall," ch. ii.

Eustace, in his "Classical Tour through Italy," says truly,—"Ruins, till the revival of taste, in the fifteenth century, were considered as quarries furnishing materials to those who chose to employ them; and unfortunately many did employ them, with little or no regard to their ancient fame, their costly workmanship, or their fair proportions."

We know the excellent construction of many fabrics, classical and mediæval, now shattered or fallen in ruins by time, ravage, fire, earthquake, or wars, enabled them to endure for ages, on which account they have a strong claim on our admiration; and if ever similar disasters happen to our works, we should take care that their merits will ensure a commendation equal to that which we bestow on the works of our ancestors. F. LUSH.

LODGING-HOUSES FOR THE LABOURING CLASSES.

NEITHER philanthropy nor commercial enterprise has as yet succeeded in establishing for the labouring poor that description of HOME which is most needed by the classes necessarily located in the heart of London. There are lodging-houses for single men at 2*s.* a week, with reading-rooms and kitchens in common; others for families at rates varying from 3*s.* to 6*s.* a week, having also washhouses; others for single women, and various nightly refuges. These are all good and beneficent as relates to the comparatively small numbers benefited thereby; but the great want of the community, the crying demand, is not for *single* model houses, nor for apartments in barrack-like buildings, but for *clean, wholesome,* and *cheap* abodes, wrought up out of the old material at hand, viz the filthy, ill-drained, comfortless tenements which pervade all quarters of the metropolis. Benevolence has essayed to benefit the thoroughly destitute by establishing refuges, some free, others at a small charge; and the result on a very small scale is good. Enterprise has attempted in a few instances a self-supporting and paying system of lodging-house. In some cases it has succeeded: in others there has been a return of only one-half per cent. All are good, and tend to demonstrate the tone of the public mind, which is irresistibly drawn to the fact that needless suffering is imposed upon our poorer brethren through the remissness of some body or bodies, whether they be ministerial, municipal, or corporate.

That there is no comfort for any human being, or for any class of creatures, unless the HOME is comfortable, must be a self-evident proposition: how to effect the attainment of that comfort seems to be the study of our existing generation, that is, how to secure the greatest good and the greatest amount of happiness for the greatest number.

Possibly the late fatal access of disease may have spurred on slothful spirits by the reflection, that danger may arise from the propinquity of contagion; and there is no quarter of town or city, however affluent, which has not its undrained, ill-ventilated, and filthy Alsatia of poverty. The movement has begun, and if it has produced but a small amount of advantage to the *million* of poor, yet it has established the fact, that an incalculable amount of good can be done by commercial enterprise in the outlay of money as an investment on the improvement of houses for the labouring classes. Some of the houses already erected, being wholly new foundations, pay as much as 20 per cent.; and on the simple calculation of ordinary building profits, this must needs be the case, even although single rooms of good dimensions (say 12 feet square, or an area of the same contents) were let each so low as 1*s.* 3*d.* per chamber,—the fact being that the average rental of single rooms at present let out to families, in the bye parts of the town and city, is 2*s.* 6*d.* or 6*l.* 10*s.* per annum for every apartment, and that, too, in houses, the paint, the drains, the whitewashing, nay, the very window-glass whereof are left wholly neglected by the landlords.

In Whitecross-street there is a better order of houses, where attention is duly paid to the entirety, if not to the neatness of premises; and the agent who collects the rents receives, for every room of *nineteen houses,* the weekly rent of 3*s.*!! There's a return for the lowest description of house property. And why is this? Simply because the lodgers must be near their occupation: they are forced to pay this enormous exaction, because none are to be had so vicinal, and none cheaper of the same quality.

Now, the average rental of good eight or six-roomed houses in the suburbs—such as Portland, Camden, and Kentish Towns, Camberwell, Kennington, &c. &c. is 5*l.* per chamber, or 30*l.* for a six-roomed, or 40*l.* for an eight-roomed house, with *kitchen and washhouse.* These houses, too, are finished with some pretensions to taste; and, though aristocrats may smile at it, even to luxury. Comforts and luxury are comparative: a poor man can luxuriate in a clean, warm room, without excessive ornamentation: a clean kitchen is a luxury: a washhouse and drying-room or ground are exceeding luxuries,—luxuries the rich cannot appreciate, who have never sat an evening amidst the reek of a week's washing, extended on lines throughout the one sole living-room.

If, therefore, a small mansion or villa can be erected and let at the rate of 5*l.* per chamber, why should not houses of plainer finish, adapted to the wants of simpler folks, be erected and let at the rate even of 3*l.* a chamber?

3*l.* a year would little exceed 1*s.* per week, but suites of rooms constructed with recesses for beds (to separate the sexes, or children from parents) might be erected even at a much smaller cost; and such buildings might also have (if on a medium scale) common kitchen and washhouse, with all the accessories essential to the health and comfort of families. An able and practised architect assured the writer, that the cost of each suite of chambers, including a good-sized sitting-room, two sleeping-compartments, together with pantry, water laid on every floor, and the other accessories, need not exceed 80*l.*! Take the interest then of 80*l.* the outlay, at 5 per cent.: it is 4*l.*: add thereto for ground-rent, or usufruct of purchase, 2*l.*; and if you like, 2*l.* more, or 25 per cent. profit, and you have this convenient family abode for 8*l.* a year, or at a fraction under 3*s.* 1*d.* a week.

To secure, however, the most prompt and effective remedy, the alteration and adaptation of *old houses* should be generally carried out; not that the middlemen of St. Giles's or Clerkenwell could be prevailed on to let their tenures at moderate rents: no, they make too good a thing of it; but there are numerous houses and ranges which might be rented by companies or solvent individuals at a reasonable rate, and which, after alteration, repairs, and adaptation, would leave to speculators a very large profit, securing at the same time to the labouring poor commodious and cheap houses: this is the way, in this respect, to secure the greatest good to the greatest number: it is what the condition and circumstance of the age requires, and any one who enters into the calculation may be confident of the results.

It cannot be denied that there is an objection very prevalent against lodging-houses which on a large scale look like barracks. The very poor (and the poorest are those who must dress well and keep up an appearance, such as clerks, shopmen, ay, and even curates), think they must occupy a house in terrace or row, so as to have a designation and address; but this feeling will soon give place to that prudence and commonsense which led our countrymen in Scotland to subdivide their houses in flats. The French have long been habituated to occupy large mansions in community. They first established the omnibus (a species of conveyance that we at first ridiculed, but afterwards fell in with). The Italian noble often lives in his attic, *sublets* his palazzo, *piano nobile* and all, keeping the cellars only for the retail of wines, the yield of his vineyards. On the comforts of home depend the *amenities* of life: these are ever present with us: they cement the domestic affections, humanize the mind, elevate the morals, and shed a bright influence, which perishes not with life, but descends to our children, even in poverty. The *asperities* of home need no commentary beyond the daily reports of police-offices and criminal courts. Repelled by irremediable discomfort, the parent lodgers too often seek in the gin-palace what is denied at home; desertion and neglect become habitual; health fails; and

their offspring, the early object of tender cares and solicitudes, are driven on a course of vice crime, and retribution.

Here, then, is scope for the exercise of true philanthropy. If this is a Christian country, the pious or the Church ought to accelerate the movement: if we are only merchants, shopkeepers, and speculators, the adventurous will find a profit as well as "luxury in doing good."

QUONDAM.

NOTES ON IRON.

The Iron Trade.—The quarterly-meeting masters, at their preliminary meeting, resolved *not* to accede to the strenuous efforts that were being made to make a new start in prices; at same time, however, accepting the already declared rise of 20s. a ton as an acknowledged advance. It is satisfactory to observe that the attempt of speculators to force up prices still farther than the point already gained is now being very generally discountenanced, experience doubtless teaching fair traders to what end association with such characters inevitably leads. They seem at length to begin to see more clearly that high prices and permanent prosperity, so far from being synonymous or co-ordinate terms, are, in this trade at least, even almost incompatible. An article of such universal distribution and utility as iron can only form the basis of a generally prosperous trade so long as *moderation* prevails in prices current, all attempts to force up the cost of the raw material without awaiting the legitimate pressure of demand being certain only to embarrass and check the manufacturing and various other outlets of the article into general use, and so to re-act injuriously on the cause of the disturbance of the equilibrium itself. This very disturbance was already felt, in consequence of the late declaration of a rise of 20s. a ton, as a check to the returning prosperity of the manufacturing branches of the trade; and doubtless this fact, combined with fear of a like forcing up of wages, is what has led to the discountenancing of any further tampering of the same sort at the present moment. There is a manifest design, however, to try shortly a repetition of the late manœuvre, whereby the quarterly masters have already been jogged on to that upward movement which accords so well with their inclinations though not with their substantial and permanent interests; and if again successful, we should not wonder to see this new dodge normally established between every two series of quarterly meetings, till its mischievous influence be fully recognised. The quarterly-meeting masters are but too likely to regard it as a convenient feeler, which, at each successive quarter, they may either act on or disclaim, as convenience may seem to suit. If quarterly-meeting dicta have been denounced, as they *have* already been, by the *Times* and other authorities, no less than by ourselves, as essentially pernicious to the trade in their tendencies, much more is such an adjunct as this likely to be so, if it really be systematically established with an exclusive design to urge prices upwards. The prices now quoted in the trade interest are, 10*l.* for bars of best brands, and 9*l.* 10s. for secondary articles; hot-blast mine pigs, 4*l.* 15s.; cold-blast, 5*l.* 5s. to 5*l.* 10s. and hot-blast cinder-pigs, 4*l.* to 4*l.* 5s.

Extent of the Iron Manufacture.—In a lecture on the manufacture of iron, delivered at the Dudley Mechanics' Institution, by Mr. S. H. Blackwell, F.G.S. the lecturer stated the present annual production of iron in this kingdom amounted to the almost incredible quantity of 3,000,000 tons, and that of this a great proportion was manufactured in South Staffordshire. Some manufacturers, he added, now produced upwards of 200 tons a week.

Corrugated Iron for Steam Boilers.—Mr. Montgomery, of New York, has recently introduced a novel species of boiler, formed of corrugated iron, which is said to possess many advantages over those formed of flat rolled plates, and to be exciting much attention among those interested. It is stated that it more than doubles the strength, takes only one-half the space, is 30 per cent. less in cost, and will prove a great preventive of explosions, as in the rolling all blisters and flaws are brought to light which cannot be seen in flat rolled iron. It presents one-third more heating surface to the furnace than the present boiler, and the engineers connected with the naval department are said strongly to recommend these corrugated boilers.

Plate Rolling.—In 1847 (says the *Sunderland Herald*), when Sir Robert Stephenson designed the Britannia-bridge, he wished to procure for the bottom of that structure the largest plates of iron which the skill of this country could afford. He employed all the leading makers of plates in the Staffordshire district, where that particular branch of the iron trade was then most successfully conducted, and they put forth their best efforts to meet the views of an engineer whose undertakings promised to open out a new and wide field for the consumption of plate-iron. The largest plates required were 12 feet long, 30 inches wide, half an inch thick, having a superficial area of 30 feet, and weighing under 5½ cwt. After the orders had been some months on hand, Sir Robert's agent wrote a note, saying that, with one exception, the makers were not prepared to supply such plates, and so difficult was the rolling and shearing found to be, with the machinery then in use, that he entertained great fears of at least considerable delay. Five years have not been idly spent by the iron trade. The *Newcastle Journal* lately announced the formation at the Derwent Ironworks of plates which far excel everything hitherto done in this way. Mr. Forster, the manager, it states, has this week achieved the most extraordinary feat in iron-making ever yet performed, having rolled four magnificent beam plates, 17 feet 3 inches long, 5 feet broad, and 1½ inch thick, and each plate weighing no less than 1 ton 15 cwts. We have had occasion previously to notice many wonderful productions from these works, but these former wonders, though astonishing and unparalleled, such as plates of a ton up to 25 cwts. each, are now thrown into the shade by this last effort. Plates of such extraordinary size and weight cannot be produced at any other iron manufactory in the kingdom, and it reflects much credit upon the spirited proprietors of the above extensive works, and their able manager, at being able to accomplish such achievements as the above. The *Gateshead Observer* remarks on these plates:—"Wonders never cease. We have on several occasions noticed the extraordinary productions of the Derwent Iron Works, at Consett—to wit, a rail which quite eclipsed the sea serpent, and plates of a ton weight, and of vast breadth and length, for which a prize medal was awarded by the Commissioners of the Great Exhibition, and other things equally extraordinary. But now Mr. Forster, the manager at these works, has outshone himself, and produced what really seems incredible—four wrought-iron plates, 1¼ inch thick, 5 feet broad, and no less than 17 feet 3 inches long! Think of such plates, as long as a good comfortable room, and weighing no less than 1 ton 15 cwt. each! How men can lift such things at all, to say nothing of doing so when they are at an intense white heat, is what we cannot comprehend. And how they are sheared, too! Think of a pair of neat scissors quietly clipping the edges of such plates, 1¼ inch thick! If this does not 'whip creation,' we do not know what does. These large monsters have gone to Glasgow, to astonish the natives there, and are to be used as engine-beams, being much lighter and stronger than cast-iron ones."

CHARGE OF NEGLIGENCE AGAINST A SURVEYOR.

KEELING *v.* TAUNTON.—This was an action at the Marylebone County Court, before Mr. Adolphus, to recover 10*l.* 10s. under circumstances of some interest to surveyors, and parties engaging their services. The plaintiff stated that he was a surveyor and house agent, and engaged by the defendant, a gentleman of property, to make a report of a house he wished to purchase at 38, Craven-hill-park. For the report he charged the sum of 3*l.* 3s. and also a further sum of 2*l.* 2s. for a specification. About a week after this he received an amended specification from the defendant's solicitor; and on the following morning the defendant called, and informed him that he had made an arrangement with Bowles, the builder and former owner of the house, that he, the plaintiff, was to have the superintendence of the work of the house until it was finished, and asked what the charge for such additional services would be. He informed the defendant that it would be an additional five guineas, and he remarked upon this—"Oh, it will not be so dear, after all." He was engaged in general superintendence from June to September, and was constantly at the house. There were many alterations made, and there was a dispute as to the size of the conservatory. He had no complaints about the work proceeding slowly. He told the defendant it was utterly impossible to finish the house in less than six weeks, and he said he would take it out of Bowles's hands, and put it into witness's. After he had applied for payment, the defendant sent him a letter, objecting to the payment of the extra 5*l.* 5s. and offering to submit the charge to a third person, and that he who had it decided in his favour should hand over the 5*l.* 5s. to St. Mary's Hospital. Of course he could not think of doing business upon such extraordinary terms, and refused.

Mr. Taunton said he did not object to the first two items—namely, for the report and specification—but he certainly did consider it as an duty incumbent upon him to dispute the item for superintendence. He had entrusted the general supervision to Mr. Keeling, and he was warranted in saying that gentleman had acted far from diligently, or like an active surveyor, and put him to great inconvenience and expense. He was obliged to have the drains trapped: the cisterns were not properly done, and he had since to have them releaded, and other work performed, which it was the plaintiff's duty to have seen to. At this moment the workmen were still in the house.

By Mr. Dod (plaintiff's solicitor).—Mr. Keeling was only employed to superintend Bowles, the builder, who had repaired and made good the defects. Witness discovered the drains were wrong.

Mr. Dod, at some length, urged that the defendant was not warranted in making such sweeping charges against a professional man without some evidence in corroboration. As to the offer to pay the amount into St. Mary's Hospital, it was preposterous. His client had not done himself justice by only charging five guineas. The services rendered would scarcely requite a labourer. The specification set out the alteration and repairs Bowles was to carry out, and his client had acted throughout in a diligent way.

The Judge said he thought Mr. Keeling should have seen to the drains and some other things the defendant swore he had not done. He also thought that the plaintiff had done considerably more than was in the specification. As Mr. Taunton had suffered some inconvenience through Mr. Keeling, he thought the justice of the case would be met by deducting 2*l.* 2s. from the claim. Verdict for 8*l.* 8s. and costs.

ASSESSMENT OF BRICK-FIELDS, FULHAM.

AT a Court of Petty Sessions, recently held at the Holland Arms, Kensington, for the Western Division of Middlesex, an appeal was heard against the assessment by the parish officers of Fulham, of certain brick-fields in the occupation of the appellants, Messrs. Hughes and Co.

It appeared from the statement of the appellants, that they had taken a large estate in Fulham, containing a quantity of brick-earth, under a covenant to lay out 10,000*l.* in covering it with buildings within a limited period. At the time of the assessment they had four stools at work in the fields, and they had manufactured about 2,000,000 of bricks, of which a small part had been sold, and the remainder employed in the buildings on the estate. The appellants contended that it was unfair to rate the brick-fields higher than the market garden-ground adjoining, since the bricks manufactured were almost wholly employed on the estate, and would ultimately greatly increase its rateable value. They had brick-fields at Hackney, for which they were assessed at a surface-rent only of about 5*l.* per acre, and they should have no objection that their assessment in Fulham should remain at the same rate as when their land was used as market garden-ground, namely, 7*l.* an acre.

On behalf of the parish, Mr. Maclure, their surveyor, stated that the occupation of land as a brick-field was what is called a "consuming occupation." It was customary for the tenant, not only to pay a surface-rent for the field, but also a royalty, which was in the nature of a rent, upon the number of bricks manufactured, as a compensation to the landlord for the consumption of the soil. This royalty varied in different localities. The number of stools erected on the field was *primâ-facie* evidence of the quantity of bricks intended to be made; and as in the course of a season as many as 600,000 were generally made off one stool, Mr. Maclure considered that the valuation of the appellants' field was not too high. The particulars of that valuation were as follows:—

Upon the 4 acres of land occupied as a brick-field, a surface rental of 6*l.* per acre	£24
A royalty of 2s. per 1,000 on 2,400,000 bricks, the estimated quantity made from the appellants' four stools	240
Gross estimated rental	£264
Statutable deductions for tithes, repairs, tenants, and other taxes	54
Net rateable value	£210

Mr. Maclure submitted that the brickmakers' occupation was the subject of assessment, and whether it was made beneficial to him by the sale of the bricks, or by employing them himself in building, was immaterial to the parish.

The Bench decided that the royalty was the proper criterion of value, as it was, in fact, but another term for rent. They, however, thought, in this instance, as the appellants were likely to benefit the parish so largely, they ought to receive some consideration. Upon this suggestion, it was ultimately agreed by the parish officers to fix the assessment at 150*l.*

In the same parish, the Sewage Manure Company appealed against the assessment of their premises at Stanley-bridge, at 145*l.* Dr. Fuller, the chairman, stated, that hitherto the company had derived no benefit from their occupation, as the speculation had

failed, but they had no objection to be assessed for the present at 100*l.* although that amount was double their former assessment. Upon the company undertaking to submit to an assessment at the full value, whenever the scheme should become prosperous, the parish officers, at the suggestion of the Beach, agreed to the reduction.

THE RESERVOIR AT GREAT MALVERN.

OBSERVING in your number of the 31st ultimo, a letter headed "Construction of a Reservoir at Great Malvern" — "Law of Fluids," and quoting an answer said to have been given by the "clerk of the works," I beg to state that I am the superintendent under the engineer, Mr. James Simpson, and I most positively deny ever having expressed myself in such a manner.

The quotation, as it stands in your impression, is simply ridiculous; and I am only astonished that any sensible man having the least pretension to theoretical knowledge should have thought it worth while to disprove such an absurd statement, which I have reason to believe arose from a conversation with the foreman bricklayer, who has been so wearied during the last summer by the inquiries of visitors and others that he frequently answered *ironically*, and stated anything to get rid of them for the moment.

The simple facts of the case are these:—The reservoir is to be covered over, to preserve the water in the same *purity* and *coolness* as it springs from the hills: the covering is to be of brick arches, which the inner walls are intended to support. Such walls being thus necessitated, advantage is taken of them to act as counterforts, or rather as struts, in supporting the external walls *against the pressure of the earth without*, and not for *lessening the pressure of the water within*, as your correspondent was informed. By this arrangement a great saving has been effected in the thickness of the *outer* walls, which, instead of being 18 inches thick, as they are, must otherwise have been at least 5 feet, to act as retaining walls, to prevent their collapsing or overturning, when the reservoir was empties of water

If your correspondent will trouble himself to make a comparative estimate, as I have, of the cost of various ways of constructing covered reservoirs, with all due attention to their requirements and stability, he will find the mode adopted is more economical than the usual kind of roofing. R. ANDERSON.

Miscellanea.

BATH GRAPHIC SOCIETY.—The assembly-room at Bath were occupied on Tuesday, in last week, by the Graphic Society, who held their first *conversazione* for the season there. The attendance was very numerous, as were also the contributions of pictures and other objects of art and *virtu*, many of which had to be excluded from want of space. Amongst the works exhibited was a stained glass window, about to be put up in Newton St. Loe Church, which is being rebuilt under the superintendence of Mr. C. E. Davis, who exhibited the window. Two console brackets of Sevres china, which the *Bath Chronicle* thinks notable from the extreme delicacy of their decorations, were exhibited by Mr. Rainey; specimens of the raw material of encaustic tiles by Mr. Minton, and of glass by Mr. Powell.

SERIOUS ACCIDENT AT SOUTHAMPTON.—A destructive fall of earth happened in the Southampton Docks, on 3rd instant, when the great lifting shears on the north east quay of the tidal basin, erected about seven years since by Messrs. Seward and Capel, of London, suddenly fell into the dock, carrying with them a length of nearly 140 feet of the solid masonry of the walls and foundations, weighing probably some thousands of tons. The shears are it is said of the largest kind ever made: 80 feet high, with legs, each 15 tons in weight, and capable of lifting 80 tons dead weight at one time. They had been tested to a lift of 50 tons, and frequently lifted from 15 to 40 tons. The cost of the accident has been estimated by the dock company's engineer, Mr. Alfred Giles, at about £10,000.

LIVERPOOL ARCHITECTURAL SOCIETY.—At the usual fortnightly meeting of the Architectural Society in week before last, Mr. Verelst, the president, in the chair, a paper was read by Mr. Alfred Rimmer, upon "Farms and Farm-buildings." At the conclusion of the paper, a discussion on it took place, principally with reference to the stall-feeding of cattle. At the following meeting the first matter of discussion was a letter on the subject of brickmaking, received by Mr. Verelst, as chairman of the society, from Mr. C. B. Yarrow, of London. Mr. Yarrow draws a very unfavourable comparison between brickmaking in Liverpool and London; the bricks made in the former place being, he says, the worst he ever saw. Afterwards Mr. F. Howard read the paper for the evening, "On the Second and Third Volumes of 'The Stones of Venice,'" which he criticised with severity.

THE MOUSTACHE AND BEARD MOVEMENT. Sense and reason are likely to prevail in this movement, and there will probably be an end in a few years to the absurd practice of scraping the virile token of nature from the chin—a practice which can only rank with other absurd ones of a like order, such as the head-shaving and the pigtails of the Chinese—ay, and of a nation nearer home, who once wore periwigs in preference to nature's own provision, and adorned their posterior aspects with the plaited pigtail itself. The newspaper press, "to a man," with the *Times* now at the head of them, quoting from our columns, are against the pig-scraping process. The potent aid of the *Times* is an auspicious token of victory. The provincial press, too, are doing the cause good service. The *Sheffield Times*, while introducing to its readers the earnest advocacy, by correspondents, of the moustache among the steel-grinders, and in which honourable mention is made of our efforts, remarks, that "our hope is in our young men;" and that "those who have never shaved have simply to remain neutral, and with them the adoption of the beard would be a gradual process, and would soon cease to be singular." The editor also remarks that the difficulty is to induce the grinders to *take* any *trouble* for the diminution of the evil which the fun is designed to abate; but if they would go one step further, and *not* be *at the trouble* of shaving their faces at all, the moustache would filter the air they breathe, and exclude those fine particles of dust which destroy their respiratory organs ere they have lived out half their days." This is precisely the ground on which we, in the outset, based our anticipation of the success of this movement among the masses. The *Wolverhampton Chronicle* also allows an able correspondent to urge the subject in its columns; and in the *Dublin Advocate*, a lady brings before its readers our humble efforts, and gives her hearty concurrence to the change which will convert the smooth chin into an exclusive privilege of her own fair sex. The editor advises ten or a dozen persons here and there to *countenance* each other in simultaneous cultivation of the beard. The *Montrose Review* says that a number of the most intelligent young men of Montrose have given in their adhesion by allowing the moustache to sustain its adhesion to the human face divine. So is it in all quarters; and we incline to prophecy, with Rowland, that ere long the beard and moustache will be generally worn again, as of old, by our countrymen.

SUFFOLK INSTITUTE OF ARCHÆOLOGY AND NATURAL HISTORY.—The Quarterly General Meeting of members and friends was held on Thursday in last week, at the Bury Athenæum. The Rev. Lord Arthur Hervey, president, took the chair. On the table were a number of objects of antiquity and natural history, and on the walls were copies and tracings made by Mr. Bacon, of Bury, and Mr. E. Walden, of the mural paintings discovered on the walls of the nave of Bardwell Church during the recent restoration of that edifice; and explanatory papers on the subject were read, from the Rev. A. P. Dunlap, rector of Bardwell, and the Rev. J. W. Burgon, Fellow of Oriel college, Oxford. A paper on the Court Leet of the hundred of Clare, communicated by Mr. J. B. Armstead, local secretary, was also read, and some presentations were made.

COVENTRY EXCHANGE AND MUSIC-HALL COMPETITION. — We are informed that twenty-three designs were submitted to the committee in reply to their advertisement, and that from these they have selected one by Mr. Murray, resident in the town. The second premium has been adjudged to Messrs. Bidlake and Lovatt. According to a correspondent, the elevation is Italian in style, three stories in height, and occupying the full frontage allowed (viz. about 125 feet). The frontage is mainly appropriated for shops and public offices, such as savings' bank, telegraph, and railway-parcels, &c. except in the centre, where a columnar recessed portico forms the principal entrance to the building, and communicates directly with a hexagonal vestibule, leading again to the general corridors, lobbies, and staircases, which are plentifully distributed throughout. The vestibule just mentioned communicates with the hall or exchange-room, a lofty apartment of about 110 feet by 55 on the ground-floor, lighted partly from the sides, and partly from above. There is a slight recess at one end for the orchestral platform, which is contrived so that a portion will slide back when not in use, and the opposite or audience end is semicircular, of the whole width of the room, and divided in height into tiers of galleries, to which is affixed a row of private boxes.

INTEMPERANCE IN SCOTLAND.—Messrs. Baird, of Gartsherrie, in the West of Scotland, the extensive iron-masters, are said to have agreed to pay 1*d.* a ton extra on the quantity of iron produced at furnaces wrought on total abstinence principles. The experiment is reported to have been attended with satisfactory results to all concerned.

THE STOKE-UPON-TRENT ATHENÆUM CONVERSAZIONE.—The annual conversazione of this institution took place on Tuesday in last week at the new Town-hall, Stoke, in the large room occupied by the School of Design, lent for the purpose by the committee. About 600 persons were present. Alderman Copeland had lent for exhibition some fine animal-paintings, by Herring, including "Mazeppa on the Wild Horse." Mr. S. C. Hall also had allowed to be shown a large number of water-colour copies of some of the finest productions of the ancient and modern schools of painting contained in the private galleries of the Queen at Osborne, Windsor Castle, and Buckingham Palace, which her Majesty had permitted him to select, and have copied, with a view to their publication as engravings. These, together with a choice display of the local manufactures from the establishments of Messrs. Minton, Alderman Copeland, and Messrs. Adams, were exhibited in the magistrates' room. The meeting, previous to the concert, which constituted an element in the evening's enjoyment, was addressed by Mr. E. Butler, who presided. Mr. Battam then delivered a dissertation on the usefulness and advantages of literary institutions; after which Mr. S. C. Hall spoke, and was followed by other gentlemen with brief addresses, and the evening's entertainment was concluded with music.

OPENING OF THE FIRST FREEMASONS' HALL IN CHINA.—On 13th October last, at Hong-Kong, the brethren of the Zetland Lodge, No. 768, gave a banquet on the occasion of opening the Freemasons' Hall there, being the first temple specially dedicated to Masonry in China, so far as seems to be known. This building was projected by the late Brother S. Rawson, P. G. M. who laid the foundation-stone with due Masonic honours, on 1st February last, and since then, by the exertions of Brother Cleverley, architect, the building has been "tiled," and brought to a perfect state, by the W. M. Brother Mercer, D.P.G.M. as mason. The necessary work having been "well and duly performed," the craft retired from Jachin to Boaz, from labour to refreshment, and spent the evening, till far beyond "high noon," in "harmonizing in the light," while all "without" were "in the dark."

MR. J. REMINGTON, inventor of the Remington Bridge and many other clever contrivances, died recently in Galveston, Texas. Mr. Remington for some time resided in the neighbourhood of Stafford. He erected one of his bridges over the Trent, at Ingestre, on Earl Talbot's estate.

DEVON AND CORNWALL ARCHITECTS AND ENGINEERS' SOCIETY.—A meeting of the members of this society was held a few days since at the Great Western Docks. Among other business brought forward by Mr. Damant, the hon. secretary, was a proposal for holding the future meetings of the society at the Plymouth Athenæum, and of establishing a library for the society there, until it should be in a position to procure premises of its own. This arrangement was agreed upon by the meeting.

THE INSURANCE TAX.—It has always appeared to me that Government should assist rather than discourage (as it certainly does by its 3*s.* per 100*l.* tax) the insurance of house property, and "Quondam's" letter in your paper of the 24th ult. on the subject induces me to trouble you with the following suggestion. If the Chancellor of the Exchequer cannot afford to give up the tax altogether, why not change its form, and levy a tax of 1*s.* or less per 100*l.* on all house property, whether insured or not? I believe a tax of 6*d.* would increase the revenue, and lead many more, if not all persons, to insure. If this were to take place, the insurance offices would be enabled to diminish their premiums; and probably the tax and premium, in time, would not amount to more than 1*s.* 6*d.* per 100*l.* Could this be accomplished, the Government would confer a great benefit on the country at large, without impoverishing itself at all; and we should no longer hear of ruin and distress occasioned by calamitous fires.—R. B.

THE SEWERAGE OF DUBLIN.—The *Northern Whig* states that Mr. Dargan and Sir M. Barrington are making arrangements for the purification of the Dublin sewage, by Mr. Bardwell's patent filtering process.

NORWICH CHAPEL COMPETITION.—We are informed that the premium offered by advertisement in our pages for the best design for a new dissenting chapel to be erected at Norwich has been awarded to Mr. Edwin Pearce.

INJURIES FROM CONTRACTORS' NEGLECT.—In the Court of Exchequer an action was recently brought by a tailor, who had been severely injured by falling into a hole about 14 feet deep, in a road beneath the Blackwall Railway, opened by the contractor, Mr. Myers, while engaged with some works connected with the railway. An arrangement was come to in court, whereby a verdict for 350*l.* was taken for the plaintiff.

SMOKE CONSUMPTION.—Mr. Prideaux, author of a work on the Economy of Fuel, has been permitted, we hear, to try an experiment at Portsmouth Dockyard with his invention for the consumption of smoke. The experiment is said to be successful. It consists of a valve in the furnace-door, of simple character, "insuring intense heating and minute subdivision of the air in its passage through it." The door of the furnace remains cool.

ELECTRO-TELEGRAPHIC.—The wires of the electric telegraph are now brought into the centre of Yarmouth and Cambridge.

ARBITRATION AS TO RAILWAY STATION GROUND AT EDINBURGH.—In a question between the Perth and Dundee Railway Company, as representing the Edinburgh, Leith, and Granton Company, on the one hand, and the Edinburgh and Glasgow Company on the other, as to the value of a portion of the Granton Company's terminal space ceded to the Glasgow Company, Mr. Brunel, as arbiter, has fixed the value of the ground at 32,000*l*. The *Edinburgh Post* states the Perth Company's estimate at something like 100,000*l*. and the Glasgow Company's at 10,000*l*.! a difference of a mere cypher.

OPENING OF THE WALDENSIAN CHURCH AT TURIN.—On 15th ult. the church of the Vaudois, or Waldenses, at Turin, was opened for divine service. The building was begun in the autumn of 1851. It is said to hold about 1,200, and is in one of the best new streets of Turin, Via del Re, a kind of Boulevard. Its architecture is the Lombardo-Gothic. Without, the walls are sustained by buttresses; the chief door being sunk deep beneath circular arches and slender semi-Gothic pillars. Pinnacles rise above turretted angles: an ante-chapel of 20 feet in width, leads to a spacious nave, ending in an apsis of 30 feet diameter, pierced by round-headed lancet windows, the whole length of the church being 30 feet. On each side, six columns, with Lombard capitals, support circular arches, surmounted by clerestory windows. The pillars are in scagliola. Gas and warm air are introduced. There is some painted glass, and the walls are pierced with round-headed windows.

TO CORRESPONDENTS.

"*Books and Addresses.*"—We have not time to point out books or find addresses.

ADVERTISEMENTS.

HER MAJESTY'S COLONIAL LAND and EMIGRATION COMMISSIONERS are prepared to engage the service of a few unmarried young men, to be employed on the colonial survey of New South Wales. Preference will be given to men from the country districts, accustomed to straightline work, and the felling of timber, and to carpenters, brick layers' carpenters, and labourers especially such as have been employed as assistants to railway surveyors and engineers. The men will be provided with kit, provided by the Commissioners, with a free steerage passage to Sydney, and on their arrival in the colony, with full rations, and wages at the rate of 30*l*. per annum. They will be chiefly employed in the construction of roads at a distance from towns, and will have to live in tents whilst engaged on service in the bush. The equipment of the surveyors will be provided by the Colonial Government, and will consist of all the requisites for carrying and cooking food, and for the ordinary comfort's of a surveyor's life in New South Wales. The men, therefore, will be likewise provided in the bush, except for clothes, and may thus save most of their wages before they commence on landing in the colony. The accepted applicants will be required to sign a bond before they embark to serve the Colonial Government for three years in the surveying department. Application to be made at the office of the Commissioners, on MONDAYS, the 9th and 16th JANUARY, between the hours of NINE and TEN, and on other days between the hours of ELEVEN and FOUR By order of the Board,

S. WALCOTT, Secretary.

Colonial Land and Emigration Office, 4, Park street, Westm uster, 30th Decemuer, 1853.

ENGINEERING PUPIL.—An Engineer and Architect, practising in the most rising neighbourhood of the kingdom, has a VACANCY in his Office for a gentlemanly Youth as PUPIL, where he will have every opportunity of studying his profession practically.—Address, S. W. R. Messrs. Waterlow's 49, Parliament-street, London.

JOINERS, PLASTERERS, and a PLUMBER WANTED, at the Parsonage houses, West Cowes.

TO ENGINEERS.

WANTED, a WORKING FOREMAN, to take the management of the machinery of a mill in the country. He must thoroughly understand his business. Apply by letter to J. C care of Messrs. Dawson and Sons, Advertising Office, 74, Cannon-street, London

TO BUILDERS' CLERKS.

WANTED, by a London firm, a Young Man who can write a good hand and assist in the general duties of the office—Address, stating age, particulars, and salary required, to L. M. O. Office of "The Builder."

WANTED, a YOUNG MAN who can make Estimates, take out Quantities, and copy Drawings; he must write a good hand; one who understands smiths and founders' work and has been in a Builder's Office would be preferred. Apply by letter, stating salary, and where last employed, to D. G. Office of "The Builder."

AN ARCHITECT'S ASSISTANT, aged 23, is desirous of a RE-ENGAGEMENT. County preferred. Address A. F. 34, Harewood-sq. P. dington

TO ARCHITECTS, SURVEYORS, CONTRACTORS &c.

AN experienced practical SURVEYOR, meeting with a loss, wishes an ENGAGEMENT as confidential general managing ASSISTANT, in the following duties,—taking out quantities, dilapidations, measuring, prices, or superintending works; preparing plans, detail drawings, specifications, &c. &c. &c. at a moderate salary. Address, A. B. 8, Little Queen-street, Westminster.

TO BUILDERS.

A YOUNG MAN, aged 22, accustomed to measure of works, assist in taking out quantities, and the general routine of the Office, is open to an ENGAGEMENT. Most respectable references.—Address A. Y. G. Office of "The Builder."

TO ARCHITECTS, SURVEYORS, AND BUILDERS.

AN ASSISTANT voluntarily leaving his present situation, wishes to meet with an ENGAGEMENT. Salary moderate, and good reference given.—Address T. T. 20, Hunnington-st-et, Pentonville-road, Islington.

A BUILDER'S CLERK, 21 years of age, fully acquainted with the duties of the office, desires a RE-ENGAGEMENT. Address H. L. 11, King-street, Bakerstreet, W ndsd

A YOUNG MAN of good connections wishes for an ENGAGEMENT in the Office of an Architect or Builder. Address J. H. 68, Euston-square

TO ARCHITECTS AND SURVEYORS.

A YOUTH, aged 17, who has been in a respectable Architect's Office in the City for upwards of three years, wishes for a RE-ENGAGEMENT. Salary not so much an object.—Address Q. Office of "The Builder."

TO ARCHITECTS.

A YOUNG MAN, who has been four years in the above profession, wishes for an ENGAGEMENT. Has been accustomed to make fair and working drawings, and has a good knowledge of construction. Address, Q. E. D. 31, Surrey street, Strand.

A PUPIL to be ARTICLED, immediately, to a Civil Engineer, on railway, Government, or drainage works. In the United Kingdom or the Colonies; or to an Architect or Resident Land Agent, a liberal premium will be given. The youth has a knowledge of drawing and mathematics.—Address, with list of works in hand and premium, with and without board and residence, to H. B. 93, Piccadilly

AN Architectural Draughtsman is desirous of an ENGAGEMENT. Is conversant with perspective and the details of architectural practice. References of former employment given. Salary not a primary consideration.—Address, T. C. Office of "The Builder."

CLERK.—A highly respectable young man, 20 years of age, is desirous of obtaining a SITUATION in the Timber Trade, in or near the Office of Lord. Is well accustomed to both, writes an expeditious hand, and is quick at measuring. Unexceptionable references.—Address S. R. F. Office of "The Builder."

TO ARCHITECTS.

THE Advertiser, who is a neat and expeditious Draught man, and has been accustomed to prepare fair and working details, plans, elevations, sections, &c. is desirous of a RE-ENGAGEMENT.—Address, X. I. , Brunswick-place, Brompton.

THE Advertiser is desirous of meeting with a SITUATION to take charge of a Brick and Tile Works. He has been engaged for some years in large firms. The youth is a miner, and has a thorough knowledge of Brick and Tile making, as well as burning.—Address, post paid, A. B. 149, Lillington-street, Pimlico

WANTED, a SITUATION, by a Builder's ACCOUNTANT and BOOK-KEEPER of experience in pricing the trade's charges in all its branches, and in preparing the prime cost of works, however extensive. No objection to the country or temporary engagement upon arrears, &c.—Address, A. Z. Mr. Eaton's, Butcher, Vauxhall, Surrey.

TO CARPENTERS, CABINET-MAKERS, &c.

WANTED, by a steady, active Young Man, a SITUATION. Can make himself generally useful in either of the above lines. No objection in a jobbing Shop, having resumed to it before.—Address A Z No 4, Pope's-head court, Bell-yard, Temple-bar Wages and a mach better than a permanent situation

TO BUILDERS.—THE TRADE.

WANTED, by the Advertiser, a SITUATION as CLERK, in town or country. Is thoroughly versed in Builders' accounts, and will be found an acquisition to a jobbing Trade in any of the branches.—Address E. H. C. Office of "The Builder."

WANTED, a RE-ENGAGEMENT as YARD FOREMAN, by a practical carpenter; understands setting out and superintending carpenters' work, and measuring joiners' work. Has a good knowledge of all kinds of building material, and to whom the same is very respectable references. Address, ALPHA, Office of "The Build r"

TO BUILDERS AND OTHERS.

WANTED, a SITUATION as FOREMAN, by a good practical Bricklayer and Accountant, who has had the superintending of several extensive jobs in London.—Address, A. B. 19, Castle-lane, Westminster.

TO MANUFACTURING IRONMONGERS, ENGINEERS, IRONFOUNDERS, &c.

WANTED, an ENGAGEMENT as CLERK and DRAUGHTSMAN, having a general knowledge of the iron trade, and desires to make himself useful in the above lines.—Address, W. M. B. Mr. Lock's, News Agent, Gray's-inn-road.

TO ARCHITECTS AND SURVEYORS.

WANTED, an ENGAGEMENT in either of the above Offices, by a Gentleman who has been accustomed to getting out working and detail drawings, specifications &c. and who is well acquainted with the various Books of all Architects offices.—Address, A. B. at Mrs. Nutman's Newspaper Office, 32, Cumberland-market, Regent's-park.

TO ARCHITECTS, BUILDERS, AND OTHERS REQUIRING OCCASIONAL ASSISTANCE.

A PRACTICAL SURVEYOR, of 20 years' experience, undertakes to measure and value works, assist disputed accounts, take out quantities, make estimates, &c. Country business on a moderate commission to cover travelling expenses; and completion or tenders made a terms contingent on success. Address, SURVEYOR, care of Mr. Robinson, 2 Serjeant's-inn, Fleet-street.

TO GLASS-STAINERS AND DECORATIVE PAINTERS

THE ADVERTISER, having lost a very valuable member of his family, is in WANT of a PARTNER to take one-half, or a less share, in an old established BUSINESS. The establishment is situate in the country, and commands an extensive first-class trade comprising glass staining, painting &c. The establishment is well known; it commands a wide circle, and the trade may be considerably increased, if requisite. A prize medal was awarded to the proprietor at the Exhibition in 1851. The Advertiser requires an active business-like man, who thoroughly understands at least one branch of the business, or an architect and surveyor would be useful to him as he is one who can take a prominent part: none others need apply. Good reference will be given, and the same expected from applicants.—For further particulars apply by letter, addressed A B Mr Gundry's 1, Soho-square, London.

EVERY description of LIFE and FIRE INSURANCE BUSINESS transacted on the most liberal terms by the LONDON and PROVINCIAL COUNTY ASSURANCE COMPANY incorporated by Act of Parliament Offices, 38 New Bridge-street, Blackfriars, London Forms of prospectuses, forms of proposal, &c apply personally or by letter, to

WILLIAM SWINEY, Manager.

Active and intelligent agents wanted

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the public, corporations, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing at one shilling the foot.

R. S. NEWALL and CO.'s Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world

OFFICES,—Gateshead-on-Tyne.

TO ARCHITECTS.

COMPETITION and other DRAWINGS.—Mr THOMAS S. BOYS, Member of the New Society of Painters in Water Colours, and Author of "The Picturesque Architecture of Paris (about, Rouen," &c. and of "London, as it is," offers his services in Tinting Backgrounds, Landscapes, Perspective Views, Interiors, &c. From the long experience he has had in such subjects, he is fully aware of the points essentially necessary to be attended to. Drawings and the grain lithographed in a superior manner.—Address, Mr BOYS, 62, Albany-street, Regent's park.

ARCHITECTURAL PUBLICATION SOCIETY.—Members desirous of completing their sets of the publications attached, are requested to do so immediately, as but few copies remain. Part I. of the DICTIONARY of ARCHITECTURE can be obtained, on payment of the subscription in arrear, for the year 1852, to HOSE L. DONALDSON, Esq. Bedford-gardens, Russell-square, Treasurer; or to WYATT PAPWORTH, Esq. 14, Great Marlborough street, Hon. Secretary.—Dec. 31, 1853.

TO CARPENTERS AND BUILDERS

THE LEASE, GOODWILL, and UTENSILS of a SHOP in the above line TO BE DISPOSED OF.—Apply to Mr EDGAR PARKER, Ironmonger, 140, Fleet-street.

TO PLUMBERS, PAINTERS, AND GLAZIERS.

TO BE DISPOSED OF, an OLD-ESTABLISHED BUSINESS, situated in a main road, owing to the illness of the proprietor.—Apply at 91, Blackfriars-road, Surrey.

TO CARPENTERS.

WANTED, in London, or vicinity, CARPENTERS' WORKSHOPS, capable of working fifteen or twenty benches, with Grooined DWELLING-HOUSE attached. Particulars of rent and situation, to W. H. H. Mr. Clarkson's, 48, Penton-street, Pent nville.

TO PERSONS BUILDING or ALTERING.

The following useful SURPLUS for SALE:—An iron door, 7 ft. by 3 ft. 6 in. by 3 ft. 4 in. and 6 ft. 4 in. by 3 ft. 4 in. by 2 ft. 4 in. fights of high circular stairs; three pairs of glass doors, with moulded hinges; an iron furnace; six cast-iron column, 11 ft. 6 in.; seven ditto, 9 ft.; eight ditto, 7 ft.; an excellent crane and chain; rough plate, iron coping, transom and other articles. Dyer's Hall Wharf, 56, Upper Thames street.

PARIS BUILDING LAND COMPANY (Société du Nouveau Quartier Rollin) enrolled at Paris by M. Guenin, Notary, the 7th December, 1853. Capital, 1,600,000 francs, always to bearer of 500 cac. Deposit, 20 per share. No deed to be signed.

GERANTS.

George Woods, Esq. 67, Upper Thames-street, London.
M. Theodore Alphonse Bayle, 58, Rue des Bernardins, Paris.

BANKERS.—MM. Le Roy, De Chabrol and Co. Paris; Messrs. Heywood, Kennards, and Co. London.

SHAREBROKERS.—Messrs. J. H Spurling and Son, 12, Copthall-court.

OFFICES IN PARIS: Of the Administration, 14, Rue Drouot; for the gestion of the Company's affairs, 14, Rue de Parbalete.

OFFICES IN LONDON: No. 9, Laurence Pountney-hill, Cannon-street.

The object of this Company is the opening of three new streets in a populous district of Paris, under a concession from the Corporation, confirmed by the French Government. With a view to the disposal of the unappropriated ground for building purposes, of highly increased value. This undertaking, which may be estimated to the most successful Land Companies, constitutes a singularly safe investment. With out speculative risk, it offers large profits at least double the capital invested in a few years. In the event, indeed, of a minimum bonus of 25 per cent. are guaranteed to the holders of scrips of ample value

All the arrangements for final title under the above concession, together with the preparation of the contracts for the transfer of the property and the registration of the statutes which necessarily are applied to moderate extent, having now completed, the Company is definitively constituted under the French Law of Commandite, wherein the liability of the shareholders is strictly limited to the amount of their subscriptions

Of the 3,000 shares forming the stock of the Company, 16,000 are taken in France.

In calling up the subscriptions of the 3,000 shares reserved for England, the Gérants, although anxious to maintain for the Company the character of an Anglo-French Association in the proportions originally contemplated, will be obliged, within a limited period, to call for the remaining shares in France

Applications for allotment, letters entitling the bearer to pay the deposit into the hands of Messrs HEYWOOD, KENNARD, and CO. the bankers of the Company, to be made to Messrs. J. H. SPURLING and SON, Sharebrokers, 12, Copthall-court; or to Mr GEORGE WOODS, at the Offices of the Company, 9, Laurence Pountney-hill, Cannon-street, where any copies of the statutes, prospectuses, plans, and full particulars may be obtained.

London, Dec mber 31, 1853

PARIS BUILDING LAND COMPANY

Société du Nouveau Quartier Rollin.—The English subscribers are hereby informed, that the DEPOSIT of 2*l*. per share, in accordance with the statutes of the Company, is PAYABLE on or before the 16th of JANUARY next, after which date the shares not paid up will be delivered, without further notice, to other applicants.

GEORGE WOODS,
THEODORE ALPHONSE BAYLE, } Gérants.

London, December 30, 1853.

TODD'S PATENT METALLIC PROTOXIDE PAINT.

The PATENT METALLIC PROTOXIDE PAINT now offered, has been found, after the most severe trials, to be peculiarly efficacious in preserving Iron from Oxidation, Wood from Decay, and Masonry and Brickwork from dampness.

Applied to Iron it unites with it most intimately, forming a complete coating; so that thus protected, it will be found equal to the best galvanized Iron. Hence its great value to all Engineers and Iron Founders as an application to Iron Vessels, Iron Roofs, Steam and Water Pipes, &c. &c. It adheres firmly to Iron even at a red heat.

Many attempts have been made to discover a substitute for White Lead, that should possess all its virtues, without partaking of its offensive character. This Paint is not affected by sulphuretted or carburetted hydrogen gas, bulge water, or indeed foul air of any kind: hence it is well adapted for the interior of Ships, Warehouses, Offices, Stabling, &c.; and from its total freedom from deleterious properties, it will be found of great value for painting the interior of Hospitals, Asylums, Unions, Gaols, and other Buildings which may require to be painted during occupation.

This Paint resists the action of the sun's rays, and also that of the sea air: it is therefore well suited for the Colonies and all tropical climates.

For Stuccoed Buildings it will be found to be effectual in preventing the discolourations formed by vegetation, and keeping out all dampness.

The Protoxide Paint, as at present produced, is a Pale Stone Colour; but it may be tinted with any other colour to suit the taste and purpose for which it may be required.

TESTIMONIALS.

"Brighton, Croydon, and Dover Railways,
Locomotive Department, New Cross, Sept. 23, 1845.

"Sir,—In reply to yours respecting the 'Patent Protoxide Paint,' I have much pleasure in stating that what has been used in this establishment has been highly approved of, and I consider it the best description of paint yet used, particularly for iron-work, for which purpose I can strongly recommend it.

"I am, Sir, your obedient servant,
"BENJ. CUBITT."

"Regent's Canal Iron Works, Eagle-wharf-road, Dec. 5, 1845.

"Sir,—As it is always my wish to render justice to every one, as far as it is in my power to do, I have great pleasure in informing you, that I have very severely tested your 'Patent Protoxide Paint;' that the results are most satisfactory; and that I consider it a very valuable article for an Iron-founder. I have ordered it to be used with us wherever circumstances will allow us to do so. I will, moreover, use it for all my own work, and wish I had known it somewhat earlier.

"I am, Sir, yours respectfully,
"HENRY GRISSELL,
"Pro H. and M. D. Grissell.

"P.S.—It must be good for Boilers."

"St. Kitts, August 29th, 1843.

"Gentlemen,—Having had some experience with Todd's Patent Paint, for which your firm are Agents, I beg to state my unqualified approval of it. I have tried it against White Lead of the first quality, and at the end of seven or eight months find Todd's Paint fresh as when laid on, while the White Lead, owing to excessive heat, may be rubbed off like chalk. It answers equally well on wood or iron, effectually preserving the latter from rust. I feel obliged by your quick attention to my further order by the 'Parrack Hall,' which ship we are daily expecting.

"I am, gentlemen, your obedient servant,
"(Signed) GEO. G. MOFFATT.

"Messrs. Davidson and Peter, Bishopsgate-street, London."

For terms, application to be made at the Offices of the Company, 12, Bishopsgate-street Within; or to the following Agents:—

Messrs. G. and T. WALLIS, 64, LONG-ACRE ..... }
Messrs. D. and G. BRYMNER ..... GREENOCK.

JOHNS'S PATENT PERMANENT STUCCO WASH. STUCCO CEMENT, AND STUCCO PAINT.

JOHNS'S PERMANENT WASH, WITHOUT SIZE OR OTHER CORRUPTIBLE INGREDIENT, is now fully established. It has been adopted EXTERNALLY and INTERNALLY at some of the largest Hospitals and Asylums, and is acknowledged to be the most useful Colouring Material in the trade, for its ADHESIVENESS, NON-ABSORBENCE, UNIFORMITY OF COLOUR, and APPLICABILITY to small or large surfaces. IT MAY BE EXPORTED TO ANY CLIMATE.

JOHNS'S STUCCO CEMENT. This Cement, which has been established many years, is now manufactured on such improved principles that its acknowledged advantages and its suitableness for INTERNAL as well as EXTERNAL purposes are unquestionable. It NEVER CRACKS, BLISTERS, or VEGETATES; has no Caustic qualities, becomes as hard as stone in a few days, when it may be painted or papered; may be cleaned with a brush and water, and will STAND THE TEST OF ANY CLIMATE.

JOHNS'S STUCCO PAINT. The merits of this Paint are so justly appreciated by the trade, for its ready affinity to Stucco, Brick, or other Rough Surfaces; its durability, comparative cheapness (two coats being equal to three of lead paint), that it is of the first importance to the public generally, AND WELL WORTH THE ATTENTION OF SHIPPERS AND EMIGRANTS.

Each Material in Casks of 1 to 5 cwt.
MANUFACTURERS,
PHILIP HARE and CO. 22, STEEL-YARD, UPPER THAMES-STREET.

HUBBUCK'S PATENT WHITE ZINC PAINT. The PERMANENT WHITE of the Ancients, previously confined by its cost to the use of the artist, is now, by Hubbuck's Patent, reduced to the price of White Lead.

The principal characteristics of HUBBUCK'S ZINC PAINT are Economy, Health, Beauty, and Durability.

Builders and Contractors find Hubbuck's Paint the only one adapted to all their purposes; possessing the great desideratum of economy, combined with its high excellence as a paint, it ranks alone. Contractors effect a saving of 25 per cent. by using HUBBUCK'S ZINC PAINT.

HUBBUCK and SON feel it necessary a caution should be circulated against imitations of their Paint. These manufactures, containing frequently pernicious ingredients, are baneful to health and worthless in use, whilst the inexperience of these imitators in the production of pigments is evidenced, not alone by the coarse grainy appearance, but also by the deficiency of that body in their produce, which is known to the painter to be all-essential. That an impossition be not practised, therefore, notice that the cask is marked with the name of the original manufacturer, thus—

HUBBUCK LONDON——PATENT.

not so marked, the reason may be inferred.

Every information in the circular to be had of THOMAS HUBBUCK and SON, Paint and Varnish Manufacturers, Upper Heat Smithfield (opposite the London Docks), London.

THE WASHINGTON CHEMICAL COMPANY,
NEWCASTLE-ON-TYNE,
Manufacturers of

PATTINSON'S OXICHLORIDE of LEAD.

The Washington Chemical Company having, during the last year, established a Manufactory of Pattinson's Oxichloride of Lead on a large scale, and being able to supply it with regularity, and to execute orders without delay, now proceed to bring this new and valuable preparation of Lead before their friends and the public, quite sure that it will not in the present age, be condemned because it is new, and that if judged by its merits, it must make its way, and finally take its place as one of the important manufactures of this country.

Pattinson's Oxichloride of Lead is a chemical combination of one equivalent of Chloride of Lead, and one equivalent of Oxide of Lead, it being well known that common White Lead is a chemical combination of one equivalent of Oxide of Lead, and one equivalent (or thereabouts) of Carbonic Acid, constituting what is called in chemical language, Carbonate of Lead. Now there is no reason to conclude that Carbonate of Lead is the only compound of lead valuable as a paint, and still less that it should be the best compound of lead for that purpose. In point of fact it is not so, for the newly-discovered Oxichloride in most, if not in all respects, is far superior; its colour is brilliantly white, and in a number of cases it has been tried against the best White Lead that could be obtained, and after a period of upwards of two years, it has been found to retain its white colour considerably better than the lead against which it was tried.

But the chief and by far the most important advantage it possesses is, its remarkable and very decided superiority of Body; by which term the power of surface with and extensively is understood among Painters. The attention of the discoverer was at a very early period drawn to this circumstance, and since that time the Washington Chemical Company have had abundant opportunities of placing its superiority in this important particular beyond all doubt. They have themselves performed a number of experiments, and have also caused a number of experiments to be performed, in the large way, by various practical men, to ascertain accurately its covering power as compared with the best White Lead, and they now state the proportions to be as 50 to 100, that is, 50 lbs. of Oxichloride Paint will cover as much surface as 100 lbs. of the best White Lead, the saving of cost being in the same proportion; besides this, the coating is thicker and more effective, both in and out of doors, as the Oxichloride dries into a hard, tenacious layer, more like an Enamel than paint.

In using the Oxichloride, no difference in the materials with which it is mixed is required. Oil and Turpentine being employed as a seal both for work technically called Plotting, and for work intended to be varnished. For the use of Paper stainers and Leather Dressers, the Oxichloride is found to be peculiarly suitable. The Washington Chemical Company strongly recommend this newly-discovered substance to the notice of consumers, both on account of its economy and its intrinsic good qualities as a paint.

AGENTS.

LONDON	Messrs. Blundell, Spence, and Co. 8, Upper Thames-street. (Mr. Richd. Cooke, 7, Pall-lane.
LIVERPOOL	Messrs. Johnson and McGowan.
MANCHESTER	Mr. James Douglas.
LEEDS	Messrs. T. and E. G. Jepson.
SUNDERLAND	Mr. John Young.
DEVONSHIRE AND CORNWALL	Mr. Richd. Pearse, Tavistock and Plymouth.
EDINBURGH AND EAST COAST of SCOTLAND	Mr. Wm. Bailey, jun. Greenside-place, Edinburgh.
GLASGOW AND WEST COAST of SCOTLAND	Messrs. Arthur & Hinshaw, Glasgow.
DUBLIN AND SOUTH OF IRELAND	Mr. P. Lindsey, jun. Middle Abbey-street, Dublin.
BELFAST	Messrs. William Stevenson, jun. and Co.

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs. T. and S. KNIGHT, of Great Suffolk-street, Southwark, as their agents, who will be ready to execute any description of painting and decorating with the Pure Patent White Zinc Paint.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is recommended for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphurous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of whitelead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily employed or to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior paint, and not a very superior paint, and the economy realized by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—In Hull, by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry by Messrs. T. B. MORLEY and CO.; and by the Company's Grinding Agents In London, Messrs. CHARLES DEVAUX and CO. wholesale agents, 62, King William-street, City; Mr. CHARLES JACK, agent, 8, Tottenham-court New road, and wholesale and retail agent, 8, Tottenham-court New road, and 80, Upper Thames-street, City. In Manchester and Liverpool, by Messrs. LAWFORD and SON, 47 & 49, Norfolk street, Liverpool, who are also acknowledged Painters to the Company for Zinc Paints, and undertake painting in the Manchester, Liverpool, and Scotch districts. In Birmingham, Mr. ANDERSON and CO. Timber-bush Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars apply to the Company's General Agent in London, Mr. SCHMOLL, 12, Manchester-buildings, Westminster.

PERMANENT ZINC COLOURS and WHITE.—Emerald and Brunswick Greens, Chromes, Blues, Reds, and all other Colours, are now produced from Zinc at prices which render them an advantageous substitute to the Lead, Arsenic, and Copper Colours. These Zinc Colours are most brilliant, and never change by exposure to any gaseous Sea Water &c For Ships and Machinery, apply for all kinds of House Painting, no other but Zinc Colours ought to be used to insure durability and economy. Zinc Frame, Sash, and Casements, Mesers GEO. K. GEYELIN and Co. White Zinc and Permanent Colour Works, Victoria-wharf, Regent's-park basin, London.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that he can supply any quantity they may require, either at his Works, supplied with vessel of 300 tons burthen, or at Messrs. Bird, St. Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. Manufacturers of the very best PORTLAND CEMENT for all purposes Cement is applicable, solicit a continuance of that confidence with which they have so long been favoured.—Orders received at Great Scotland yard, and at the Works

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality in consideration of that confidence with (in Portland Cement) he pledges himself that his Cement shall be equal to those made by any other party in the kingdom. Manufactured by CHARLES RICHARDSON, at his Works near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs. ASPDIN, ORD, and CO have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery (patented by Mr. ASPDIN) much improved the quality of this Cement without any increase in price.

Engineers and architects are recommended to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cement, resembling it only in color.

ASPDIN, ORD, and CO. beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper.

A report of experiments made to prove the extraordinary strength of their Patent Portland Cements, may be had at their Office, New Wharf, Westminster, London; at their Works, Gateshead-on-Tyne; or from their Agent, Mr. HENRY ROBINSON, 21, King-street, Liverpool.

The attention of Engineers, Architects, Builders, &c. is requested to inspect a ring of ARC BLOCKS, "Austin's Patent," for Sewers, Culverts, Water mains, Bridges, Viaducts, &c. &c. To be seen at ASPDIN, ORD, and CO.'S WHARF, adjoining the Queen's Tower, New Houses of Parliament.

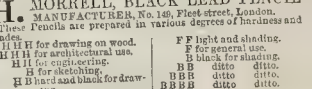
KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses.—These well known hard stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PARIAN CEMENT, for internal use, to be painted in a few hours, and covered within a couple of days. —CHARLES FRANCIS and SONS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes. Nine Elms, London

ATKINSON'S CEMENT, so long known and esteemed in London, for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster; and Seel-street, Liverpool.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its constituent properties; that it is not affected by frosts, and does not vegetate in damp situations Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The authenticity of which is vouched by Engineers, Architects, and Contractors, of the above, is its best recommendation



Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS Cements of the best quality.

SECONDS, PAVIORS', STOCKS, and other Bricks.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

BLUE LIAS LIME.—NELSON and CO. beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders, and others connected with the building trade, to the superior quality of their BLUE LIAS LIME, the natural hydraulic properties of which, and the great estimation in which this kind of Lime is held for buildings in wet and damp situations, such as wharf-walls, docks, &c. and for concrete foundations, is a sufficient recommendation for the adoption of it in all works of the above description. It is also peculiarly adapted for Orders executed by the London Agents, Ivatty adapted for Orders executed by the London Agents, Ivatty BLYTH, BROTHERS, 16, South Wharf, Paddington; and at the Works, Stockton-fields, near Southam, Warwickshire.

NOISELESS RINGS.

GUTTA PERCHA CURTAIN & CORNICE RINGS.—These Rings have been much approved by the Faculty, particularly for nervous and aged patients. Owing to the peculiar properties of Gutta Percha, these rings do not make the least noise when drawn along the pole or rod. The following sizes a noise when drawn along the pole or rod. The following sizes may be had, either with or without lines:—Size 1 inch diameter, 1¼ inch ditto, 1½ inch ditto, 2 inch ditto, 2½ inch ditto, 3 inch ditto, 3½ inch ditto, 4 inch ditto, 5 inch ditto.

TUBING, TELEGRAPH WIRE, GALVANIC BATTERIES, &c. &c. manufactured by the GUTTA PERCHA COMPANY (Patentees), 18, Wharf-road, City-road, London.

TO DRAUGHTSMEN AND CIVIL ENGINEERS.

H. MORRELL, BLACK LEAD PENCIL MANUFACTURER, No. 149, Fleet-street, London.

These Pencils are prepared in various degrees of hardness and shades.

H H H for drawing on wood.	F F light and shading.
H H H for architectural use.	F for general use.
H H for engineering.	B black for shading.
H for sketching.	B B ditto ditto.
H Bland and black for drawing.	B B B ditto ditto.
M medium.	B B B B ditto ditto.

Sold by all the principal Stationers in town or country.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

It being universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLEY and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 6 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, it lands are unnecessary, and when used in Greenhouses no scorching occurs; its NON-TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Workshops, &c. for which purposes it is supplied in squares of all sizes, from 8 by 8 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO Wear Glass Works, Sunderland.

N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate.—May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to

Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

GLASS.

Tariffs of the above on application to

T. MILLINGTON, 87, Bishopsgate-street Without, London.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT, has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor. —2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.

CROGGON and CO.'s PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.

Samples, testimonials, and full instructions, on application to CROGGON and CO. 2, DOWGATE-HILL, LONDON.

GOOD THIRDS FOREIGN GLASS, in cases of 200 feet each, average size 21 by 30 at 40s. per case Good fourths ditto ditto, 32s. Crown squares in 100 feet boxes, varying from 14 by 10, and upwards, 2d. per foot. Quarter-inch rough plate tiles, 12s. per dozen. Also crown and sheet glass in crates; British and patent plate, ground, fluted, and stained glass, glass slates, &c.; sheet-lead, pipe, white lead, oils, turpentine, colours, &c.—G. FARMILOE and SON, 118, St. John's street, West Smithfield.

NICHOLLS, BROTHERS, of King's-road, Chelsea, beg to call the attention of Architects, Builders, and the trade generally, to their establishment, where they can be supplied with every description of WINDOW GLASS now manufactured, with despatch, and at the lowest terms. Also sheet-lead, patent pipe, pumps, plumbers' brass work, genuine white lead, oils, colours, varnishes, brushes, and every article requisite for the trade.—Manufacturers of patent lead pipe.

SOHO CROWN, SHEET, ORNAMENTAL, PATENT PLATE, AND PLATE-GLASS WAREHOUSE, 26, SOHO-SQUARE.

ALFRED GOSLETT begs to inform Builders, &c. that he is prepared to Tender for the supply of EVERY DESCRIPTION of Glass, now manufactured at WHOLESALE PRICES.

ORNAMENTAL WINDOW GLASS, at very short notice.—The patterns symmetrically adjusted to size ordered, and free from the much complained of defects in squares cut out of sheets, from 1s. per foot super; borders, 6d. per foot run.—At CHARLES LONG'S, King-street, Portman-square.

PLATE and PATENT PLATE GLASS, of unequalled colours, quality, and finish, for glazing and other purposes, supplied by J. LEES and CO. cheaper than any other house in London. All applications for estimates, &c. to be made to the Plate-glass Warehouse and Looking-glass Manufactory, 13, Rathbone-place, Oxford-street.

STAINED GLASS and GENERAL ORNAMENTAL DRAUGHTSMAN and DESIGNER.—The Advertiser, who is well versed in the above departments, is open to arrangements either of a permanent or occasional character, for preparing designs, working drawings, &c.—Apply by letter to A. Z. Cook's Library, 53, Upper North-place, Gray's-inn-road.

E. and W. H. JACKSON beg to call the attention of Builders and the Trade to the LOW PRICES of their PATENT PLATE GLASS, BRITISH PLATE, silvered and for glazing, of unrivalled quality and finish; ROUGH PLATE, CROWN, SHEET, COLOURED, and ORNAMENTAL GLASS, in every variety, of the best manufacture, at the lowest terms. Designs and estimates furnished for ornamental windows, either for house or church decoration.—All applications for estimates and lists of prices to be made at their warehouse, 315, OXFORD-STREET.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 313, Oxford-street, adjoining the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 9d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 2s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

TERRA COTTA.—Vases, Figures, Capitals, Coats of Arms, Friezes, Consoles, Chimney Shafts, Flower-trays, &c. &c. manufactured by J. M. BOASHFIELD, Mill Wall, Isle of Dogs (near the West India Docks), and sold at No. 1, Praed-street, Edgware-road, Paddington.

By Her Majesty's Royal Letters Patent.

TO BUILDERS AND OTHERS.

Prompt attention given to orders forwarded by post.

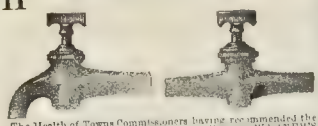
PRIZE MEDAL, CLASS 30.

HIGH-PRESSURE VALVE COCKS.—

LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous hard pressure, varying from 100 to 350 feet; their efficiency and durability is by experience established.

The Equilibrium Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.



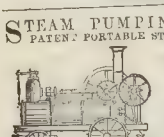
Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for private houses, mansions, villas, asylums, &c

THOMAS LAMBERT and SON,

Brass and Iron Founders, Short-street, New-cut, Lambeth

TO WATER COMPANIES AND PLUMBERS.

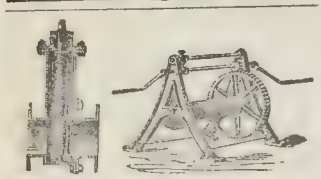
HIGH-PRESSURE COCKS & CLOSETS.



The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-pipe for attaching direct to main pipes without a cistern, cocks, or wire

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin street, London.



STEAM PUMPING ENGINES.—

PATENT PORTABLE STEAM-ENGINES, from four to ten horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile-driving, raising materials, &c. &c.

Contracts taken for pumping any quantity of water.

JAMES BURTON & SONS, Engineers and Contractors, Johnson-place, Hudson-street, Southwark, London.

BARRETT, EXALL, and ANDREWS, Kate's Grove Ironworks, Reading Agents in London, DRAY and CO Swan-lane

FOWLER'S IMPROVED

WROUGHT PUMPS for CONTRACTORS, BRICKMAKERS, EXCAVATORS, and OTHERS.

The attention of this house for more than fifty years past having been almost exclusively paid to the manufacture of every description of pump-work for every variety of purpose, attention is respectfully requested to their very superior Wrought Pumps, with plain or sliding telescope suction, galvanized and ungalvanized. A large stock of all sizes is kept ready to finish off to order, according to length required, at the shortest notice.

This description of Pump-work varying in almost every case, it is impossible to quote a general price, but the fullest particulars will be given on application.

A large stock of Wrought Pumps, from 3-inch single to double 10-inch barrel, is also kept on hire prepared for hand or steam power, on reasonable terms, at

BENJAMIN FOWLER'S

ENGINE-PUMP MANUFACTORY,

Whitefriars-street, Fleet-street, London.

TO BUILDERS AND PLUMBERS.

The attention of the Trade is called to

JOHN WARNER & SONS'

PATENT VIBRATING STANDARD PUMP,

which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard, the cumbrous, wearing, and expensive slings and guides are unnecessary, rendering the pump considerably less than pumps made on the old plan.

Beer and Water Engines for raising liquids from a depth not exceeding 25 feet also, hand or light cranes constructed on the same principle.

JOHN WARNER & SONS,

8, Crescent, Jewin-street, London, Manufacturers and Patentees.

PUMPS.—Engineers, Contractors, and Parties

engaged in raising water will find it their interest to examine into the merits of the various pumps possessed by the PATENT CENTRIFUGAL PUMPS over every other. They are highly valuable for mining, marine, and general purposes. Are used by the first engineers, builders, and contractors in the kingdom, to whom they can be referred to. Contracts entered into for the supply of all sizes, varying from 2-inch to 24-inch bore per minute. Can be seen daily at work, and all information obtained respecting them, by application to GWYNNE, SON, and CO. Essex-wharf, Strand.

STEAM-ENGINES, of various sizes, from

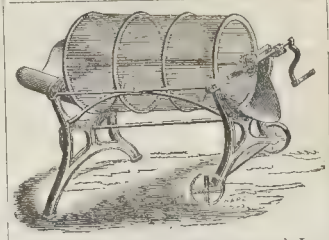
two horse power upwards, always in stock, made on the most approved principles, and of the very best quality; single and double-purchase cranes also always ready for immediate use or exportation; saw benches and saw frames, with all the most recent improvements, and every description of machinery, made to order by ANDREW MCLAREN and Co. Wind- or Iron Work, Wilkinson-terrace, City road, and 174, Upper Thames-street.

TO BE SOLD, a bargain, a FOURTEEN-

HORSE TOWER HIGH-PRESSURE ENGINE and BOILER, nearly new, built to order, price 200 guineas. Also a very superior TIMBER and DEAL SAWING FRAME, capable of cutting eight logs into deals at one sawing, with shifting gear and frame complete, as may be required, for deals &c price 80 guineas. May be seen at work, and further particulars obtained of LACEY BROTHERS, saw mills, Lewisham. This is an opportunity rarely to be met with, the above being sold merely to make room for machinery of much greater power.

JOHN WARNER and SONS, Patentees of

IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.



J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which means they are enabled to manufacture Bells of any size, note, or weight, of superior tone, for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast in any size, note, or weight, ready for hanging.

TUNED BY MACHINERY

Stocked and wheels ready for fixing. Old Bells tuned or taken in exchange.

MUSICAL HAND BELLS tuned to the Chromatic Scale, with improved Clappers and regged on a new system, which gives a superior tone and facility for ringing.

FRANCIS ARDING, Engineer and Iron

Founder, Ashford Iron Works, Uxbridge, Middlesex, begs to direct the attention of Builders and others to his Patent Cheese or Meal Mill, manufactured by him, for sifting sand, gravel, lime, ashes &c. by the use of which one man and a boy can do the same amount of work as six men using the common sieve.

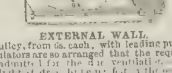
Price, delivered in London.—	
No 1—3 feet cylinder	£6 6 0
No 2—3 feet 6 inches cylinder	7 7 0
No 3—4 feet cylinder	8 8 0

Arch tectonial, structural, engine, and mill castings of every description.

One of the above Soft mills will be exhibited at the Smithfield Club Cattle show, to be held at the Carriage Bazaar, Baker-street, Portman-street, on the 5th, 6th, 7th, and 8th of December, at Stand No 86.

TWENTY IRON-BOUND CASKS, 6 Iron

Pans, 50 to 80 gallons each, 6 Galvanised Iron Pans, 70 gallons, and 1 Plate FOR SALE, very cheap Apply, BROOK and CO 7, Wenlock road, City-road.



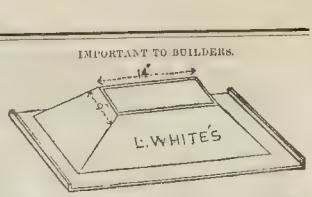
REPERTOIRE of MEDIÆVAL ART,

No 2, Wyndham-street, Cavendish-square Mr BURTON, M.A. of the University of Cambridge, having made arrangements with parties who for many years past have worked from the designs, and under the superintendence of the late A. W. PUGIN, Esq. begs to inform the public, clergy, architects, &c. that he supplies every kind of Pen-and-pencil and Pencil Gothic Work, viz.—Metal work, chalices and patens, offertory, basons, candlesticks, coronas, branches, gasaliers, sconces, lamps in numerical brasses, hinges, bolts, escutcheons, fire dogs, lecterns, velvets, rich figured silks and stuffs, for altar hangings, &c. woven silks for vestments, and gold and silk fringes, lace, and embroidered cassocks, picture frames, and tracks, banners, &c. &c. Church walls, roofs, altars, and reredoses, decorated in gold and diaper. Designs and materials for all kinds of embroidery supplied and arranged.

SUCCESSFUL VENTILATION.—

WATSON'S PATENT SELF-ACTING DOUBLE-CURRENT VENTILATOR has been successfully applied to Churches, Chapels, Public Halls, Stables, and almost every kind of building.—as well as to withdraw Steam, Smoke, Dust, and Heat. Testimonials and other information forwarded on receipt of a postage stamp. The Ventilators delivered carriage free in London and Brighton. Instructions sent for fixing.—Apply at the Manufactory, by CHARLES WATSON, King Cross-lane, Halifax, Yorkshire, who is the patentee and sole maker.

VENTILATION.—PURE AIR.



admission of pure air through an

EXTERNAL WALL.

With single pulley, from 6s. each, with leading pulley, from 8s. 6d.

These Ventilators are so arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants, as they are placed in the external wall, the current is not impeded when the room is used for the evening, and which gives a constant supply of fresh air in most rooms. SHERINGHAM BROTHERS, sole Manufacturers, 196, Tottenham-road, and 117, Union-street, Borough; and of all respectable ironmongers, builders,

IMPORTANT TO BUILDERS.

REGISTERED CAST-IRON CHIMNEY

BLOWER and CHIMNEY BAR COMBINED, makes a perfect fireplace for the Parlour, and rendering stoves chimney impossible. One trial will cause their adoption in every building

Price from 8s. 6d. each, according to size.

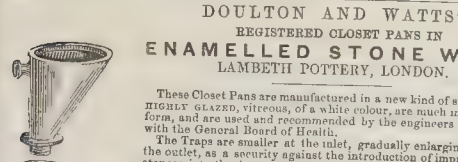
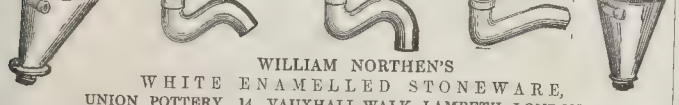
The most economical and efficient system of drainage is formed with DOULTON'S STONE-WARE PIPES.
Testimonials as to their superiority have been received from the Borough Engineers of Liverpool, Glasgow, and other cities

DOULTON AND WATTS'S
REGISTERED CLOSET PANS IN
ENAMELLED STONE WARE,
LAMBETH POTTERY, LONDON.



These Closet Pans are manufactured in a new kind of stone-ware, HIGHLY GLAZED, vitreous, of a white colour, are much improved in form, and are used and recommended by the engineers connected with the General Board of Health.
The Traps are smaller at the inlet, gradually enlarging towards the outlet, as a security against the introduction of improper substances into the drain.
They may also be had turned down.

PRICE 7s. 6d. each,

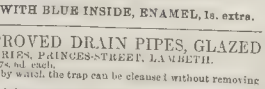


The same as for ordinary stone-ware, and may be had fitted with copper fans of the best construction at 1s. 2d. each extra.

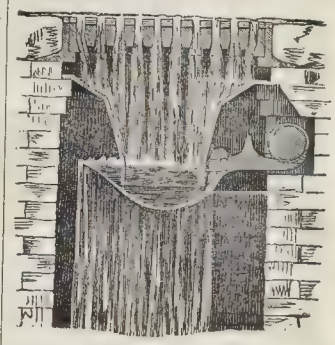
JAMES STIFF, MANUFACTURER of GLAZED STONE-WARE DRAIN PIPES,
BENDS, JUNCTIONS, TRAPS, &c. 29, HIGH-STREET, LAMBETH, LONDON. Established 1751.
Water-Closet Pans, with Syphon Traps, 7s. 6d. each.
STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths.

The great advantages attending the use of these articles are now so generally understood, as to render any enumeration of them almost superfluous. Their cheapness, efficiency, and durability, are universally admitted; while the rapidly increasing demand for them proves their estimated superiority over every other kind hitherto before the public for similar purposes.
Inspection is invited to an assorted Stock of Drain Tubes of every form and size, adapted to the various situations for which they may be required; as also to the WATER-CLOSET PANS OF IMPROVED CONSTRUCTION, and interior slabs, far surpassing any other manufactured of Brown Stone Ware.
N.B. These are made with at the discharge-hole being turned downwards.

May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge, City-road Wharf, City Basin; Dock-head, Bermondsey; Dane's Wharf, foot of Battersea-bridge, Chelsea; Pratt Wharf, Kings-road, Camden New Town; J. TURNER 2, South Wharf, Praed-street, Paddington; and at COLWILL, Brokers, 32, Brydges-street Covent Garden.
Drawings and List of Prices will be forwarded free, on application.

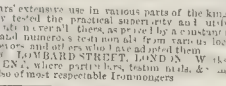


WILLIAM NORTHEN'S
WHITE ENAMELLED STONEWARE,
UNION POTTERY, 14, VAUXHALL-WALK, LAMBETH, LONDON.
W. N. solicits an inspection of his IMPROVED WHITE ENAMELLED STONEWARE CLOSET PANS, being an entire new description of stoneware, perfectly vitrified and highly glazed, far surpassing anything of the SAME PRICE AS BROWN STONEWARE—7s. 6d. Pan and Trap. WITH BLUE INSIDE, ENAMEL, 1s. extra.



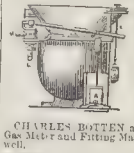
STEPHEN GREEN and CO.'S IMPROVED DRAIN PIPES, GLAZED
IN SIDE-WORKS, IMPERIAL POTTERIES, PRINCES-STREET, LAMBETH.
Common Shape Closet Pans, well glazed inside, 7s. 6d. each.
Extra, if fitted with the patent air-tight valve, by which the trap can be cleansed without removing the seat, 1s. 6d. each.
Various patterns of improved shapes always on hand.

Straight Tubes, Junctions, Bends, Curves, Elbows, Syphon-traps, Flap-traps, Urinals, Surface-sinks, and Increasing Pipes always kept stock.
Manufacturers of the

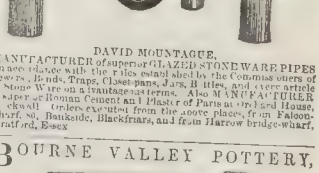


PATENT SIPHON FLUSHING-BASIN, WITHOUT METAL SPREADER, WITH SELF-ACTING CLOSET CONNECTIONS. For illustrative drawings and testimonials, see "The Builder," May 31, 1851.

BUNNETT and CO.'S PATENT SELF ACTING EFFLUVIA TRAP, for Sewers, Drains, and Cesspools, is entirely self-acting and self-cleansing, cannot get out of order, and requires no attention.

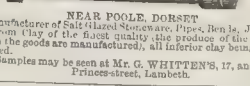


The above is a sectional view of the Trap in its ordinary position, with the plane weight at the extremity of the lever attached to the moveable pan. The buoy of the trap, dipping into the moveable pan, forms a perfect vapour-proof joint, and should the trap ever get stopped, the water will rise in the body of it till it overbalances the weight, which then rolls towards the centre, and allows the pan to fall to its fullest extent, effectually disharging all obstructions, the weight then rolls back, and brings up the pan to its former position, catching sufficient water to form a fresh joint.
Five years' extensive use in various parts of the kingdom have thoroughly tested the practical superiority and utility of the above invention over all others, as proved by a constant repetition of orders and numerous testimonials from various local boards, town surveyors and others who have adopted them.
Office, 6, LOMBARD-STREET, LONDON W. 4 Works, DEPTFORD, KENT, where particulars, testimonials, &c. may be obtained, also of most respectable Ironmongers



MANUFACTURERS of GLAZED STONEWARE PIPES, Bends, Junctions, &c., also FIRE BRICKS, Vitrified Blue Bricks as used by Her Majesty's Commissioners of Sewers, White Fire Clay, Facing Bricks, &c., &c. Agents, CHARLES RICHARDSON, No. 6, South Wharf, Paddington, London.

GREAT SIMPLIFICATION and Economy in FIXING CLOSETS.



By the use of Underbay's Patent Regulator, the separate cistern, service-box, valve, cranks, and weights are dispensed with, making a closet as simple to fix as a lavatory, and yet ensuring a perfect flush of water.
The Manufacturers, CHARLES BOTTEN and SON, solicit a call from all parties interested, they having Fish Valve, Self-acting, and Jennings's Closets fitted with this apparatus, and fixed for inspection. It will forward drawings of the same.
CHARLES BOTTEN and SON, Brass Founders, Engineers, Gas Meter and Fitting Manufacturers, Crawford-passage, Clerkenwell.

SALES BY AUCTION.

7,500 Pieces of Paperhangings and Vein Marble Chimney-pieces, ready for fixing.

MR. BRAY, Jun. will SELL at his ROOMS, 259, High Holborn, on WEDNESDAY, JANUARY 21, at TWELVE, upwards of 7,500 pieces of excellent PAPER-HANGINGS, suitable for the drawing and dining rooms, libraries, bed-rooms, and secondary apartments.—May be viewed, and catalogues had.

VALUABLE FREEHOLD BUILDING GROUND, SUNNINGHILL, BERKS.

MESSRS. BUCKLAND and SON have received instructions from the Proprietors, to SELL by AUCTION, on TUESDAY, JANUARY 20, 1852, at the WELLS INN, Sunninghill, at TWO for THREE o'clock in Three Lots, a most eligible PLOT of BUILDING GROUND, comprising a frontage of 240 feet and averaging 70 feet in depth, abutting on the public road, leading from Virginia Water to Ascot, rising with a gradual sloping ascent above the road and the main line a southern aspect, with delightful scenery, over an extensive valley lying at its base, and on to the distant hills. This spot is extremely suitable for the erection of Villa and other Residences, being in the immediate vicinity of the Great Park, Virginia Water, and the Royal Hunt, within a short distance of Ascot Race-course, and the new projected Railway Station on the line from London to Woking, now in progress, which tends greatly to increase the demand for respectable residences. The property is freehold, and each lot possesses the advantage of a first of fire and evergreens, enclosing the back part and each side, which have been carefully placed and left there for the purposes both of shelter and ornament. The property, which thus offers an opportunity of safe and profitable investment, may be viewed any day before the sale, and printed particulars, with conditions and plans, may be had ten days previous at the Offices of H. Dawkins, Esq. Windsor; at the Wells Inn, Sunninghill; of Messrs. HAVAH and BUCKLAND 2, Cannon-street West, London; and of the Auctioneers, Park-street, Windsor.

TO BUILDERS, BRICKMAKERS, JOINERS, AND OTHERS.

—Re Richard Anderson, a Bankrupt.

MR. MOXON will SELL by AUCTION, at the DEVONSHIRE ARMS, Abingdon-road, Kensington, on THURSDAY, the 15th of JANUARY, 1852, at TWELVE o'clock, by direction of the assignees, the STOCK-IN-TRADE of a Builder and Brickmaker, comprising about 200,000 bricks, in clamp, sewers and drain pipes, sashes and frames, planks, building materials, part of three excellent horses, carts, articles partly built, and the erection of a detached dwelling-house, to be pulled down. May be viewed the morning of sale, and catalogues had on the premises; of Messrs. Cox and Wilkins, Angel-court, Strand; of W. H. Waller, Esq. Solicitor, 7, Furnival's Inn; and at Mr Moxon's Offices, 85, West Strand, Charing cross.

CHELSEA SAW-MILLS—By

MESSRS. FULLER and HORSEY, on MONDAY, JANUARY 26, 1852, at ELEVEN o'clock, on the PREMISES, Chelsea-wharf, Chelsea, near the Cadogan-pier, in Lots, by direction of the trustees, the MACHINERY of the Saw-mills, oil-cake mill, 30-horse power steam engine, Cornish steam-boiler 17 feet long, 6 feet diameter two upright and three tubular 12 inches, one circular saw bench, planing, chamfering, and 4 machines; 120 feet main shafting, drums, wheels, and drum bearings, cross iron pump, pipes and benches, timber-saw, drill-machine, two dead lifting screw jacks, two patent portable articles partly built, and the erection of a detached dwelling-building, to be pulled down. May be viewed the morning of sale, and catalogues had on the premises; of Messrs. Cox and Wilkins, Angel-court, Strand; of W. H. Waller, Esq. Solicitor, 7, Furnival's Inn; and at Mr Moxon's Offices, 85, West Strand, Charing cross.

TO COOPERS, ENGINEERS, AND OTHERS.—By Messrs. FULLER and HORSEY, on MONDAY, JANUARY 26, 1852, at ELEVEN o'clock, at the PATENT COOPERAGE, CHELSEA WHARF, Chelsea, the HALF SHARE of the valuable PATENTS for IMPROVEMENTS in MACHINERY for the MANUFACTURE of every description of CASK, in all parts of the world, except the said Patent in London and forty miles round, and the machinery required for this Patent Property, with capabilities and arrangement, has been very extensively worked in London, and is fitting up in a fine new street in Liverpool. The cask made by it are of a very superior description, produced with much greater rapidity, and at a far less cost than those made by hand, and the staples of the trade, from the skilled labour is, to a great extent, superseded. The machinery will be sold at the sale in lots, unless an acceptable offer for the machinery as a whole be made by private contract. The machinery may be seen at any time by tickets, or on application on Friday and Saturday previous to the sale.—Particulars may be had on the Premises; of Mr. Spark, Solicitor, Dominion-chambers, 33, Gracechurch-street; and of Messrs. Fuller and Horsey, Billiter-street

TO COOPERS, ENGINEERS, AND OTHERS.—By Messrs. FULLER and HORSEY, on MONDAY, JANUARY 26, 1852, at ELEVEN o'clock, at the PATENT COOPERAGE, CHELSEA WHARF, Chelsea, the MACHINERY of the PATENT COOPERAGE, but little used the last two years, highly useful, and of the best make, the machinery including two brace shaving machines, two truss hoop machines, one making machine, one edge planing machine, two circular saw benches, one head mortising machine, two circular saw benches, one head shaping machine, brick and tile machine, 200 feet shafting, drums, rigger, strap, saws, and other apparatus. Lots to work the different machines for the term of the patent, will be given to each purchaser of such lot. The machinery may be viewed in motion on Friday and Saturday previous to the sale, when catalogues may be had on the Premises; of Mr. Spark, Solicitor, Dominion-chambers, 33, Gracechurch-street; and of Messrs. Fuller and Horsey, 13, Billiter-street, City.

Great Western Railway.—First Portion of the Valuable Materials of the old Terminus, at Paddington.

MESSRS. EVERSFIELD and HORNE are honoured with instructions from the Directors of the Great Western Railway Company, to SELL by AUCTION, on the PREMISES, on TUESDAY, JANUARY 27, 1852, and following day, in consequence of the number of lots, the very valuable materials and fittings of the Booking Offices, Departure Platforms, and Carriage Sheds: comprising, 300 superior sash and plain doors, sashes, 100 pairs of small timber principals with tie-beams and tie-beams, suitable for necessitous or temporary purposes, platform of timber floors, timber handrailing, partitioning, frame bulk, iron gates, doors, sashes, and shelving, iron columns, square and octagon gas lamps, 1,000 feet of iron gas piping, 2,000 feet of Yorkstone paving, large lined cisterns, fittings of ten water closets and urinals, fittings up of the ticket offices and waiting rooms, with numerous excellent turned newels, a large metal bell, about 1½ tons of lead, 10,000 superficial feet of zinc, sound stock brickwork, 2 large pigmills, a quantity of loose materials, and a variety of other articles.—May be viewed the days previous to the Sale the day of which will be very shortly announced, when Catalogues may be had, on the Premises, and of the Auctioneers, 40, Parliament-street, Westminster.

WESTMINSTER.—Valuable Building Materials by order of the Board of Ordnance

A first-class railway ticket, free for eleven years, granted for every house built on this land, and worth 50l. per annum.—Apply to Mr WILLIAM THOMPSON, Architect, 2, Conduit-street West, Westbourne Terrace, Hyde Park. Advances made if required.

TO BUILDERS, CABINET MAKERS, PIANOFORTE MAKERS, CARPENTERS, AND PAINTERS IN GENERAL.

TO BE LET, in the Caledonian-road, a SIX-ROOMED DWELLING-HOUSE, with large Workshops, Carpenter's Shops, Painter's Shops, Showroom for Timber, Stabling for Three Horses, if required, all neatly compact, with direct 4-inch railway in the yard, suitable for any business trade, being a house and premises seldom to be met with.—Apply to Q. MARKS, 37, Alfred-place, Bedford-square.

BUCKINGHAM, TO CAPITALISTS, BUILDERS, and OTHERS.—TO BE LET, upon leases for ninety nine years, and on advantageous terms, several eligible PLOTS of BUILDING GROUND, most desirably situated, near to the town of Buckingham, part whereof forms a frontage to a new road leading from the town to the railway station there, and other parts will admirably suit for villa residences, upon a gentle ascent on the said road, with extensive views, and convenience near to the town. Their property offers peculiar advantages, being in the centre of Lord Southampton's and Mr. Drake's hunts, and within an easy distance of London, which is rendered in two hours; and from the demand for residences in the neighbourhood, a safe and highly remunerative investment may be obtained.—To view plans, and for further particulars, apply to SMITH and SMALL, Solicitors, Buckingham; DECIMUS BURTON, Esq. 6, Spring-gardens, Westminster; and THOMAS BEARDS, Esq. Stowe, near Buckingham.

SOUTHAMPTON.—Freehold Mansion and Estate.—FOR SALE, by PRIVATE CONTRACT, a most desirable and valuable MANSION, with excellent walled garden, and out-buildings, together with 39 acres of rich pasture land, with an extensive river frontage, and large area of mud land. The estate offers to a gentleman of property a beautiful residence, in the best neighbourhood contiguous to the town of Southampton, and to capitalists a valuable investment in building, &c. as an opportunity which has rarely occurred.—For further particulars and to view apply to Mr. JOSEPH BLUNDELL, Land Agent, &c. Barnard-in, Southampton.

FINSBURY and GENERAL FREEHOLD LAND SOCIETY.

Established 1849.

The Mitcham and Merton Estates will be balloted for shortly. All shares issued previously, on which one month's subscription has been paid, will be eligible for the ballot. Monthly subscription, 5s.; entrance and rules, 1s. 6d.

48, Bedford-row. R. A. MARCH, Secretary.

ESTATES of the CONSERVATIVE LAND SOCIETY—FOURTEENTH PUBLIC DRAWING.—On SATURDAY, the 14th of JANUARY, at Noon, at the Offices, 31, Norfolk-street, Strand, London, the Fourteenth Public Drawing amongst the subscribers, not yet on the register of rights, for priority of selection of lots on the estates bought for the Conservative Land Society, will take place. The advances taken prior to the final numbers being drawn, will be the wheel up to the time of the drawing will participate in the advantages thereof. One Hundred Shares will be drawn and Fifty added to the order of rights by seniority.

The unallotted estates are West Malvern, Worcestershire; the Romford Park, Essex; Lower Norwood, Surrey; Kingsbury, Tottenham, Middlesex; Wellington, West Surrey, Wolmer-park, Tonbridge Wells, West Kent; Castle Hill, Reading, Berkshire; Heathfield, Sussex; and the Manor of Manningham and St. Margaret's, Richmond, in Middlesex. Negociations are in progress for purchases in other counties.

A share and a half will place you on the order of rights at once, price 33l. 5s 6d. five per cent interest being allowed on the subscriptions up to the time of the choice of a lot on any estate, such for plans up to the time of the choice of a lot on any estate, such selection being made or not as the member thinks fit. Five per cent. interest is also allowed on subscriptions of a year in advance (if so paid) and upwards, at the office or the day before the ballot. Any person desirous of being the fortunate allottee of a lot on the Malvern Estate, the subscription being 8s. per month, with its every three months in advance, for quarterage for the expenses of the Estate, and Half an Share (Nine Guineas) Deposit, payable at 202, Strand, will secure the immediate enrolment of names in the Society's books. The bonus declared for the end of the first three years is £1 10s. per share, or £3 per cent. No partnership liability. The system which is peculiar to the Conservative Land Society of establishing the order of rights by compiling, and enrolling, and ballot has worked so effectively that upwards of 2,500 shares are now on the register of rights of which nearly 500 were drawn, upwards of 1,000 are paid up, and the whole sound, and profitable investment, the claims of the Conservative Land Society, presenting, as it does, well-balanced advantages for a limited liability, and for the large capitalist, and small investor. The prompt withdrawal of shares by a member whenever he may wish to draw out his money is insured. The practical working of an active executive committee and the whole working of the society secures for the shareholders the most judicious purchases of land, thus enabling the members to acquire eligible freehold grounds, a kind of investment which is based on the firmest foundation.

CHARLES LEWIS GRUNFISEN, Secretary

TO BUILDERS, CONTRACTORS, AND OTHERS.

TO BE SOLD for 6,000l. a FREEHOLD ESTATE, consisting of 250 acres, on the Hampshire coast, within a convenient distance of the fashionable towns of Bournemouth and Christchurch, having a frontage to the sea-beach of upwards of a mile and a half, admirably adapted for villa residences and building purposes. The principal part of the estate has been planted, and now forms a thriving fir plantation, affording shade, with facilities for cutting roads and drives. A plan of the estate may be had, and further particulars obtained, at Mr THOMAS C. SCOTT'S, Land Agent and Valuer, 5, Charing cross; or at Messrs. GOLDNEY and FELLOWES', Solicitors, Chippenham, Wilts.

Gentlemen connected with the building interest, desirous to serve in so excellent charity by becoming stewards, will be pleased to forward their names on or before 20th JANUARY, 1854, to the Honorary Secretary, Mr. JOSEPH BIRD, 34, Pomona place, Edgware road. In order to insure comfort, the number of tickets will be limited.

SURREY ARCHÆOLOGICAL SOCIETY. PRESIDENT. His Grace the Duke of Norfolk

Gentlemen desiring to join this Society are informed that copies of the rules, list of members (upwards of 300), and forms of application for admission, may be obtained from the Honorary Secretary.

Annual Subscription £0 10
Composition for Life 5 0

On and after JANUARY 1, 1854, an entrance fee of 10s. will be required, from which those members who join the Society during the present month, will be exempt.

GEORGE HISH WEBB, Honorary Secretary.
43, Addison road North, Notting-hill.

COMPETITIONS.

TO LANDSCAPE GARDENERS, ARCHITECTS, AND OTHERS.

THE Burial Board for the Parishes of Saint Mary Magdalene and Saint Leonard, Bridgenorth, are desirous of receiving DESIGNS and ESTIMATES for LAYING OUT the proposed new burial-ground near that town. The designs must include plans for the fencing of the land and for chapel, as required by the Act of Parliament relating to new burial-grounds. The party whose plan is selected will have the superintendence of the works, and will receive 5 per cent. upon the money actually expended for his design and such superintendence. No payment will be made to unsuccessful candidates for their plans.—Designs and estimates to be delivered on or before 6th MARCH next, to Mr. E. W. HASLEWOOD, Solicitor, Bridgenorth, the Clerk of the Board, of whom further particulars may be obtained.

CONTRACTS.

TO BUILDERS.

PERSONS desirous of CONTRACTING for the ERECTION of a new RACE STAND and OFFICES at ASCOT HEATH may inspect the plans and specifications by applying to me, at the Grand Stand, Ascot Heath, on and after the 3rd of JANUARY next. Tenders to be sent in on or before JANUARY 27th, 1854. The lowest Tender will not be necessarily accepted. EDWARD HIBBURD, Clerk of the Course.

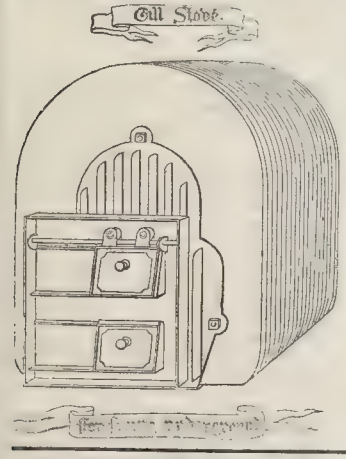
Gas Pendants, Brackets, and Joints of all descriptions for Gas-fitting in Brass and Iron; Tin, Composition, Iron and Brass Tubing, Cornice-poles, Rings and Lacquered Case Tube for Picture Rods, Desk Rails, &c. &c.
Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. &c.
RICHARD EVERED'S Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 13, Charles-street, Long-acre, London.

PORTABLE HOUSES—ADAPTED TO ALL CLIMATES.



SOLE MANUFACTORY, CLIFT-HOUSE, BRISTOL.

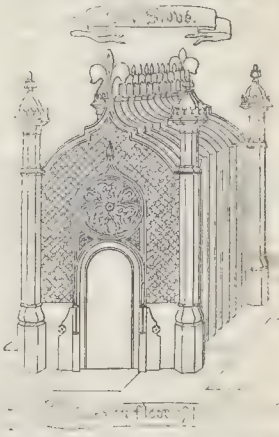
SAMUEL HEMMING'S PATENT IMPROVED PORTABLE BUILDINGS.

A great variety may be seen at the Works, consisting of Churches, Chapels, Two-storied Hotels, handsome Row of Two-storied Shops and Dwellings, with Balconies and Verandahs, and many Ornamental Villas. Also, an Emigrant's Home, fitted up complete, with accommodation for Seventy-two Persons; and many other Buildings, covering an area of Ten Acres of Ground.

Every Building may be seen perfectly erected previously to its being taken down for shipment. All the Timber-work is dried in extensive Drying-sheds.

STUART AND SMITH,

ROSCOE-PLACE, SHEFFIELD,



SOLE PROPRIETORS & MANUFACTURERS

OF

THE GILL STOVE,

PATENTED BY THE LATE

JOHN SYLVESTER, Esq. C.E.

TO RAILWAY COMPANIES, CONTRACTORS, AND BUILDERS.

JAMES LAURIE and CO. Warehouse, Cousin-lane, Upper Thames-street, supply Railway Chairs and Sleepers, Fishing Pieces, Bolts and Nuts, Spikes and Pit Bars, Columns, Girders, Socket Pipes, Rain water Pipes, Gutters, Railing and Palisading Bars, and all kinds of Iron Castings. Also, Henderson's Patent Derrick Cranes.

NEW HOUSES OF PARLIAMENT.—DEFRIES'S GAS STOVES, RANGES and BATHS, just completed for two kitchens in the above building. A great variety in stock upon the same principle. Gas Baths from 7s. by which a warm bath may be obtained for three halfpence. Gas Cooking and Heating Stoves for all classes, from 1l. Defries's celebrated Dry Gas-Meters, 50,000 in use. Testimonials at the office, 145, Regent-street. Manufactories removed from Hampstead road and St. Martin's lane to more extensive premises, New-road, near Albany-street.

WARMING by HOT WATER.—J. WEEKS and CO. King's-road, Chelsea, Hot-water Apparatus Manufacturers, beg most respectfully to solicit the attention of architects, builders, &c. to their superior apparatus for warming churches, mansions, halls, baths, offices, and public buildings, by the circulation of hot water.—See WEEKS and CO.'S Illustrated Catalogue.

STEPHENSON and PEILL, 61, Gracechurch-street, London and 17, New Park-street, Southwark, Manufacturers of COPPER CYLINDRICAL and improved CONICAL IRON BOILERS, and Cisterns, for Iron, Plumbers, Builders, Cabinet Makers in wood or iron, respectfully call the attention of the nobility, gentry, and nurserymen to their simple but efficient method of warming horticultural and other buildings by Hot Water. From the extensive works they have executed, references of the highest respectability can be given, and full particulars furnished on application.

CALORIFERE.—Gold Medal, Paris Exhibition, 1849. A 20,000 cubic feet room warmed by hot air only, at 65 degrees Fahrenheit, in burning 10 lbs. of coal per hour. The most complete safety against fire, the healthiest and most powerful ventilation, without any machinery, are obtained by BOILEVE'S PATENT CALORIFERE. The constant supply of fresh air carries out instantaneously, by a new well improved process, all damp or vitiated air, that makes it very desirable for churches, schools, theatres, hospitals manufactories, clubs, houses of any size, laundries, and green houses. The Calorifere has been adopted by his Grace the Duke of Bedford, at Woburn Abbey, by several architects, and it may be seen in operation in many places in London and country.—Apply, per post, to T. BOILEVE, French Engineer, 85, King William street, City.

TO BUILDERS, CARPENTERS, UPHOLSTERERS, SMITHS, BELL-HANGERS AND THE TRADE IN GENERAL.

WHOLESALE IRONMONGERY WAREHOUSE, 18, Blandford-street, Manchester square (running out of Baker-street, Portman-square), where a large stock is always kept on hand for the exclusive supply of the above trades.—JOHN YOUNG, Birmingham and Wolverhampton, Agent and Factor.

GEORGE HART, 253, STRAND, Near Temple-bar.

WHOLESALE, MANUFACTURING, AND FURNISHING IRONMONGER.

Proprietor and Manufacturer of Pitt's Patent Self-adjusting Spundled Door Furniture.

Lists on application.

LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE.

Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Cast-iron Goods, and STEWART'S PATENT CAST-IRON GAS and WATER PIPES.

Office, No. 7, Size-lane, London.

THE LATE JOHN SYLVESTER, C.E.—The undersigned beg to announce that the Warming, Ventilating and General Domestic Engineering Business of the late Mr. John Sylvester, is still carried on by them at 86, Great Russell-street, Bloomsbury.

SYLVESTER and CO.

January 1, 1851

TO IRONFOUNDERS.

TO BE DISPOSED OF, an IRON and BRASS FOUNDRY, in a large and flourishing town in the east of England, doing an excellent business among builders, millwrights, &c. About £ 1,200 would be required. A steady, industrious person, who thoroughly understands his business, would find this worthy his immediate attention.—Address A. B. at Mr. J. C. DREWS, 8, Providence-place, Commercial-road, Limehouse.

RECENT TESTIMONIALS
of the practical worth and efficient security of
CHUBB'S LOCKS AND STRONG-ROOM DOORS.

CHUBB and SON beg to lay before the public the two following Letters, which they have lately received, as affording further proof of the security of their Manufactures:—

Ineffectual Attempt upon the Strong Room of the London and North-Western Railway Company.

"London and North Western Railway Company,
Liverpool, 17th May, 1854.

"Gentlemen,—I have much pleasure in bearing testimony to the efficiency of the Iron Door and Locks of your make, which secure the Strong Room at this office, and which compl tely baffled the efforts of one or more burglers to get at the money-chest on the night of Thursday last, although it is evident that considerable force was used to break open the door.

"I am, Gentlemen, your obedient servant,
"Messrs. Chubb and Son." "GEO. PATMER.

From Mr. Otway, Superintendent of Police, C Divison.

"5, Great Vine-street, May 3, 1853.

"Gentlemen,—I have the pleasure to inform you, that having one of your Locks on the street-door of my house presented my being robbed last night. The thief tried to open it, but not succeeding, has so dreaded it that I have sent it to you for inspection, and shall feel so glged if you will have it repaired.

"I am, gentlemen, your obedient servant,
C. OTWAY, Superintendent C Division of Police.

"Messrs. Chubb and Son."

CHUBB'S LOCKS, with all the recent Improvements; Cash, Deed, and Paper Boxes of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock. Complete Illustrated Lists, with Prices and Sizes, will be sent on application.

CHUBB and SON, 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley-fields, Wolverhampton.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Founds, Nails wrought and cut), Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, 4s.; and the new registered Venetian Ventilator, so much admired, &c. &c. 6d. each.

1	2	3	4	5	6

6-in. Mortise, white China Furniture, 3s. 6d. each.

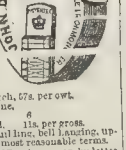
J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 20 years, for the supply of Goods from the best Manufactories, at the lowest prices.
14, Stanhope street, Clare-market, London.

PARNELL'S PATENT DEFIANCE LOCKS.
DEPOT, 82, STRAND, LONDON.

Messrs PARNELL and PUCKRIDGE respectfully inform the public, that they have a stock of these Locks ready for inspection. To give a detailed description of this Lock within the limits of an advertisement is impossible; Messrs. P. and P. must therefore content themselves with saying, that it is not one lock, but several locks in one, that no instrument but its own key can possibly open it; that it cannot, by any ort or ingenuity, be picked; that the principles of it are simple, and applicable to locks of all sizes; that it cannot be put out of order; and, notwithstanding, that it is moderate in price

Messrs. P. and P. satisfied of the peculiar excellence of this Lock, respectfully, yet with great confidence, place it before the public as being what they have called it—THE DEFIANCE LOCK THAT CANNOT BE PICKED.

Messrs. PARNELL and PUCKRIDGE have also a stock of Fireproof Safes of the best make, Deed and Cash Boxes, Copying and Letter Presses.



PARNELL'S
PATENT NOISELESS BOX STAPLE & STRIKING PLATES,
82, STRAND, LONDON.

This very simple and efficient invention entirely obviates the slamming of doors, and the consequent irritating, but nuisance caused by it in every household, it may truly be said, has no high by claim to the title of "one of the wants of the age;" for it has been wanted for a very long period; and in looking at it one involuntarily marvels with surprise, that it has never been discovered before. The Patent Noiseless Box Staple is made of strong malleable iron of the best quality, and is adapted for use in all situations, and for every purpose for which the present box staple is used: for dead-locking, it possesses double security to the present article, and at very little more cost.

Sold by M. L. PARNELL, Inventor and Patentee of "Parnell's Patent Distance Lock," and may be had of every Ironmonger in Great Britain

TO BUILDERS, CARPENTERS, CABINET-MAKERS, &c.

JOHN DALE, 18 and 19, Chiswell-street, Finsbury-square, respectfully invites the above Trades to the inspection of his immense stock of ironmongery, which cannot be surpassed in variety, quality, and cheapness by any house in London.

Elliptic Stoves, double backs,
3d. per inch, and upwards.
Register Stoves, 5½d. 6½d. 7d. 8d. and 9d. per inch.
Self-acting Ranges, with circular ovens and back boilers, best wrought bars and bright fittings:—

2-feet Cottage Ranges, with ovens and back boilers, 35s. each.
3-feet self-acting ditto, ditto, 50s. each.
Air Bricks, 4s. per doz.
Best Town Grate, 28s. Ditto, Scotch, 57s. per cwt.
Best Patent Sash Line,

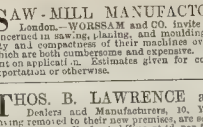
1	2	3	4	5	6
4s. 6d.	5s.	6s.	7s. 6d.	8s. 6d.	11s. per gross.

And every material required in the building, bell hanging, upholstery, and brass-foundry trades on the most reasonable terms.

List of Prices had on application at the Warehouse, or by letter prepaid.

WIRE STRAND FENCING, as furnished with all its fittings, by R. S. NEWALL and Co. having elicited the unqualified approval of practical men, is confidently recommended as the best fencing for park and farm inclosures, or indeed anywhere, for temporary agricultural inclosures (instead of any kind of hurdles), for road-side and all other fencing.

The PATENT WIRE STRAND FENCE possesses an economy, security, and durability, not to be found in combination in any other fence hitherto introduced. This fence, as fitted by R. S. Newall and Co. (after the model of the fences of this material in the Slopes and Home-park, at Windsor), has the inherent property of remaining equally tight and rigid, under any variations of temperature.



N B. Estimates given at so much per running yard, for fencing, fixed complete. Specimens, sketches, or any other particulars, will be forwarded on application.

OFFICES.—Gateshead-on-Tyne
1a, Strand, London.
67, Hyde-park-street, Glasgow.
27, Dale-street, Manchester.

SAW-MILL MANUFACTORY, Chelsea, London.—WORSSAM and CO. invite the attention of all concerned in sawing, planing, and moulding wood to the simplicity and compactness of their machines of those now in use, which are both cumbersome and expensive. Drawings and prices sent on application. Estimates given for complete saw-mills for exportation or otherwise.

THOS. B. LAWRENCE and CO. Zinc Dealers and Manufacturers, 10, York-place, Lambeth, having removed to their new premises, are selling SHEET ZINC at 38s per cwt.; Perforated Zinc, at 4d. per foot; Rain-pipes, 3 in. 6d. per foot; Gutters, 4 in. 4½d. per foot, and in proportion. Chimney-shafts, Cowls, &c. equally cheap. A prize medal was awarded to them for their manufactures.

An extensive stock of bar, rod, hoop, and sheet iron.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,
THE BEAR GARDEN LEAD WORKS, SOUTHWARK,
Invite the attention of Manufacturing Chemists to their Patent method of
UNITING LEAD TO LEAD WITHOUT SOLDER.
Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

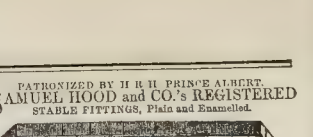
TO IRONFOUNDERS OR ENGINEERS.

WANTED, for a Brewery, a NEW or second-hand CAST-IRON COLD-LIQUOR BACK, not exceeding 15 inches deep, and capable of holding 100 Barrels; also, a HOT-LIQUOR BACK, either cast or wrought, to hold 20 Barrels, and about 5 feet deep.—Particulars and prices to be sent, post-paid, to Mr NORTHCROFT, 4, Nottingham-place, Marylebone.

BUILDERS, Contractors, Carpenters, and others are invited to inspect the stock of NAILS, TOOLS, BRASS, AND GENERAL IRONMONGERY, at PEELL and STEDALL'S,
Nos. 5 and 6, BROAD STREET, BLOOMSBURY.
The prices will be found the lowest, and the stock one of the largest in the trade. A price list sent on application.

HART AND SON,
WHOLESALE AND EXPORT IRONMONGERS AND MANUFACTURERS,
53, 54, & 55, WYCH-STREET, STRAND.

PITT'S PATENT DOOR FURNITURE.

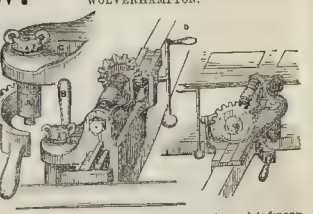


LOCKS, LATCHES, HINGES, &c.

HYDRAULIC PRESSES.—FOR SALE, a HYDRAULIC PRESS, having 14 in. ram and 5 feet lift, capable of sustaining 800 tons' pressure. Also one of 8-inch ram and 3 feet lift, pressure, 250 tons. Both new and substantially fitted up. Will be sold either with or without pumps. Prices moderate.—Apply to SCOTT and CO. 38, Upper Thames-street, City.

GALVANIZING WORKS.—SKAIFE'S PATENT GALVANIZED IRON (Superior Process).—Works at the Regent's-canal basin, Commercial-road, Limehouse, London. J. SKAIFE supplies this Metal in every form, viz. Sheets, plain and corrugated, of all sizes and gauges; Wire of every gauge, and Wire Netting of all descriptions, Guttering, Rain-water, Screwed Gas and Water pipes, Hoopings, Cashes, Furnace-pans, Baths, Buckets, &c. wholesale, retail, and for export. Every description of Ship's Ironwork Galvanized; Deck-spikes, nails, &c. kept ready. Galvanized Estimates and drawings given for roofs and buildings fixed complete. J. SKAIFE is also Agent for Morewood and Rogers's Patent Galvanized Tinned Iron, both flat and corrugated; also for Morewood and Rogers's Patent Galvanized Tinned Iron Tiles, for exportation, and Plumbic Zinc. Portable Emigrants' Houses and Substantial stores supplied at moderate prices, and on the shortest notice. An allowance to the Trade.

PATRONIZED BY H. R. H. PRINCE ALBERT.



SAMUEL HOOD and CO.'s REGISTERED STABLE FITTINGS, Plain and Enamelled.

To be seen, fixed, at the Polytechnic Institution, Regent-street, and at the Warehouse, 81, Upper Thames street.

PATENT CRAMP FOR FLOORS, DOORS, AND SASHES.

W. BISSELL, PATENTEE, WOLVERHAMPTON.

AA. A set screw and pin moving in slab C, to regulate for any thickness of joist, from 2 to 4 inches.

B. An eccentric notched lever, to be turned and pressed against the joist.

Lay the cramp upon the joist close up to the board, move the set screw in the slab up to the side of the joist, then fix the set screw firm. Turn the notched lever B against the joist, then, by turning the handle D, the lever will gradually fix itself and hold the cramp firm: the greater the strain, the more tightly, by its eccentric action, will the lever hold. The Patentee, in asking the attention of Builders and others, assures them that his cramp possesses great advantages. It is a novel cramp of the best kind, and as great advantages for doors and sashes as for floors. From its superior well-suited for doors and sashes as for floors. From its superior mechanical principles, it has greater power, and will be found to be more quickly and safely used than any yet brought out, and at the same time it is light and portable.

COLLINGE'S PATENT HINGES.—Sole Manufacturers, CHARLES COLLINGE and CO. 63 and 65, Bridge road, Lambeth, where a great variety are always on view for church, park, railroad, coachhouse, and other gates and doors of large and small dimensions, a gate of a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c. to doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.

GEOLOGY.—KING'S COLLEGE, LONDON. Professor TENNANT, F.G.S. will give a Course of Twenty Lectures on GEOLOGY, having especial reference to the important application of the science to ENGINEERING, ARCHITECTURE, and AGRICULTURE. The Lectures will commence on WEDNESDAY MORNING, JANUARY 25, at NINE o'clock. They will be continued on each succeeding FRIDAY and WEDNESDAY at the same hour.
R. W. JELF, D.D. Principal.

NOTICE is hereby given, that a GENERAL QUARTERLY MEETING of MEMBERS of the INSTITUTION of BUILDERS' FOREMEN and CLERKS of WORKS, will take place on WEDNESDAY EVENING NEXT, at the BAY-TREE TAVERN, St. Swithin's-lane, for the purpose of transacting the usual Quarterly business.
W. ALLARD, Secretary.

EDUCATIONAL INSTITUTE, 58, Aldersgate-street.—EVENING CLASSES.—The Drawing Class, comprising Perspective, Architectural, and Mechanical Drawing, will commence on JANUARY 14. Hours of attendance, every Saturday Evening, from half-past Seven till Ten. Terms, 5s. per Quarter. The Class for Practical Chemistry is held every Tuesday Evening, from Eight till Ten. Terms, 7s. per Quarter (including Chemicals). Conducted by Mr. LIDDELL. Other Classes are in the course of formation.

TO ARCHITECTS, BUILDERS, &c.—Specifications, Contracts, Leases, Agreements, and every description of Document Engrossed and Copied at very moderate charges, by A. G. HARSTON and CO. Law Stationers and Printers, 23, Chancery-lane.

OUTSIDE DRAWING-PAPERS.

WINSOR and NEWTON have on hand a large and varied stock of WHATMAN'S TURKEY MILL, string-marked outsides DRAWING-PAPERS, of all sizes, surfaces, and thicknesses, from demy, size 20 inches by 15, to IMPERIAL, 30 inches by 21, well adapted for first-class specifications, or general office purposes, and much cheaper than the ordinary cartridge papers.

PRICE 10s. FOR 14 POUNDS, or 42 THE CWT.
WINSOR and NEWTON, Artists' Colourmen, 38, Rathbone-place, London.

GUTTA PERCHA TUBING.—May be buried for years, without injury, and it is therefore valuable for conveying water, chemicals, &c. It is peculiarly valuable for liquid manure, drain, and soil pipes. Being a non-conductor, it is not affected by the frost of winter or drought of summer, like metal pipes, or leather. Its strength is extraordinary; the small half-inch diameter tubing having resisted a pressure of 250 lbs. on the square inch, without bursting. The smaller sizes may be had in 100 feet, and the larger in 50 feet lengths. The joints are easily made. As a conductor of sound it is most valuable for conveying messages in lieu of bells. ELECTRIC TELEGRAPH WIRES INSULATED WITH GUTTA PERCHA. The GUTTA PERCHA COMPANY, Patentees, 18, Wharf-road, City-road, London.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing, at one shilling the foot.

R. S. NEWALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.

OFFICES.—Gateshead-on-Tyne.
1a, Strand, London.
67, Hyde-park-street, Glasgow.
27, Dale-street, Manchester.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

It being universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLEY and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 8 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, blinds are unnecessary, and when used in Greenhouses no scorching occurs; its NON-TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Workshops, &c. for which purposes it is supplied in squares of all sizes, from 8 by 8 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.

N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate.—May 1, 1851.

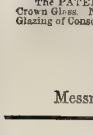
GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to

Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

THOMAS MILLINGTON

Begs to inform ARCHITECTS, BUILDERS, and the Trade that he supplies the following articles of the best quality and at the same time upon the lowest terms:—



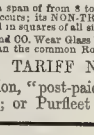
ENGLISH AND FOREIGN SHEET GLASS, PLATE, PATENT PLATE, PATENT ROUGH AND FLUTED PLATE

MILLED SHEET LEAD, PATENT PIPE, LEAD, IRON, AND BRASS PUMPS,

And Water-closets, genuine White Lead, Colours, Varnish, Brushes, and every article in the Trade.

FOR PRICE SEE ADVERTISEMENT FIRST SATURDAY IN EVERY MONTH, OR UPON APPLICATION AT THE WAREHOUSE,

87, BISHOPSGATE-STREET WITHOUT, LONDON.



SANDS AND EMERY,

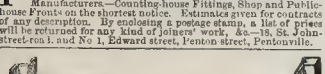
CURSITOR-STREET, CHANCERY-LANE.

MANUFACTURED JOINERS' WORK AND MOULDINGS OF EVERY DESCRIPTION ON THE SHORTEST NOTICE, AND AT THE LOWEST PRICES, PACKED AND FORWARDED TO ALL PARTS OF THE COUNTRY.

Lists of Prices and Estimates forwarded on application.

GRIBBON'S PATENT SASH-HANGING AND WINDOW IMPROVEMENT,

For facilitating the cleaning and painting and repairs of windows, by making the sashes to lift out, and the cords to unfasten by hand, rendering it unnecessary to stand outside windows to clean them, and preventing accidents and inconvenience, and getting rid of the draughts caused by loose beads, and keeping the frames in repair through doing away with the necessity of bursting off the beads to take out the sashes.



The Ironmongery is to be had of every Ironmonger in the United Kingdom, or to be had and fixed by any Builder: these parties are supplied through the Patentee,

MR. GRIBBON, ARCHITECT, 61, LOWER GARDINER-STREET, DUBLIN,

WHERE ANY FURTHER INFORMATION CAN BE HAD.

J. MILLS (late Shop Foreman to Messrs. Lawrence and Sons), JOINER to the TRADE, 7, Princes-street, Stamford street, Lambeth. Shop-fronts, fittings, staircases, &c. Well seasoned materials and superior workmanship, at the lowest possible prices. A quantity of doors and sashes always in stock.—By enclosing a postage-stamp, a full list of prices will be returned.

FARMER and CO. Sash, Door, and Staircase Manufacturers.—Counting-house Fittings, Shop and Public-house Fronts on the shortest notice. Estimates given for contracts of any description. By enclosing a postage stamp, a list of prices will be returned for any kind of joiners' work, &c.—18, St. John-street-road, and No. 1, Edward street, Penton street, Pentonville.

JENNINGS'S PATENT SHOP SHUTTER-SHOE and FASTENER costs HALF the PRICE of the unsightly SHUTTER BAR.

May be had from any Ironmonger, or from the Patentee, GEORGE JENNINGS, 29, Great Charlotte-street, Blackfriars-road.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 313, Oxford-street, adjoining Hanover square, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner: Venetian blinds, per square foot, 9d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 2s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

TO BUILDERS, BUILDING MATERIAL DEALERS, &c.

WANTED to PURCHASE, immediately, for CASH, in large or small quantities, new or second-hand DOORS of various sizes.—Apply, by letter, with full particulars, to A. B. 28, West Strand.

ALFRED GOSLETT begs to inform Builders, &c. that he is prepared to Tender for the supply of EVERY DESCRIPTION of Glass, now manufactured at WHOLESALE PRICES.

ORNAMENTAL WINDOW GLASS, at very short notice.—The patterns symmetrically adjusted to size ordered, and free from the much complained of defects in squares cut out of sheets, from 1s. per foot super; borders, 6d. per foot run.—At CHARLES LONGS, King-street, Portman-square.

PLATE and PATENT PLATE GLASS, of unequalled colours quality, and finish, for glazing and other purposes, supplied by J. LEES and CO. cheaper than any other house in London. All applications for estimates, &c. to be made to the Plate glass Warehouse and Looking-glass Manufactory, 13, Rathbone-place, Oxford-street.

E. and W. H. JACKSON beg to call the attention of Builders and the Trade to the LOW PRICES of their PATENT PLATE GLASS, BRITISH PLATE, silvered and for glazing, of unrivalled quality and finish; ROUGH PLATE, CROWN, SHEET, COLOURED, and ORNAMENTAL GLASS, in every variety, of the best manufacture, at the lowest terms. Designs and estimates furnished for ornamental windows, either for house or church decoration.—All applications for estimates and lists of prices to be made at their warehouse, 315, OXFORD-STREET.

SEASONED FLOORING.—A large stock of dry WHITE and YELLOW FLOORING, prepared by machinery, always on sale, at reduced prices, as under, for cash.

4-inch Yellow, 17s. per square.			4-inch White, 18s. per square.		
6-inch	"	18s. "	6-inch	"	17s. "
9-inch	"	21s. "	9-inch	"	18s. "

Dantzic Timber, 80s. per load.

Mouldings by machinery in very great variety.

ARCHBUTT and ATKINSON, St. Pancras Saw Mills, Old St. Pancras-road.

MUIR'S PATENT  PLANING MACHINE.

SAW MILLS, GILLINGHAM-STREET, PIMLICO.

TIMBER of any size, PLANKS, DEALS, and BATTENS, &c. sawn on the most approved principle; Boards, &c. prepared, matched, and grooved, by Muir's Patent Machinery. The Mills have all the advantages of navigation and water-carriage, being connected with the Thames by the Grosvenor Canal. Goods fetched from the docks, and carted home free of charge. Address to HENRY SOUTHAM,

Saw Mills, Gillingham-street, Pimlico.

N.B. Estimates given for Sawing and Planing.

A LARGE ASSORTMENT of WELL-SEASONED, DRY, PREPARED WHITE and YELLOW BATTEN FLOORING, also a large assortment of SCAFFOLD POLES, FOR SALE, at a low price, at DRUCE'S, No. 9 Wharf, Queen's-road West, Chelsea. Bricks, Lime, Cement, Sand, Plaster, Slates, and Slate Slab, Tiles, &c. on Sale at the lowest remunerative prices. Goods landed and carted. Ladders for sale. Apply to H. P. DIXON and CO. as above. Great facilities for the prompt execution of country orders.

REDUCED PRICES.—EDWARD SIMMS (late William Cleave), of Wilton-road, Pimlico Basin, begs to acquaint Builders and the Trade that he has now on hand, at his Manufactory (the first of its kind ever established), a very large Assortment of Dry and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from ¼ inch to 1¼ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber, Deals, Oak Plank-, Scantlings, Sash Sills, Mouldings prepared by Machinery, Laths, &c.—Apply at E. SIMMS'S (late W. Cleave's) Flooring Manufactory, Wilton-road, Pimlico Basin.

PREPARED FLOORING, &c.—ALFRED ROSLING begs to inform parties shipping wood goods to the colonies that he can supply any quality or description at the lowest prices of the day, and with the greatest possible despatch. Also mouldings in great variety. A large stock of Baltic deals kept in bond for export.—Southwark-bridge Wharf, Bankside.

FOREIGN TIMBER and DEALS of every description, at the lowest prices, for cash; and also Prepared Floors at the following prices, for the present month:—

1 in.	¾ in.	1 in.	1¼ in.
17s. 6d.	18s. 6d.	21s	26s. Yellow, per square.
16s. 6d.	17s 6d.	19s. 6d.	24s. White, do.

Battens, 9s. 5d.; Deals, 4s. 6d.; and Plank, from 6s. 3d. per 12 feet. Dantzic Timber, 85-. per load, and every kind of English and Foreign Wood direct from the docks.—Apply to Mr. MAY, 90, Leadenhall-street.

STAINING DEAL TO IMITATE ALL KINDS of WOODS. It requires NO SIZING, and will stand the exposure to the weather. Price 6s. per gallon. Varnishes for W. NAYLOR'S Stains may be had at the Factory, 44, and 56, James-street, Oxford-street.

TIMBER WHARF, SAWING, PLANING, and MOULDING MILLS, Belvidere-road, Lambeth.—The General Wood cutting Company beg leave to inform their customers that the temporary additional charge of 20 per cent. on their mouldings (as advertised on the 8th of November last) is removed, from this date, consequently, the prices will be those inserted in their Moulding List, as heretofore.

1st January, 1851.

By her Majesty's  Letters Patent.

TO BUILDERS &c.

FOR SALE, at REDUCED PRICES, No. 27, WHARF-ROAD, CITY BASIN, the Proprietor retiring from the Timber Trade, a Large Quantity of PREPARED FLOORING, in Boards and Battens, from ¼ to 1¼ inch, and seasoned by the patent desiccating process. Also Match-boards, Pine and Deals, Wainscot, Mahogany, and Hornbeam. The Premises to Let, and immediate possession given.

TO BUILDERS, SHOPFITTERS, AND PIANO-FORTE MAKERS.

FOR SALE, a large quantity of DRY WAINSCOT, in board and plank; also a large stock of very fine veneers, cut from very superior logs.—Apply to TUELY and CO. Bridge-wharf, City-road Basin.

PADDINGTON TIMBER-YARD SAWING, PLANING, and MOULDING MILLS, 3, Ironcate Wharf, Praed street, Edgware road, near the Great Western Railway Station, and abutting on the Grand Junction and Regent's Canals, affording the advantage of railway and water carriage.

GEORGE W. FRY, in returning thanks for the liberal support received by the late firm of W. R. Fry and Son, begs respectfully to solicit a continuance of the same, and calls attention to his large and well-seasoned stock of Flooring Boards, Matched Boarding, and Mouldings, of every description, prepared in a superior manner from the best goods, at the lowest remunerative prices.

GEORGE W. FRY can also offer every advantage to purchasers of any description of Timber and Deals. The extensive Mills afford convenience for immediate conversion on the most moderate terms. All sawn and prepared goods delivered free to any part of London, or carefully packed and delivered at any railway station in town.

G. W. F has published an enlarged and improved sheet of Moulding Designs, which will be forwarded, with prices of flooring, &c post-free, on application.

PATENT VULCANIZED INDIA-RUBBER TUBING, for Gas Fittings, Chemical Purposes, Fire Engines, Manure Pumps, &c.—JAMES LYNE HANCOCK, Sole Manufacturer (and Lieensee), Goswell-mews, Goswell-road, London, begs to invite the attention of Architects, Builders, Engineers, and the trade generally, to the Vulcanized India-Rubber Tubing, which is now manufactured from 1-8 inch bore and upwards, in lengths from 50 to 100 feet, and of various strengths, suitable to the purposes for which it is applied. VULCANIZED HOSE for FIRE ENGINES, LIQUID MANURE, and for conveying HOT WATER to BATHS in DWELLING-HOUSES and BREWERIES, manufactured to resist great pressure of any length and size to order.

*** Testimonials may be had on application at the Manufactory.

N.B. VULCANIZED WASHERS and SHEET RUBBER or Steam and Hot-Water Pipes, and Packings for Pistons and Gland-Boxes of Steam Engines, cut any size to order.

REPERTOIRE of MEDIÆVAL ART, No. 22, Wigmore-street, Cavendish-square.—Mr. BURTON, M.A. of the University of Cambridge, having made arrangements with parties who for many years past have worked from the designs, and under the superintendence of the late A. W. PUGIN, Esq. begs to inform the nobility, clergy, architects, &c. that he supplies every kind of Ecclesiastical and Domestic Gothic Work, viz. —Metal work, chalices and patens, offertory, basons, candlesticks, coronas, branches, gas-fittings, crosses, lamps, monumental brasses, hinges, locks, handles, fire-dogs, lecterns, velvets, richly figured silks and stuffs, for altar hangings, &c. woven silk laces, embroidery in gold and silk, gold and silver lama, painted candles, picture frames, tryptichs, banners, &c. &c. Church walls, roofs, altars, and reredoses, decorated in gold and diaper. Designs and materials for all kinds of embroidery supplied and arranged.

INSTITUTED 1831.

SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY.—Incorporated by Royal Charters, and Special Act of Parliament

Head Office—Edinburgh, 28, St. Andrew-square.
Directors—Robert Christie, Esq.
London 128, Bishopsgate-street, Cornhill.
Glasgow.—76, St. Vincent-street.

The Scottish Equitable Life Assurance Society, is an institution peculiarly adapted to afford Provision for Families. It was established in the year 1831, upon the principle of Mutual Contribution, the profits being wholly distributable among the members; and the additions which have been made to policies at the periodical investigations of the Society afford satisfactory evidence of the prosperity of the Institution, and the great advantages derived by its members. The following examples exhibit the additions already made:

A policy for 1,000l. opened in 1832, is now increased to £1,268 9 4
A policy for 1,000l. opened in 1838, is now increased to 1,067 18 1
A policy for 1,000l. opened in 1840, is now increased to 1,027 15 7

The profits are ascertained and limited triennially amongst policies of more than five years' duration.

The annual revenue is upwards of 140,000*l*.

The amount of assurances in force is upwards of 4,000,000 sterling.

The amount paid to the representatives of deceased members exceeds 300,000*l* sterling.

The total amount of vested additions allocated to policies exceeds 600,000*l*.

The annual claims and refunds of premiums exceed 70,000*l*.

Loans granted to members to the extent of the Office value of their Policies.

Copies of the annual report, forms of proposal, and all information may be had on application at any of the Society's Offices, in town or country.

W. COOK, Agent,
Dec. 1853. 128, Bishopsgate-street, London.

SOLICITORS' and GENERAL LIFE ASSURANCE SOCIETY, 52, Chancery lane, London.
Subscribed Capital, One Million.

This Society presents the following Advantages—
The security of a subscribed Capital of One Million.
Exemption of the Assured from all liability.
Premiums affording particular advantages to young lives.
Participating and Non-Participating Premiums.

In the former 80 per cent. or four fifths of the profits are divided amongst the Assured triennially, either by way of addition to the sum assured, or in diminution of Premium at their option.

No deduction is made from the four-fifths of the profits for interest on Capital, for a Guarantee Fund, or on any other account.

Policies Free of Stamp Duty and Indisputable, except in case of fraud.

At the General Meeting, on the 31st of May last, a Bonus was declared of nearly Two per cent. per annum on the amount assured, or at the rate of from Thirty to upwards of Forty per cent. on the Premiums paid.

Policies share in the Profits, even if One Premium only has been paid.

Next Division of Profits in 1856.

The Directors meet on Thursdays, at Two o'clock. Assurances may be effected by applying on any other day, between the hours of Ten and Four, at the Office of the Society, where prospectuses and all other requisite information can be obtained.

CHARLES JOHN GILL, Secretary.

THE HIGHEST STYLE OF ARTISTIC LITHOGRAPHY WILL BE FOUND IN THE WORKS PRODUCED BY

DAY & SON,

LITHOGRAPHERS TO THE QUEEN.

Landscapes, Architecture, Shipping, and Figure Subjects—Portraits direct from Life or Nature, or from Paintings, Drawings, or Daguerreotypes—Medical and Scientific Subjects, executed in a superior style peculiar to this establishment. Calotypes copied.

The large Staff of Draughtsmen required by Messrs. DAY and SON to execute the

MAPS, PLANS AND SECTIONS, DIAGRAMS, &c. &c.

FOR HER MAJESTY'S STATIONERY OFFICE,

Offers to solicitors, engineers and surveyors, stationers and printers, throughout the country, great advantages for the rapid and economic execution of their Lithography. If required, a plan received by the morning post may be lithographed and despatched by the return post.

To meet the growing demand upon

LITHOGRAPHY FOR COMMERCIAL PURPOSES,

Messrs. DAY and SON have just erected the largest premises for the purpose in the world. In soliciting orders from Manufacturers and others for

PATTERN-BOOKS, SHOW-CARDS, LABELS, &c.

And every other description of Lithography and Colour Printing, Messrs. DAY and SON promise a style of work of unequalled excellence, with economy and rapidity of execution. The smallest favours of the commercial public will receive the best of the kind, from which they may rely on Messrs DAY and SON for estimates, and it will be found, owing to the extent of this Establishment, that a combination of extraordinary superiority of work, great speed, and moderate charges, can be secured with satisfaction and saving to the customer.

PRINTING IN COLOURS,

As perfected and practised by Messrs. DAY and SON, has assumed a position hitherto unattained for artistic excellence, rapidity of execution, and economy of production. The first and only perfect reproduction in painting in colours, "The Fighting Téméraire Lighted to her Last Berth" after Turner, executed at this establishment, secured for itself the designation of a Painting Print. Other examples of great merit, in the particularly illustrative rapidity and economy of production, combined with artistic excellence, will be found in the three important works by

MATTHEW DIGBY WYATT, Esq.

Namely, "THE GEOMETRICAL MOSAICS OF THE MIDDLE AGES," "METAL-WORK AND ITS ARTISTIC DESIGN," and "THE INDUSTRIAL ARTS OF THE NINETEENTH CENTURY."

These works, although elaborately printed in colours and gold, have been sold at the price of uncoloured works. The last-named, consisting of 160 plates, issued in Fortnightly Parts of four plates, proves the possibility of adapting Chromolithography to Periodical Works—the book plates requiring four numbers cheaply and quickly—and to geological or other coloured maps.

Messrs DAY and SON are prepared to estimate and undertake works of any extent, and to meet every requirement as to quantity and style, or necessity as to price.

STEEL AND COPPER-PLATE PRINTING OF EVERY DESCRIPTION.

LADIES, Amateurs of Drawing, will find the reproduction by themselves of their own Sketches, by means of Lithography, a most delightful occupation for leisure time. Materials and instruction can be had of

MESSRS. DAY AND SON,
LITHOGRAPHERS TO THE QUEEN,
17, Gate-street, Lincoln's-inn-fields, London.

REVOLUTION in LITHOGRAPHY.—TO PUBLISHERS, PUBLIC COMPANIES, THE TRADE, AND THE PUBLIC MACLURE, MACDONALD, and MACGREGOR, sole patentees of the great SELF-ACTING LITHOGRAPHIC MACHINES by steam power. By means of these perfect machines, the range of lithography is immediately extended, rivalling letter-press printing in despatch and cheapness. Each machine being equal to 30 ordinary presses, exhibits the great power possessed by the patentees.—57, Walbrook, Mansion-house.

DECORATIVE ARTISTIC PAINTING.—Mr E. SANG, from the Royal Academy of Munich, whose works may be seen in the leading public and private buildings in the metropolis and country, gives the study of his patrons to have a new and improved STYLE of ARTISTIC EMBELLISHMENTS of INTERIORS, in the modern and ancient styles. Address, Mr. SANG, 68, Parkmall, London.

DECORATIVE PAINTING. — Messrs. JENSEN and KUCKUCK, Decorators to his Majesty the King of Hanover, to respectfully inform architects and builders, that they have considerably increased their establishment with a number of artists from Germany, and are now enabled to undertake, in the shortest notice, the interior embellishments of private and public buildings, combined with moderate charges.—Apply to HE. N. JENSEN and KUCKUCK, 201, Piccadilly.

QUANTITIES, SPECIFICATIONS, SCHEDULES of PRICES, WORKING DRAWINGS, &c. copied, lithographed, or printed.
PLANS, ELEVATIONS, DRAWINGS of MACHINERY, &c. lithographed or engraved.
BUILDERS' and CONTRACTORS' ACCOUNT-BOOKS; DRAWING PAPERS; ditto, mounted and continuous; TRACING PAPER and CLOTH; ditto in lengths.
GENERAL STATIONERY, for the use of BUILDERS, ARCHITECTS, SURVEYORS and ENGINEERS at the lowest current rates.
WATERLOW and SONS, 65 to 68, London-wall; and 49 Parliament-street, London.
Contracts for the supply of large establishments.

BILLS of QUANTITIES, &c. Lithographed with the greatest celerity, and on the lowest scale of charges. Maps, Plans, &c. reduced or enlarged. Architectural Engineering, and Mechanical Drawings executed in the most superior style of plain or tinted lithography.—ASHBEE and DANGERFIELD, Architectural and Engineering Lithographers and Draughtsmen, 21, BEDFORD-STREET, COVENT-GARDEN, LONDON.

TO ARCHITECTS.

COMPETITION and other DRAWINGS.—Mr THOMAS S. BOYS, Member of the New Society of Painters in Water Colours, and author of "The Picturesque Architecture of Paris, Ghent, Rouen," &c. and of "London as it is," offers his services in Tinting Backgrounds, Landscapes, Perspective Views, Interiors, &c. From the long experience he has had in such subjects, he is fully aware of the points essentially necessary to be attended to. Drawings and designs lithographed in a superior manner.—Address, Mr. BOYS, 39, Albany-street, Regent's-park.

SURVEYING, Architecture, Engineering, Levelling, Draining, Draughting, Mapping, Measuring, and Valuing of Land, Timber, Buildings, &c. TAUGHT PRACTICALLY, in a short course of lessons, by Messrs. HYDE, SMITH, and LEWIS, Civil Engineers, Architects, Surveyors, &c. &c. Proficiency guaranteed. Terms very moderate.—For prospectuses, &c. apply at the offices, 24, Guildford-street, Russell square.

"An excellent establishment for surveying, architecture, civil engineering, &c."—*Magazine of Science.*

NORTH LONDON SCHOOL of DRAWING and MODELLING, Maryle-terrace, High-street, Camden-town.—This School will RE-OPEN on MONDAY, JANUARY 16th, 1854. The Women's Classes will meet at half-past Five p.m. and the Men's Classes at Eight p.m. on Mondays, Wednesdays, and Fridays. Admission 2s. per month. On February 2nd, a Class for Geometrical Drawing and Perspective will be opened. Admission, 5s. per month. Students desirous of attending both classes will pay 3s. per month, or 12s. for the half-year, in advance.

J. NEVILLE WARREN, Hon. Sec.

NOTICE TO ARTISTS
Extension of Time for the Reception of Works of Art.

BELFAST FINE ARTS ASSOCIATION and Exhibition of Modern Works in Painting, Sculpture, and Architecture.

PRESIDENT.
The Lord Dufferin and Clandeboye.
VICE-PRESIDENTS.

Marquis of Londonderry.	Wm. McGee, esq. M.D. Mayor.
Marquis of Downshire	Richard Blackiston Houston, esq. J.P.
The Lord Bishop of Down and Connor and Dromore.	William Sharman Crawford, esq.
Lord Lurgan.	Fergus Henry Lewis, esq. Mayor Elect.
Sir James Emerson Tennant.	
Sir Robert Bateson, bart.	
Richard Davison, esq. M.P.	

The THIRD EXHIBITION of the above Association will open at Belfast in the first week in April. All Works of Art intended for this Exhibition must be forwarded to the Society's Agent, Mr. CHARLES H. TRACY, Middlesex Hospital, London, on or before the 1st of March, or to the Exhibition Rooms, Victoria-hall, Belfast, addressed to the Secretaries. The expense of carriage of the productions of Artists only to whom the Association Circular has been sent will be defrayed by the Committee.

By order of the Committee,
CLAUDE I. NURSEY, } Honorary
WM. S. TRACY, } Secretaries.

DRAWINGS for EXHIBITION.—From five to eight have been annually since 1838 in the Royal Academy that were coloured by T. J. RAWLINS, who has REMOVED from Charlotte-street to 38, University-street, Tottenham-court-road.

CHELTENHAM GREAT EXHIBITION of 1854. To OPEN on the 1st of JUNE. In addition to all kinds of Horticultural productions, this Exhibition will comprehend every description of Implement or Article manufactured, designed, taken from, or in any way connected therewith. Programmes, schedules of prizes, &c. may be obtained, on application to the Secretary, Mr. HENRY J. COCHRANE, 128, High-street, Cheltenham.

COLOSSEUM, REGENT'S PARK.—ADMISSION ONE SHILLING. The original Panorama of LONDON BY DAY is exhibited daily from Breakfast Tea till half-past Four. The extraordinary Panorama of LONDON BY NIGHT, every evening, Saturday excepted, from Seven till Ten; Music from Two till half-past Four, and during the evening. Several favourite songs by Miss Schwiese.

CYCLORAMA, ALBANY-STREET.—LISBON and EARTHQUAKE.—This celebrated and unique moving Panorama, representing the destruction of LISBON BY EARTHQUAKE in 1755, is exhibited for a short time in all its original splendour, and by the aid of new machinery, with increased startling effects. Daily at Three; Evening (Saturday excepted) at Eight o'clock.—Admission One Shilling. Children and Schools half-price to either Exhibition.

ROYAL POLYTECHNIC INSTITUTION.
Patron: H. R. H. Prince Albert. Magnificent Photographic Pictures, prepared expressly for this Institution by Monsieur Ferrier, of Paris, exhibited on a surface of about a thousand square feet, with an entirely new series of Dissolving Views, daily at a Quarter-past Four, and in the evening at a Quarter-past Nine.—Lecture by Dr. Bachhoffner on Wilkins's New Patent Universal Electric Telegraph. Lecture by J. H. Pepper, Esq. on Spontaneous Combustion, with brilliant experiments. Ogles, Normines and Kyeskops. Admission, 1s.; Schools and Children under Ten Years of age, Half-price.

J. R. SMITH'S GRAND TOUR of EUROPE now OPEN Daily at Three and Eight o'clock.—J. R. SMITH'S GRAND TOUR of EUROPE and ASCENT of MONT BLANC now OPEN daily, at Three and Eight o'clock, Leicester-square, opposite the Great Globe, one of the largest, most elegant, Normines and Kyeskops. Admission, 1s.; Schools and Children under Ten Years of age, Half-price.

J. R. SMITH'S GRAND TOUR of EUROPE now OPEN Daily at Three and Eight o'clock.—J. R. SMITH'S GRAND TOUR of EUROPE and ASCENT of MONT BLANC now OPEN daily, at Three and Eight o'clock, Leicester-square, opposite the Great Globe, one of the largest, most elegant, and interesting exhibitions in London, and exhibited on the continent the past year to many crowned heads and half a million of persons.—Stalls, 3s.; reserved seats, 2s.; second seats, 1s.

The Builder.

SATURDAY, JANUARY 14, 1854.

WE cannot view with complacency the proposal to remove, in other words destroy, thirty of the London churches,—thirty landmarks in London history; and can scarcely believe that it will be carried out, notwithstanding it has been so authoritatively stated that this will be the case. The proposition, as made by the Rev. Charles Hume, has been before us for these two years past: the Bishop of London, Mr. Hume states, now "approves of its general principles, and says he has long felt the necessity for some such step being taken," and upon this, and perhaps some further information, our potent contemporary the *Times* says that "as soon as legislators, lawyers, architects, and contractors have done their part in the business, thirty churches will wholly disappear from the City, and their places be devoted to whatever purpose may be most in demand. Yes; church, steeple, bells, organ, minister, clerk, beadle, sexton, pulpit, pews, will all give way to nothing worse, we will hope, than dry goods, woollens, prints, tallow candles, stationery, and such profane material. The neat little architectural façade, the three or four modest windows of the basest Gothic or the tamest Italian; the church-door beset with parish and tax-gatherers' notices, and the brief interruption to the otherwise continuous line of shop-fronts, will all be missed; and the tide of commerce will sweep over those rocks that have so long shown their heads above its angriest surges."

Further, "no opposition of any weight is expected in Parliament;" there is no one "to mourn for the banished churches," and it is intimated, to appease those who may think the destruction smaller than desirable, that more will follow hereafter: — *only* thirty are to be taken down "at present." The notion is to cart these away, and rebuild them in parts of the metropolis where they are needed; to unite the parishes whence the churches have been taken with contiguous parishes; to supply the clergyman for each church so removed with part of his income (how will the citizens relish this?); and to increase the income of the clergymen remaining in the City. Into the financial part of the question we shall not enter, further than to say that we view the re-erection of them as quite out of the question: it would be absurd, even if it were expedient in a money point of view, and would scarcely be attempted in half-a-dozen instances. It may be quite true that the attendance at some of the churches is small, and that the duties and remuneration of clergymen require re-arrangement. Even were the churches less frequented than they are, these "rocks that have so long shown their heads above the angriest surges" of the "tide of commerce," have their great uses. As one writes, who had not the reputation of attaching too great importance to holy things:—

> "This may be superstition weak and wild,
> But even the faintest relics of a shrine
> Of any worship, wake some thoughts divine."*

There are few of the threatened thirty that do not recall a story which belongs to the history of the metropolis,—few that are not associated with memories that should not die. The writer in the *Times* seems to scoff at the sentiment which will be obliged to "confess a momentary pang at this vast act of desecration;" so that we risk his sarcasm when we urge, as we must, on the strongest conviction, that the barest stone which has a history attached to it, awakens a sentiment, or induces a good thought, is worthy of care; The opinions of the article to which we are referring, fully carried out, would sweep away all our memorials of the past, and would leave nothing between us and the selfish wants and cares of the day. Many of these churches are exceedingly interesting examples of construction and design, the work of England's greatest modern architect. One of them, St. Helen's, Bishopsgate, is amongst the most ancient and interesting structures in the kingdom; and nearly all, as we have said, have a story. In St. Helen's, the City should feel the greatest interest. Here lie the remains of Sir John Crosby, Sir William Pickering, the finest gentleman of his age "for worth in learning, arts, and warfare," Sir Thomas Gresham, the builder of the first "Burse," and many others. The destruction of this building would be an eternal disgrace to the parties concerned in it, and, indeed, to the metropolis: we cannot believe that it will be permitted.

The places where the good and great lie buried are "fruitful of sentiments and virtues, of those thoughts which make man the brother of them 'that have none to help them,' and elevate him to a God."* How differently do you read history in the place where the events occurred; how much more vivid your notion of a great man when you view the tomb beneath which he rests:—

> "Our sleeping visions, waking dreams,
> Receive their shape and hue from what
> Surrounds our life."†

As Hartley Coleridge sings, too, of places where good men have walked—

> "Their several memories here
> (Even like their persons in their portraits clothed
> With the accustomed garb of daily life)
> Put on a lowly and a touching grace
> Of more distinct humanity, that left
> All genuine admiration unimpaired."

Nor is it simply the individual immediately exposed to these influences upon whom they operate. His character, his thoughts, his acts, are modified by them and re-act on scores of others: the kind feeling engendered in one mind permeates a thousand, and is eternal, never-ceasing in its good effect.

Earnestly, then, we raise our voice against the threatened wholesale destruction of city churches, and the "general principles" involved in Mr. Hume's unworthy proposition.

We have received from correspondents two or three indignant protests against the threatened act, and will let one of them speak for himself. Since it was written, the Bishop of London has denied that he has sanctioned the proposal beyond expressing approval of "the principle that, in any case where it can be clearly shown that a church is *not* required, it may be advantageously removed to a place where it *is*." Even from this we must dissent, and we entreat his lordship to give the matter serious consideration:—

It appears that the Bishop of London is supporting a scheme for the removal of a large number of the City churches, on the ground that they are not wanted there, and that churches are required in the suburbs. This has been spoken of before, but no great attention seems to have been paid to it. Some agitation surely will be made against this fearful proposition for destruction, and it is to be hoped that Parliament will not be induced to sanction such a measure. Pull down! level the churches! is the cry. Why? Because the population of London has become so small that they are useless, and may be transferred to the suburbs. Stop a moment. By "special command from the Right Honourable the Lords of his Majesty's Privy Council," the population of the several wards appears to have been taken in August, 1631 (7 Charles I.), and the number, including the liberty of Southwark (18,660), was 130,268. This may, therefore, be taken as a fair statement of what the population of London was at the time of the fire. Now it was 128,269 in 1801, and 127,869 in 1851. Long previous to the fire of London, there were, according to the London topographer Fitzstephen, in London and the suburbs, thirteen churches belonging to convents, besides 126 parish churches. These latter, no doubt, continued until the fire, which destroyed upwards of eighty at once: before this fire, London must have appeared a forest of steeples. Only thirteen of the present structures escaped its ravages, and thirty-four of the old churches were never rebuilt. Surely it cannot be intended to remove any of the thirteen which are now existing. A living writer says—

"We must especially recall to mind the positions of the citizens of London, if we would rightly appreciate the noble qualities of which the churches of London are the enduring memorials. Every stone marks a difficulty conquered—a sacrifice made on the part of those incapacitated in no ordinary degree for the making of sacrifices—an active exhibition of heroic hope, where men might have been not altogether without excuse, for a long period of something much more nearly approximating in its characteristics to despair. We must remember—to review for a moment the successive stages of the great event in question" (then follows an extract from Vincent's "God's Terrible Advice to the City by Plague and Fire"),—"we must remember the result; thirteen churches only saved out of ninety-seven standing within the walls. We must behold the miserable inhabitants—all miserable! rich and poor, young and old, weak and strong, reduced for the moment to one common level, in their bivouacs in the surrounding fields and open country, where for months great numbers had to remain. We must, above all, weigh the utter ruin that many must have been plunged into by their losses,—the difficulties requiring years of exertion and privation to overcome experienced by still more,—the necessity for the husbanding of every penny of money, every thought and energy of the mind, on the part of all to reinstate themselves in their former position. Houses the houseless could not at once build: the commercial capital of the world could not, from motives of the most evident self-interest, remain long without its halls and warehouses: both piety and the habits of piety would naturally impel men to obtain *some* fresh places of worship; but when we find what an architect they did employ for their churches, what sums of money they did expend upon them, and how numerous were the buildings they did erect, it is impossible to repress a warm feeling of admiration at the conduct of our civic forefathers, or to resist the whispers of national pride, that explain and concentrate the whole in one appropriate word (and never may that word lose its magic!) as the conduct of Englishmen."* Are thirty of these to be felled in one day?

Will not every citizen of London respond to an appeal for his churches? Shall it be said in the nineteenth century, and shall it go forth to the world, that in London, the first city in the universe, thirty Protestant churches are to be destroyed at once! Need more be said with respect to this? Might not the parishes be consolidated, and the services be alternate,—the ministers of the parishes which are to be annexed being removed? Does the Bishop of London think some of the London clergy have *nothing* to do? The report of a religious society, just issued, states "that in a large number of the parishes there is no resident clergyman, and the people do not know where to find a minister when they want one, most of the City rectors living at some distance away." Are we not proud to say of each one, "This church was built by Wren;" and "*Si monumentum requiris circumspice?*"

The Bishop's own words on these churches are, "Place yourself on the summit of that magnificent church which crowns our imperial city: from thence, survey the prospect unfolded to your ken. Immediately below you are thickly spread the monuments of former munificence and piety; those numerous churches reared by kings and nobles, and merchants and religious bodies" O. S.

ON THE NOMENCLATURE OF GOTHIC ARCHITECTURE.*

VARIOUS names have been, from time to time, proposed to be adopted, to get rid of what was considered at one time the opprobrious term "Gothic," as applied to English architecture. But the term, although first used by Sir Christopher Wren in derision, has become too firmly rooted,—all the names which have been brought forward to be adopted instead of it have been disregarded,—and the term "Gothic" has at length become universally acknowledged. Although not meaning what was originally meant by it, it has gained, from use, a meaning of its own, far more expressive and applicable than could have been otherwise obtained.

Such will be the case with the divisions of "Gothic architecture" which were first put forth by the late Mr. Rickman. People may say as much as they please about their inappropriateness, or their want of meaning, and may propose others to supersede them; yet we all know, from habit and use, what we mean by the original terms,—we are able to make each other understand what we wish to express; and even if it be urged that they have very little meaning in themselves, or are literally inappropriate, yet they have gained, from constant use, a meaning for themselves. And more than that, they are in every one's mouth,—nineteen persons out of every twenty, who speak or write of architecture, use them: it is therefore no use working against the grain: we *cannot* set them aside. Adopting new terms in lieu of old ones, also gives rise to great inconvenience, causes the utmost confusion, and even sometimes gives rise to a great deal of bad feeling; to prevent which, we ought to be prepared even to sacrifice something in favour of the old names;—besides which, I have myself never heard any which have been yet proposed, which would answer the purpose better.

I do not, therefore, come forward with a whole series of new terms, which is to be a sort of patent medicine to cure all the ills and squabbles that architecture is heir to. I have ventured simply to bring before you an endeavour to arrange, to the best of my ability, a scheme of further division of the original five divisions or periods. A system of subdivision of these periods has been practically in use by architects for some years, which is the best proof that such is wanted, but it has never yet been brought into a proper systematized form of subdivision. I will therefore proceed to develop what I consider should be the subdivisions, and in doing so, will compare them with the "Seven Periods of English Architecture," as proposed by Mr. Edmund Sharpe, but previously, I beg to premise, I do so solely with a view to arrive at a unanimity of expression, and with a wish that that should be adopted which may be found best for the purpose in every point of view. Why I compare the divisions with Mr. Sharpe's "Seven Periods," is, because he is the only person, that I am aware of, who has systematically attempted to alter the five Periods as set forth by Mr. Rickman; namely, the Saxon, Norman, Early English, Decorated English, and Perpendicular English: all other writers have only attempted to substitute other names in place of these.

I have no new terms to propose, except one, which is in lieu of that which is rather too absurd to be put up with, viz. "*late* Early English."

Saxon, then, although it may be reckoned as the first period of our architecture, I have nothing to say about, because it requires no subdivision; but in Norman architecture, a change is clearly discernible towards the latter period of the style, when the pointed arch became occasionally introduced: mouldings, capitals, and other details became lighter, and partook of some of the characteristics which were more fully developed during the next period.

There can be no doubt that this division requires a distinctive name, something to distinguish it from what may be termed Norman Proper. Mr. Sharpe has adopted the term Transitional for this period; but I should prefer to adopt a term already in pretty general use—Semi-Norman. The Early English period I would subdivide into two divisions—Lancet for the earlier, and the term Foliated for the later; the Decorated English, into Geometrical and Flowing; the Perpendicular English, into Early and Late; or the later division may be conveniently distinguished by the term "Tudor."

The subdivision "Lancet Early English" indicates very clearly that period after the general adoption of the pointed arch, but previous to the introduction of foliation or cusping in windows and other portions. Mr. Sharpe has adopted the same term, and it serves clearly enough to express the period meant. Windows of a lancet form were used singly, in couplets, triplets, in groups of five, and sometimes more. Orders of mouldings were divided into squares, as in the Norman period, which exactly suited the square abacus of the Normans; but in the Lancet, the round abacus becoming adopted, some modification of the mouldings became necessary; consequently we find the central moulding of each group (or order) kept back, that it may conveniently come within the boundary of the round abacus; but the squares, as seen by the small internal angles, were still retained.

Foliage, during the Lancet period of Early English, was much more simple than it afterwards became, and was usually formed with the characteristic triple leaves.

By the division which I have designated "Foliated Early English," I mean to express that particular period when the foliation of tracery in windows, arcades, and other portions, first commenced. This is embraced by Mr. Sharpe in his Geometrical period; so that he classes the chapter-houses of Salisbury, York, Southwell, and Wells, under the same division. Now I have always looked upon Salisbury Chapter-house as being quite distinct from the others, and cannot help doing so now. In fact I have been in the habit of calling it "*late* Early English." The only similarity of the Salisbury example to the others, is in the foliation of the windows: the mouldings, foliage, and other details, clearly belong to the Early English. Foliage is quite as good a criterion for division, and perhaps quite as certain, as any other. What could we call that from Salisbury Chapter-house but Early English? while that from Wells and Southwell, we should readily distinguish as being Decorated. I take, then, Salisbury Chapter-house as the type of what I mean by "Foliated Early English." Two lancets are placed together: a general arch is turned over them, having a pierced quatrefoil placed between. In the windows from Salisbury, two of these are placed together, a general arch turned over all four lights, a multifoil placed between them, and the spandrels pierced. The lancet-lights are generally without cusping, and do not partake of the curve of the general arch: they are distinct in themselves, the circle above often fitting in so as to leave corners. The latest building which I know of, that I should class as being "Foliated Early English," is the Presbytery at Lincoln, in which the large east window answers precisely to this development of tracery. What term, then, could be adopted more appropriate than "Foliated," for the division in which we see the first bursting forth of that foliation or tracery which had such a vast influence over the later periods of Gothic architecture?

In the mouldings of this division we first lose the division of the orders of mouldings into squares, and the joints are placed in the hollows. The moulded capitals, however, still retain their early form, with the characteristic abacus and base. The foliage has become much more elegant, but still it is distinctly and decidedly Early English. It has lost some of its simple triple character, and the leaves are often divided into four and five, also into three threes; yet in these examples the early abacus is still, in nearly every case, retained. This is without doubt the most beautiful period of Early English foliage. Now if, as I have attempted to show, the foliage strongly partakes of the character of the Lancet division, if we adopted the term Geometrical to express this division, as Mr. Sharpe has done, because of the geometrical formation of its tracery,—how should we be able to decide whether the details are geometrical, in the absence of that tracery? I would therefore adopt Rickman's division between Early English and Decorated, which is sufficiently marked to allow a line of demarcation to be drawn;—the Foliated Early English closing with such late examples as the Presbytery at Lincoln, and the Geometrical Decorated English commencing with such examples as the chapter-houses of Southwell, York, and Wells, and the Lady Chapel at Exeter. To commence with the windows, we here see at once a marked difference in the tracery. The plain lancets are lost, and they become trefoiled, and are frequently of the same curve as the external arch. In Foliated, the tracery has scarcely any change from the quatrefoils, placed in spandrels of the arches thrown over the lancets; the common number of which were either two, four, and at Lincoln eight; while now we find the number of lights most commonly to be either two, three, or five. In Foliated Early English, the outer circles inclosing quatrefoils, trefoils, &c. were never omitted; but in Geometrical Decorated they often were. This was seldom the case in Flowing Decorated, but it was so again in Early Perpendicular. Another most beautiful addition to the tracery of this period was the introduction of the ogee curve in the cusping of the tracery; and it should be observed, that the ogee form was at this time confined to the cusping, altering only the form of the piercing; but during the next division—the Flowing,—it was carried also into the main lines of the tracery. Now this is worth observing, and serves well as a mark of division.

There is another feature which now appeared,—the triangular crocketed canopy. We had them in the Foliated, as at Salisbury, the Presbytery at Lincoln, and other places; but the crockets all turned downwards, and were formed with Early English foliage. They now run upwards, and consist of the flat natural foliage, which was so beautifully and delicately wrought during this division. They were also terminated by finials, formed usually in a similar manner to the crockets.

The variety of the foliage, and the beautiful manner in which it is adapted from nature, is a most remarkable feature of this division; and the almost general absence of any foliage similar to the Early English clearly indicates a new era in Gothic architecture. Perhaps the most favourite adaptations from nature were taken from the thorn and maple leaves, of which there are some most exquisite examples remaining in the little chapter-house at Southwell, which is early in this division. There are also some beautiful specimens in the wooden stall-work of the choir at Winchester, certainly the finest example of early wood-work we have in this country. Nor is it less clear in the profiles of the mouldings and other minor details. We now see the first general use of the Decorative pinnacle, not yet carried down to the base, as afterwards became the universal practice, but springing from above the canopies. The ball-flower is substituted for the tooth-ornament. The triple groups of mouldings, so often found in the Early English, are in this division nearly lost: the characteristic moulding is an ogee-shaped roll and triple fillet, but much larger than in Early English, and hollows smaller—the joints placed in the hollows.

In the capitals we lose the Early English abacus, which is substituted by the roll-moulding and bead. The bases usually consist of three rolls, one smaller than the other. The hollow has entirely disappeared. The detached shafts in clusters, so prevalent during the Early English period, now became much less frequent, and when they were adopted, were fitted in so closely as scarcely to have the appearance of being detached. The second division of Decorated English I have called "Flowing," that being a term already in pretty general use. Mr. Sharpe has adopted the term "Curvilinear;" but "Flowing" appears to me more expressive and less complicated. In the tracery of this division the ogee curve, which was, in the Geometrical, confined to the cusping, enters very largely into the main or leading lines,—and large complete circles are seldom found: much of the tracery assumes a leaf-like form. Foliage becomes much

* Read at a meeting of the Architectural Association, on December 2, 1853. The paper was illustrated by drawings, the references to which have been here omitted.

more intricate, and the beauty of outline of elegantly-formed leaves is entirely lost in the manner in which the surface of the leaf itself is thrown into violent light and shade. Mouldings have much the same character as the last, except they begin to be arranged in a flatter manner upon the diagonal line,—often a repetition of the same, as the wave-moulding, or sometimes the double ogee, separated by three-quarter hollows. Triangular canopies often give place to ogee-formed ones. The abacus of capitals, and the lower portion of bases, are sometimes made octangular. We now come to the Perpendicular period, which I have, for want of more distinctive terms, simply divided into Early and Late, or Tudor. Mr. Sharpe has altered the name of this period to "Rectilinear;" but I do not see what advantage is gained by it: we are accustomed to the term "Perpendicular," and that goes a great way in its favour. But a great oversight in the "Seven Periods" is the giving to the "Rectilinear," or Perpendicular, a period of 190 years, without any division whatever, while in reality there is quite as much difference between Early and Late Perpendicular as there is between Geometrical and Flowing Decorated. The Early portion of this period is a very fine style, and deserves the most attentive study. The ogee form of cusping is often preserved, general circles sometimes omitted round quatrefoils, as in Geometrical Decorated. Compound cusping began to be developed, although it was partially so in the previous division. The Tudor arch is seldom if ever met with. Arches were frequently more lofty than equilateral; and further, not only were the arches lofty, but the lower portion became very much elongated; so much so as to occasion the necessary use of the transom in large windows. The foliage of this division still retained much of the beauty and chasteness of the Decorated. In mouldings we seldom yet meet with the broad shallow hollow, so prevalent in the later examples. In shafts, the centre fillets and side-beads have disappeared, and the abacus and base have invariably become octagonal. Moulded capitals are more frequent than foliated ones,—and in arcades and windows the shaft has disappeared altogether, and the mouldings are continuous. In the latest division, the Tudor arches became depressed, and the well-known Tudor arch became general for nearly every purpose where arches were used. The tracery possessed very little variety, but compound cusping was carried to a very great extent, and crocketed canopies were often introduced among the tracery.

Panelling was sometimes literally extended over the whole wall-surface. Foliage became stiff and conventional: shafts were reduced to mere bundles of beads. The arch-moulding coming upon a shaft, was frequently only a bead of the same size of the shaft below, while in the former divisions it was the invariable practice to bring the arch-mouldings out upon the abacus of the capital. The capitals were small and octagonal; the bases also octagonal, with very high plinths; hood-mouldings over doors very commonly square; hollows in arches very wide and shallow. There are, however, many redeeming features in this division; such as the magnificent fan-groining, of which we have such fine examples at King's College Chapel, Cambridge, and St. George's Chapel, Windsor. The wood-carving also of this and the previous division was perhaps brought to far greater perfection than it was at any other period, as may be seen in the roofs, rood-screens, and seating of the churches of this date; more especially of those remaining in Norfolk and Suffolk. We have also many fine examples of square towers of this division.

Any reference to dates for the subdivisions, I have purposely omitted, for I believe, myself, dates to be sometimes very contradictory, and I would prefer to assign any building as belonging to such a division, rather by the character of the architecture itself, than its *supposed* date. Whenever the exact dates of the erection of any building can be ascertained upon undoubted authority, they are of course of the greatest importance; but I am of opinion that the alteration in any particular style may have been earlier in one part of the country than in another. For instance, while Foliated Early English was being carried out at Westminster under Henry III. churches of the Lancet division may have been in the course of erection in Norfolk, or some other part of the country. There is no objection to saying that such a building is early or late in such a century, or about the time of such a king; but I would be cautious as to exact dates, unless upon good authority.

THE DARK AGE OF ENGLISH TASTE.

In a former paper on this subject we referred to the obstinacy, so to speak, with which the multiplication of tasteless forms has been persisted in.* The pewter ale-pot is but one of many instances to which, if space could be spared, attention might be usefully directed. The London street-posts and lamp-posts, for example, numerous and conspicuous as they are, deserve particular notice. During the darkest age of English taste (the time of the late American and French wars), cannons were so plentiful that numbers which were thought imperfect, or had been sufficiently used, were placed at the corners of narrow turnings in the towns near our seaports and arsenals. When peace had at length been obtained, the metropolis and various other towns in the kingdom began, as a natural consequence, rapidly to increase; but the lingering taste for warlike implements, the force of custom, or else the want of power to design, altogether prevented the invention of any other corner-post than the "*cannon pattern.*" Many of these may be seen at the present day planted in St. Marylebone parish, dated 1828, and in many other London parishes. Throughout the country, too, you find them. It is true that the mouth of the imitative cannon in most instances was filled in the casting with half of a cannon-ball: in some cases, by a stretch of invention, two balls, a large and a small one, were introduced, the only use of which was to prevent little boys and any other person from conveniently taking a rest on the top. In short, for many years "the cannon" was the *beau ideal* and standard taste as regards street-posts. (Fig. 1.)

On the introduction of gas, the parties applied to for designs for the new street lamp-posts seem to have felt it impossible to supply anything better than the "cannon pattern" for the pedestal; and our readers who have not given attention to this peculiarity, will see, by reference to our engraving (fig. 2), that instead of the cannon-ball, or a spear-head, the shaft of the lamp-post was inserted into the mouth of the cannon.

In other instances we find ducal coronets and other objects were applied to cannon heads. (Fig. 3.) The same idea was used for the water-pumps in many of our squares, &c. (Fig. 4.)

In order to show the correspondence between architecture and art even in the dark age, let such of our readers as take an interest in the matter examine a few of the house-railings and other ornaments in the neighbourhood of particular London churches—that is to say, of modern date; and he will find a curious correspondence between the church, the domestic dwellings, and their adjuncts erected at the same period. This will be readily recognised in many districts. Let us, for example, look into Queen's-square, Bloomsbury. Part of the square, Great Ormond-street, and some of the streets adjoining, were erected during the reign of Queen Anne. Many of these houses are of good design, and are ornamented with very fair ironwork and richly carved doors. The church here, however, is of more recent date; and both in its exterior and interior proportions and appearances affords clear evidence of the condition of English taste in architecture at the time of its erection. Surrounding the church, the iron railings of the houses, and other matters of the same date, correspond in clumsiness of form and want of originality and fitness of design.

On approaching Mr. Inwood's (in many respects) beautiful church of New St. Pancras, the lamp-posts planted at about the time of the building of that church are varied from the "cannon pattern," and begin to assume an independent form; and in the neighbourhood of the church the house-railings, &c. exhibit evidences of improved style. Fig. 5 shows a piece of railing in front of a house close to the church. It is true that some of the balconies in Euston-square are extraordinary performances, yet even they show an attempt at improvement. The spike heads too begin to take another shape, as will be seen by reference to fig. 6.

The entrance to the Euston-square railway station—a fine thing in itself, whatever may be thought of its fitness and present position—has been the means of producing lamp-posts of an improved and appropriate description. Turn in whichever direction you will, it will be found that architecture is a regulator of taste. This may be readily seen by various comparisons; for instance, between the coffin

* Vol. xi. p. 591.

of Charles II. and that of the Princess Sophia, who died in the reign of George III. In the former the proportion is elegant, and the ornaments are chaste and appropriate: in the latter the forms are clumsy and unmeaning, each instance corresponding with the prevailing architecture of the time.

In the arts of sculpture and painting, the correspondence to which we have referred is, according to the practical artistic knowledge of each period, sufficiently evident, as is shown by a comparison of Greek architecture with the Elgin and other sculptures; the stern and substantial old Roman masonry and their sculptured effigies; the church of St. Peter's, and the sculptures and paintings of Michelangelo and his school; and the Italian architecture and the Italian arts generally at the time of Raffaelle.

It may be said that sculpture and painting in this country during the finest period of our Gothic architecture were in a state of barbarism. Such, however, was not altogether the case. It is true that the high state of perfection found in Greek art had for several centuries declined. This decline is shown in both the architecture and sculpture of imperial Rome, and was rapidly increased by the decline and fall of that empire. Yet neither amongst the Greeks, Romans, nor other nations of antiquity, do we find the art of painting practised beyond the flat coloured decoration of architecture. Painting may, therefore, be said to have been, during the period of our finest Gothic architecture, in an infant state—its principles not entirely understood: it could not, therefore, be expected that such works would be other than mere matters of decoration and of secondary consideration. Many of the English sculptures of the Gothic period are, however, highly characteristic, and possess great feeling, and many other high qualities of art. The imitation of foliage and other adaptations of nature, and the beauty of the workmanship of the carvings both in wood and stone, fully bear out the correctness of our opinion respecting the effect of architecture on the other arts.

During the dark ages, it is true, West, Reynolds, Gainsborough, and others rose up and founded a school of painting which possessed qualities of its own: the progress of this school of painting can be traced, however, to the natural progress of an art (used as it is amongst us) suited to the genius of a people; and it will be seen that the production of the pictures of Reynolds and others did not immediately affect the general arts of the country; for nothing could be in worse taste than the objects by which their pictures were surrounded at the time of their production, and for long afterwards; and it is but reasonable to suppose that if architecture in England had continued pure and tasteful, our school of painting would have been further advanced.

The objects to which we have directed attention will soon be looked upon as instances of a strange condition of taste; and although the beer pots may in a short time be melted, and some ingenious pewterer make a large fortune by the introduction of a new pattern, and the Brighton Pavilion, like the King's-cross effigy, become a thing of the past, we fear that the pigtailed statue in Cockspur-street, the "cannon pattern" posts, and other matters are too hard for speedy removal, but must remain in the eyes of our children as reflections on the want of invention manifested by their progenitors.

A VISIT TO THE MARYLEBONE FREE LIBRARY

Startled by the announcement that the Marylebone Free Library was actually open on Monday, the 9th inst. (the opening day), we took a journey along the New-road as far as Gloucester-place, No. 37, and there found the object of our search. It is situated within a minute's walk of another most useful parochial institution, the public baths and washhouses. The junction of the two establishments is very appropriate. The workman returning from his daily toil may go to the one and purify his body, and then cross the road to the other, and spend the evening in purifying and furnishing his mind. The proximity of the two institutions, to our mind, also, is not a little suggestive. It points to a great fact, which social reformers would do well to take more note of than they do,—namely, that in their endeavours to do good to the minds and souls of their fellow-men, they should not forget their bodies. If we could strip off the integuments of flesh, and deal with men as disembodied spirits, we might then afford, in our efforts of benevolence, to look at the spirit alone; but inasmuch as the Almighty has willed that man in this world should be a compound of the angel and the animal, we must remember the animal part as well as the angelic. It is useless to try to elevate and Christianize men sunk in the lowest depths of physical degradation by merely moral means. Hence, much as we admire the latter in the varied forms of their exercise which the present age displays, we must accord an equal degree of importance to the former. The bath is as much an instrument of social reformation as the library.

On walking up the passage leading to the house, our attention is arrested by a placard announcing that the library is opened this day with 3,000 volumes, contributed by various friends or purchased by the committee; and that every one above the age of fourteen may have the use of them from ten in the morning till ten at night for nothing. "Too good to be true," said a friend, to whom we mentioned the proposal. We had our own misgivings; and there have been various little things which have helped to strengthen them; so we took what every one must admit to be the wisest course—went and judged for ourselves. There, sure enough, were the books, the property of the working men of Marylebone, arranged in goodly rows, in convenient cases, around the sides of two comfortable first-floor rooms, furnished with baise-covered reading-tables, on which were placed writing materials for the use of those who follow the commendable practice of that illustrious scholar of antiquity, who never read without a pen in his hand. If such readers were more numerous, we fancy there would be fewer complaints about the superficiality of our times compared with the solidity of the past. The literary serials, such as the *Athenæum*, *Household Words*, and the quarterlies, were lying on the tables; but we saw nothing like a newspaper. At first we were rather sorry for this, because we have some leaning to Mr. Cobden's opinion, that the reading of a first-class newspaper is one of the most important helps towards a working-man's education. But of course no one can do impossibilities; and unless some one can tell the committee how to buy papers without money, they must be contented without them. The finances will not justify the necessary expenditure. By the way, what could we not do if money were not always necessary for everything? There is, however, space for a news-room on the premises; and whenever the support accorded to the institution by the public shall justify the step, it will be opened.

What sort of books are provided? is our next thought. The catalogue answers, some of all sorts. We have prayer-books and romances, novels and biography, poetry and dictionaries, grammars and books of devotion, every degree of seriousness from Doddridge's "Rise and Progress of Religion in the Soul," to "Don Quixote" and "The Devil on Two Sticks." Something, in short, to suit every taste. On the list are many works of sterling value, and not a few, also, whose titles are evidence that their former owners have been lately revising their book-shelves, and turning out the lumber; and moreover, like others we could name, putting the parish and borough of St. Marylebone under an obligation for nothing. We find no *index prohibitorum*, all is fish that comes to the net; even politics and theology are not forbidden: common sense asks, why should they be? Why indeed? and yet they often are. The dates in the catalogue show many of the volumes to be rather ancient, but we find provision is made to secure the current literature of the day on the library tables, by means of an arrangement with a circulating library, so that the writings of Dickens, Bulwer Lytton, Lamartine, and other popular authors shall be brought within the reach of the working man as well as the more massive literature of science and theology.

At present there is no lending library, and the books must be perused on the premises, no great hardship, however, since the rooms are well lighted and warm. Still we wish there were, for however agreeable it may be to a young unmarried man to have such a place in which to spend his winter evenings, a man at the head of a family might prefer spending his at his own fireside, and we should like him all the better if he did. For we must confess to some jealousy of everything that takes the poor man from his home. His humble cottage, or, as is too often the case in London, his single room, should be to him the dearest spot in the world. At home he should feel himself *at home*. It is some gratification to know that this also forms a part of the scheme when the necessary funds shall be accumulated to render it practicable. It would be supposed that it would then be necessary for a person, on taking out a book, to deposit its value, otherwise where is the security for its safe return? But it has been suggested to the committee, that many a hard-working man might find it difficult to lay down a sum of money equal to the value of the book he might wish to read, and in such a case, reference to a respectable householder who would be security for the book, would be deemed sufficient.

We have seen the books, and know how they were obtained, but how is the machinery to be kept going? We are rather curious about that. The placard at the door tells us it is "all dependent upon voluntary contributions," and the best dependence too, we venture to opine. When M. Guizot was in this country, he observed that nothing struck him more than the number of charitable institutions on which were inscribed the words "Supported by voluntary contributions." It impressed him with a favourable opinion of the will of the English people, that they should will to support so many good things. It is to this will that the projectors of the Marylebone Library look for support, and we have every confidence they will not be disappointed. Already, in addition to the donations of money and books which have set the scheme going, we are happy to find that some annual subscriptions are promised—more are anxiously looked for.

But after all, it is obvious that success must depend mainly upon those for whose more immediate benefit the library is instituted. The law of demand and supply will operate here as well as in commerce, to the same effect, though in a somewhat different manner. The men of property, by whose contributions mainly the thing has been thus far successful, will gladly continue their efforts if they find they are appreciated, but if no one seems to value what they do, they will soon tire, and naturally enough, for no one likes to throw his money away.

F. W. J.

ON THE WARMING OF CHURCHES AND CHAPELS.

Permit me to offer a few remarks, suggested by the paper read at a meeting of the Architectural Society of the Archdeaconry of Northampton, by the Rev. H. J. Bigge, which appeared in your journal.

The writer proceeds in the first place, very properly, to show the necessity which exists, in the present day more than at any former period, for rendering churches comfortable to the congregations assembled to worship God; not only as being agreeable to those who are in health, but as an essential to the weak and infirm,—and it may be added, that it is equally essential to both these classes, in securing their attention to Divine service, and enabling them to realize that enjoyment which it is calculated to impart, when the person is not tortured by the influences of a cold and damp building.

The self-evident sources of cold, viz., dilapidation, &c., need no reference, as it may be taken for granted that the cure is simple. A curtain over the doors is no doubt a very good screen; but I do not see that baize or cloth-covered doors are so highly objectionable because some good people have displayed their judgment in selecting a colour at variance with a refined taste,—and very often discordant with the character of the edifice,—but, on the contrary, if the arrangement of the inner doors were

confided the architect, it would in all probability be ch as would not offend the eye; and such ors are used without any unpleasant concussi to disturb or attract attention, and they exde noise from without.

The ?hor of the paper refers at some length to the arious and all but numberless contrivanc of stoves, which, with their accompaing impurities, annoyances, and disfigurents, are denounced, as most of them deser to be. The Roman Hypocaust claims from im a lengthened notice, but I do not learn hat it has found a place in any of our chures or cathedrals. Durham Cathedral is said o have *upwards of a dozen* Patent Phœnix sto s, *with their pipe flues thrust out of the win ows!*—and the result is said to be *tolerably successful—but* at what cost?—the apparent c version of the House of God into a *smithy!* d the whole fabric both inside and outside, ore or less begrimed with soot! Can nothing e done to preserve our beautiful houses from such perpetrations, and at the same time save them from the devouring flames, which have robbed the country of so many fine examples of architecture, and an amount of value incalculable? I answer yes, but before adverting to the means, permit me to make one other extract from Mr. Bigge's paper, as follows, viz., "The system of warming by hot water conveyed in pipes along the walls, and on a level with the floor, is free from most of the objections just stated, and is *effective in its operation;* but the expense of laying it down, and afterwards maintaining it, is too great to admit of its being employed in ordinary cases."

Thus, the only method acknowledged to be effective is summarily dismissed, and upon grounds which I conceive insufficient.

In the first place, warming by hot water is here assumed to be more costly in its *introduction* than any other mode. In most cases where it is so, it may be accounted for from the fact that in old churches (and I regret to say in many new ones also), no provision whatever is made for its introduction, nor for the introduction of any other mode of warming: thrice the expense to a great extent is incurred in making that necessary provision, and not simply the cost of the means of warming.

In most cases of church building this provision might be made at a cost not worth consideration, viz. by appropriating the chamber under the aisles for the reception of hot-water pipes, the paving being laid upon sleeper walls, "as is usual," and ornamental gratings laid as margins on each side.

By a judicious arrangement of hot-water apparatus, as herein described, the following advantages would accrue, viz., the absence of smoke, dust, and draughts,—the common enemies, both to person and furniture; attendances at the fires during Divine service rendered unnecessary; the purity of the atmosphere preserved; an uniform temperature throughout the building maintained; the health and comfort of the congregation secured; the prevention of all unsightly excrescences; and a certain security *against fire.*

With respect to the waste of fuel by using stoves, Mr. Bigge's statement, "that eleven parts of every twelve pass in waste up the chimney," is almost universally admitted; whereas, by using a well-constructed boiler, and having it *properly set*, the greatest possible amount of heat is obtained from any given quantity of fuel.

One word on "the expense of maintaining hot-water apparatus," as an alleged reason for its rejection: I believe that any respectable and competent hot-water engineer would willingly undertake the responsibility of maintaining in good working condition hot-water apparatus of his own fitting, at an annual charge not exceeding 5 per cent. on the original cost. Having endeavoured as briefly as possible to show the superiority of hot water as a means of warming, in utility, economy, and comfort, I trust this subject will receive from architects (especially) a little more attention than heretofore in making their designs. It will amply repay them, by the preservation of their works from absurd and disgusting deformities: churches and chapels will be better filled: the ministers will be encouraged, and the people grateful.

W. H.

VENTILATION OF GAS-PRODUCTS.

To the advantage, or, indeed, the necessity, of having attached to every gas-burner some means of conducting away the noxious products of its combustion from apartments of every description, and more especially from such as printing-offices, and many others, in which much gas is used, we have repeatedly pointed attention, and did so quite recently.

A correspondent has favoured us with the description of a simple addition to gas-fittings, which ought, in some shape, to be as inseparable from the burning of gas as chimneys are from the burning of coal; for the smoke and the other far more noxious products of gas combustion at present spread through an apartment, doing much mischief to books, ornaments, and everything else, while seeking a way of escape, not even so specially provided for them as is the hole in the roof of an Irish hut for the eye-blearing smoke of the peats on the hearth, so rude and primitive are we as yet, even in the most aristocratic dwellings, in respect to the important subject of gas-combustion.

The remarkable rotting and destruction of book-bindings in one of the London clubs, investigated by Professor Faraday, and a like mischief to the library of the Literary and Philosophical Society of Newcastle-upon-Tyne, appear to have led to the particular arrangement described by our correspondent, which we quote nearly at the length he gives it. The burners in this case were clustered into a chandelier, but a simple apparatus like it can easily be applied in a cheap way, as by the use of tin in place of bronze, to separate burners and fittings:—

"The chandelier is suspended by a double tube, the inner of which brings the gas, the space between the inner and outer tubes forming a chimney for conveying away the products of combustion into the open air. In the present case the outer tube is at once carried through the slates to the height of 4 feet above them, with a revolving apparatus at the top, to prevent down-draughts. The outer tube separates into three arms, and the gas is introduced to the burners by these arms from the central gas-tube.

The branch chimneys curve downwards, so that their mouths are towards the floor. Each chimney spreads at the mouth into an inverted cup, from the inside of which proceeds an elongation of the branch tube which brings the gas. This elongation continues downwards for about 14 inches, and is made to support three fish-tail burners. These are inclosed in a glass shade or 'moon' of a nearly globular form, and open at top and bottom; the upper part being either slightly elongated into a neck or turned over, so as to allow a brass collar to be placed round it. The neck of the 'moon' enters within the inverted cup at the mouth of the chimney, the 'moon' itself being suspended either by a brass collar which screws into the mouth of the cup, or is supported by three wires fixed into a cylindrical piece of brass, which screws into the lower part of the gas-tube immediately below the burners. By this arrangement the light is entirely inclosed by the glass, excepting at the lower opening, where it is fed by atmospheric air, and as there is no down-draught, the products of combustion are all carried off, excepting a portion of the water produced by the liberation of hydrogen. This water condenses in the higher portion of the chimney, and is conveyed away by a tube extending perpendicularly downwards from the bottom of the chimney. At first a tap was put at the bottom of this tube, but it could not be kept tight, from the *corrosive nature of the water.* The arrangement now adopted is to suspend a glass vessel by means of a brass collar and a bayonet-catch below the open end of the tube; and the water collected is removed every morning.

Notwithstanding the rapid up-draught, and that consequently a considerable portion of the water flies off by the chimney, the quantity collected *every morning* from four chandeliers, is at present upwards of *half a gallon.* This water, when analyzed, has been found to contain *a large quantity of sulphuric acid and sulphate of ammonia,* as well as sulphate of iron and sulphate of copper, which last, of course, it gets from the pipes."

BUILDERS' BENEVOLENT INSTITUTION.—We would direct the attention of our readers to our advertising columns, in which will be found a list of gentlemen who have given in their names to act as stewards at the approaching ball in aid of the funds of the above institution. Under such patronage, and with such an object in view as the relief of the distressed builders of the metropolis, we have no doubt that the receipts will be such as to prove advantageous to the charity. Mr. Joseph Bird acts as honorary secretary.

THE PIPE AND BRICK SEWER QUESTION.

THE question of a proper system of sewerage reform has so long attracted the attention of the public, and so much has been said and written on the subject, that I should have had considerable hesitation in troubling you or your readers with a letter, did I not feel that the matter appears as far from a solution as ever, and that every hint from a practical man is valuable, and when conveyed by your paper, weighty and impressive. I shall confine the contents of my present letter chiefly to the much-disputed point of pipe-sewerage, to which my attention was most particularly drawn by the Report of the Institute of Engineers, and by the remarks made upon that Report in your leading article of the 24th ult.

"Nothing," says the Report, "can be relied upon for street sewers except brick constructions sufficiently large to admit access within them." For *main* sewers, where a large area has to be drained, brick constructions should be undoubtedly used; but I do not see the necessity of having them so large in all cases as to admit access within them. The old-fashioned brick sewers, of huge dimensions, with upright sides, and, in many cases, with flat bottoms, were frequently, as is truly asserted, little better than elongated cesspools: this I know to be the case, as I have passed through many miles of them. There was a great difficulty in properly cleansing them: the man-holes along the line had to be periodically opened, and the deposit lifted by well-tackle, and removed by carting,—a most offensive and expensive system. But these nuisances ceased with the construction of the egg-shaped sewer, with its admirable flushing apparatus, and numerous other improvements, both economical and useful, introduced by Mr. John Roe, many years surveyor to the Holborn and Finsbury divisions, and who was the first man to work a reform in sewerage detail.

The improved sewer, periodically and properly flushed, is not open in any way to the objections raised against the old one, and if a sufficient supply of water be injected, there is no probability of a deposit; and it is for this reason, combined with that of economy, that I enter an objection against their being constructed on so large a scale as is insisted upon. I am so convinced of this, that I believe, if substance and cheapness could be united in pipes, they would be equally good with brick in forming all classes of sewers. They can be as readily flushed, and no greater fall is required for them; but as pipes were made, they could not withstand the pressure to which they were subjected; and they were not then, and are not now, permeable, in my opinion,—the second objection to them being used as main lines. Upon the basis of economy, I would raise a strong argument in favour of pipe-drainage: it is so much more cheaply carried out than that of brick, that it is placed within the reach of almost every corporation; whereas, under the old system, so large a sum of money was required to complete the sewerage of a town, that but little has been effected. But economy is not the only benefit: in proper soils, in appropriate places, they can be used for mains,—such as in county towns, where a small area is to be drained; and in *all,* or nearly all, collateral sewerage, I would use pipes as readily and as usefully as bricks.

Directly pipe-drainage was introduced, it was eagerly and injudiciously used; its advocates, without proper consideration, laid it in all directions; pipes were laid of a ridiculously small bore; junctions were placed at right angles, and but little attention was paid to the quality of the material, to the sockets, or glazing; and men in no way qualified to perfect a new system were employed to lay them down. Strata, position, size of pipe, were seldom taken into consideration. These, united with prejudices entertained by many employed, and who were only too anxious to prevent the introduction of a new system, were the primal causes of the failures which have been quoted by the opponents of pipe-drainage,—a drainage that required only, and still requires only, skilful execution to make it, united with brick, a most perfect and economical system.

"Experience," continues the Report, "confirms the application of pipes to house-drainage

only." My answer to this is, that pipe-drainage being quite in its infancy, the experience spoken of has not been purchased. As far as my own experience goes, it teaches me diametrically opposite to that expressed in the Report. I have laid down in Birmingham, under the corporation, some miles of pipe-drainage, and in no one instance have I had a failure; and, after four years' trial, the most complete and triumphant proof is offered of the goodness and cheapness of pipe-drainage.

The assertions in the Report were founded upon data which I should fancy were obtained from incorrect sources. Certain lengths of pipe were laid down: these pipes were improperly made: they were improperly used; consequently they did not succeed. No continued trials have been made to perfect a system which I feel confident is not only the cheapest, but for collateral and house-drainage the best. The failures that have taken place I can easily account for, and could as easily prevent a recurrence of them. I may be thought egotistical, but I do not fear to affirm, that my practical knowledge is quite as great as that of any parties who have furnished the Institute with matter for the Report; neither do I fear to say, that eventually pipes will be generally used; but if they are not well and properly glazed,—a most important matter,—the joints not truly formed and accurately fitted,—if they are not well laid down and judiciously used,—then no amount of forethought is required to proclaim their utter failure.

There is a half-brick sewer, 3 feet 9 inches by 2 feet 6 inches, known as Class C, constructed in blocks in cement, of which many thousand feet were laid down in London; but in consequence of one failure in a situation where it never ought to have been used, it is now, I believe, quite discontinued in London, though it is still used extensively and advantageously in Birmingham. For collateral sewerage, and in favourable soils, I do not know a more useful or a more economical drain.

Although I consider it *quite impracticable to lay down one classified system of sewerage* for all districts, as each must be governed and treated according to its natural local requirements, still I should assert, as a matter of rule, *that the amalgamation of the two opposing systems*, brick and pipe,—brick for large mains, and pipe for collateral and house-drainage—would be attended with complete success. I have so used them in many instances, and I never had a failure, neither do I anticipate one.

HENRY JOHNSON.

PROPOSED ROAD FROM BROMPTON TO KENSINGTON.

THE intimation in our pages that an Act is to be applied for to get power to open a road from the end of Brompton-square into Princes-terrace, and so to the Kensington-road, has brought us a host of letters urging the importance of the proposed improvement, and expressing a hope that individual objections will not suffice to prevent what would be a great public improvement. Mr. Elger, the owner of the portion of land required, and the builder of the houses in Princes-terrace (now, with two exceptions, sold) has favoured us with a note denying the correctness of an assertion in some of the daily papers, that the parochial board is a party to the project. We are glad, however, to be able to say that the Kensington Improvement Commissioners will take the proposition into consideration at their next meeting, and we sincerely hope that they will determine to give it their strongest assistance.

The Bill is entitled "The Kensington Improvement Act, 1851, Amendment," and takes power to purchase the land required, &c. and to make a special rate to defray the expenses.

Mr. Elger writes, "There can be no doubt that such a communication would *very much* increase the value of property in Brompton. Nevertheless, I am sure you will agree with me, *that* offers no reason why other property should be prejudiced to accomplish an object which no parties resident in Brompton could have contemplated when purchasing property there, and, indeed, which could not have been effected but for the manner in which I have arranged my building operations on the Kingston House estate."

Certainly not. If damage can be shown, it should be amply compensated for. For our own part, we are disposed to think that the property referred to, far from being injured, would be benefited, especially if the inclosure in Brompton-square were cleared away, and a wide central road formed.

SOAP AS A MEANS OF ART.

DR. FERGUSON BRANSON, of Sheffield, writing in the *Journal of the Society of Arts*, says,—"Several years ago I was endeavouring to find an easy substitute for wood-engraving, or rather to find out a substance more readily cut than wood, and yet sufficiently firm to allow of a cast being taken from the surface when the design was finished, to be reproduced in type metal, or by the electrotype process. After trying various substances, I at last hit upon one which at first promised success, viz. the very common substance called soap; but I found that much more skill than I possessed was required to cut the fine lines for surface-printing. A very little experience with the material convinced me that, though it might not supply the place of wood for surface-printing, it contained within itself the capability of being extensively applied to various useful and artistic processes in a manner hitherto unknown. Die-sinking is a tedious process, and no method of die-sinking that I am aware of, admits of freedom of handling. A drawing may be executed with a hard point on a smooth piece of soap almost as readily, as freely, and in as short a time, as an ordinary drawing with a lead pencil. Every touch thus produced is clear, sharp, and well defined. When the drawing is finished, a cast may be taken from the surface in plaster, or, better still, by pressing the soap firmly into heated gutta percha. In gutta percha several impressions may be taken without injuring the soap, so as to admit of 'proofs' being taken and corrections made—a very valuable and practical good quality in soap. It will even bear being pressed into melted sealing-wax without injury. I have never tried a sulphur mould, but I imagine an impression from the soap could easily be taken by that method."

OPENINGS FOR HEATING BUILDINGS.

IN warming public buildings, it is a great error to bring the heat into the apartment through openings *in* the floor quite level. The consequence of this arrangement is, that the dust and dirt fall through openings; and very often the servants, in sweeping the apartments, put the dust down these openings, in order to save themselves the trouble of taking it away: the consequence of this is, that the current of air from the furnace or boiler sends the dust into the rooms again. The National Gallery is warmed on this plan, which may account for the great accumulation of dirt on the pictures.

M. F.

ROYAL INSTITUTE OF BRITISH ARCHITECTS.

AT an ordinary general meeting, held on Monday evening, the 9th inst.—Mr. Geo. Godwin, fellow, in the chair,—Mr. Horace Field, B.A. Mr. Joseph James, and Mr. Richard Reynolds Rowe, were elected associates.*

Mr. Donaldson, as hon. sec. for foreign correspondence, brought under the attention of the meeting the death of no less than three leading architects in Paris within a very short space of time; namely, M. Achille Leclerc, M. Visconti, and M. Gau, the architect of the new Gothic church of St. Clotilde. We shall return to the subject.

Mr. H. H. Burnell then read a paper on the French method of constructing iron floors, which led to an interesting discussion, and was ultimately adjourned for further consideration. We shall report it *in extenso* hereafter.

MONUMENTAL BRASSES.—Messrs. Waller have recently executed a monumental brass in Lichfield cathedral, to the memory of Lieutenant-colonel Peter John Petit, C.B., of the 50th (Queen's Own) regiment, erected by his brother officers as a mark of esteem. It consists of a full-length figure, the size of life, in regimentals, and is a portrait of the deceased. There is a diaper background, composed of a species of clematis native to India, and a border to the whole of Indian corn, in part of which, on a scroll, are the names of the principal battles in which he was engaged; and another in Sandon church, Staffordshire, to the memory of Dudley, first earl of Harrowby.

* At the previous meeting, December 12, the following gentlemen were elected. Mr R. G. Carpenter and Mr Joseph Clarke as fellows; Mr. J. T. Knowles, jun, Mr. Joshua D. Mathews, and Mr. S. Salter, jun. as associates.

MONUMENT TO TITIAN, VENICE.

IN the pleasantly written and interesting "Scratches on the Road to and in Venice," printed in our last volume, our correspondent described the monument which has been recently erected there in memory of the painter Titian. We now give a view of this costly memorial, and will reprint "F. S. A.'s" description, to save the necessity of turning to it. The monument stands in the church of Santa Maria Gloriosa de Fiori, where he was buried. It was erected at the expense of the Emperor Ferdinand, and is the joint production of Luigi Zandomenichi and Pietro Zandomenichi, his son. It occupies the entire breadth of the aisle on the south, immediately opposite the monument of Canova. It rises from the nave with three steps. It consists of a high double plinth, four columns on pedestals, entablature and attic. The centre intercolumniation is arched, and within this is seated Titian, having on one side a figure representing Genius, and on the other Strength. Immediately behind him, on the backing of the monument, is a basso-rilievo, exceedingly well executed, of his great picture of the "Assumption of the Virgin," which is in the Academy there. To the right of this is another, of the "Martyrdom of St. Lawrance," which is in the Jesuits' Church; to the left another, of the magnificent picture of Peter Martyr, in the Church of San Giovanni e Paolo: above are two other bassi-rilievi,—that on the right representing his first work, the "Visitation of St. Elizabeth," which is now at Dresden, and on the left, his last picture, the "Descent from the Cross," which is in the Academy. On each side of Titian are two female figures representing Design, Painting, Architecture, and Sculpture. In the upper plinth are two winged figures holding a tablet, with the inscription,—"*Titiano. Ferdinandus I.* 1852." On the corner of the plinth to the left is an aged figure holding a tablet, upon which is the following legend:—"*Æques et Comes Titianus sit. Carolus V. MDLIII.*;" and on the left a younger figure, upon whose tablet there is, "*Titiano monumentum erectum sit. Ferdinandus I. MDCCCXXXIX.*" The whole is surmounted by the Venetian lion holding a scutcheon with the arms of Ferdinand. It is said to have cost the monarch 200,000 florins. It is composed entirely of marble: the figures (the size of life) are of statuary marble, which, from its whiteness, produces a striking effect from the contrast with the other. The figure of Titian is very good, the head full of genius and dignity. The figures of the Sister Arts are not sufficiently exalted in expression; but on the whole, it is a fine specimen of modern art.

THE PUTNEY AND BROMPTON OMNIBUS PROPRIETORS.

THE Putney and Brompton Omnibus Proprietors never omit to take advantage of the public. When London was snowed up, Russianized as if were, passengers on the road were charged one shilling for any distance, however short, and as the roads were scarcely passable, little would have been said about the fare. But after the occasion has passed away they maintain an increased rate, and are now charging unwary riders sixpence for short journeys. When the body of the Duke of Wellington was lying in state, every traveller on the road was made to pay an increased fare. If the night be foggy or the weather bad, the omnibuses are taken off the road: in fact, the only guiding motive with them is their own advantage. Those who rail against what is called "centralization," a word previously made odious, are in the habit of asserting that commercial speculation provides best for the public, and that the fear of competition obtains for the public the best and cheapest provision. Look however at the body we are alluding to: they have formed a coalition, wealthy, powerful, and unscrupulous, and drive off the road without difficulty any individual who attempts to give the public additional accommodation. The public are entirely at their mercy, and they use their power, as we have said, without the slightest regard to anything but their own interest. It is just possible, however, that they will one day get an instructive lesson at their own expense: at all events, we hope so, on principle.

GAS METERS.—In consequence of the severity of the weather, the managers of the Louth gas-works have publicly advised all persons having gas-meters to cover them with woollen cloths, to protect them from the frost,—a useful hint, worthy of general adoption.

MONUMENT TO TITIAN, VENICE.

PROVINCIAL NEWS.

Spilsby.—We announced week before last that the blessings of gas had been extended to this town; but it seems that the statement was rather premature. The lamps were erected, and every preparation made, about a fortnight since, but on Monday week notice of appeal against the rate for lighting was given to the overseers, and the gas company thought it prudent to suspend further operations for the present. A public meeting of the inhabitants will be held on the subject in a few days.

Melton Mowbray.—A preliminary meeting for the purpose of forming a company to erect a new corn-exchange was held last week in the Town-hall (which a local journalist maliciously designates the "town-hovel"). The meeting was influentially attended, and a considerable number of shares were taken.

Oxford.—A new vicarage is in course of erection, in the parish of St. Ebbe; Mr. Street, architect. The works are being executed by Mr. Hope, Oxford. The estimated cost is 900*l.* The restoration of St. Michael's Church is under the direction of the diocesan architect. The works progress rather tardily, but are on the verge of completion. The gallery has been removed, and the whole of the church repaired, refitted, and reseated. The church now consists of three aisles, chancel, nave, and tower, and will afford accommodation for 450 persons. The roofs are covered with coloured tiles. Mr. Long, of Witney, is the contractor; and the total cost of the alterations is 1,300*l.* Some curious relics have been discovered by the workmen during the progress of the works.

Faringdon.—All Saints' Church is now in a fair way to have a portion, at least, of its original propriety of internal arrangement restored. The vicar and committee have raised a fund almost sufficient for their present work. Plans having been made by Mr. Hugall, of Cheltenham, for reseating, lighting, and warming the church, tenders were called for, and the committee have selected that sent in by Mr. Woodroffe, of Reading, for the entire works. We would gladly have to record the prospect of a still further movement towards the restoration of the fabric. Mr. D. Bennett, the lord of the manor, has taken upon himself the rebuilding the long-lost south transept, which is now nearly completed.

Coleshill.—Our attention has been called to the extensive works which have been carried on in All Saints' Church, Coleshill, at the sole expense of the vicar, the Rev. Edward Bouverie, and under the professional direction of Mr. Hugall. Three unsightly galleries, all the decayed pews and other fittings, have been removed, and replaced by open benches, prayer-desk, lectern, and pulpit. The arcades have been repaired and cleansed from whitewash. Two new windows, filled with stained quarries, by Wailes, have been inserted in the north aisle. The ancient font is restored, and various other improvements have been effected.

Leeds.—The corporation are taking steps, according to the *Intelligencer*, towards the erection of the covered market proposed some time since to be provided for the town. Plans and specifications have been prepared by Mr. Tilney, the borough surveyor. The site fixed on is between Vicar-lane, Ludgate-hill, and Kirkgate. The market will be principally of cast iron and glass, "in the English style of architecture," [in the ferro-vitreous *order of construction* rather, we suppose, is here meant] having a west frontage of 240 feet to Vicar-lane; a south frontage of 152 feet to Kirkgate; an east frontage of 312 feet to Smithfield-street; and a north frontage of 132 feet to Ludgate-hill; covering an area of 4,100 superficial square yards. The external part of the structure is supported on 71 cast-iron columns, varying in length from 20 to 26 feet, according to the inclination of the ground, placed 12 feet apart, centre and centre. The interior is to be divided into three bays or avenues, by means of two rows of cast-iron columns, 53 in number, ranging the whole length of the structure from north to south, and braced by cast-iron; four centred arched girders, extending from pillar to pillar, forming three arcades, in which are the horizontal water-conductors and supporters to the roof. The three roofs are constructed of malleable iron, on the string and girder principle, with iron laths, covered with Westmoreland green-blue slate. On the apices of the three roofs are elevated lantern-lights, 16 feet wide, running the whole length of the three ridges, glazed with thick rough plate-glass, under which are iron ventilators, with quarter and trefoil openings. On the centre avenue, and at the intersection of the aisles through and across, are two lantern towers, supported on 16 cast-iron pillars, each rising 3 feet above the centre roof, and terminating at the top by a domed ogee roof, with crocketed finial. These towers are 36 feet square, divided into twelve minor arches or divisions on each side, and glazed with rough plate glass. The building is arranged on a 12 feet square plan, so that the strings, arches, girdings, tracings, &c. are all of equal length; the shops or stalls being 12 feet square; the footways 12 feet wide; the cart-roads 24 feet wide; and the tower 36 feet: thus the moulds and casting-work in any and every direction are equal, which causes the building to be obtained at a comparatively low price. 81 covered stalls surround the structure. The window-sashes are a loose moveable fitting. The shops cover an area of 1,300 square yards, and the roads and stands 2,800 square yards. The committee believe that the arrangement for shops at the frontage of the structure will bring in a revenue which will not only pay the interest on the money laid out, but leave an ample surplus. They estimate the total expenditure at from 13,000*l.* to 14,000*l.* We are not aware that the corporation have as yet specially voted this or any sum for the purpose.

Taunton.—The quarter sessions committtee to whom the question of building a new assize-hall and accommodation for the judges had been referred, have reported, according to the *Sherborne Journal*, that they do not think it desirable to take the present site at Taunton. It was considered advisable to recommend the buildings to be erected either on the new works at Wilton, by the removal of the governor's house, which would entail a cost of 9,000*l.* including a new residence for the governor, or on a piece of ground opposite, on which was already a mansion, and which, allowing for the value of the surplus land, would cost in the erection about 12,000*l.* The latter the committee thought the most eligible. It was arranged that the subject should be considered at next sessions. It was also resolved that 1,000*l.* should be expended on the gaol and sessions house at Wells.

Doncaster.—"Whenever the parish church tower shall be rebuilt," says the local *Gazette*, "we are sure of having a peal of bells. The committee have made an arrangement with Messrs. Warner, of Cripplegate, London, to take the old bell-metal at the usual price, and to allow five per cent. interest upon it until new bells are ordered; and they have given a bond to supply a new peal to the satisfaction of the committee at a price which is equivalent to recasting the 4 tons of old metal at 2*l.* 2s. per cwt. (which is only 2s. more than was paid for recasting the bells in 1835, when metal was much lower than it is now). The result is, that if the new peal is ordered in four years and a half from this time, the committee will have credit for no less than 400*l.* towards the cost of it. Two tons more of bell-metal ought to have been recovered from the ruins. Mr. Denison told the committee that he had seen a very good peal of bells cast by Messrs. Warner for the newly-built cathedral at Fredericton, of the same size and key as the old Doncaster peal; and that they have lately got a patent for an improved mode of casting bells. No other of the four bell-founders from whom the committee received tenders offered such advantageous terms." The tenders for the building must have now been lodged.

Port Glasgow.—The new Roman Catholic chapel in Port Glasgow, lately in course of erection, is now being taken down for the purpose of being rebuilt. The building had advanced as far as the roof, when, owing to heavy rains and high winds, the side-walls showed symptoms of giving way, and it was found necessary to take down the whole structure.

Elgin.—A free church has been erected at the village of Hopeman, near Elgin.

FOREIGN ARCHITECTURAL AND ART INTELLIGENCE.

Pisa.—The preservation and renovation of mediæval buildings is proceeded with here with much zeal and energy. The restoration of the baptistery of the cathedral has excited some controversy, as it was first intended to ornament the inner cupola with frescoes. It was found, however, that the architectural idea of Diotisalvi was not in accordance with that intention.—— The Church of the Holy Sepulchre has been completely restored. It is also a work of Diotisalvi, and consequently dates from the twelfth century. Situate on the Arno, the subsequent construction of the quays had sunk it in the ground, and it had, therefore, become cold and damp. It is an interesting structure, forming internally an octagon compound of eight pillars, over which rise pointed arches. The success of this restoration is mostly owing to Professor Rossi.

Rome.—Auction of Pictures.—The events of 1848 and 1849 had created here so many misfortunes, that many of the owners of pictures and sculptures fell into distress. It was, therefore, a lucky accident that the director of the pledging establishments (*monte di pietá*) here had the courage to give good sums for works of merit. The time having now expired for their redemption, an extensive public sale will take place, at which many foreign purchasers are expected.

Carrara.—No other place in the world is to be compared to this, where every staircase, door and window post, wall, trottoir, and pump, is made of *white marble*. At the very entrance into Carrara, we tread over heaps of that material, and white dust out of the workshops covers every subject around. In most of the houses we hear the clattering of hammers, the screeching of saws, and at every door we see persons in the varied occupations of the sculptor, or preparatory thereto. The artist most occupied here at the present moment is M. Hofer, of Stuttgart, who has already completed his groups of horses, and has now received from the king of Würtemberg, orders for some colossal statues for the royal park of Stuttgart. Business is very brisk, and prices of every kind have much risen of late. The United States are considered the largest consumers in this art-magazine of Italy, and statues, columns, and ornamented chimney-pieces, as well as ornamentations of whole churches, are to be seen in progress of execution. Next, Russia is to be mentioned, as many ornaments for the new Greek church at St. Petersburg are now made here. The emperor has ordered in Rome the colossal images of several Russian saints, to be made in Mosaic, of which the borders are made in Carrara, of the finest marble, forming garlands of flowers, fruits, birds, and lizards.

THE PROPOSED FREE-TRADE HALL FOR MANCHESTER.

WE obtain some particulars as to the new Free-trade Hall, from the Manchester newspapers. The total area of the entire plot (exclusive of the portions forming parts of the several adjacent streets) is about 2,300 square yards. The internal area of the present Free-trade Hall is about 1,575 square yards: that of the large hall in the new building is to be 1,078 square yards, including the platform, 137 by 88 feet, and 64 feet high. It is a lofty palatial stone edifice, in the ornamented Italian style, importing some of the leading features of the Byzantine, but still sufficiently modern in character for an English city in the nineteenth century. The lower story is formed by an arcade of nine circular-headed arches, extending the whole length of the Peter-street frontage. These open arches will be closed, when the hall is not open, by ornamental iron-work, in keeping with the character of the building; but, when the hall is open, entrance will be had on the level of Peter-street, by these nine open arches, to the arcade within, which is 9 feet wide, affording a sheltered waiting-place, on a wet night, for parties quitting the hall, and waiting the drawing up of their carriages. In this respect it will be like the opera colonnade in the Haymarket, London.

If there were no recess for the platform, the

BRICK ARCHITECTURE IN SIENA.

length of the great hall is 123 feet; but at this lower end there is a central recess 37 feet in length and 14 feet deep, making the extreme length of the hall, to the back of this recess, 137 feet, or (as is stated) 2 feet longer than the present hall. The length of the square portion of the hall, without the recess at one end or the circular portion at the other, is about 88 feet; its width in the square part 78 feet; and these would be its proportions if reduced to a rectangular form. Its length is therefore made made up of 14 feet of platform recess, 88 feet of rectangular length, and 35 feet within the arc or semicircle. Its total area, including the platform, is 1,078 square yards. Its height (exclusive of the domes, which are not visible from within the hall, the ceiling being carried under them in coffered panels of frosted glass) is 64 feet, which by some has been regarded as a little excessive and out of proportion, when taken in connection with its length and breadth. The galleries are supported on fifteen light and ornamental cast-iron circular columns: the side-galleries are 13 feet deep, and the circular end-gallery 21 feet deep. At the sides there will be four tiers of seats, descending from back to front: at the end, there will be two additional tiers behind the aisle or passage. The whole of the gallery-seats are divided into eleven blocks by ten aisles. The galleries have a total area of about 459 square yards, giving seat-accommodation to 754 persons. The floor of the hall, including the platform, will give seat-room for 3,156 persons; giving a total of 3,910 persons, who may be seated in this great hall; the calculation being made on the allowance of 18 inches of seat for every individual. The ceiling will be coved from the walls to a flat, in coffered panels, with circular centres of pateræ, &c.; and down the centre of the roof is a range of three circular domes, not visible, however, from within, each about 12 feet high and 20 feet in diameter, which, it is expected, will amply light the room by day, by borrowed light through glass panels in the coffers of the flat ceiling, with the aid of a range of elliptic-headed windows in the upper part of the side-walls.

The Assembly-room is next Peter-street, at the upper or South-street end of the building, and its dimensions are 76 by 38 feet, and 25 feet high. On the side next the great hall there is a small recessed orchestral gallery suitable for balls, but not at all adequate, or in a right position, for concerts; for which, however, the room is to be made adaptable. This room is on the same level with the great hall, and adjoining it, only 10 feet above the street-level. Above the assembly-room is a supper-room, the same form and size (76 by 38 feet), and lighted by three square lanterns in the roof.

It is intended, if practicable, to open the new buildlng for public purposes in the course of the winter of 1854-5; and it is anticipated that, including internal fittings and decorations, the whole will cost considerably more than 20,000*l.*

ADVICE GRATIS: DOCTORS' HALLS.—It is the practice of most of our physicians and surgeons to give advice *gratis* during certain hours of the day. The consequence is, that the halls and passages of their houses are daily crowded by the inheritors of the various ills to which flesh is liable. In addition to a sojourn in a cold hall for an hour (sometimes more or less), the severity of the ordeal is considerable, increased at this bleak season of the year by the cold and biting wind rushing in every time a fresh applicant is admitted. Allow me then to suggest as a remedy, the idea of a "Hall Screen," which might be of simple construction, and by the ingenuity of our artisans, prove a boon to the sufferers alluded to.

BRICK ARCHITECTURE IN SIENA.

THE once powerful republic of Siena,—the great rival of Florence during the Middle Ages, now falling into ruins, robbed of its ancient arts, learning, and magnificence, still retains its glorious cathedral and majestic street architecture of the thirteenth and fourteenth centuries. This was the real fortress architecture of the time of the Guelphs and Ghibellines, and not, as books often tell us, the massive palaces of Florence, which were built long after the feuds ceased.

The whole of the palaces of Siena erected in the thirteenth and fourteenth centuries were the works of the brothers Agostino and Agnolo di Siena, and with a few exceptions were built entirely of red brick. The specimen engraved, though by no means one of the most elaborate, is one of the most perfect. As in the palaces of most of the towns in Tuscany, iron brackets to support banners are fixed in the front, as well as rings for the bridles of war-horses. Some of these palaces have elaborate cornices and strings. An ancient picture of Siena, preserved in the Palazzo Publico, shows that many of these palaces had formerly large square brick towers of defence attached to them. These have been nearly all destroyed; but the curious in mediæval history may see a remarkable group of these towers at the little town of San Gemignano, about seven miles from the Poggibonsi station on the Florence and Siena railway.

A. B.

HOUSES OF ANCIENT EGYPT.*

THE abridgment of Wilkinson's standard work on the ancient Egyptians which has been published is a valuable boon to the public,—a new-year's gift, even though to be paid for,—meriting a return of their best thanks to Mr. Murray, in the substantial form of a run upon him for copies till the whole edition be exhausted.

Though essentially a cheap abridgment of the large and expensive work, the author has embodied in this what is not to be found in the larger one, namely the fruits of his revisit to Egypt, and his discoveries since 1836. He has also introduced here and there comparisons of interest between the ancient Greeks and the ancient Egyptians, as well as some valuable observations on decorative art, and on colour, form, and proportion, so well understood in ancient times—many of the ideas on which subjects, now gaining ground in this country, the author claims as closely connected with the subject of ancient Egypt, and as having been long advocated by him. Various new engravings have been introduced into the present abridgment, which, even as respects woodcuts, is full of curious interest.

The amount of graphic information which we, in the nineteenth century, possess of the manners and customs, trades, instruments, arts, and industry of the ancient Egyptians, is really wonderful. The detail in which they pictured, on the walls of tombs, the productions, instruments, and processes of trades and manufactures, buildings, works of art and luxury, and many other matters of interest, is exceedingly minute; and hence a miscellaneous and varied interest is given to such a work as the present. We cannot attempt, therefore, to give those who know little of the original publication an adequate idea, in available limits, of its contents. We shall restrict ourselves to a few details as to the dwellings of the ancient Egyptians.

As in all warm climates, the poorer classes of Egyptians lived much in the open air; and the houses of the rich were constructed to be cool throughout the summer; currents of refreshing air being made to circulate freely through them by the judicious arrangement of the passages and courts. Corridors, supported on columns, gave access to the different apartments through a succession of shady avenues and areas, with one side open to the air, as in our cloisters; and even small detached houses had an open court in the centre, planted as a garden with palms and other trees. *Mulkafs*, or wooden wind-sails, were also fixed over the terraces of the upper story, facing the prevalent and cool north-west

* "A Popular Account of the Ancient Egyptians:" revised and abridged from his larger work, by Sir J. Gardner Wilkinson, D.C.L. F.R.S, &c. In 2 vols. Illustrated with 500 woodcuts. London: Murray. 1854.

wind, which was conducted down their sloping boards into the interior of the house. They were exactly similar to those in the modern houses of Cairo; and some few were double, facing in opposite directions.

The houses were built of crude brick, stuccoed and painted with all the combinations of bright colour, in which the Egyptians delighted; and a highly-decorated mansion had numerous courts, and architectural details derived from the temples.

Poor people were satisfied with very simple tenements; their wants being easily supplied, both as to lodging and food; and their house consisted of four walls, with a flat roof of palm-branches laid across a split date-tree as a beam, and covered with mats plastered over with a thick coating of mud. It had one door, and a few small windows closed by wooden shutters. As it scarcely ever rained, the mud roof was not washed into the sitting-room; and this cottage rather answered as a shelter from the sun, and as a closet for their goods, than for the ordinary purpose of a house in other countries.

"In their plans, the houses of towns, like the villas in the country, varied according to the caprice of the builders. The ground-plan in some of the former consisted of a number of chambers on three sides of a court, which was often planted with trees. Others consisted of two rows of rooms on either side of a long passage, with an entrance-court from the street; and others were laid out in chambers round a central area, similar to the Roman *Impluvium*, and paved with stone, or containing a few trees, a tank, or a fountain, in its centre. Sometimes, though rarely, a flight of steps led to the front door from the street.

Houses of small size were often connected together, and formed the continuous sides of streets; and a courtyard was common to several dwellings. Others of a humbler kind consisted merely of rooms opening on a narrow passage, or directly on the street. These had only a basement story, or ground-floor; and few houses exceeded two stories above it. They mostly consisted of one upper floor; and though Diodorus speaks of the lofty houses in Thebes four and five stories high, the paintings show that few had three, and the largest seldom four, including as he does the basement story. Even the greater portion of the house was confined to a first-floor, with an additional story in one part, on which was a terrace covered by an awning, or a light roof supported on columns. Some had a tower which rose even above the terrace.

The first-floor was what the Italians call the '*piano nobile*;' the ground rooms being chiefly used for stores, or as offices, of which one was set apart for the porter, and another for visitors coming on business. Sometimes, besides the parlour were receiving apartments on the basement-story, but guests were generally entertained on the first-floor; and on this were the sleeping-rooms also, except where the house was of two or three stories. The houses of wealthy citizens often covered a considerable space, and either stood directly upon the street, or a short way back, within an open court; and some large mansions were detached, and had several entrances on two or three sides. Before the door was a porch, supported on two columns, decked with banners or ribands; and larger porticos had a double row of columns, with statues between them.

Other mansions had a flight of steps leading to a raised platform, with a doorway between two towers, not unlike those before the temples."

Doors, both of entrances and of inner apartments, were frequently stained to imitate foreign and rare woods. They were either of one or two valves, turning on pins of metal, and were secured within by a bar or bolts. Some of these bronze pins have been discovered in the tombs of Thebes. They were fastened to the wood with nails of the same metal, whose round heads served also as an ornament, and the upper one had a projection at the back, in order to prevent the door striking against the wall. Folding-doors had bolts in the centre, sometimes above as well as below: a bar was placed across from one wall to the other; and in many instances wooden locks secured them by passing over the centre, at the junction of the two folds. Keys were made of bronze or iron, and consisted of a long straight shank, about five inches in length, with three or more projecting teeth: others had a nearer resemblance to the wards of modern keys, with a short shank about an inch long; and some resembled a common ring with the wards at its back.

"The doorways, like those in the temples, were often surmounted by the Egyptian cornice: others were variously decorated; and some, represented in the tombs, were surrounded with a variety of ornaments, as usual richly painted.

Even at the early period when the Pyramids were built, the doors were of one or two valves; and both those of the rooms and the entrance-doors opened inwards, contrary to the custom of the Greeks, who were consequently obliged to strike on the inside of the street-door before they opened it, in order to warn persons passing by; and the Romans were forbidden to make it open outward without a special permission.

The floors were of stone, or a composition made of lime or other materials; but in humbler abodes they were formed of split date-tree beams, arranged close together or at intervals, with planks or transverse layers of palm-branches over them, covered with mats and a coating of mud.

Many roofs were vaulted, and built like the rest of the house of crude brick; and not only have arches been found of that material dating in the 16th century before our era, but vaulted granaries appear to be represented of much earlier date. Bricks, indeed, led to the invention of the arch; the want of timber in Egypt having pointed out the necessity of some substitute for it.

"The ceilings were of stucco, richly painted with various devices, tasteful both in their form and the arrangement of the colours; among the oldest of which is the Guilloche, often miscalled the Tuscan or Greek border.

Both in the interior and exterior of their houses the walls were sometimes portioned out into large panels of one uniform colour, flush with the surface, or recessed, not very unlike those at Pompeii; and they were red, yellow, or stained to resemble stone or wood. It seems to have been the introduction of this mode of ornament into Roman houses that excited the indignation of Vitruvius, who says that in old times they used red paint sparingly, like physic, though now whole walls are covered over with it."

Notices of Books.

The Journal of Industrial Progress. Edited by W. K. SULLIVAN, Chemist to the Museum of Irish Industry. No. 1. January, 1854.

THIS new journal contains articles on the Dublin Exhibition, and its influence on the development of industry in Ireland, and on its undeveloped resources; on the establishment of a national gallery of art in Dublin; on establishing permanent exhibitions of art in provincial cities, and on other cognate subjects, with one on the law of partnership *en commandite*. It promises to be useful.

The Museum of Science and Art. Edited by Dr. LARDNER. Part I. London: Walton and Maberly, Paternoster-row. 1854.

THE purpose of the publishers of this series of penny tracts is to supply a collection of instructive essays in a popular and amusing style on the leading discoveries in the physical sciences, and their applications to the arts which contribute to the convenience and ornament of life. They are intended to constitute, in the hands of those who want time for systematic study, a sort of literary bouquets of "the flowers and fruits of the garden of knowledge," to be enjoyed in "hours of leisure." The first fivepenny part contains essays on "The Planets, are they Inhabited Worlds?" on "Weather Prognostics," and on "Popular Fallacies," all of which seem well adapted to fulfil their destined purpose.

A Guide to Geology. By JOHN PHILLIPS, M.A. F.R.S. F.G.S. London: Longman and Co. 1854.

WE had occasion to offer certain objections to the last "Guide to Geology" which happened to come under our notice. The present one is a little work of a very different description, and needs no recommendation from us, nor even mere mention, unless to the effect that it has now reached its fourth edition, which will be found to contain essentially all that is new in the progress of the science in which the author is an authority well known and esteemed.

WINDOW GLASS.—The value of window glass exported in the first eleven months of last year was 53,864*l*.

Miscellanea.

REBUILDING OF DONCASTER CHURCH. — Great anxiety has naturally been felt to know the result of the meeting of the Church Building Committee last Saturday, as it was understood that the tenders for the whole of the masonry were then to be received and decided upon. We learn from the *Doncaster Gazette*, that although some of the tenders were exorbitantly high, exhibiting even more than the usual difference, there is no longer any doubt that Mr. Scott's design can be executed within the probable resources of the committee. At the same time we are given to understand that it must still depend on the liberality of the public, whether the roofs and woodwork can be executed in materials and style worthy of the magnificence of the exterior, inasmuch as the sum remaining for these purposes out of the promised subscriptions, is estimated as barely sufficient to complete the work not included in the present tenders in the cheapest manner consistent with architectural propriety. The important question of the stone to be used is not yet finally settled as to all the parts of the building; but we believe, says our authority, we shall be correct in saying that for the internal ashlar (or plain walling) the old stone will be generally used: for the pillars and some of the external parts Mr. Scott recommends the adoption of a very hard stone from the Rev. F. J. Woodyeare's quarries at Crookhill. The external ashlar will be built of stone from Cusworth, which Mr. W. B. Wrightson, the chairman of the committe, has liberally placed at their free disposal, at a merely nominal price to cover the damage to the roads. For the dressings (*i.e.* windows, mouldings, and all parts requiring to be cut out of larger blocks than have yet been found in Mr. Wrightson's quarries), the committee will be obliged to resort to Steetly, near Worksop.

SALE OF A PORTION OF MR. HENNET'S ESTATES. —An auction was held on the 5th inst. at Teignmouth, by Messrs. Chinnock and Galsworthy, the auctioneers appointed by the assignees under the bankruptcy of Mr. Hennet, the railway contractor. The sale comprised thirty lots of property, including a ship-building yard, the custom-house, and a timber-yard, with numerous dwellings, model cottages, plots of building ground, &c. at Teignmouth, and the public baths, with ground, and five houses adjoining, situate at Dawlish, &c. Considerable interest was manifested throughout the sale, which was attended by a large audience, who competed with great spirit for most of the lots. The sale was followed by another, on the 7th inst. at Bristol, of property situated at Clifton, which also realized good prices, the total result being between 11,000*l*. and 12,000*l*.

THE ALBERT-PARK, FINSBURY. — Lord Robert Grosvenor, M.P. has lately been actively pursuing that desirable object—the obtaining a park for the borough of Finsbury. Anxious to ascertain the opinion of the whole of the metropolitan members on the Chancellor of the Exchequer's proposition, viz. whether the plan of raising 200,000*l*. in addition to the promised grant of 50,000*l*. by the Government, is one which it is desirable to carry out,—his lordship has put the proposition individually to Lord D. Stuart, Sir B. Hall, Bart. Sir W. Molesworth, Bart. Mr. A. Pellatt, Sir W. Clay, Mr. Butler, Col. Evans, Sir John Shelley, Bart. and the four members for the City. We are informed that his lordship has received a majority of assurances from the above list, of their strenuous support of the Bill, and is now prepared to introduce it into the House of Commons at the earliest period of the session.

WORKMEN'S LIBRARY AND READING-ROOM AT NOTTING-HILL. — Some of the residents in the St. John's neighbourhood at Notting-hill, have formed a "Notting-hill Working Men's Association," with convenient rooms in High-street, opposite the Palace-gardens. Donations will doubtless be thankfully received.

THE FILE TRADE.—According to a resolution of the file trade operatives, the men were to give a month's notice to their employers that on and after 6th February, they would require an advance of wages according to a new statement prepared. The average advance, according to the *Sheffield Independent*, would be about 10 per cent. The flat 14-inch file, one of the principal articles in the trade, is advanced from 3*s.* to 3*s.* 6*d.* for cutting, and something like 1½*d.* for forging The small work has been considered to be the worst paid, and upon that the principal advance has been made. Single-hand forging is raised from 12½ to 15 per cent. The large files now paid from 4*s.* to 10*s.* per dozen, are raised 6*d.* per dozen for cutting, but not for forging. It is stated that this advance of wages in connection with the increased price of fuel and materials, would compel manufacturers to diminish by at least 10 per cent. the discounts allowed to their customers, but how far the market will bear this advance remains to be seen. There is said to be a want of hands in the trade.

RATING MACHINERY IN A SHIPYARD.—At the Essex Quarter Sessions an appeal was tried, brought by Mr. Mare, shipbuilder, of Bow-creek, against the poor-rate of West Ham. The rate made in September was on 3,000*l.* gross rental, and, taking off from this one-third for repairs, insurance, &c., as was the practice in the parish, the rateable value was put at 2,000*l.* It appeared that in 1851 the shipyard was rated at 730*l.*; in 1852 it was raised to 1,513*l.*; and, though the appellant said this was too high, he was willing to submit to that rather than litigate the matter; but he felt bound to resist the ever-increasing amount. For the parish, it was contended that this advance was perfectly justified by the gigantic enlargements which Mr. Mare was continually making, and that the amount was fully borne out by the great value of the machinery for shipbuilding and boiler-making fixed upon the premises. On the part of the appellant, it was contended that the machinery could not be taken into the account, as it was the property of the tenant, who, on removing, would take it away; and that, unless this machinery was taken into account, the value of the property to let was not more than from 1,200*l.* to 1,400*l.* The Court confirmed the rate. Mr. Hawkins applied for a case as to the point whether machinery was rateable. The Court said, they thought the machinery was attached to the building.

INCREASING VALUE OF LAND IN NORTH WALES.—Since the opening of the Chester and Holyhead railway, the value of land, particularly in the districts of Carnarvonshire, lying between the Conway and Britannia Bridges, has greatly increased. A few days since, a farm of sixty-one acres, not advantageously situated, and not worth more than a rent of twenty shillings an acre to a tenant, was sold for 3,000*l.*, or 132 years' purchase.

MODERN ZIGZAG ARCHITECTURE OF GLASGOW.—The local *Reformers' Gazette* thus alludes to a series of buildings in progress at Glasgow:—"If our modern civic authorities have eyes to see, we strongly recommend them to pay a visit to Mitchell-street. Here is a venerable street, now in course of renovation, in the very heart of the city, in which the most absolute confusion seems to be the only rule followed. To speak in Hibernian style, all the straight lines are crooked, and all the symmetry is 'most admired disorder.' Two or three new buildings or 'lands' are now being erected at the southern extremity of this street, which has long been a disgrace to Glasgow; and if it was narrow, irregular, and confused before, we think it is now 'confusion worse confounded.' The architecture adopted appears to belong to the original order of chaos. The new houses are neither straight nor curved, but angular, salient, retreating, and zigzag, as if they had been just caught, and frozen down to the spot in the act of perpetrating a jig. . . . Unfortunately the new houses are now nearly erected; and, choosing the least of two evils, we strongly recommend the civic authorities to take into consideration the propriety of building the street up at both ends."

RAILWAY MATTERS.—The amount of Christmas traffic on all the leading metropolitan lines would appear from the returns to have considerably exceeded that of any previous year.——The total amount received for traffic on the London and North-Western line for the week ending Dec. 31, was 47,382*l.* (corresponding week in 1852, 46,250*l.*)—Midland and Bristol and Birmingham, for week ending Dec. 26, 27,292*l.* (corresponding week in 1852, 26,548*l.*)—Great Western, week ending Dec. 26, 25,393*l.* (corresponding week in 1852, 20,319*l.*)—Great Northern, week ending Dec. 25, 21,489*l.* (corresponding week in 1852, 15,527*l.*)——In *Herapath's Journal*, it is stated that there is good reason for believing that the returns of traffic for 1853 will show an excess of about two millions sterling over those for 1852. The traffic for 1852 was about fifteen millions. The traffic for 1853 has been about seventeen millions, derived from nearly the same number of miles of railway. The increase is full 13 per cent. The traffic will go on, it is thought, increasing year after year, for many years to come, rendering railway property, under good management, ultimately fairly remunerative.——The foundation of the large tower for supporting the tubular bridge of the Canadian Grand Trunk Railway across the Ottawa river has been completed. The length of this bridge, extending over two branches of the river, will be nearly half a mile.

STRIKES AND LOCK-OUTS.—The Council of the Society of Arts have taken up this subject, or rather propose that the society constitute a sort of neutral ground, on which all interested, under certain practical restrictions and regulations, may discuss the best modes of either preventing the outbreak of such disastrous quarrels, or terminating them as speedily and satisfactorily as possible to all interested when they do arise. The council have fixed the 24th inst. for holding a conference at the society's house, John-street, Adelphi, punctually at 10 a.m.

PRICE OF LAND AT GLOUCESTER.—It is rumoured that the field called "Madeleys," between the Bristol-road turnpike and the Gloucester and Berkeley Canal, and the property of Mr. Highford Burr, has been or is now in the market. It will be remembered that the field was that which was so much desired as the site of the late exhibition of the Royal Agricultural Society, and it is said that the proprietor has refused 8,000*l.* per acre for the land, asking 100,000*l.* for the price of ten acres (?)—*Gloucester Chronicle.*

THE MOUNDS OF NORTH SYRIA.—At a recent meeting of the Syro-Egyptian Society, Mr. Ainsworth read an elaborate paper on this subject. These mounds (*tells* of the Arabs, *teppehs* of the Turks, and *uyuks* of the Turkmans) are almost invariably met with in such portions of the country as appear to have been cultivated from time immemorial. They are mostly mere mounds of loose earth looked at superficially, but when examined more closely they present a mass of pottery, glass, and sometimes coins and other *débris*. A native village is attached to almost every *tell*, and some still bear castles on their summits, as at Aintab, Killis, and Aleppo (the latter mound is chiefly rock); and others ruins of castles, as Jindariz, Azass, Tell Bashir, and Tell Khalid; and others of temples, as Tell Balkis. Some are surrounded by gigantic boulders, like the menhirs or peulvans of the Celts, as at Ak Diyarin. These mounds differ in height, form, and nature from funereal tumuli, as observed in the plains of Troy, Seleucia, Cilicia, over Annibal in Bithynia, and elsewhere. Colonel Chesney justly describes them as constituting in their assemblage the most remarkable feature of northern Syria. There is much reason to believe that the original nucleus of these mounds was raised as far back as Assyrian times, or is composed of ruins of that epoch. Strabo describes Tyana and Zela as built on mounds raised originally by Semiramis. The discovery lately made by the Rev. L. Parter, that the *tell* of Salahiya (mound of Saladin), well known to travellers, is composed of Babylonian bricks, would also tend to confirm this conjecture. In subsequent times they were used mainly for purposes of defence or worship, or for the erection of castles or temples. Mr. Ainsworth argued that they present promises of a rich harvest for the explorations of the archæologist. It is not that historical monuments of the same antiquity, or of such good art, as have been dug out at Kuyunjik, Nimrud, and Khursabad, might be expected, but much would be undoubtedly met with to illustrate Syrian art.

NATIONAL INTEMPERANCE AND ITS PALLIATION OR REMEDY.—The abstinent principle has our best wishes for its prevalence. If it were possible to aid its influence by placing strong drinks as much as possible beyond the reach, pecuniarily speaking, of the poorer classes, so many of whom, unfortunately, regard them as an indispensable comforting panacea for all their hardships, discomforts, and wants, and at same time by bringing less intoxicating, but really more generous and palatable liquors as much as possible within their reach, as a substitute less capable of being abused, such a result would be exceedingly desirable. Were the beer of England, for instance, to be more available and cheaper than it is, in Scotland, and the Scottish whiskey to be rendered more difficult of obtainment to any extent by the poorer classes there; and were the English gin, in like manner, rendered more difficult of access here, and the lighter cheaper sorts of wines of France, Portugal, and Spain, allowed to flow more freely into England, an immense amount of relative good might be done, or of relative evil mitigated or prevented. We are gratified in no ordinary degree, to learn that as regards the introduction of French wines at a low duty, strenuous exertions are likely to be made, with these very views, on the opening of the new session of Parliament. Mr. Benjamin Oliveira, M.P., who is president of a general committee favourable to the reduction of duty upon foreign and colonial wines, lately visited Bordeaux and Paris, for the purpose of collecting materials for an address to the House of Commons on the subject, and we are glad to hear that he was received with great courtesy, not only by the principal merchants and others of Bordeaux, but also by the minister for foreign affairs, and other members of the French Government at Paris; and that there is an almost universal feeling, in the Government inclusive, in favour of reduced tariffs and reciprocal commercial advantages between the two countries. Thus, for instance, in exchange for our cheap cottons for behoof of the poorer classes in France, we might have, it appears, in a very short time, an *unlimited* abundance of the cheaper order of French wines, for behoof of our own poorer classes; and thus, too, over and above, the bonds of mutual amity, be drawn, by degrees, far too close for pugilistic efforts in the future of the two neighbourly nations. We earnestly hope that Mr. Oliveira will be successful in the important objects which he has in view.

RED AND GREEN MARBLES.—From Athens, it is announced, according to the *Athenæum*, that the ancient red and green marbles, the quarries of which are said to have been lost from time immemorial, have been re-discovered by a German sculptor named Siegel, domiciled in the Greek capital. The red marble is averred to have been found on the southern side of the chain of the Taygetus,—the ancient green on the northern coast of the island of Tinos.

ELECTRO-TELEGRAPHIC.—The Electric Telegraph Company have recently erected an illuminated clock over the entrance to their Manchester offices, fronting the end of Ducie-street, and near the principal entrance of the Exchange. The company have now completed arrangements by which they will be enabled to transmit the correct Greenwich time to the principal towns in the kingdom, and the experiment is now in operation in Manchester and Liverpool.

CHEAP PAVEMENT FOR COURTS AND ALLEYS, GARDENS, &c.—The Central Board of Health are issuing a report by Mr. Lee, one of their superintending inspectors, recommending the employment of gas concrete as a cheap pavement, especially for the improvement of unwholesome courts and alleys, but also for suburban footpaths, backyards to dwellings, stable-yards, &c. Mr. Lee reports that the work can be executed in the best manner, complete, at from 9d. to 1s. a square yard, and even so low as 7d. to 8d. under competition. For carriage-ways, a concrete may be formed with macadamized stones, but cinders and ashes from steam-engines, ironworks, or even domestic fires are used for many gas concretes, although small gravel is the best material for footpaths, court-yards, &c.

MONUMENT TO CHANTREY.—The erection of the obelisk to the late Sir Francis Chantrey, at Norton, says the *Sheffield Independent*, has been delayed by an accident which has happened to the shaft at the granite quarries in Cornwall. As the shaft is to be 22 feet high and 3 feet square at the base, it may be readily conceived that a block of these dimensions is not readily met with; another has, however, been found, and it is hoped that the subscribers and friends will have the pleasure of witnessing the inauguration of the monument early in the spring.

MANUFACTURE OF IRON.—Messrs. H. B. Walker and J. Warren have patented an invention which mainly consists in a moveable containing vessel or furnace, for the purpose of agitating, and consequently puddling, the liquid metal, while kept at a high temperature and mixed with suitable fluxes, and subjected to the action of carbonic oxide, oxygen, and other gases, in order to purify it.

SCHOOLS AT HEXHAM: COMPETITION.—At a meeting of the committee for the proposed new schools at Hexham, to decide upon the merits of the plans sent in, the designs of Mr. Gibson, of Newcastle, were approved of and selected. They embrace accommodation for six hundred scholars, with class-rooms, and master and mistress's residence, and will be erected on a site in the Seal, handsomely presented for that purpose by the lord of the manor, W. B. Beaumont, Esq. M.P.

SHEFFIELD BUILDERS' ASSOCIATION.—The members of this association held their annual dinner on Wednesday. About forty sat down, under the presidency of Mr. Craven, Mr. Fewsdale occupying the vice-chair. The society was established for the protection of the trade.

LONDON BRIDGE.—There being an intention of altering London Bridge to allow the carriage-way to occupy the footways, thus widening the carriage-way sufficiently to give traffic for four carriages abreast, allow me to suggest that the roadway of the bridge be divided in the middle, and the lamps placed there; the heavy carriages to keep the curb, and the light carriages the two middle lines,—strictly forbidding any carriage to pass another on the bridge. And if the foot-passengers were always to keep the left hand to the water on the bridges, and to the houses in the streets, much confusion would be avoided. T.

LODGINGS FOR THE SINGLE.—Will you allow me to call attention to the want which exists of respectable lodging-accommodation for single young men engaged in the City? While families are provided with comfortable and decent lodgings by the Institution (Metropolitan Buildings) in the St. Pancras road,—an accommodation which, by the division into separate suites of rooms, the artist and poor *littérateur*, equally with the labouring classes, avail themselves of, yet there is no similar institution, to my knowledge, in the metropolis or suburbs, where single young men,—clerks and others,—might find respectable lodgings upon the same principle. The supplying of this want is, I think, a desideratum felt by many besides myself.

W. C.

*** If we mistake not, the Albert Buildings, Spitalfields, afford the accommodation desired.

[ADVERTISEMENT.]

GREAT FIRE IN BREAD-STREET.

61, Friday-street, Jan. 6th, 1854.

GENTLEMEN,—We have great satisfaction in informing you that the wrought-iron door made by you, and which was placed in the opening made by us some years since through the party-wall which divided our warehouses in this street from that which, previously to the late conflagration, we occupied at the rear of Messrs. Townend's premises in Bread-street, most effectually resisted the large mass of fire to which it was exposed for many hours; and we may also state, that so soon as the metal became sufficiently cool, the lock yielded readily to its key, and (excepting discoloration) the door does not appear to be in the least injured, or out of position.

We are, Gentlemen,

Yours very respectfully,

Messrs. Chubb & Son, St. Paul's Churchyard. LIDDIARD & CO.

TENDERS

For Congregational Chapel, Crouch-end, Hornsey. Messrs. Edwards and Richards, architects. Quantities supplied:—

Stredder (Kensington)	£2,849	0	0

ADVERTISEMENTS.

TO ARCHITECTS' ASSISTANTS.

AN Architect residing in a provincial city, requires the immediate assistance of a GENTLEMAN, thoroughly competent to undertake the general management of his Office. Address, stating age, salary required, with particulars of qualification, &c to Z. A. Z. Office of "The Builder."—An eligible opportunity through an extensive local practice, also now occurs for a well-educated Youth, as a pupil, with the advantages of a comfortable home, if desired.

ARCHITECTURAL DRAWING.—There is a VACANCY for THREE PUPILS in the Evening Classes of the Architects', Builders', Civil Engineers', and Machinists' Drawing Classes, conducted by THOMAS J. HILL.—Offices, 12, Helmet-row, Old-street, where prospectuses, with terms, &c. may be had.—11th January, 1854.

TO BUILDERS' CLERKS.

A CLERK WANTED, in the Office of a London Builder. He must be accustomed to accounts, able to measure up work, and be thoroughly acquainted with the duties of a Builder's Office.—Address, stating age, salary required, and where last employed, to C. P. Office of "The Builder."

A WORKING FOREMAN WANTED by a Builder, to take charge of a job in London; a Carpenter preferred.—Address, stating age, &c. to J. W. Office of "The Builder."

A CLERK WANTED, in an Engineer's Establishment in Town; he must have filled a similar situation before, be quick at figures, and write a good hand.—Address, stating last situation and salary, to R. M. N. Office of "The Builder."

TO CARTERS.

WANTED, by a Builder, a MAN who thoroughly understands the management and driving of horses. None need apply who have not been accustomed to the trade. Also, a Carpenter who thoroughly understands framing and roofing, to act as working foreman in the country. None need apply in either case whose character will not bear the strictest investigation.—Address, stating age and salary, to A. H. W. Post-office, Oxford.

TO CIVIL ENGINEERS AND CLERKS OF WORKS.

WANTED, a Gentleman of practical experience, to take the CHIEF SUPERINTENDENCE under the direction of the Engineer, of TOWN DRAINAGE WORKS.—Address particulars to BETA, Office of "The Builder."

TO PLUMBERS.

WANTED, in a Builder's business in the country, a first-rate PLUMBER.—Apply by letter, stating salary required, to T. S. Y. Office of "The Builder."

WANTED immediately, a CLERK of WORKS, to undertake the superintendence of a church.—Address, A. Z. Office of "The Builder."

WANTED, by a Builder and Contractor in London, a person fully competent to take the charge of SEWAGE WORKS, and to measure up the Brickwork and Earthwork thereon, and render an account of the same. If suited, the situation would be likely to become permanent.—Apply, by letter only, stating terms, age, reference, and capabilities, to W. S. 11, Hamilton-street, Camden-town

TO BUILDERS' FOREMEN.

WANTED, by a London firm, an active MAN, as YARD FOREMAN, thoroughly experienced in rough carpenter's work and timber-framing.—Address, D. B. Office of "The Builder."

TO BUILDERS' FOREMEN.

WANTED, by a London firm, a thoroughly experienced active MAN, as SHOP FOREMAN. He must have previously filled a similar situation.—Address, stating age, salary required, and where last engaged, A. B. D. Office of "The Builder."

TO CLERKS OF WORKS AND OTHERS.

WANTED, a Party who has had considerable practical experience in the supervision of buildings, and in valuing builders' work, and who can also map well. Application by letter only, prepaid, to be made to A B 1, Waterloo-cottage, Wellington-road, Camberwell green, stating age, how and where last employed, and salary expected

WANTED, by the Contractors for Carlisle Cathedral, an active, experienced CARPENTER, capable of superintending the new roof, and other works now in progress. Apply to Mr. VASEY, jun. Whitby, Yorkshire.

ARCHITECTURAL DRAUGHTSMEN.

WANTED, TWO good ARCHITECTURAL DRAUGHTSMEN. Apply by letter, stating terms, with references, to Messrs. BIDLAKE and LOVATT, Architects, Wolverhampton.

WANTED, in a Builder's Office, an ASSISTANT, who has a knowledge of Drawing, and who would be able to assist in the general business of the Office. As he will have great opportunities of improvement, moderate wages will only be given.—Apply by letter, stating references and terms, to W. S. 11, Hamilton-street, Camden-town

WANTED, a respectable YOUTH, as an IN-DOOR APPRENTICE in an old-established business as CARPENTER, &c. where he would have an opportunity of obtaining a knowledge of the business in all its branches. A premium required.—Apply, if by letter enclosing stamp, to P. J. ALSTON, Carpenter and Builder, 5, Queen-street, Pitfield-street, Hoxton.

TO CONTRACTORS, BUILDERS, AND OTHERS.

WANTED, a SITUATION, by a Young Man, a PLUMBER, who thoroughly understands the lead glazing, glass cutting, and glazing in all its branches. For address, apply to A. B. Sunderland Glass Co. 14, City-road.

WANTED, by a respectable Young Man, a SITUATION as PLUMBER, or as a general hand; the country not objected to. Unexceptionable reference for ability, &c.—Address, H. H. 35, Princess-street, Marylebone.

WANTED, by a respectable Young Man from the country, to ENGAGE HIMSELF for IMPROVEMENT in any firm as a BRICKLAYER for two years at a stated weekly salary. Good references as to character. Address, G. T. 10, New End, Hampstead.

TO BUILDERS AND OTHERS.

WANTED, a SITUATION as SHOP or GENERAL FOREMAN, by a steady, active young man, a carpenter and joiner by trade who has had several years' experience in the above capacity, and is well acquainted with the general routine of a builder's business. Can undertake the management of a steam-engine or circular saw-bench.—Address, A. B. C. 20, Bouverie-Street, Fleet-street, London.

WANTED, a SITUATION as CLERK of WORKS. Has had considerable experience in Construction, estimating, &c.—Apply to J. O. P. Office of "The Builder."

TO CARPENTERS

WANTED to APPRENTICE, a well-disposed YOUTH, aged 16, as INN-DOOR to a CARPENTER and BUILDER. A moderate premium will be given. Has been a few months at the trade.—Apply, paid, to M. M. S. Upper Marylebone-street, Portland place.

TO PAINTERS AND OIL AND COLOURMEN.

WANTS a SITUATION, a Young Man just out of his apprenticeship, as Plumber, Painter, Writer, Grainer, and Glazier, or as an Assistant in an Oil and Colour Warehouse. In-door preferred. Wages 16l per annum.—Address, W. C. P. 9, Earl-street, Blackfriars.

TO BUILDERS, PAINTERS, &c.

WANTED, by a Young Man, a permanent SITUATION as PLUMBER, PAINTER, and GLAZIER. Likewise understands Paper-hanging, and is capable to undertake the management of a business.—Address, W. G. 9, Margaret-terrace, Harrow-road, Paddington-green, Paddington

TO BUILDERS.

WANTED, by the Advertiser, a SITUATION as FOREMAN. Can make working drawings, &c.; has had good experience in superintending of Carpenters' and Joiners' work, and can be well recommended.—Address, J. H 9, Camomile-street, Bishopsgate, City.

TO BUILDERS, ENGINE-SMITHS, &c.

WANTED, by a Practical Man, age 46, a RE-ENGAGEMENT as FOREMAN or MANAGER in either of the branches. Character, as to ability, sobriety, and punctuality, will bear the strictest inquiry.—Address, K. S. 16, John-street, Fitzroy-square. No objection to the country.

TO BUILDERS, &c.

WANTED, a SITUATION as FOREMAN. The Advertiser, brought up to the bench, is desirous of a SITUATION, as above. Salary moderate. Good references.—Address, F. S. C. 69, Great Titchfield-street, St. Marylebone.

TO BUILDERS.

WANTED, a SITUATION, by an experienced SHOP or GENERAL FOREMAN. References unexceptional.—Address, A. Z. 10, Izabella street, Gibson-street, Lambeth.

TO PLUMBERS, PAINTERS AND GLAZIERS, AND BUILDERS.

WANTED, by a Young Man who understands his business, a SITUATION in the above branches, and also, if required, can take the gas-fitting. No objection to town or country.—Direct to A. B. at Mr. Hovell's, Greengrocer, corner of John-street, Upper Holloway, Islington.

SURVEYING.

WANTED, a SITUATION, by a Party who has had several years' practical experience in Surveying, Levelling, &c. Is also a good draughtsman. Good references.—Address to W. S. Post-office, York.

TO ARCHITECTS AND SURVEYORS.

WANTED, an ENGAGEMENT in an Architect's and Surveyor's Office, by a GENTLEMAN, who has been accustomed to getting out working and detail drawings, specifications, &c. and who is well acquainted with the various duties of an Architect's Office.—Address, A. B Mrs Norten's Newspaper-office, 23, Cumberland-market, Regent's-park.

TO PLUMBERS, BUILDERS &c.

WANTED, by a Middle-aged Man, who thoroughly understands his business, a permanent SITUATION either in town or country, as PLUMBER, GLAZIER, &c. Respectable references can be given.—Apply by letter (free), to S. C. at the Office of "The Builder."

TO BUILDERS.

WANTS a SITUATION, a SHOP FOREMAN of extensive experience; has had the management of from fifty to one hundred men for the last ten years. References of the highest order. Address, N. R. C. Office of "The Builder."

TO ENGINEERS.

WANTED, by a Young Man, who has just completed an engagement in an engineer's office, a SITUATION. Is a good draughtsman, mathematician, and practical engineer; would not object to work at the practical part of his business if required. Moderate salary only required. Reference from his last place.—Address, A. B. Office of "The Builder."

TO ARCHITECTS, BUILDERS, &c.

A YOUNG MAN, aged 25, who has been three years and a-half in a Builder's Office, wishes for a RE-ENGAGEMENT, in town or country. He can draw and colour neatly, and is a good writer. Unexceptionable references given.—Address, F. C. 33, New-street, St. John's-wood.

TO BUILDERS.

A BUILDER'S CLERK, who has been brought up at the bench, and is well conversant with the duties of the office, wishes for a RE-ENGAGEMENT. A reference to last employer will be given.—Address, O. Office of "The Builder."

TO TIMBER-MERCHANTS.

A GENTLEMAN of experience in the Timber and Hard wood Trade desires an ENGAGEMENT as TRAVELLER with a first-class House, in or out of London.—Address, B. D Office of "The Builder."

TO BUILDERS AND OTHERS.

AS GATEKEEPER, MESSENGER, or otherwise, a respectable and trustworthy man, with good references.—Address, J. P. 46, York-terrace, New-road, Marylebone.

AS CLERK of WORKS or FOREMAN.—WANTED, by the Advertiser, a SITUATION as above. Is well acquainted with the details of Gothic architecture.—Address, F. C. T. Office of "The Builder."

TO LAND AGENTS, SURVEYORS, AND OTHERS.

A FIRST-RATE DRAUGHTSMAN and SURVEYOR, having a practical knowledge of lithography, with experience and good testimonials, is desirous of a RE-ENGAGEMENT.—Address, X. Y. Mr. BATEMAN'S, Law Stationer, Tooke's court, Chancery-lane.

A YOUNG MAN, who is an experienced and practical Clerk, Foreman of Carpenters, or General Foreman, is open to an ENGAGEMENT. Five years' reference from the situation he is about leaving.—Address to A. Z. at Mr. Stoner's, No. 2, Commercial-street, Whitechapel.

TO BUILDERS, &c.

A YOUNG MAN, 24 years of age, well acquainted with Book-keeping, Estimating, Taking out Quantities, making Working Drawings, and the general routine of a Builder's Office, is desirous of an ENGAGEMENT to the above. References given if required.—Address, post-paid, stating salary, to W. C. 173, Waterloo-road, Lambeth. No objection to the country.

A FIRST-RATE ARCHITECTURAL DRAUGHTSMAN, accustomed to executing Geometrical, Perspective, Freehand, and Water Colour Drawings, is desirous of an ENGAGEMENT, at home or abroad.—Address, SPHYNX, Office of "The Builder."

TO MASTER PLUMBERS AND BUILDERS

A YOUNG MAN, who is a good plumber, wishes for a CONSTANT SITUATION; willing to fill up his time in painting or glazing. No objection to the country. Reference if required.—Direct, J. G. at Mr. Wakeling's, No. 3, Macclesfield-street North, City-road.

PLASTERING.—WANTED, either the MANAGEMENT of or to TAKE a JOB (labour only), at a fair price. Good references.—Address, B. S. P. Office of "The Builder."

THE Advertiser, a Young Man, age 25, is in WANT of a RE-ENGAGEMENT as TIMEKEEPER, and to keep accounts; and is desirous to make himself useful to his employer. Unexceptionable references and security if required. Address, T. S. S. Office of "The Builder."

TO CARPENTERS AND JOINERS

THE ADVERTISER, with a small capital, wishes to join a party in a good JOBBING BUSINESS, or would not object to a situation in a Building Firm, or as Salesman in a Timber-yard, where he could employ his time and money to advantage.—Address, G. H. Office of "The Builder."

TO BUILDERS.

THE Advertiser, aged 23, has been apprenticed five years to the Joining and Paper-hanging, desires practical improvement in the former, at moderate wages, in or near London.—Address, A. L. 5, Adam-street West, Bryanston-square.

TO PAINTERS, BUILDERS, HOUSE-AGENTS, &c.

THE Advertiser wants a SITUATION as GENERAL HOUSE-PAINTER; has had twenty-five years' experience in all the branches; useful in writing, graining, gilding, furniture-painting, decorating, &c.—Address, M 38, New-street-square, Farringdon-street, City. The country not objected to, if permanent.

TO CIVIL ENGINEERS AND LAND SURVEYORS.

THE Advertiser has had upwards of ten years' experience in Land and Engineering Surveying, as a Surveyor and Superintendent of Surveyors, engaged on extensive surveys of towns for sanitary, &c. improvement in all its branches, and is now OPEN for an ENGAGEMENT. Testimonials and specimens of the first class can be produced. Salary not so much an object as permanency of employment.—Address, Y. Z. Office of "The Builder."

MR. WEALE, 59, High Holborn, has for DISPOSAL a lucrative HALF-SHARE of a professional COUNTRY PRACTICE, where the engagements are principally of architecture and civil engineering.

TO GLASS-STAINERS AND DECORATIVE PAINTERS.

THE ADVERTISER, having lost a very valuable member of his family, is in WANT of a PARTNER to take one-half, or a less share, in an old established BUSINESS. The establishment is situate in the country, and commands a very extensive first-class trade, comprising glass staining, decorative painting, ornamental ceilings, gilding, paper hanging, plumbing, &c. The establishment is well known; it commands a wide circle, and the trade may be considerably increased, if requisite. A prize medal was awarded to the proprietor at the Exhibition in 1851. The Advertiser requires an active business-like man, who thoroughly understands at least one branch of the business, or an architect and surveyor would be useful, but it must be some one who can take a prominent part: none others need apply. Good reference will be given, and the same expected from applicants.—For further particulars apply by letter, addressed A. B. Mr. Gundry's, 1, Soho-square, London.

TO BUILDERS

TO BE SOLD a bargain, a LIGHT BUILDER'S CART, on springs and patent axle-trees, and made to shoot (only been used three times); also a Grey Cob, to be sold separately.—Apply to S. ROGERS, No. 6, Cannonside street, City

THE CWM EIGAI QUARRY SLATE and SLAB COMPANY, Llanbedr Conway, North Wales.
ON THE COST-BOOK PRINCIPLE

By which Shareholders are exempted from the Restrictions and Liabilities of the Joint-stock Companies Acts. *Vide* Act 7 & 8 Vic. cap. 110, sec. 63.

Capital, 18,000*l.* in Shares of 1*l.* each. Deposit, 5*s.* per share.

COMMITTEE OF MANAGEMENT.

(With power to add to their number.)

Thomas Lee, Esq. George-yard, Lombard-street, and Birmingham.
John Leonard, Esq. St. James's road, Holloway, and Reading.
Frederick Pertridge, Esq. Trinity-square, Tower-hill
Matthew Semple, Esq. Slough, and Devon.
James Shallis, Esq. Bride-terrace, Islington.

BANKERS.—London and Westminster Bank
AUDITOR.—Edward Ryley, Esq. New Bank-buildings.
SECRETARY.—W. F. Nokes, Esq.
SOLICITORS.—Messrs. *J.* Nokes and Son, 11, George-yard, Lombard-street.
BROKERS.—Messrs. Bladon and Cavell, 25, Change-alley, Cornhill.
TEMPORARY OFFICES, 3, Royal Exchange-buildings.

PROSPECTUS

The Cwm Eigai Quarry is situate in the Snowden range of hills, in the county of Carnarvon, eight miles from the quay at Tally Cafn, on the river Conway, where ships come alongside to load.

The vein of first quality dark blue slate, embedded in hard basteo-granite, about 20 to 30 feet high, upon which there are four working levels, rising one above the other, from which slates of an excellent quality have already been produced, and as the quarry deepens the metal still further improves.

At the depth of only a very few yards from the surface it is of a good marketable quality

The nature of the Cwm Eigai slate is particularly adapted for large slabs, which are very profitable working, and the quantity is quite inexhaustible.

The position of the quarry possesses many natural advantages, all of which are important as rendering the working easy, economical, and expeditious. They may be enumerated as follows:

1st. Great abundance of superior slate metal.
2nd. A first-rate site for quarrying operations.
3rd. An excellent fall for rubbish on both sides of the vein—thus entirely obviating all hauling machinery.
4th. A plentiful and never-failing supply of water power to work machinery for planing, cutting, &c.
5th. A good mountain road, on a descent from the quarry, to Tally Bont, 2½ miles; from thence, by turnpike road to Tally Cafn, the port of shipment, 2½ miles.

This quarry has been most judiciously opened; upwards of 2,000*l.* having been expended in sinking and making roads, and no site in North Wales holds out better prospects of returning larger return than Cwm Eigai.

The quarry which is now being worked, has been inspected by some of the most eminent engineers and quarrymen of North Wales, all of whom agree in pronouncing it to be a first-rate concern, and now wanting capital but for judicious expenditure of capital in erecting the necessary sawing, planing, &c. machinery to make it a highly remunerative undertaking.

The terms upon which it is held are very advantageous twenty-four years' lease from 1st February, 1853 rent to commence 1st February, 1854, and to be at the rate of 20*l.* per annum for three years, after which the very low royalty of one sixteenth on the produce. This valuable interest, with all the advantages of the large outlay above alluded to, has been secured by the Committee, in consideration of 6,000 shares in the Company, with no cash payment whatever.

Slate may be sent to market within six months, the proceeds of which will be at the disposal of the Committee of Management for distribution by way of dividend

No further calls will be made in respect of the shares in this Company, exceeding the sum of 5*s.* at any one time, or at less intervals than three months, otherwise resolved by a majority at a general meeting of the Company called for that purpose.

Specimens of slate from the quarry may be seen at the Company's offices, where prospectuses and forms of application for shares may be obtained.

CWM EIGAI QUARRY SLATE and SLAB COMPANY.—NOTICE.—Applications for the unappropriated shares will continue to be received from the TRADE until the 31st instant, through the Secretary, Solicitors, or any of the Committee of Management.—By order of the Committee,

W. F. NOKES, Sec.

2, Royal Exchange Buildings, 6th Jan. 1854.

THE PIMLICO SLATE-WORKS.

Patronized by Royalty, the Heads of the Nobility, the Clergy, Architects of Eminence, Builders, Railway Contractors, and the Public generally. MAGNUS'S ENAMELLED SLATE notwithstanding the vile imitations and infringements of his patent that are attempted, continues to grow in favour with the public, being hand-some, more durable, and infinitely cheaper than marble. Price-lists sent in a sheet of drawings, sent to any part of the kingdom gratis. Cisterns, Filters, Dairy and Larder Shelves, Wine Cellar Fittings, Slabs, and every variety of plain Slate-work, at prices that defy competition.—39 and 40, Upper Belgrave-place.

SLATES, Slabs, Cisterns, Enamelled Chimney-pieces, Plain ditto, Urinals, Baths, Sinks, Slabs, Lining, Skirting, Roofing, Malt or Floors, Patent Ridge and Roll, and Slab-work generally. Export orders supplied without detention, a large stock of slabs and manufactured goods being usually kept on hand. Price-lists may be had on application either personally, or by post.—Address, JOSEPH BRINDLEY, Slate Merchant, Steam Slate-works, Bermondsey-wall, London, opposite the London Docks.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Limatic Asylums, the Ordnance Works Model Prisons, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Pattern-rooms, Barracks, and are kept in stock in any quantities by Messrs FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and Messrs Braby's, Belvidere-road, where terms may be obtained

BANGOR SLATES.—J. EASTWOOD and SONS have some cargoes now arrived, consisting of DUCHESSES, COUNTESSES, and LADIES, of first quality. Ready for delivery at their Wharf, Surrey Canal-bridge, Old Kent-road.

CORSHAM-DOWN and other BATH STONE.—Prices for the above, delivered either in town or country, may be had on application to MARTIN and WOOD, Market-wharf, Regent's-pk-basin.

SEYSSEL ASPHALTE COMPANY,

STANGATE, NEAR WESTMINSTER-BRIDGE, LONDON.

ESTABLISHED 1838.

CLARIDGE'S PATENT.—Frequent complaints having been made by ARCHITECTS and others of the failure of certain works supposed to have been done by this Company (but which in fact were executed with spurious materials), a list of works executed with the

GENUINE SEYSSEL ASPHALTE

is kept at the Office, that it may be at any time ascertained whether any work in which a failure has taken place was executed by this Company.

N B THE EXCLUSIVE SUPPLY OF ASPHALTE from the Mines of Pyrmont Seyssel being conceded to this Company, the Directors particularly recommend Architects, Builders, and others for the purpose of securing the use of the genuine article, to insert in their specifications

"PYRIMONT SEYSSEL ASPHALTE, CLARIDGE'S PATENT,"

and not merely "Asphalte," or "Bitumen," as in many cases where these terms have been used, gas tar, and other worthless and offensive compositions have been introduced.

1853.

GENUINE SEYSSEL ASPHALTE.

ORSI AND ARMANI.

THE EXCLUSIVE SUPPLY OF SEYSSEL ASPHALTE (FRANGY)

DIRECT FROM THE MINES.

REDUCTION IN THE PRICE FOR VARIOUS WORKS FIFTEEN PER CENT.

AND THE

WORK GUARANTEED FOR THREE YEARS.

Offices, No. 6, Guildhall Chambers, Basinghall-street, City.

PATENT METALLIC LAVA.

A printed List of the important Works for Flooring, Roofing, Covering of Arches, &c. &c. executed from 1845 to 1852, with this Material, may be obtained at the Office of

ORSI AND ARMANI.

THEIR PATENT METALLIC LAVA IS FIFTEEN PER CENT. CHEAPER

THAN THE GENUINE SEYSSEL ASPHALTE OF MESSRS. O. AND A.

OR THIRTY PER CENT. LOWER THAN ANY OTHER MATERIAL CALLED BITUMEN OR ASPHALTE.

Offices, No. 6, Guildhall Chambers, Basinghall-street, City.

MARBLE.—Mr. J. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined Sculpan, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the font of Vauxhall-bridge—offices, 3, Crescent-terrace, Millbank, Mr. THOS. THOMPSON, Agent.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPÔT, for Yorkshire Paving, Portland and Derby stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. MARTIN and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

TO BUILDERS, MASONS, AND CONTRACTORS.

OBSERVE!!! the cheapest Depôt in England for MARBLE CHIMNEY-PIECES of superior quality and workmanship is the Westminster Marble Company's Patent Works, Fart-street, Howell-street, Millbank. An inspection of their superior Stock of Statuary, Sienna, Black and Gold, Vein, and other Chimney-pieces, Tombs, Monuments, Tablets, &c. is earnestly solicited.

TO BUILDERS, MASONS, AND OTHERS.

THE largest STOCK in England of MARBLE in Blocks and Slabs, select, bardilla, dove, black, black and gold, sienna St. Ann's statuary, strp nttue, verde antique, &c. Portland, Hareheil, Park Spring, and other stone, in blocks, slabs, landings, and bend-stones. Y ried re paving, granite curb, &c. All goods carefully packed and forwarded to any part of England —THOMAS JACKSON, Marble and Stone Sawing Mills, Commercial-road, Pimlico, London

PAVING, in great varieties.—Sinks, sills, steps, &c.; rubbed coping; tooled ditto: rubbed and tooled sills; Harehill and selfaced slab; rubbed York paving; pipes pots, &c all at low prices Builders and masons are invited to inspect a list sent free on application to E. and W. STURGE, Bridge wharf, City road.—Established 1821.

ANCASTER STONE.—JOHN WILSON, Stone-merchant, Grantham, begs to inform Architects, Builders, and the Trade in general, that he is prepared to execute orders to any extent, and on short notice.

BATH STONE DEPOT, Great Western Railway, Paddington.—EDWARD FLUESTER respectfully informs Builders, Masons, and Others that he continues to supply the best Bath Stone, Corsham Down, Combe-down, and Farleighdown Stone, of the best quality, and at the lowest prices. Painswick and Forest of Dean Stone in Blocks, steps, landings, or slabs of any thickness.—N.B. Stone and other goods landed and carted.

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.

DEPOTS:

Great Western Railway Station.....	PADDINGTON.
Great Western Railway Station.....	BRISTOL
Hope-street, Mount-pleasant	LIVERPOOL
Castle-fields	MANCHESTER.

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

GRANITE.—The Cheesewring Granite Company, of Liskeard, Cornwall, are now prepared to supply Granite of excellent quality, and the largest dimensions. Prices may be ascertained on application to C. THELFALL, 3, Pinner's court, Old Broad-street, City; or to JAS. J. TRATHAN, Liskeard

S. TRICKETT, VICTORIA STONE WHARF, Isle of Dogs, informs his friends and the building public generally, that he is prepared to execute orders to any extent, wholesale or retail, by vessel or rail, or from his Depôt, Isle of Dogs, for all kinds of York Block, Westwood Beanie, Ball, New Brain, Pell, Potterswood, Harehill, Wadbank, Rotherhill, Portland, and all of Bath Stones, steps, cills, sinks, coping landings, headstones, flagstones, & Pavements. Scutch, good or clean, at low prices guaranteed. Estimates given for the supply of large contracts.

TO ARCHITECTS, MERCHANTS, BUILDERS, &c

TRICKETT and PERKIN can supply any quantity of their IMPERISHABLE RAWDON-HILL STONE from their quarries at Harewood, near Leeds. This stone is of a fine grit, perfectly uniform in colour; can be seen to advantage in the much-admired buildings now being erected in Albion-street, Leeds, for the Leeds and Yorkshire Assurance Company; and also at Harewood House, where it was used for the extensive additions and improvements made by Sir Charles Barry, who has a high opinion of the stone; no part of the most exposed mouldings, or carved stonework, shows the least signs of decay. The stone has been analysed by an eminent chemist and geologist; his opinion is, that if is the most durable stone in the market, and, as known, must be most extensively used wherever a good, strong, and durable stone is required. The stone can be got of any size or length up to 30 tons, is most suitable for steps, stairs, balcony landings, ashlar fronts, columns, tombs and monumental work, &c. &c. Superior grindstones, large or small.—Address, S. TRICKETT, Victoria Stone Wharf, Isle of Dogs, sole London agent, who will keep a stock for selection for immediate use or supply, direct from the quarries, by vessel or railway, to order.

By Her Majesty's Royal Letters Patent.

THE SILICEOUS STONE COMPANY are now prepared to UNDERTAKE CONTRACTS for the EXECUTION of WORKS of an Architectural or Ornamental character. This stone is composed of the purest grit and other siliceous material, combined by means of flint (dissolved by the patent process), the result being a material most indestructible in its nature, and by the same combination, protected from those impurities to which natural stone is liable.

Specimens may be seen on application at the Office, and a variety of designs in open Terrace-work, Balustrades, Copings, Fountains, Tombs, Chimney-pieces, Pavements, Ecclesiastical and other decorative work.

Attention is also particularly requested to the Ashlar for facing buildings, and to Austin's Patent Hollowed and Dovetailed Building Blocks, manufactured in the siliceous stone, which combine great strength with economy and speed in erection, are perfectly fireproof, and offer peculiar facilities for ventilation and the circulation of warm and dry air.

8, John-street, Adelphi. E. MENDHAM, Secretary.

ASPHALTE.—GERVASE FOOTTIT, Trinidad Asphalte Works, Rotherhithe; established 1834. Every description of Flooring laid with the above durable material in the best manner Asphalte for Railway Arches, 35s. per ton. Importer of Trinidad Asphalte.

Shipping Depôt, Devon Haytor Wharf, Rotherhithe.
G. H. CLARK, Agent.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed. Apply to JOHN PEARSON, DODGEON and DUCKETT'S BITUMEN PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.—N.B. Country Agents, and Railway Engineers and Contractors, supplied with the best Bitumen, for covering Bridges and Arches.

PAPER-HANGINGS and WALL-DECORATIONS.—E. T. ARCHER, Patentee and sole Manufacturer of the Royal Tapestry Silk Hangings. Every description of Paper-hangings, from cylinder-work for the most delicate hand printing, in papers for the cottage or the mansion. Borders Friezes, Centres, Medallions, &c. &c. from the drawings of the best artists in the colourings of the most refined taste. Always on hand a large stock of French and all Continental Manufactures.

Machine Printing Works, Royal Mills, Wandsworth, Surrey; Block Printing Works, 451, Oxford street, London.

PAPER-HANGINGS, the cheapest in London, at CROSS'S Wholesale and Retail Warehouse, 22, Great Portland-street, Oxford-street, where builders and the trade can select from a stock of 50,000 pieces, at the following reduced prices:—

Good Bedroom Papers.....	from 6d. per yard.
Painted Marble, Granite, and Oak Papers ..	from 9d. do.
Superior Dining and Drawing room Papers from	1s. do.
Satins and Flock.....	from 2s. do.

THE PERMANENT WAY COMPANY call the attention of Railway Directors and Engineers, to their Patent Keys, Sleepers, Fish Joints and other important improvements now in use on upwards of 2 miles of railway in the United Kingdom may be obtained on application to Mr. CHARLES MAY, C.E. the Manager, or to Mr. WILLIAM HOWDEN, the Secretary, 26, Great George-street, Westminster.

TODD'S PATENT METALLIC PROTOXIDE PAINT.

The PATENT METALLIC PROTOXIDE PAINT now offered, has been found, after the most severe trials, to be peculiarly efficacious in preserving Iron from Oxidation, Wood from Decay, and Masonry and Brickwork from dampness.

Applied to Iron it unites with it most intimately, forming a complete coating; so that thus protected, it will be found equal to the best galvanized Iron. Hence its application to all Engineering purposes as an application to Iron Vessels, Iron Roofs, Steam and Water Pipes, &c. &c. It adheres firmly to Iron even at a red heat.

Many attempts have been made to discover a substitute for White Lead, that should possess all its virtues, without partaking of its offensive character. This Paint is not affected by sulphuretted or carburetted hydrogen gas, bilge water, or indeed foul air of any kind: hence it is well adapted for the interior of Ships, Warehouses, Offices, Stabling, &c.; and from its total freedom from deleterious properties, it will be found of great value for painting the interior of Hospitals, Asylums, Unions, Gaols, and other Buildings which may require to be painted during occupation.

This Paint resists the action of the sun's rays, and also that of the sea air: it is therefore well suited for the Colonies and all tropical climates.

For Stuccoed Buildings it will be found to be effectual in preventing the discolourations formed by vegetation, and keeping out all dampness.

The Protoxide Paint, as at present produced, is a Pale Stone Colour; but it may be tinted with any other colour to suit the taste and purpose for which it may be required.

TESTIMONIALS.

"Brighton, Croydon, and Dover Railways,
Locomotive Department, New Cross, Sept. 25, 1845.

'SIR,—In reply to yours respecting the 'Patent Protoxide Paint,' I have much pleasure in stating that what has been used in this establishment has been highly approved of, and I consider it the best description of paint yet used, particularly for Iron-work, for which purpose I can strongly recommend it.

"I am, Sir, your obedient servant,
"BENJ. CUBITT."

"Regent's Canal Iron Works, Eagle-wharf-road, Dec. 5, 1845

"SIR,—As it is always my wish to render justice to every one, so far as it is in my power to do, I have great pleasure in informing you, that I have very severely tested your 'Patent Protoxide Paint;' that the results are most satisfactory; and that I consider it a very valuable article for an Iron-founder. I have ordered it to be used with us wherever circumstances will allow us to do so. I will, moreover, use it for all my own work, and wish I had known it somewhat earlier.

"I am, Sir, yours respectfully,
"HENRY GRISSELL.
"To H. and M. D. Grissell.

"P.S.—It must be good for Boilers."

"St. Kitts, August 20th, 1853.

"Gentlemen,—Having had some experience with Todd's Patent Paint (for which your firm are Agents), I beg to state my unqualified approval of it. I have tried it against White Lead of the first quality, and at the end of seven or eight months find Todd's Paint resists when laid on, while the White Lead, owing to the excessive heat, may be rubbed off like chalk. It answers equally well on wood as iron, effectually preserving the latter from rust. I feel obliged by your quick attention to my further order by the 'Parrack Hall,' which ship we are daily expecting.

"I am, gentlemen, your obedient servant,
"(Signed) GEO. G. MOFFATT.

"Messrs. Davidson and Peter, Bishopsgate-street, London."

For terms, application to be made at the Offices of the Company, 12, Bishopsgate-street Within; or to the following Agents:—

Messrs. PITCHFORD, ISLAND LEAD WORKS, LIMEHOUSE ... } LONDON.
Messrs. G. and T. WALLIS, 64, LONG-ACRE ..... }
Messrs. D. and G. BRYMNER ..... GREENOCK.

JOHNS'S PATENT PERMANENT STUCCO WASH. STUCCO CEMENT, AND STUCCO PAINT.

JOHNS'S PERMANENT WASH, WITHOUT SIZE OR OTHER CORRUPTIBLE INGREDIENT, is now fully established. It has been adopted EXTERNALLY and INTERNALLY at some of the largest Hospitals and Asylums, and is acknowledged to be the most useful Colouring Material in the trade, for its ADHESIVENESS, NON-ABSORBENCE, UNIFORMITY OF COLOUR, and APPLICABILITY to small or large surfaces. IT MAY BE EXPORTED TO ANY CLIMATE.

JOHNS'S STUCCO CEMENT.—This Cement, which has been established many years, is now manufactured on such improved principles that its acknowledged advantages and its suitableness for INTERNAL as well as EXTERNAL purposes are an unquestionable. It NEVER CRACKS, BLISTERS, or VEGETATES; has no Caustic quality, becomes as hard as stone in a few days, when it may be painted or papered; may be cleaned with a brush and water, and will STAND THE TEST OF ANY CLIMATE.

JOHNS'S STUCCO PAINT.—The merits of this Paint are so justly appreciated by the trade, for its ready affinity to Stucco, Brick, or other Rough Surfaces, its durability, comparative cheapness (two coats being equal to three of lead paint), that it is of the first importance to the public generally, AND WELL WORTH THE ATTENTION OF SHIPPERS AND EMIGRANTS.

Each Material in Casks of 1 to 5 cwt.
MANUFACTURERS,
PHILIP HARE and CO. 22, STEEL-YARD, UPPER THAMES-STREET.

HUBBUCK'S PATENT WHITE ZINC PAINT. THE PERMANENT WHITE of the Ancients, previously confined by its cost to the use of the artist, is now, by Hubbuck's Patent, within the reach of the million.

The principal characteristics of HUBBUCK'S ZINC PAINT are—Economy, Health, Beauty, and Durability.

Builders and Contractors find Hubbuck's Paint the only one adapted to all their purposes; possessing the great desideratum of economy, combined with its high excellence as a paint, it ranks alone. Contractors effect a saving of 25 per cent. by using HUBBUCK'S ZINC PAINT.

HUBBUCK and SON deem it necessary a caution should be circulated against imitations of their Paint. These manufactures, containing frequently pernicious ingredients, are baneful to health and worthless in use, whilst the inexperience of the imitators in the production of pigments is evidenced, not alone by the coarse grainy appearance, but also by the deficiency of that body in their produce, which is known to the painter as the "opening out." That an imposition be practised, therefore, notice that the oask is marked with the name of the original manufacturer, thus—

HUBBUCK—LONDON—PATENT.

not so marked, the reason may be inferred.

Every information may be obtained, head of THOMAS HUBBUCK and SON, Paint and Varnish Manufacturers, Upper East Smithfield (opposite the London Docks), London.

THE WASHINGTON CHEMICAL COMPANY,
NEWCASTLE-ON-TYNE,
Manufacturers of

PATTINSON'S OXICHLORIDE of LEAD. The Washington Chemical Company having, during the last year, established a Manufactory of Pattinson's Oxichloride of Lead on a large scale, and being able to supply it with regularity, and to execute orders without delay, now proceed to bring this new and valuable preparation of Lead before their friends and the public, quite sure that it will not, in the present age, be condemned because it is new, and that if judged by its merits, it must make its way, and finally take its place as one of the important manufactures of this country.

Pattinson's Oxichloride of Lead is a chemical combination of one equivalent of Chloride of Lead, and one equivalent of Oxide of Lead; it being well known that common White Lead is a chemical combination of one equivalent of Oxide of Lead, and one equivalent (or thereabouts) of Carbonic Acid, constituting what is called in chemical language, Carbonate of Lead. Now there is no reason to conclude that Carbonate of Lead is the only compound of lead valuable as a paint, and still less that it should be the best compound of lead for that purpose. In point of fact it is not so, for the newly-discovered Oxichloride is most, if not in all respects, is far superior; its colour is brilliantly white, and in a number of cases it has been tried against the best White Lead that could be obtained, and after a period of upwards of two years, it has been found to retain its white colour considerably better than the lead against which it was tried.

But the chief and by far the most important advantage it possesses, is its remarkable and very decided property of Body; by which term the power of covering surface well and extensively is understood among Painters. The attention of the discoverer was at a very early period drawn to this circumstance, and since that time the Washington Chemical Company have had abundant opportunities of placing its superiority in this important particular beyond all doubt. They have themselves performed a number of experiments, and have also caused a number of experiments to be performed, in the large way, by various practical men, to ascertain accurately its covering power as compared with the best White Lead, and they now state the proportions to be as 60 to 100, that is, 60lbs. of Oxichloride Paint will cover as much surface as 100 lbs. of the best White Lead, the saving of cost being in the same proportion; besides this, the coating is thicker and more protective, both in and out of doors, as the Oxichloride dries into a hard, tenacious layer, more like an Enamel than paint.

In using the Oxichloride no difference in the materials with which it is mixed is required. Oil and Turpentine being employed as usual both for work technically called Flatting, and for work intended to be varnished. For the use of Paper-Stainers and Leather-Dressers, the Oxichloride is found to be peculiarly suitable. The Washington Chemical Company strongly recommend this newly-discovered substance to the notice of consumers, both on account of its economy and its intrinsic good qualities as a paint.

AGENTS.

LONDON	Messrs. Blundell, Spence, and Co. 9, Upper Thames-street.
LIVERPOOL	Mr. Richd. Cooke, 7, Sise-lane.
MANCHESTER	Messrs. Johnson and McGowan.
LEEDS	Mr. Jas. Douglas.
SUNDERLAND	Messrs. D. and E. G. Jepson.
DEVONSHIRE AND CORNWALL	Mr. John Young. Mr. Richd. Penrose, Tavistock and Plymouth.
EDINBURGH AND EAST COAST OF SCOTLAND	Mr. Wm Bailey, jun. Greenside-place, Edinburgh.
GLASGOW AND WEST COAST OF SCOTLAND	Messrs. Arthur & Hinshaw, Glasgow.
DUBLIN AND SOUTH OF IRELAND	Mr. P. Linskey, 91, Middle Abbey-street, Dublin.
BELFAST	Messrs. William Stevenson, jun. and Co.

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs. T. and S. KNIGHT, of Great Suffolk-street, Southwark, as their painters, who will be ready to execute any description of painting and decorating with the Pure Patent White Zinc Paint.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphurous or any other vapours or emanations. Being completely innocuous and free from corrosive effects of whitelead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compound that might be sold as an adulterate as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of calcination, or by mixture with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy resulted by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull, by Messrs. BLACKBELL, SPENCE, and CO.; when ground and dry, by Messrs T. B. MORLEY and CO., and by the Company's Grinding Agents in London, Messrs CHARLES DEFRAFER and SON, their agents, 69, King William-street, City; Mr. CHARLES JACK, wholesale and retail agent, 8, Tottenham-court, New-road, and 69, Upper Thames-street, City. In Manchester and Liverpool, by Messrs. LAWFORD and CO. of 49, Norfolk-street, Liverpool, who are also acknowledged Painters to the Company for Zinc Paints, and undertake painting shops, warehouses, dwelling houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-bush. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 12, Manchester-buildings, Westminster.

PERMANENT ZINC COLOURS and WHITE Emerald and Brunswick Greens, Chromes, Blues, Reds, and all other Colours, are now produced from Zinc at price which render them an advantageous substitute to the Lead, Arsenic, and Copper Colours. These Zinc Colours are most brilliant, and are chemically opposed to any Sulphurous Gas. Sold Wholesale for Ships and Machinery, also for all kinds of House Painting, no other but Zinc Colours ought to be used to insure durability and economy. For Prices, apply to the Patentees, Messrs. GEO. H. GEYELIN and CO. White Zinc and Permanent Colour Works, Victoria-wharf, Regent's park-basin, London.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. Manufacturers of the very best PORTLAND CEMENT for all purposes Cement is applicable, solicit a continuance of that patronage with which they have so long been favoured.—Orders received at Great Scotland-yard, and at the Works.

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs. ASPDIN, ORD, and CO have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery (patented by Mr. ASPDIN) much improved the quality of this Cement, without any increase in price.

Engineers and architects are recommended to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cement, resembling it only in colour.

ASPDIN, ORD, and CO. beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper.

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office, New Wharf, Westminster, London; at their Works, Gateshead-on-Tyne; or from their Agent, Mr. HENRY ROBINSON, 31, King-street, Liverpool.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of a uniform colour and quality (a desideratum never before attained in Portland Cements). It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which its eminent hydraulic properties stamp it at once as the first cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly. Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal use. These well known hard stuccos dry quickly, and can be painted upon within a few days. Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fireclay Goods, Grindstones, Cement Hammers-dogs, dried Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Portzolano

PARIAN CEMENT, for internal use, to be painted in a few hours, and papered within a couple of days.—CHARLES FRANCIS and SONS, Manufacturers of Roman, Parian (their patent), and all other Cements in use for building purposes, Nine Elms, London.

ATKINSON'S CEMENT, so long known and esteemed in London, for plastering purposes, is a quick-setting Cement, that requires no additional sand. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster; and Seel-street, Liverpool.

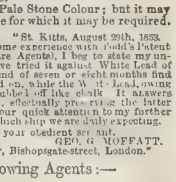
ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cement-like properties; that it is not affected by frost, and does not vegetate in damp situations. A result of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

ROMAN and OTHER CEMENTS. Manufactured by J. M. BLASHFIELD, successor to the Patentees, PARKER and WYATT, who, in 1796, introduced PARKER'S ROMAN CEMENT; also Tarras and Portland Cements, English and French Plaster, Terra Cotta Chimney Pots, Trusses, &c.

Manufactory, Mill Wall, Poplar; Depôts, Commercial-road, Lambeth; and Paddington-basin.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it clearer for use over or above that any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.



ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS Cements of the best quality.

SECONDS, PAVIORS', STOCKS, and other Bricks.
CHARLES RICHARDSON, 6, South Wharf, Paddington.

BLUE LIAS LIME.—NELSON and CO. beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders, and others connected with the building trade, to the superior quality of their BLUE LIAS LIME, the natural hydraulic properties of which, and the great strength to which this kind of Lime is held for buildings in wet and damp situations, such as wharf-walls, docks, &c and for concrete foundations, is a sufficient recommendation for the adoption of it in all works of the above description. It is also peculiarly adapted for stucco. Orders received by London Agents, BLYTH, BROTHERS, 16, South Wharf, Paddington; and at the Works, Stockton-on-Tees, near Southam, Warwickshire.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast from any size, note, or weight, singly or in peals

TUNED BY MACHINERY.

Stocked and wheeled ready for hang. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.

FOWLER'S IMPROVED FARM and COTTAGE PUMPS.

To be had of any Ironmonger or Plumber, 1l. 15s.

The usual allowance to the trade.

PUMPS of SUPERIOR CONSTRUCTION bored perfectly true by improved machinery, in various plain and ornamental patterns, for squares and market-places, roads, conservatories, liquid manure, ship, barge, brickmakers, contractors, gold diggers, brewers, chemical works, and in wrought and cast iron, copper and brass, for hot or cold liquors, &c. &c. Long barrel and hydraulic lift-pumps, with handles on planks; and engines of various powers, for wells of any depth.

PUMPS on HIRE! The largest stock in England of single and double pumps, from 4 in. to double 12 in. barrels, prepared for hand or steam power, ready for use on reasonable terms, at

BENJ. FOWLER'S, Hydraulic Engineer, Hot-water, Steam and Gas Apparatus Manufacturer, New Factory, White'friars-street, Ple-t-street

FARM AND COTTAGE PUMPS.

WARNER'S PATENT CAST IRON PUMPS, for the use of FARMS, COTTAGES, MANURE TANKS, AND SHALLOW WELLS

Patent Pump..... £1 15 0
Patent Pump, with 15 feet of lead pipe attached, and the nuts and nuts ready for fixing..... 3 0 0
Larger sizes if required.

The smaller sizes are also much used for supplying Hot, Rearing, and Plant Houses, from underground Water Tanks, and can be readily fixed in any situation.

May be obtained of any Ironmonger or Plumber in town or country, or of the Patentees and Manufacturers,

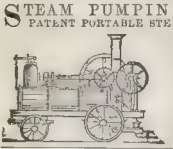
JOHN WARNER AND SONS, 8, CRESCENT, JEWIN-STREET, LONDON.

Every description of Machinery for raising Water, Fire Engines, &c.

The usual allowance to the Trade. An Illustrated Book sent on application post-free.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.



The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with a supply valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, AND TIN PIPE.

JOHN WARNER AND SONS, Manufacturers, 8, Crescent, Jewin street, London.

STEAM PUMPING ENGINES.—PATENT PORTABLE STEAM-ENGINES, from four to ten horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile-driving, raising materials, &c. &c.

Contracts taken for pumping any quantity of water.

JAMES BURTON & SONS, Engineers and Contractors, 79, Duke-street, H Jamb-street, Southwark, London

PUMPS.—Engineers, Contractors, and Parties engaged in raising water will find it their interest to examine into the merits and advantages possessed by the PATENT CENTRIFUGAL PUMPS over every other. They are applicable for lifting, draining, and irrigating. Are used by Government, Engineers, Railway contractors, Brewers, Distillers, Contractors, and to the supply of all cities, towns, &c. from 25,000 to 300,000 gallons per minute. Can be seen daily at work, and all information obtained respecting them, by application to GWYNNE, SON, and CO. Essex wharf, Strand

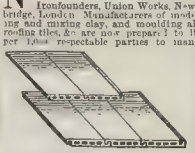
STEAM-ENGINES, of various sizes, from two-horse power upwards, a few in stock, made on the most improved principles, and of the very best quality; single and double-purchase crabs also always ready for immediate use or exportation; saw benches and saw frames, with all the most recent improvements, and every description of machinery, made to order by ANDREW McLAREN and CO. Windsor Iron Work, Windsor-terrace, City road, and 174, Upper Thames-street

TO BE SOLD, a new and powerful PASSENGER LOCOMOTIVE ENGINE, being the last made by the late Charles Todd, of Leeds.—Apply to Mr. TAWEET, the foreman of Smith, Beacock, and Tannett, Ironfounders and Tool Makers, Victoria Foundry, Water-lane, Leeds.

SUCCESSFUL VENTILATION.—WATSON'S PATENT SELF ACTING DOUBLE-CURRENT VENTILATORS have been successfully applied to Churches, theatres, Public Halls, Stables, and almost every kind of building,—as well as to withdraw Steam, Smoke, Dust, and Heat. Testimonials and other information forwarded on receipt of a postage stamp. The Ventilators delivered carriage free in London and Brighton. Patentees seek for Sale. Apply at the Manufactory to CHARLES WATSON, King Cross-lane, Halifax, Yorkshire, who is the patentee and sole maker.

VENTILATION.—PURE AIR.

Sheringham's Ventilator for the



admission of pure air through an

EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 6s. 6d.

These Ventilators are so arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 196, Blackfriars road, and 117, Union-street, Borough; and of all respectable ironmongers, builders,

NORTON and BORIE, Engineers and Ironfounders, Union Works, New Park-street, Southwark-bridge, London Manufacturers of moderate machinery for crushing and mixing clay, and moulding all kinds of bricks, pipes, roofing tiles, &c are now prepared to license by the district or per 1,000 respectable parties to manufacture their patented Tubular Roofing Tiles. The advantages arising from a covering for roofs of this formation will be apparent to every reflective mind, and will not require very lengthened observations to prove their great usefulness, further than briefly pointing out the leading claims to universal adoption. Being noncombustible, the sun's rays on a roof of these tiles have little or no power beyond the outer surface, the heat being cut off by the presence of air in the tubes running all through the tile. The various practices so frequently adopted with a view to keeping down the temperature of the uppermost rooms in large buildings, factories, workshops, store-rooms, farm buildings, cowhouses, &c are now no longer necessary. They are efficient ventilators, by which, if so sought, the tiles act upon the air being admitted in the same manner, lowering its warmth in the same degree with the roof. It is also obvious that they are not so liable to leakage; should the outer plate get fractured, the rain would be carried off by the chamber below. The upright partitions give great strength, and let the latter for the same evening—a less than any other tile in use. In appearance they are more stylish, and at prices not above the plain inches in most cases lower. To secure agents for each operations, orders should be sent at once. Illustrated circulars on application, post-paid.

PATENT TUBULAR TILE, WITH CELLULAR EDGES.

BRICKS from COWLEY and KENT. Also WHITE, YELLOW, and RED FACING BRICKS. RED VERTICED BRICKS. Pipe Bricks, Lumps, and Tiles. CHARLES RICHARDSON, SOUTH WHARF, PADDINGTON.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good average quality, constantly on sale at H. DODD'S Brickfield, where a month's quarter can be had with from the City. H. D. earnestly requests parties above named to call with a visit, in order to inspect his stock, and to judge for themselves.

Malm Facing and Rubbed Stocks and Place Bricks also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Address H. HENRY DODD and CO. at the Counting House, Hoxton Brickfield, Grange walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

BRICKS.—KENT, GREY STOCK, and other Bricks of superior quality delivered alongside per Barges.—Apply to W. ALLAWAY, 4 Catherine court, Tower hill

BRICKS.—500,000 Stocks, Pickings, and PAVIORS, for SALE, at H. S. BARLOW'S Brickfield, Queen's road, Dalston, near the turnpike-gate.

Also MANUFACTURER of superior Roman Cement and Plaster of Paris at the Yard House, Rochester. Orders executed from the above places, from Falcon-wharf, 80, Bunhill-fields, Blackfriars, and from Harrow bridge wharf, Stratford, Essex.

LAMBERT'S SELF-CLOSING LAVATORY AND CLOSET-VALVE

Is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under continuous pressure of 100 to 200 feet; they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured solely by the Patentees,

THOS LAMBERT and SON, Brass Founders and Engineers, Corner of Short-street, New Cut, Lambeth.

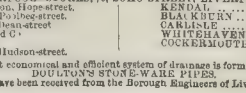
SUPERIOR GLAZED STONEWARE DRAIN PIPES, invented and manufactured by WILLIAM NORTHEN, UNION POTTERY, No. 14, VAUXHALL-WALK, LAMBETH.

W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipes and sockets, the dies being of a different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—

Road or end Co.'s Wharfs: Kingsland, Blackfriars, and Mill bank. Martin and Wood's Market Wharf, Regent's-park Basin.—J. C. Hilton's, Crown and Horse-shoe Wharf, No. 6, Upper Thames-street.—W. Peter's, North Wharf, Paddington.—C. Richardson's, South Wharf, Hitto.—G. Frith's, Cambridge Heath Wharf, Hackney.—Millwood and Co.'s Wharfs, Kensington Basin, and Creek Wharf, Hammersmith.—J. Corbet's Depôt, Britten street, Chelsea: and at the Pottery.

BOURNE VALLEY POTTERY,



NEAR POOLE, DORSET.

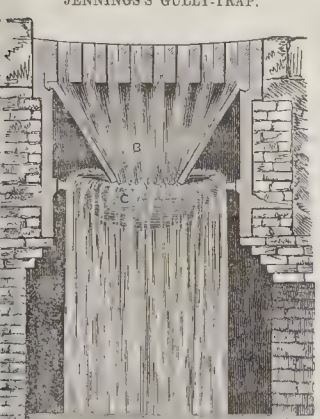
KENDAL.....Robt. Thompson.
BLACKBURN.....W. Hopwood, Clayton-street.
CARLISLE.....C. Armstrong, Lowther-street.
WHITEHAVEN.....Hugh Todhunter.
COCKERMOUTH.....John Hird.

The most economical and efficient system of drainage is formed with DOULTON'S STONE-WARE PIPES.

Testimonials as to their superiority have been received from the Borough Engineers of Liverpool, Glasgow, and other cities



JENNINGS'S IMPERISHABLE WATER-CLOSET.

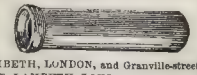
The advantages peculiar to this Closet are -

The Basin is so formed that it has no standing surface.
It also contains water sufficient to prevent any adhesion, and condense all effluvia.
In action it displaces no impure air.
It requires no supply from any cistern.
As a rule it should be half that of any other closet, besides which it is very materially LESS EXPENSIVE IN FIRST COST.
It is free from all machinery, imperishable in its material, and any mechanic can fix it.
It may be had in ENAMELLED PORCELAIN for the MANSION, or in BROWN STONE WARE for the COTTAGE.
These advantages for the supply of these Closets are as free from complication as the Closet, no wires or cranks, and they are not liable to injury from frost.

JENNINGS'S GULLY-TRAP.

A good and efficient trap should at all times prevent the escape of impure air; it should be so formed as to resist the passing of all matters detrimental to drainage and not be liable to stoppage.
The Patentee is now enabled to refer to several towns, but prior to their introduction to these towns they were subjected to severe tests; the inverted Bell C was several times charged with stiff road dirt, but the fall of two gallons of water in every trial dislodged it.
The Patentee would here observe that the grating can be raised and the parts B and C removed, to enable workmen to enter a sewer or remove the deposit from the chamber usually formed under gully gratings.
Traps on the above principle can now be had from 3 inches diameter up to 3 feet by 18 inches, for SINKS, AREAS, STABLES, YARDS, STREETS, &c. The GROUNDS, AREAS, and SINKS of the CITY of LONDON HOSPITAL; the SINKS, AREAS, and BASEMENT of the INSTITUTE of ENGINEERS, Great George-street; and the EXTENSIVE STABLES of the GREAT NORTHERN COAL COMPANY, have been fitted with these Traps, and many other public works which can be referred to.

A BOOK containing ILLUSTRATIONS, DESCRIPTIONS, and PRICES of JENNINGS'S PATENT SLUICE VALVES, FIRE COCKS, DRAINALS, LAVATORIES, &c. &c. can be had on application, or it will be sent free if two stamps are addressed to



G. JENNINGS,
ENGINEER AND BRASS-FOUNDER,
No. 29, Great Charlotte-street, Blackfriars-road.

A WATER-CLOSET, with Apparatus complete, price from 24s. to 30s. adapted for any situation; acknowledged to be the cheapest and most efficient ever invented. Perfect action guaranteed. Testimonials of the highest respectability, and prospectuses, forwarded by post. A specimen, to be seen fixed on the Premises. Manufactured and sold only by W. PATTEN, 22, OLD FISH-STREET, London, near St. Paul's.

TO LOCAL BOARDS OF HEALTH, WATER COMPANIES, &c.

A DESIDERATUM in SLUICE-VALVES. FREEMAN HOPE'S Patent Sluice-valve, can be repaired without being removed from the main. All sizes, from 2 inch to 6 inch. Patent Hydrants, self-closing Cocks, fire and other Pumps, Hot-water Apparatus, Baths, &c. Surveys made, and estimates given by FREEMAN HOPE, Hydraulic, sanitary, and Gas Engineer, 70, Strand, and Upper Marsh, Lambeth.

HENRY DOULTON and CO.'S DRAIN PIPES in GLAZED STONE WARE

OFFICES—HIGH-STREET, LAMBETH, LONDON, and Granville-street Wharf, Broad-street, Birmingham.
MANUFACTORIES—HIGH-STREET, LAMBETH, LONDON; ROWLEY REGIS, STAFFORDSHIRE; AND SMETHWICK, NEAR BIRMINGHAM.

May also be had as follows:—

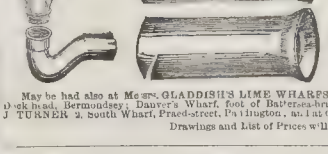
DOULTON AND WATTS'S

REGISTERED CLOSET PANS IN

ENAMELLED STONE WARE,

LAMBETH POTTERY, LONDON.



These Closet Pans are manufactured in a new kind of stone-ware, HIGHLY GLAZED, vitreous, of a white colour, are much improved in form, and are used and recommended by the engineers connected with the General Board of Health.
The Traps are smaller at the inlet, gradually enlarging towards the outlet, as a security against the introduction of improper substances into the drain.
They may also be had turned down.

PRICE 7s. 6d. each,

The same as for ordinary stone-ware, and may be had fitted with copper fans of the best construction at 1s. 3d. each extra.

JAMES STIFF, MANUFACTURER of GLAZED STONE-WARE DRAIN PIPES,

BENDS, JUNCTIONS, TRAPS, &c., 19, HIGH-STREET, LAMBETH, LONDON. Established 1751.
Water-Closet Pans, with Syphon Traps 7s. 6d. each.
STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths.

N.B. These are made without the discharge-hole being turned downwards.

The great advantages attending the use of these articles are now so generally understood, as to render any enumeration of them almost superfluous. Their cheapness, efficiency, and durability, are universally admitted; while the rapidly increasing demand for them proves their estimated superiority over every other kind hitherto before the public for similar purposes.

Inspection is invited to an assorted Stock of Drain Tubes, of every form and size, adapted to the various situations for which they may be required, as also to the WATER-CLOSET PANS OF IMPROVED CONSTRUCTION, and interior glaze, far surpassing any other manufactured of Brown Stone Ware.

May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge; City-road Wharf, City Basin; Deck-head, Bermondsey; Danvers's Wharf, foot of Battersea-bridge, Chelsea; Pratt Wharf, Kings-road, Camden New Town. J. TURNER 2, South Wharf, Praed-street, Paddington, and at COLWILL, Brothers, 34, Bridges-street Covent Garden.

Drawings and List of Prices will be forwarded free on application.

THE FARNLEY IRON COMPANY, WORTLEY, near LEEDS.

Manufacturers of FIRE BRICKS, TILES, QUARRIES, &c., White Building Bricks, Fire-clay CHIMNEY-TOPS, in Norman Egyptian, Saxon, Tudor, Grecian, Gothic, and Elizabethan styles.

TERRA COTTA

Fountains, Vases, Pedestals, Capitals, Trusses, Brackets, &c., in great variety, which for beauty and elegance of design are unequalled. The designs of Architects modelled with the greatest exactness.

Also of PATENT GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, &c., well adapted for pressure, being made extra pressed under "Spencer's Patent." Superior White Glazed CLOSET PANS, TRAPS, &c.

The Works of the Company are situated in the immediate vicinity of the well-known bed of WORTLEY FIRE-CLAY, and their manufacture of BRICKS, for the use of Forges, Gas Companies, Foundries, Potteries, and Glassworks, is confidently recommended for all purposes where extreme heat is required. Their GROUND CLAY is also particularly adapted for the manufacture of CRUCIBLES, MELTING POTS, &c.

IMPORTANT TESTIMONIALS.

Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College. I have great pleasure in giving you my testimony as to their efficiency and simplicity.
HENRY J. UNDERWOOD, Architect.
R. S. HOGGAR, Town Hall-yard, Engineer.

Oxford, January, 1850.

GENTLEMEN,—I have fitted up several of your Closets at various Colleges in Oxford, and gentlemen's houses near, and have much pleasure in giving you my testimony as to their great efficiency; I have not yet found one out of order.
R. S. HOGGAR, Town Hall-yard, Engineer.

Oxford, January, 1850.

GENTLEMEN,—I have fitted up nine of your Closets at Corpus College, and I can without hesitation give you my testimony as to their great efficiency; and the simplicity of their action is much admired by all who have seen them.
I am, Sir, yours,
JOHN CASTLE, Builder.

They are in use at the Royal Arsenal, and Royal Military Academy, Woolwich; Tower of London; Christ Church, St. John's, Corpus Christi, and Merton Colleges, Oxford Rolls Court, Chancery-lane, &c. &c. &c.

And may be seen in operation at Messrs. Stephen Green and Co.'s Manufactory, Lambeth.

MANUFACTURERS OF SUPERIOR GLASS-LINED STONEWARE DRAIN PIPES AND CLOSET BASINS OF EVERY DESCRIPTION.

THE BUILDER.

SALES BY AUCTION.

BRICKS—Shepherd's Bush.

MESSRS. EVERSFIELD and HORNE beg to announce that they will SELL by AUCTION, early in MARCH at the SHEPHERD'S BUSH, near Hammersmith, about a million of capital stock BRICKS, which will be arranged in lots to suit purchasers, to whom access may be had on the day of approved bills will be granted. Auction and Estate Offices, 4, Parliament-street, Westminster.

Great Western Railway First Portion of the Valuable Materials of the Line Terminus at Paddington.

MESSRS. EVERSFIELD and HORNE are honoured with instructions from the Directors of the Great Western Railway Company, to SELL by AUCTION, on the PREMISES, on WEDNESDAY, the 22nd of FEBRUARY, and following day, at ELEVEN o'clock each day, the very valuable materials and fittings of the Locking cabins, Departure Platforms, and Carriage Sheds; comprising 200 squares of capital duchess slating, 10 pairs of sound timber principals with rafters and tie-beams, suitable for re-erection; the stout planking of platforms, lead and timber floors, weather boarding, quarterings, lining boards, large gates, doors, sashes, and sky-lights, iron columns, square and hexagon gas lamps, 1,000 feet of iron gas piping, 2,000 feet of Yorkshire paving, large lined cisterns, fittings of tea, water closets and urinals, fittings of the ticket offices and waiting rooms, 1,400 yards of excellent turnpike rails, a large metal bell, about 10 tons of land, 12 inches superficial feet of zinc, sound stock brickwork, 2 large pumpmills, a quantity of loose materials, and many effective effects. May be viewed 7 days previous to the Sale the day of which will be very shortly announced), when Catalogues may be had, on the Premises, and of the Auctioneers, 46, Parliament-street, Westminster.

TO TIMBER MERCHANTS, SAW-MILL PROPRIETORS, and others, requiring extensive Premises.

MR. WARD will SELL by AUCTION, on the PREMISES, on THURSDAY, FEBRUARY 9th, at TWO o'clock precisely, the LEASE of the TIMBER YARD, situate in the Hermit-road, New-road, Southwark, near the Bricklayers Arms Railway Station, and within ten minutes walk of London-bridge. These premises comprise a large yard, with dwelling-house and garden in the rear; offices, saw-pits, scaffolding for deal drying-sheds, veneer-room, loft, stabling for seven horses, &c.; the whole containing nearly an acre of ground. The rent is exceedingly moderate. The business of a timber-merchant has been carried on in the above premises for the last fifty years with great success. From its close vicinity to the City and Docks, can be fully made to it any extensive undertaking either in the present trade or as a new mill. For further particulars apply to the Auctioneer, No. 8, Oxford-street.

TO TIMBER-MERCHANTS, BUILDERS, CARPENTERS, Cabinet, Coach, and Pianoforte Makers, Sawpit-diggers, Wheelwrights, and others

MR. WARD will SELL by AUCTION, on the PREMISES, Herm-street, New-road, Southwark, on THURSDAY and FRIDAY, the 9th and 10th of FEBRUARY, at ELEVEN o'clock each day, exactly and well-assorted STOCK of a Timber merchant, consisting of 1,000 deals and Spanish mahogany, in planks, board, and veneers, American, and Baltic boards and planks, 2 dry yellow pine planks and boards, 2,000 white and yellow deals and battens, 2 loads Prussian timber, very prepared flooring boards, 2 cords of English oak tree-nails, 1 load of dry mahogany, beech plank, quarters and fellocs, elm stocks, nut deals and planks; and also the whole of the utensils in trade consisting of 2 saw benches, rearing-up frame, large circular pit-saw, screws, jobers, two screw jacks, &c.—Catalogues in the interim to be had on the Premises; and of the Auctioneer, No. 8, Oxford-street. To view, the day before the Sale and morning of Sale. Lots will be put up at 12 precisely on the Premises, and at 2 o'clock precisely, at the Auction Mart, on THURSDAY.

TO BUILDERS AND OTHERS—Stock-in-Trade, Ladders, Scaffolding, Household Furniture, and Effects

MESSRS. LOCKWOOD will SELL by AUCTION, on the PREMISES, No. 9, Bruton-place, Berkeley-square, on TUESDAY the 7th of JANUARY, at ONE o'clock punctually, STOCK-IN-TRADE of a Builder, consisting of a small quantity of deals, various thicknesses, timber in scantling, part with unfinished, framed work of various descriptions, small quantity of York paving, assorted mantels, two stands of ladders, pairs of various sizes of trestles, timber and other tramps, and painters' utensils, small quantity of crown and sheet glass, household furniture of the usual description, and miscellaneous effects.—May be viewed the day before the Sale, when catalogues may be had on the premises of Messrs. BICKNELL, Solicitors, 79, Connaught-terrace, Edgeware-road; and at the offices of the Auctioneers, No. 1, Burwood-place, Hyde-park, or 44, Upper Baker-street.

NORTH-END, FULHAM.—TO BRICKMAKERS, BUILDERS, AND OTHERS.—Attractive Plot of Ground, abounding with brick-earth; and early possession.

MR. HERBERT PRICKETT has received instructions to SELL by AUCTION, at the MART, on THURSDAY, JANUARY 26, at TWELVE precisely, the undermentioned acceptable offer previously made by private contract, a valuable PLOT of GROUND (on which is a house known as Walnut-tree Cottage), comprising 2a. 1r. in extent, presenting situations peculiarly adapted for the erection of semi-detached or other residences, the access from various points being easy and convenient. The land, which abounds with brick-earth of a superior quality, has a frontage of 220 feet to North-end, by a depth of 400 feet, and is eligibly situate at North-end, about a quarter of a mile from Walham-green, and three only from the metropolis. It is copyhold of the Manor of Fulham, as is fine certain, which renders it nearly equal in value to freehold. The property may be viewed, and particulars, with plans annexed, may be had of Messrs. Pearce, Wedlake, and Cosway, Solicitors, 16, King's Bench-walk, Temple; at the Mart; and of Mr. HERBERT PRICKETT, 75, Chancery-lane, and 23, Paddington-green.

Capital Building Materials, by order of the Commissioners of Greenwich Hospital.

PULLEN and SON have the honour to announce that they are instructed by the Commissioners of Greenwich Hospital to SELL by AUCTION, on the PREMISES, on THURSDAY, JANUARY 26, at TWELVE, in 50 lots, all the capital MATERIALS, Fixtures, and Fittings up of the spacious block of buildings, known as the Great Hospital Infirmary, comprising about 200,000 capital stock bricks, slates and slating, 50 loads prime timber in roofs and floors, pairs of framed sashes, modern deal fittings, elegant cornice, cypress, and other mantlepieces of a superior description, 70 squares of excellent floor boards, stone staircases and buildings, York paving, lead flashing, Portland stone dressings and window dressings; a handsome stone portico, extending 50 feet by 20 feet high, with eight Doric columns, modern stoves, ranges, cisterns, water-closets, several tons of lead, &c.—May be viewed the day previous. Catalogues of P. HARDY, Esq. 21, Cavendish-square, of Messrs. Lee and Sykes, Surveyors of Works, Greenwich Hospital; and of PULLEN and SON, 5, Fore street, Cripplegate

MARK-LANE and TOWER-STREET.—Extensive sale of Building Materials

MESSRS. ELLIS and SON are directed by Messrs. T. and D. Henry, to SELL by AUCTION, on the PREMISES, on TUESDAY, FEBRUARY 7, and following day, at ELEVEN each day, in lots, for the purpose of carrying out the intended City improvements, the valuable BUILDING MATERIALS of 8 Six Houses, being Nos. 44, 45, 46, and 47, Mark-lane, and Nos. 1, 2, 3, and 4, Tower-street, comprising about 400 bricks, several tons of lead, plain and pan tiling, slates, stone coping, stone-front garlare, fire-stoners, joists, quarter-partitions, flooring-boards, sashes and frames, doors, pair of iron wrought marble and other chimney pieces, a modern shop front, with circular corner, two lantern sky-lights, lead flats, gutters, pipes, cisterns, iron columns, numerous fixtures and fittings of the houses and offices, &c.—To be viewed two days prior to the sale, when catalogues may be had on the Premises, and of Messrs. Ellis and Son, Auctioneers and Estate Agents, 36, Tenderden-street.

ST. JOHN'S, HORSELYDOWN.—BUILDING GROUND and HOUSES TO BE LET by TENDER the governors of St. Olave's Free Grammar School, Southwark, on sixty and near-building leases, and twenty one years repairing leases, respectively from Lady-day and Midsummer-day now next ensuing; that is to say, all that Building Ground and Premises, situate at the ing the tenement No. 61, on the south side of Fresehool-street, with the vacant ground adjoining, now forming part of Fresehool-street, together with the vacant ground on the west side of Cross-street, with frontages in Fair-street and Freeschool-street respectively, the lease of which for sixty-one years will commence from Lady-day next. Also all the two Messuages, comprising a shop and dwelling-houses, situate and being No. 5, on the south side of Freeschool-street, and No. 29, on the north side of Fair-street, and immediately adjoining west, on the premises known as the Rising Sun, the lease of which for twenty-one years will commence from Lady-day next. Also all those premises situate and being Nos. 65 and 66, on the south side of Freeschool-street, the lease of which for twenty-one years will commence from Midsummer-day next. Also all that Messuage and Premises, situate and being No. 41, Little Britain, the lease of which for twenty-one years will commence from Lady-day next. All which, with the exception of the premises in Little Britain, are situate in the parish of St. John, Horselydown, in the county of Surrey; together with the appurtenances thereunto respectively belonging. The particulars and conditions of the premises, and specification of the repairs to be performed, may be seen at the Office of Mr. HENRY STOCK, the Surveyor, No. 1, Duke-street, Southwark, between the hours of TEN and FOUR o'clock, any day (Sundays excepted); and Tenders (in writing only) are to be received at the Office of Mr. MUNSTER JONES, No. 130, Tooley-street, Southwark, by or before TEN o'clock, on TUESDAY, the 24th of JANUARY inst., immediately after which a Court of Governors will be held at the School, in Mazepond, for the purpose of taking the same into consideration, and where persons making such Tenders are requested punctually at TWELVE o'clock of the same day; but the governors do not bind themselves to accept the highest or any offer or offers.

January 6, 1854.

BUCKINGHAM. — TO CAPITALISTS, BUILDERS, and OTHERS. TO BE LET, upon leases for ninety years, and on advantageous terms, several eligible PLOTS of BUILDING GROUND, most desirably situated, near to the town of Buckingham, part whereof forms a frontage to a new road leading from the Aylesbury-road to the canal, and other parts well adapted for villa residences, upon a gentle rising near to the said road, with extensive views, and overlooking the town. The property offers peculiar advantages, being in the centre of Lord Southampton's and Mr. Drake's plants, and within an easy distance of London, which is reached in two hours; and from the demand for residences in the neighbourhood, a safe and highly remunerative investment may be obtained. For view (plans and further particulars apply to Messrs. SMITH and SMALL, Solicitors, Buckingham; PECIMUS BURTON, Esq. 6, Springgardens, Westminster; and THOMAS BEARDS, Earl Stowe, near Buckingham.

TO BUILDERS AND OTHERS.

TO BE LET, on BUILDING LEASE, in the rear of the Westminster-road, eligible SITES for the ERECTION of SMALL HOUSES. A plan of the ground may be seen, and further particulars obtained on application at the offices of Messrs. WILDSMITH and ASHDOWN, Architects, 62, Charing-cross.

FREEHOLD BUILDING LAND, contiguous to the Feltham Station on the Windsor and Richmond Railway.—Land Companies, Builders, &c. may Purchase on most advantageous terms, about SEVENTEEN ACRES of valuable FREEHOLD LAND, extending more than 600 feet on the line of road from the Feltham Station to Twickenham Common, having gravel subsoil, and a good; a short distance from Hounslow, Bedfont, &c., bounded by Harmondsworth and a branch of the Colne, and let upon lease at £3 per acre. The Estate is admirably adapted for small farms, as it is free from building lease, and the accommodation for the farmer is very large, the materials for which are on the spot. Apply to JOHN WILSON, Architect and Land-agent, Manor Bouchers, Feltham.

HIGHBURY NEW PARK.—FREEHOLD BUILDING GROUND TO BE LET, in this eligible locality, commanding extensive views. Money and Deeds advanced, if required. For particulars apply to Mr. C. HAMBRIDGE, Arch-terr, 74, Coleman-street, City

FREEHOLD LAND, HARROW, TO BE LET or SOLD, in small or large lots, and on liberal terms. A first-class railway ticket, free for seven years, granted for every house built on the land, and nominal ground-rents only to be required. Apply to Mr. WILLIAM THOMPSON, Architect, 6, Orchard-street, Westbourne-terrace, Hyde-park. Advances may be required.

FREEHOLD BUILDING LAND.—TO BE SOLD, a most eligible PIECE of LAND, for either villa or small houses, having a fine frontage to Barfleet-lane, close to the town of Bramley, Kent, and near Bramley Hill. Price £300. Apply to Messrs. BROWN and ROBERTS, 22, Throgmorton-street

ELIGIBLE BUILDING GROUND.—TO BE LET, near the Camden Hausa station, Camden-new-town, suitable for three and a half or four Villas, and 14 or 15 first-class row Houses of a description are much sought after in this neighbourhood. Roads and sewers are made. Building agreement may be accommodated.—Apply to J. and K. WRIGHT, 22, Bedford-row; or Mr. RICHARDSON, St. Paul's-lodge, St. Paul's-road

PUBLIC-HOUSE, PUTNEY COLLEGE ESTATE.—A valuable SITE for a Public-house, with a large PLOT of GROUND adjoining, TO BE LET, on Building lease, upon very advantageous terms. Also several PLOTS for Shops and third-rate Houses.—Apply at the Offices of G. MORGAN, Esq. 5, Chancery-lane.

FREEHOLD BUILDING GROUND TO BE LET, in the Green Lanes, near Woodgreen, Hornsey, at a moderate ground-rent. The whole of the surface drainage is being made. Roads already laid out to proper building lines. A few second-rate Building Lots to be sold at £2 per foot only. The Building Lots are part of the park-like pasture ground on which stands the mansion of Noel Park, Hornsey. Plans may be seen on the ground, and further particulars obtained on application to Mr. JOHN HOLLOWAY, Architect, 3, Bedford-row, Holborn.

RECTORY ESTATE, EALING.—Valuable FREEHOLD BUILDING GROUND TO BE LET or SOLD in plots adjoining the old church and the rectory-house, Ealing Green. The roads and drains are made. Liberal advances will be made as the works progress. For particulars, apply to GEORGE MORGAN, Esq. Architect, 5, Chancery-lane; or to Mr. FARQUHARSON, Uxbridge-road, Ealing.

BROCKLEY-HILL PARK ESTATE, FOREST-HILL. — TO BE LET, on Building Lease, or SOLD, several eligible lots of BUILDING LAND, commanding a most extensive prospect, rivalling that seen from the Crystal Palace. A site has been appropriated for a church on the summit of the hill, in the centre of a proposed ornamental garden of nearly 5 acres in extent. The roads, garden, and drains are being formed. Advances will be made to responsible parties. Apply to GEORGE MORGAN, Esq. Architect, 5, Chancery-lane.

SHOP FIXTURES. — TO BE SOLD, a quantity of useful FIXTURES of a Bookseller's Shop, recently closing. To be seen on the premises 118, Fall-mall.—Tenders to be made in writing to Mr. GEORGE MORGAN, 5, Chancery lane.

A COMMODIOUS CHAPEL, suitable for a small congregation, recently fitted up with every convenience, closets, a good supply of water, and rooms for the chapel-keeper, TO LET, in the neighborhood of Fitzroy-square. Inquire at 9, Oxford street.

BUILDING FRONTAGE TO LET, on eligible Freehold elevated ground, two and a half miles from the Regent's Park, on the Finchley New Road, suited for a crescent or detached villas.—For plans and particulars inquire of R. L. ROUMIEU, Esq. 10, Lancaster-place, Strand.

ISLINGTON, SHOREDITCH PARISH, DALSTON DISTRICT, and TURNHAM-GREEN.—FREEHOLD BUILDING GROUND TO LET; term, 16 instead of 99 years.—Apply to new Inn Mr. GREEN, Grove-road, Upper Holloway; HARRIS, opposite Ice Arms, Brownlow-road, Queen's-road, adjoining Bellingham's Distillery, Dalston; PHILLIPS' Country-house, near Acton-lane, Harlesden-road, Turnham green, or Mr. D. BIGGINS, 15, Gresham-street. N.B. Populated localities; roads and sewers made.

TO STONEMASONS, &c.

TO BE DISPOSED OF, the LEASE and GOODWILL of an OLD-ESTABLISHED BUSINESS, situate in a leading thoroughfare. The premises are roomy and commanding, and, with a trifling stock, tools, and fixtures, will be sold a bargain. The most satisfactory reasons will be given for its being sold. Further particulars may be obtained by applying to THOS. POWELL, 134 Tooley-street, Southwark

TO BE DISPOSED OF, solely on account of the owner going abroad, the LEASE, near fourteen years unexpired, of a convenient CARPENTER'S SHOP and PREMISES, with Dwelling-house attached, and large gateway entrance (situate No. 2, Nos. 1 and 2 Nos. 2, St. Leonard's-street, Middlesex. Application to be made personally on the Premises. Terms very moderate.

TO CARPENTERS AND BUILDERS

TO BE DISPOSED OF, the GOODWILL of a PREMISES and WORKSHOPS, with Good-will of a Business in the trade of sixty years' standing; also Stock-in-Trade. The workshops are capable of holding [illegible] benches, situated in the neighborhood of [illegible] in the centre of a good jobbing connection.—Apply at the Office of "The Builder."

TO BRICKMAKERS AND BUILDERS

TO BE DISPOSED OF, by Private Contract, a PLOT of LAND, containing a great depth of excellent brick-earth, contiguous to the Windsor Railway, and South-Western Railway. The demand for bricks in this improving district has been very great, with a prospect of being so for some years to come. All other particulars, apply to Mr. ROBERT DANIEL, Stone Merchant, Victoria Wharf, Pimlico.

BURIAL GROUND WANTED.—The Burial Board of the parish of Paddington, in the county of Middlesex are prepared to consider PROPOSALS for the sale to them, in fee, of from acres and upwards of land, situate within the north, north-west, or west of the metropolis, for the use of a new burial-ground. Particulars to be forwarded to the Office of the Board, at the Vestry Hall, Harrow-road. By order of the Board, FREDERICK AVELING, Clerk.

NINE UNFINISHED HOUSES, held for 200 years, at 3l. 3s. each, TO BE SOLD for 100l; or they will be Let at 8l. each.—Apply to Mr. GREEN, No. 2, Mitford-road, Grove road, Upper Holloway, who will show the property; or Mr. HUGHES, 13, Gresham-street.

FOREST-HILL.—TO BE SOLD, in CARCASS, with main walls, roofs, floors, and principal frames fixed, a LEASEHOLD MANSION, well and substantially built of red brick, with stone dressings, situate near the church, and standing on an embankment commanding extensive Sydenham and other views, at the south of the Forest-hill Railway Station, and commanding views on all sides of the surrounding country, including Crystal Palace, Sydenham Hill, Dulwich Picture Gallery, and the Surrey Hills. The mansion comprises, on basement: kitchen, 19 feet 6 inches by 14 feet 4 inches; servants' hall, 18 feet 10 inches by 14 feet 4 inches; butler's room and closet, store-closet, beer and wine cellars, pantry, scullery, two coal-cellars, capable of holding together sixteen tons of coal; area-closet, with dustbin under the footway; and a good fall. Ground-floor: large entrance hall, library, with circular arch, drawing-room, each 20 feet 3 inches by 14 feet 4 inches, and 12 feet 6 inches high; ante-room, 13 feet square, and 12 feet 6 inches high, with folding-doors to drawing-room; water-closet. First floor: three rooms, each 20 feet 3 inches by 14 feet 4 inches, and 10 feet 8 inches high, with two dressing-rooms and a closet, 12 feet square. Second floor: five bed-rooms and one dressing-room and water-closet; each 12 feet 6 inches high. Third floor: four servants' bedrooms, each 6 feet 9 inches high. Smoking-room on tower.—The land is among the most [illegible] in the district, with [illegible] feet respectively, and a frontage on the west of 28 feet, and will be sold for an unexpired term of seventy-eight years from the 25th of March, 1853, subject to a low annual rent of 1l per annum. The [illegible] granted to the purchaser direct from the freeholder, [illegible] Lane, Forest-hill, immediately to Mr. WM. [illegible], Sydenham-park, Forest-hill Station; or to Mr. C. PERCEVAL TITT, 1, Angel-court, Throgmorton-street, London.

ADVERTISEMENTS.

MASONS' PROVIDENT INSTITUTION. Established 1845, for granting Pensions and the Erection of an Asylum for Aged and Decayed Masons, their Widows and Orphans.

The EIGHTH ANNUAL GENERAL MEETING of the above Institution will be held on TUESDAY, JANUARY 31st, 1854, at HAWKSTON HALL, Waterloo road, for the purpose of receiving the Report of the Managing Committee and Auditors, and other general business of the Institution.

The Committee respectfully beg to state that the General Meetings of the Institution are not confined entirely to its subscribers, and the Committee feeling desirous that the Trade at large should avail themselves of the inestimable benefits to be derived from so excellent an institution earnestly invite their attendance, and judge for themselves, as to the expediency of co-operating to carry out its benevolent objects.

The Chair will be taken at EIGHT o'clock precisely.

Reserved seats will be arranged for those ladies who might honour the meeting with their presence

By order, WM. DIX, Secretary,
14, William street, Hampstead-road.

COMPETITIONS.

COOKING APPARATUS. — FULHAM UNION. — WANTED, for the Workhouse of the above Union, suitable APPARATUS adapted for cooking for 550 persons, either by new apparatus, or alteration of the present, if practicable. It is essential that parties desirous of supplying the same, or altering the present, should view the kitchen department of the Union prior to furnishing estimates for such purpose. The estimates and plans must be forwarded to me on or before TUESDAY, the 31st instant.—By order of the Board,

W. D. SALTER, Clerk.

Clerk's Office, Fulham Union, Jan. 12, 1854.

N.B. Simplicity of design and moderation of expense are indispensable.

CONTRACTS.

PONTYPOOL TOWN-HALL. — Builders desirous of TENDERING for the ERECTION of the above BUILDING may inspect the plans and specifications, and obtain bills of quantities, at the Office of Mr. E. B. EDWARDS, Pontypool, from 24th JANUARY instant to the 11th of FEBRUARY next, and at the Office of the Architects, Messrs. BIDLAKE and LOVATT, at Wolverhampton, from the 13th to the 18th of FEBRUARY next, between the hours of TEN a.m. and FOUR p.m. The Tenders to be sent sealed and endorsed "Tenders for Pontypool Town-hall," to E. B. EDWARDS, Esq. Solicitor, Pontypool, on or before the 22nd day of FEBRUARY next.

Pontypool, January 2, 1854.

TO BUILDERS.

PARTIES willing to CONTRACT for the several works to be performed on the ERECTION of a CONGREGATIONAL CHAPEL, in Charlotte street, Queen's square, Bath, may inspect the drawings and specification at the Offices of Messrs. GOODRIDGE, Architects, 7, Henrietta st eet, Bath, on and after TUESDAY, the 24th instant, between the hours of TEN a.m. and FOUR p.m. The Tenders must be delivered sealed, on or before the 28th day of FEBRUARY, directed to the Building Committee. The lowest Tender will not necessarily be accepted.—Bath., January 19, 1854.

TO ROAD-MAKERS, CONTRACTORS, AND OTHERS.

PERSONS desirous of CONTRACTING for making ROADS and laying DRAIN-PIPES on an Estate abutting on the Lea-bridge-road, in the parish of Leyton, Essex, may see the plan and specification, and obtain all particulars at the Office of Mr. LILLY, Land Surveyor, Walthamstow, Essex, by whom Tenders will be received on or before the 30th INSTANT. The lowest Tender not necessarily accepted.—January 16th, 1854.

CONTRACTS.

ORDNANCE CONTRACTS. — Notice is hereby given, that the Honourable the Board of Ordnance will receive TENDERS, on or before THURSDAY, FEBRUARY 2, 1854, for the performance of such WORK as may be required by Items of the undermentioned Trades, at YORK, HULL, and LEEDS, from the 1st of APRIL, 1854, to the 31st of MARCH, 1855, viz.:—

Bricklayers'	Work.
Masons' and Paviors'	Do.
Carpenters'	Do.
Slaters'	Do.
Plasterers'	Do.
Plumbers'	Do.
Smiths'	Do.
Painters', Glaziers', and Paperhangers'	Do.

N.B. Parties are particularly required to observe, that it is desirable their Tenders should include every trade in the schedules; and that the per-centage is to be separately expressed for each trade.

Printed schedules for the different trades and form of Tender can be obtained on application to Mr. GLEGG, Clerk of Works, at the Royal Engineer's Office, in Parliament-street, York; the Foreman of the Works, Royal Engineer's Office, Barrack's Lock-yard of the Barrack Master, Citadel, Hull; any day (Sundays excepted) between TEN and FOUR o'clock, until WEDNESDAY, the 1st FEBRUARY, 1854.

Royal Engineer's Office, York, 13th January, 1854.

TO CARPENTERS AND BUILDERS.

TENDERS will be received until WEDNESDAY, the 1st of FEBRUARY, for sundry extensive WORKS required to be done on the altered and additional premises to a Tavern situate between New-cross and Peckham. The specification and drawings may be viewed, on application to Mr. R. J. WOODCOCK, Architect and Surveyor, 6, Chatham-chambers, Gracechurch-street, City. The proprietor does not bind himself to accept the lowest or any other Tender.

BERWICK-UPON-TWEED. —LOCAL BOARD OF HEALTH.—DRAINAGE WORKS.—To Contractors, Pipe-layers, and Others. The Local Board hereby give notice, that they are prepared to receive TENDERS from parties who may be willing to undertake and fully carry into effect CONTRACT, No. 2. For EXCAVATING and LAYING SEWER and MAIN PIPES, and for the CONSTRUCTION of BRICK SEWERS, GULLIES, MANHOLES, and OTHER WORKS.

The drawings may be examined on and after the 16th instant, and copies of the specifications, schedules, bills of quantities, and form of Tender, may be obtained, on payment of 5s. for each copy, together with any further information, at the Office of the Local Board, Berwick-upon-Tweed; or at the Offices of ROBERT RAWLINSON, C.E. No. 14, Parliament-street, Westminster. Tenders to be delivered at the Office of the Local Board, Berwick-upon-Tweed before TWELVE o'clock on the 1st day of FEBRUARY next, endorsed, "Tender for Contract, No. 2." N.B. The Local Board do not bind themselves to accept the lowest or any Tender

JAMES C. WEDDELL, Clerk to the Local Board.

Berwick-upon-Tweed, 12th January, 1854.

STOCKPORT UNION.—To CONTRACTORS.—The Board of Guardians of the Stockport Union are required to receive TENDERS from persons desirous to CONTRACT for the making of a MAIN SEWER from the side gates of the Union Workhouse north, across the vacant land, to Oliver-street and Park-street, and the supply of the present sewer from the end of Oliver-street, along Wellington-road, to the corner of the road leading up to the Stockport Railway Station, being a distance in the whole of about 350 yards. A plan and section and specification of the work to be done may be seen on application at the Office of Mr. SAMUEL HUNT, Surveyor, Heaton Norris, Stockport, and every other requisite information obtained. Sealed Tenders, endorsed "Tender for making Main Sewer," to be sent to me on or before SATURDAY, the 21st JANUARY inst. The contractor will be required to enter into a bond for the due performance of his contract. It is intended that the contract shall be let on MONDAY, the 23rd inst. but the guardians do not bind themselves to accept any Tender then offered.

HENRY COPPOCK, Clerk of the Union.

Warren street, Stockport, January 3, 1854.

TO ROAD CONTRACTORS, &c.

PERSONS willing to CONTRACT for the CONSTRUCTION of the ROADS and FOOTPATHS on an ESTATE at OLD FORD, may see the plans and specification on, and after MONDAY, the 23rd instant, at Mr. JAMES BROWN'S, The Marquis Cornwallis (adjoining the Estate), 241, Old Ford road, near Victoria-park. The Contractor will be required to enter into a bond for the due performance of his Contract. Tenders to be sent to Mr. JAMES BROWN, as above, on or before TWELVE at noon, on MONDAY, the 30th instant. The owner does not pledge himself to accept the lowest, or any Tender.

Sealed Tenders to be delivered at the Office of the Vestry Clerk, Kennington-green, on or before the 12th of FEBRUARY, addressed to the "Lambeth Burial Board." The Board do not bind themselves to accept the lowest Tender.—The Board do not bind themselves to accept the lowest Tender.

TO BUILDERS AND OTHERS

PERSONS desirous of CONTRACTING for the ERECTION of a LARGE ROOM, to be carried up over another building, now agent for Mr. Arnold, Livery Stables, one door from the Swan, near the Crystal Palace, Wear-house, Upper Norwood.

TO BRICKLAYERS, PLASTERERS, CARPENTERS AND JOINERS, MASONS, PLUMBERS, GLAZIERS, SLATERS, AND PAINTERS.

THE Trustees for the intended Primitive Methodist Chapel, at Deptford, are desirous to receive TENDERS for the ERECTION of the same, from the plans and specification now in the Vestry of the Chapel, in Poke-street, on MONDAY the 16th, to SATURDAY the 28th inst. Tenders are to be sent to the Rev. RICHARD MANN, Young-street, Deptford, not later than before WEDNESDAY, FEBRUARY 1.—Trustees do not bind themselves to accept the lowest tender.

HAYLES ESTATE, St. George's-road, Southwark.—The printed particulars and conditions on which the Trustees are willing to receive TENDERS for BUILDING 100 HOUSES on Building and repairing Leases, in Thirteen Lots, are now ready for delivery, and may be had upon apply ng at the Offices of the Surveyor, WM. ROGERS, Land Valuer, &c. 3, Prattstreet, Lambeth, and No. 15a, Cannon-row, Westminster; or at the Estate Office, the Hayles Arms, Southwark, or H. C. BARTON, Solicitor, 4, Wellington place, Lambeth. No Tender can be received after the 1st February.

MR. WEALE, 59, High Holborn, has for DISPOSAL a PARTNERSHIP of a professional COUNTRY PRACTICE, where the engagements are principally of architecture and civil engineering.

BONUS TO SHAREHOLDERS.—HOME COUNTIES and METROPOLITAN FREEHOLD LAND SOCIETY, a bonus of 8s. 8d. per cent will be added to the past year's subscriptions, and in future Interest at the rate of 5s. 4d. per cent. per annum will be given on all subscriptions, with such additional bonus at the end of the year as the profits of the Society may allow. Two Estates have been purchased by this Society during the past year. That at Wood Green, North Middlesex, has been very satisfactorily and profitably, both to the allottees and the Society, laid out. The other Estate in the neighbourhood of Peckham promises to be a more successful purchase, as the nearness of the railway is a great demand for plots upon it. It is situated in Wim bledon Park, and the choice of gentlemen's seats, and is adapted for first-class villas. There are two special advantages in this Society, viz. members are not required to pay down any part of the price of the land prior to choosing plots. The full amount of the shares drawn in the ballot can be supplied with land, so that the Members may have the advantage of selling their drawn shares at a premium. A share is full 3s. 6d. with nomination. By order.

HENRY KNIGHT.

CONSOLIDATED LAND, HOUSE, and INVESTMENT SOCIETY.—A PUBLIC MEETING of this Society will be held at BLAGROVE'S CONCERT ROOMS, No. 1, Tim-street, Cavendish-square, on WEDNESDAY, JANUARY 25, 1854, at SEVEN p.m. to explain the nature and objects of the Society. J. A. HIGHLEY, Esq. in the chair. Shares to suit purchasers and subscription received daily, from TEN to SIX; on MONDAYS, TEN to EIGHT, at the chief office, 10, Brunswick-square, next to Mr. Bell's, surgeon and physician, Charles-street, Middlesex Hospital. By order of the Board.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver, Railway Stoves and Lamps of every description

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

IRON ROOF WORKS.

By Royal Letters Patent.

JOHN WALKER, SON OF THE PATENTEE, GENERAL CONTRACTOR,

Having extended his means for executing Orders, and Contracts for

CORRUGATED IRON BUILDINGS AND ROOFS,

Galvanized or otherwise, will be happy to wait, by appointment, on ARCHITECTS, ENGINEERS, &c.

Merchants are invited to ascertain his Prices for Shipping Orders. The Trade supplied with Corrugated Iron, Plain or Galvanized, or Iron Corrugated. References to Firms of the first class

FIRE-PROOF FLOORING.

The earnest attention of ARCHITECTS, ENGINEERS, &c. &c. is called to a particularly economical mode of erecting Fire-proof Floors capable of sustaining great weight, without any thrust against the walls. Any information, with Estimates, Drawings, &c. &c. may be obtained at the Offices.

JOHN WALKER, Manufacturer of IRON and WOOD ROOFS, Stores, &c. calls the attention of merchants, shippers, and others to the following testimonial, which he has obtained by consent of the work People:—"16, New Broad-street, July 11, 1851. John Walker, Esq.—Dear Sir, I have much pleasure in saying I consider the roof erected from a letter received from my friends, Messrs. McKie and Wood, dated from Natal April 1, 1851. We are just receiving the back of the shore. You can tell Mr. Walker that it is admired by every one, and we are only saying what he deserves that he has done ourselves justice and given us complete satisfaction. I would give something to take you over the premises, I am sure you would approve of all that has been done. I remain, dear Sir, yours truly, (signed) Alexander Morrison." The original may be seen at John Walker's Offices, and cards may be obtained to view the works, where some sections of roofs are erected.

Offices: Corner of Arthur-street West, London-bridge; and 3, India-buildings, Liverpool.

JAMES LAURIE and CO. Warehouse,

Cousin-lane, Upper Thames-street, supply Railway Chairs and Sleepers, Rolled Joists and Beams, Angle and Tee, Bars, Columns, Girders, Socket Pipes, Rain-water Pipes, Gutters, Raining and Palisading Bars, and all kinds of Iron Castings. Also, Henderson's Patent Derrick Cranes.

212 SAFES.—MILNER'S HOLDFASTS, fire-resisting by means of the only perfect non-conductor, vaporizing, the strongest, best, and cheapest, because the only effectual safes and against fire, robbery, or violence, for bullion, cash, or valuable. Lord CHIEF Justice Campbell, on naming to the late trials for infringement of MILNER'S SAFES, was pleased to observe:—"He must say he had been astonished to find such strong evidences of their usefulness, and he had no doubt on his mind that they were any human means of so effectually preserving papers from the action of fire. It was a comfort for one to know that there was such an invention, by which valuable documents might be rendered secure, notwithstanding the calamity of fire." As to which it is useful, it appears to be created on all points, as it is almost MOST PERFECT AND AGAINST FIRE: the water remains permanently in the artificial material vessels, and THE HEAT CANNOT PENETRATE THE CENTRE for the heat reduces the water or moisture, and heat is turned into steam, and the steam moistens the substance that is to be preserved, and so acts as a PERFECT SAFEGUARD AGAINST FIRE.—Milners' Patent Safe Works, Liverpool. London Depot, 47a, MOORGATE STREET, City, London.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE OF LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the improved Art of Bell Casting, have recently invented and patented a new process for the same, by which they consider to manufacture Bells of any size, and of the right of superior tone, truer in form, and at less cost than has hitherto been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, supply or pegals.

TUNED BY MACHINERY

Stocked and wheeled ready for hanging. Old Bells recast or taken in exchange.

RECENT TESTIMONIALS
of the practical worth and efficient security of
CHUBB'S LOCKS AND STRONG-ROOM DOORS

CHUBB and SON beg to lay before the public the two following Letters, which they have lately received, as affording further proof of the security of their Manufactures:—

Ineffectual Attempt upon the Strong Room of the London and North Western Railway, Liverpool

"London and North-Western Railway Company,
Liverpool, 17th May, 1853.

"Gentlemen,—I have much pleasure in bearing testimony to the efficiency of the Iron Door and Locks of your make, which secure the strong Room at this office, and which completely baffled the efforts of one or more burglers to get at the money-chest on the night of Thursday last, although it is evident that considerable force was used to break open the door.

"I am, Gentlemen, your obedient servant,
"Messrs Chubb and Son." "GEO. PALMER.

From Mr. Otway, Superintendent of Police, C Division.

"8, Great Vine-street, May 3, 1853.

"Gentlemen,—I have the pleasure to inform you, that having one of your locks on the street door of my house prevented my being robbed last night. The thief tried to open it, but not succeeding, has so damaged it that I have sent it to you for inspection, and shall feel obliged if you will have it repaired.

"I am, gentlemen, your obedient servant,
C. OTWAY, Superintendent C Division of Police.

"Messrs. Chubb and Son."

CHUBB'S LOCKS, with all the recent Improvements; Cash, Deed, and Paper Boxes of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock. Complete Illustrated Lists, with Prices and Sizes, will be sent on application

CHUBB and SON, 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley-fields, Wolverhampton

Office, No. 7, Sise-lane, London.

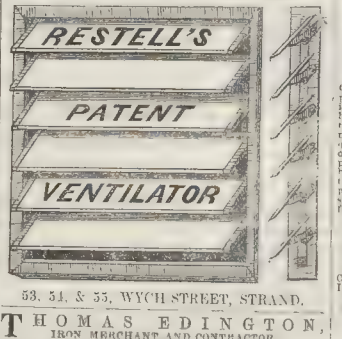
TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY,
PLUMBERS,
THE BEAR GARDEN LEAD WORKS, SOUTHWARK.
Invite the attention of Manufacturing Chemists to their Patent method of
UNITING LEAD TO LEAD WITHOUT SOLDER.
Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

BUILDERS, Contractors, Carpenters, and others are invited to inspect the stock of NAILS, TOOLS, BRASS, AND GENERAL IRONMONGERY, at PEELE and STEDALL'S,
Nos. 5 and 6, BROAD STREET, BLOOMSBURY.
The prices will be found the lowest, and the stock one of the largest in the trade. A price list sent on application.

WIRE STRAND FENCING,
as furnished with all its fittings, by R. S. NEWALL and CO. having elicited the unanimous approval of practical men, is confidently recommended as the best fencing for park and farm inclosures, or subdivisions, for temporary agricultural inclosures instead of any kind of hurdles, for road-side and all other fencing.



The PATENT WIRE STRAND FENCE possesses an economy, security, and durability, not to be found in combination in any other fence hitherto introduced. This fence, as fitted by R. S. Newall and Co. offers the model of the fences of this material in the Slopes and Home-park, at Windsor, has the inherent property of remaining equally tight and rigid, under any variations of temperature.

N.B. Estimates given at so much per running yard, for fencing, fixed complete. Specimens, sketches, or any other particulars, will be forwarded on application to

OFFICES—Gate-head-on-Tyne,

Sheet, Hoop, Rod and Bolt Iron. Locksmiths' and Bell-hangers.

FIRE-PROOF CONSTRUCTION.—
FOX and BARRETT'S PATENT
This improved system of fire-proof construction, has been most extensively adopted, and its property is now been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages

The floors and roofs are formed by a combination of joists of wrought iron filled from with concrete, so constructed that every floor becomes in effect a beam of iron and stone with hollow iron tubes, the structure possessing great strength and rigidity and forming a fire-proof foundation adapted to receive a fining surface, either of the ordinary flooring boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the Kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one

Further information may be obtained of the Proprietor of the patent.—Mr. BARRETT, 72, York-street, Lambeth.

THOS. B. LAWRENCE and CO. Zinc Dealers and Manufacturers, 1, York place, Lambeth, having removed to their new premises, are selling SHEET ZINC at 3l. per cwt., Perforated Zinc, at 4l. per cwt. Rain-pipes 4in. 4d. per foot. Gutters, 4 in. 4½ per foot, and in proportion as before. Cisterns, &c. equally cheap. A price media was awarded to them for their manufactures.

IRON FOUNDRY, 80, Goswell-street (late of Brick-lane, St. Luke's). J. J. JONES having made great additions to the STOCK of PATTERNS begs to inform the Trade that he can now supply them with Plain and Ornamental Iron Columns, Girders, Railings, Gates, Iron Coping, Balconies, Window Guards, Verandahs, Ornamental Staircase Panels, Iron Staircases, Tomb Enclosures, Trellis Panelling, Lamp and other Brackets, Cantilevers, Newel Bars, Water Closet Work, Area Gratings, Fly and other Wheels, Wheel Plates, &c.

BAKER'S OVEN WORK, Force Backs and Troughs, Rain Water Pipes and Gutters, Sash Weights, Furnace Bars, Stoves, Ranges, &c. always in stock.

FOUNDRY AND IRON WORKS,

Patterns of Girders, Columns, Balconies, Railing, Ornamental Carriage and Park Gates, Lamp and Street Posts, Tanks, Pipes, Wheels, Pinions, Ladles, and Steam-engines; Range and Hot-plate Metal. An improved Soot Door, adapted for dencies, &c.

A large stock of Rain-water Pipes, Plain and O G Gutters, Air-bricks, Sash Weights, Air-tight Sewer Grates, Stable Fittings, Hurdles, &c.

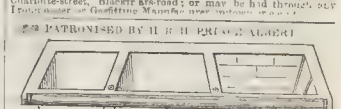
Plain and Ornamental Vases 30 per cent cheaper than Terra-cotta.

Estimates given for Iron Buildings, Wrought-iron Roofing, Greenhouses, Stanneries, Wrought-iron Girders, Fireproof Doors, Safe safes and Strong Room Doors, and Hinges suited for every description of ironwork to specification, and the whole work executed with every attention to quality and despatch.

GLOVERS' IRONWORKS,
168, DRURY-LANE, and CHARLES-STREET.

TO TOOL DEALERS, IRONMONGERS, &c.
WILLIAM BAKER, BRADAWL MANUFACTURER—Manufactory, No. 1, Allen street, Goswell-street, London. Established upwards of 30 years.

RICKARDS'S PATENT TONGS,
for screwing iron piping for gas or other purposes.



These Patent Tongs possess many advantages over the old ones. One pair will take four sizes, or any intermediate size, and hold perfectly tight, without any fear of being cut by the handle, which is not the case with the old ton s; as when the proper part becomes worn, and the pipe runs smaller than the inside size for the tongs, the workman requires to use packing. This is not necessary with Rickards's Tongs, which can set to the exact required, by moving the nut at the end of the top and moveable part of the tongs which lifts up to enable the workman to take on the pipe as you would put on the old ones; the nut then screwed up to the pipe, and the handles pressed down, which causes the nut to grip the pipe in the same manner as in using a common nut-wrench. The price is as follows:—

	Inch.	Inch.		Inch.	£ s. d.
No. 1, to take	½,	¾,	1 Barrel, and	¾ Socket	0 7 0
No. 2,	¾,	1,	1¼	1½	0 9 6
No. 3,	1,	1¼,	1½	2	0 15 0
No. 4,	1½,	2,	2½	3	1 10 0

For further particulars, apply to C. RICKARDS, 5, Great Charlotte-street, Blackfriars-road; or may be had through any Ironmonger or Gasfitting Manufacturer throughout England.

PATRONISED BY H.R.H. PRINCE ALBERT

S. HOOD and CO.'S REGISTERED
CABLE-FITTINGS, with FRONT REVOLVING
ROLLER (Lever Cord-tie).
Sold by all Ironmongers.

TO BUILDERS, CARPENTERS, &c.
THE following are the present prices of the NEW CHUBB LOCK, at YOUNG and CO.'S, 26, Duke-street, Grosvenor-square, all other articles in the same proportion for cash

Cut Clasp, 6d.—6½d.; 8d.—8½d.; 10d.—11d. 6d.; 20d.—2s. 3d. per 1,000.

Tumbler Locks, No. 3, 5s. 6d.; No. 4, 7s.; No. 5, 8s. per gross.
4 in Mortise Locks, Brass Furniture, 8s. 6d. each.
Ditto, ditto, ditto, China Furniture, 8s. 6d. each.
Bottom Springs for Sewer Doors, 14s. 21s. each.
Cast Butts, Iron Bound, 2½ in. 4½ in. 2s. per dozen.

HEATING by HOT WATER.—J. JONES, Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK, also fire-bars, furnace bars, ornamental and plain supply cisterns, cast sinks and frames, furnace grates, soot doors for the same, hot water pumps, elbows, bows, syphons, flat-face valves, screw cocks, brass and copper elbows, bends, nuts, unions, pipes, branchings, and pieces of any size, on application to J. JONES, iron merchant, Wharf, No. 9, Bankside, London, over the Southwark iron bridge.

TO ARCHITECTS, FIRMS, MERCHANTS, AND BRICK MANUFACTURERS.
THE best and quickest drying of the wood, bricks, and houses is obtained by the BOILEN'S PATENT CALORIFERE, recently patented in twenty-four hours steaming of wet, without altering the finest forms or injuring the quality of the most precious materials. The Calorifere works up to dear only, without any machinery or power. Small room is required; no repair necessary for many years. A great deal of tack, size, &c., and other shrinkages are thereby considerably reduced by the use of the above valuable agent. It is in operation at West-ham Workhouse, Essex, Hunslet; at Mr. Mackenzie's, Architect, of Westminster; Wesleyan Chapel, Sion, and Raymond, Dockhead, and is very much used in Hertfordshire, Lincolnshire, London and country. Apply per post to F. BOILEN'S, Engineer for Private Plant to the Parliament, 25 King William-street, City.

NEW HOUSES OF PARLIAMENT.—
DENNIS'S GAS STOVES, RANGES, and BATHS, just completed for the Kitchens in the above building. A great variety in stock on the same principle. Gas Hot-plates from 2l. by which a warm bath may be obtained for three-halfpence. Gas Cooking and Heating Stoves for all classes, from 1l. Dennis's celebrated Dry Gas-Meters, 40,000 in use. Testimonials at the office, 18, Regent-street. Manufactories removed from Hampstead-road and St. Martin's-lane to more extensive premises, New-road, near Albany-street.

WARMING CHURCHES, &c. by HOT WATER JOHN WEEKS and CO. King's-road, Chelsea, Hot Water Apparatus Manufacturers, whilst respectfully calling the attention of architects, builders, &c. to their superior apparatus for warming churches manufactured by them, and other buildings, by the circulation of hot water in pipes, beg to call particular attention to the scientific statement in the "Builder" of June 25th, 1853, which fully bears out the able address of the Rev. H. J. Boyle's, delivered at a meeting of the Architectural Society, wherein Mr. Boyle shows that heating by hot water is really the only effective system applicable to warming churches and other large buildings. It is free from all objections, is economical in its working, and produces perfect ventilation with a uniform comfortable warmth throughout the building. Messrs. JOHN WEEKS and CO. will guarantee their Hot Water Apparatus for thirty years at 5 per cent.

J. TYLOR AND SON'S BATH APPARATUS.

To heat a Supply of Water for a Bath from an open Fire in a Hall, or any Apartment, either below or on the same level as the Bath.

A. Copper Saddle Boiler.

B.B. Stove Front, which covers the face of Boiler, and entirely conceals it from view.

In order to set the Boiler to the greatest advantage, a 4-inch Flue, if practicable, should be carried over it and stopped off along the middle of both sides (see fig. 2), to within about 6 inches of the front. The Fire will pass from the back, along the sides, over the top, and up the chimney at the back (see fig. 2). Nearly the whole of the boiler is thus exposed to the action of the fire.

For the convenience of cleaning the Flues, the Stove Front being screwed up can be readily taken down.

C. Cistern for Hot Water, having a small Feed Cistern *E*, supplied from the Cold Cistern *D*.

This Cistern can be made of Tinned Iron or any suitable material and fixed in a Water-closet as shown in engraving, or in any convenient position.

The overflow can be carried into waste of Bath, or any convenient outlet.

F. Copper or Tinned Iron Bath, having three Pipes for Hot, Cold, and Waste Water, as indicated by the engraved levers on the cocks. The overflow is carried into Waste Pipe.

G. Inch Pipe from top Pipe of Boiler, and standing up 6 inches above bottom of Cistern. A branch from this Pipe supplies the Bath with Hot water.

H. Inch Pipe from side of Boiler to bottom of Hot Cistern.

These Pipes *G* and *H* should be cased in and well packed with sawdust, to prevent the heat being given off to the atmosphere.

I. Inch Pipe to supply Cold Water to Bath.

K. Inch Pipe to carry Waste Water from Bath into Soil Pipe, or other convenient outlet, and must be well trapped before entering a drain.

For particulars of Shower Baths, and estimates for fixing ditto, see Catalogue.

Illustrated Catalogue showing every method of fixing Warm Baths, to be had on application.

J. TYLOR and SONS, Warwick-lane, Newgate-street, London.

THE HIGHEST STYLE OF ARTISTIC LITHOGRAPHY WILL BE FOUND IN THE WORKS PRODUCED BY

DAY & SON,

LITHOGRAPHERS TO THE QUEEN.

Landscapes, Architecture, Shipping, and Figure Subjects—Portraits direct from Life or Nature, or from Paintings, Drawings, or Daguerreotype—Medical and Scientific Subjects, executed in a superior style peculiar to this establishment. Calotypes copied.

The large Staff of Draughtsmen required by Messrs. DAY and SON to execute the

MAPS, PLANS AND SECTIONS, DIAGRAMS, &c. &c.

FOR HER MAJESTY'S STATIONERY OFFICE,

Offers to solicitors, engineers and surveyors, stationers and printers, throughout the country, great advantages for the rapid and economic execution of their Lithography. If required, a plan received by the morning post may be lithographed and despatched by the return post.

To meet the growing demand upon

LITHOGRAPHY FOR COMMERCIAL PURPOSES,

Messrs. DAY and SON have just erected the largest premises for the purpose in the world. In soliciting orders from Manufacturers and others for

PATTERN-BOOKS, SHOW-CARDS, LABELS, &c.

And every other description of Lithography and Colour Printing, Messrs. DAY and SON promise a style of work of unequalled excellence, with economy and rapidity of execution. The smallest consumers of the productions of Lithography in any part of the kingdom should apply to Messrs. DAY and SON for estimates, and it will be found, owing to the extent of this Establishment, that its manifest advantages, viz. superiority of work, great speed, and moderate charges, can be secured with satisfaction and saving to the customer.

PRINTING IN COLOURS,

As perfected and practised by Messrs. DAY and SON, has assumed a position hitherto unattained for artistic excellence, rapidity of execution, and economy of production. The first and only perfect realization of a painting in colours, "The Blue Lights" (after Turner), executed at the establishment, secured for itself the designation of a Painting Print. Other examples of great merit, more particularly illustrating rapidity and economy of production, combined with artistic excellence, will be found in the three important works by

MATTHEW DIGBY WYATT, ESQ.

Namely, "THE GEOMETRICAL MOSAICS OF THE MIDDLE AGES," "METAL-WORK AND ITS ARTISTIC DESIGN," and "THE INDUSTRIAL ARTS OF THE NINETEENTH CENTURY."

These works, although elaborately printed in colours and gold, have been sold at the price of uncoloured works. The last-named consisting of 160 plates, issued in Fortnightly Parts of four plates, proves the possibility of adapting Chromolithography to Periodical Works—to book plates requiring long numbers cheaply and quickly—and to geological or other coloured maps.

Messrs. DAY and SON are prepared to estimate and undertake Works of any extent, and to meet every requirement as to quantity and speed, or necessity as to price.

STEEL AND COPPER-PLATE PRINTING OF EVERY DESCRIPTION.

LADIES, Amateurs of Drawing, will find the reproduction by themselves of their own Sketches, by means of Lithography, a most delightful occupation for leisure time. Materials and instruction can be had of

MESSRS. DAY AND SON,
LITHOGRAPHERS TO THE QUEEN,
17, Gate-street, Lincoln's-Inn-fields, London.

DECORATIVE ARTISTIC PAINTING.—Mr F. SANG, from the Royal Academy at Munich, whose works may be seen in the leading public and private buildings in the metropolis and the country, draws the attention of his patrons to his new and improved STYLES of ARTISTIC EMBELLISHMENTS of INTERIORS, in the modern and ancient styles.—Address, Mr. SANG, 58, Pall-mall, London.

DECORATIVE PAINTING. — Messrs. BELSEN and KUCKUCK, Decorators to his Majesty the King of Hanover, most respectfully inform architects and builders, that they have considerably increased their establishment with a number of artists from Germany, and are now enabled to undertake, on the shortest notice, the interior embellishments of private and public buildings, combined with moderate charges.—BELSEN and KUCKUCK, 201, Piccadilly [illegible] rate prices.—Apply to

DRAWINGS for EXHIBITION.—From five to eight have been annually since 1826 in the Royal Academy that were coloured by T. J. RAWLINS, who has REMOVED from Charlotte-street to 33 University-street, Tottenham-court-road.

GEOLOGY.—KING'S COLLEGE, LONDON. Professor TENNANT, F.G.S. will give a Course of Twenty Lectures on GEOLOGY, having especial reference to the important application of the science to ENGINEERING, ARCHITECTURE, and AGRICULTURE. The Lectures will commence on WEDNESDAY MORNING, JANUARY 25 at NINE o'clock. They will be continued on each succeeding FRIDAY and WEDNESDAY at the same hour.
R. W. JELF, D.D. Principal.

CHELTENHAM GREAT EXHIBITION of 1851.—To OPEN on the 1st of JUNE.—In addition to all kinds of Horticultural productions, this Exhibition will comprise every description of Implement or Article manufactured, designed, taken from, or in any way connected therewith. Programmes, schedules of prizes, &c. may be obtained, on application to the Secretary, Mr. HENRY J. COCHRANE, 128, High-street, Cheltenham.

COLOSSEUM, REGENT'S PARK.—ADMISSION ONE SHILLING. The original Panorama of LONDON BY DAY is exhibited daily from Half-past Ten till half past Four. The extraordinary Panorama of LONDON BY NIGHT, every evening, Saturday excepted, from Seven till Ten. Music from Two till half past Four, and during the evening Several favourite songs by Miss Schwieso.

CYCLORAMA, ALBANY-STREET.—LISBON and EARTHQUAKE.—This celebrated and unique moving Panorama, the Destruction of LISBON BY EARTHQUAKE in 1755, is exhibited for a short time in all its original splendour, and by the aid of new machinery, with increased startling effects. Daily at Three, Evening (Saturday excepted) at Eight o'clock.—Admission One Shilling. Children and Schools half-price to either Exhibition.

ROYAL POLYTECHNIC INSTITUTION.
Patron:—H. R. H. Prince Albert.—Magnificent Photographic Pictures, prepared expressly for this Institution by Monsieur Ferriere, of Paris, exhibited on a surface of about a thousand square feet, with an entirely new series of Dissolving Views, daily at a Quarter-past Four, and in the evenings at a Quarter-past Nine.—Lectures by Dr. Bachhoffner on Wilkins's New Patent Universal Electric Telegraph. Lecture by J. H. Pepper, Esq. on Spontaneous Combustion, with brilliant experiments.—Open Mornings and Evenings. Admission, 1s.; Schools and Children under Ten Years of age, Half-price.

EGYPTIAN HALL.—A Grand MOVING DIORAMA of CONSTANTINOPLE, including the Dardanelles and the Bosphorus, up to the Black Sea, WILL OPEN, in the NEW TURKISH ROOM, on MONDAY EVENING next, the 21st inst. at EIGHT o'clock. The Diorama was painted by Mr. ALLOM, from Sketches made by him on the Spot, assisted by Mr Desvignes and Mr Gordon. The Evening Lecture has been written by Mr ALBERT SMITH and Mr. SHIRLEY BROOKS, who are personally acquainted with Constantinople, and will be delivered by Mr. CHARLES KENNEY. The concluding tableau, a conflagration a fire at Constantinople, as seen from the Golden Horn, has been painted by Mr WILLIAM BEVERLEY. Full programmes and particulars may now be had at the Hall, and Reserved Seats taken. It is respectfully intimated that no charge is made for taking places, nor for programmes, nor are the attendants permitted to receive any gratuity. Admission, One Shilling; Reserved Seats, Two Shillings.

AERONOMIC ASSOCIATION.
Established 25th August, 1852.—Offices, Upper Dorset-street, Bryanstone-square.

At a meeting held 15th December, 1853, G. P. Marischall Keith, A.M. in the chair.

Resolved:—That as the publications which have been issued under the auspices of the Association are calculated for the use of the man of labour as well as of the man of science, it does not appear to be necessary that the daily personal attendance of professional members of the Association at the Offices as particularly mentioned in the circular of the Association, to afford gratuitous instruction or advice as to ventilation, should be continued.—By order,
MILL. JEFFS, Assistant Manager and Clerk.

An explanatory Statement of the sanitary Purport and Views of the Aeronomic Association, and its practical Utility, public and domestic.

Published by A. VARNHAM, 41, Bedford-street, Strand, price 3d. 6d.

"Architects, builders, and owners of houses ought to know the contents of this volume, which also contains matters interesting and amusing to the general reader."—*Literary Gazette.*

"This volume contains many useful practical suggestions, and being acknowledged by Mr. Hint, is entitled to consideration."—*The Builder.*

Copies of the above to be had at the Offices of the Association, where letters and communications are received as usual.

QUANTITIES, SPECIFICATIONS, SCHEDULES of PRICES, WORKING DRAWINGS, &c. copied, lithographed, or printed.
PLANS, ELEVATIONS, DRAWINGS of MACHINERY, &c. lithographed or engraved
BUILDERS' and CONTRACTORS' ACCOUNT-BOOKS; DRAWING PAPERS; ditto, mounted and continuous; TRACING PAPER and CLOTH; ditto in lengths.
GENERAL STATIONERY, for the use of BUILDERS, ARCHITECTS, SURVEYORS, and ENGINEERS, at the lowest current rates.
WATERLOW and SONS, 65 to 68, London-wall; and
49, Parliament-street, London.
Contracts for the supply of large establishments.

BILLS of QUANTITIES, &c. Lithographed with the greatest celerity, and on the lowest scale of charges. Maps, Plans, &c. reduced or enlarged. Architectural Engineering and Mechanical Drawings executed in the most superior style of plain or tinted lithography.—ASHBEE and DANSFIELD, Architectural Lithographers and Draughtsmen, 22, BEDFORD-STREET, COVENT-GARDEN, LONDON.

TO ARCHITECTS, SURVEYORS, and BUILDERS, who are in want of OCCASIONAL ASSISTANCE.—Plans, specifications prepared, quantities taken, estimates made, accounts adjusted, book keeping, &c done on terms strictly moderate. Apply to J. W., 10, Southbridge-terrace, Vauxhall-bridge-road. P.S. In taking estimates, a consideration will be made where competition is unsuccessful.

TO ARCHITECTS.

COMPETITION and other DRAWINGS.—Mr. THOMAS S. BOYS, Member of the New Society of Painters in Water Colours, and author of "The Picturesque Architecture of Paris, Ghent, Bruges," &c. and of "London as it is," offers his services in Tinting Backgrounds, Landscapes, Perspective Views, Interiors, &c. From the long experience he has had in these branches, he is fully aware of the points essentially necessary to be attended to. Drawings and designs lithographed in a superior manner.—Address, Mr. BOYS, 32, Albany-street, Regent's-park.

SURVEYING, ARCHITECTURAL, and ENGINEERING ESTABLISHMENT.
For preparing Gentlemen for Surveyors, Architects, Engineers, Land Valuers, Draughtsmen, Measurers, Valuers, &c. and for giving EVENING INSTRUCTION, in Architectural, Civil Engineering and Mechanical Drawing, Colouring, Perspective, Mathematics, Mechanics, Specifications, Taking out Quantities, Preparing Estimates, &c. &c. Terms very moderate.—For prospectuses, &c. apply at the Offices, 24, Guildford-street, Russell-square.

REVOLUTION in LITHOGRAPHY.—TO PUBLISHERS. PUBLIC COMPANIES, THE TRADE, AND THE PUBLIC.—MACLURE, MACDONALD, and MACGREGOR, sole patentees of the great SELF-ACTING LITHOGRAPHIC MACHINES by steam power. By means of these perfect machines, the range of lithography is incalculably extended, rivaling letter-press printing in despatch and cheapness. Each machine being equal to 50 ordinary presses, exhibits the great power possessed by the patentees. 57, Walbrook, Mansion-house.

GUTTA PERCHA TUBING.—Many inquiries having been made as to the durability of this tubing, the Gutta Percha Company have pleasure in drawing attention to the following letter received from Mr. C. Hacker, surveyor to the Duke of Bedford:—"Office of Works, Woburn-park, Jan. 10, 1852. In answer to your inquiries respecting the gutta percha tubing for pump suctions, I find that the water has not affected it in the least, although it will eat lead through in two years; we have adopted it largely, both on account of being cheaper than lead, much easier fixed, and a more perfect job. Yours, &c. C. Hacker." N.B. The Company's Illustrated Circulars, containing instructions to plumbers for joining tubes, lining tanks, &c. will be forwarded on the receipt of three postage stamps.—The Gutta Percha Company, Patentees, 18, Wharf-road, City-road, London.

THE PERMANENT WAY COMPANY call the attention of Railway Directors and Engineers, to their Patent Rails, Sleepers, to the large Stock of Ladders; excavators, brickmakers', and other Barrows; Painters' Machines, Trestles, Steps, &c. he has always on hand, at a very low scale of charges.
Manufactory, 3, TOTTENHAM-COURT, NEW-ROAD, opposite Hampstead-road.

LADDERS, BARROWS, &c. for SALE or HIRE.—G. ELL invites the attention of builders, decorators, and the trade generally, to the large Stock of Ladders; excavators', brickmakers', and other Barrows; Painters' Machines, Trestles, Steps, &c. he has always on hand, at a very low scale of charges.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

It being universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLEY and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 8 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, blinds are unnecessary, and when used in Greenhouses no scorching occurs; its NON-TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Workshops, &c. for which purposes it is supplied in squares of all sizes, from 8 by 6 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.
N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate.—May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to
Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

THOMAS MILLINGTON

87, BISHOPSGATE-STREET WITHOUT, LONDON.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT, has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required. 4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.
CROGGON and CO.'s PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.

Samples, testimonials, and full instructions, on application to CROGGON and CO. 2, DOWGATE-HILL, LONDON.

ASPHALTE.—GERVASE FOOTTIT, Trinidad Asphalte Works, Rotherhithe; established 1834. Every description of Flooring laid with the above durable material in the best manner. Asphalte for Railway Arches, 35s. per ton. Importer of Trinidad Asphalte.
Shipping Depôt, Devon Haytor Wharf, Rotherhithe.
G. H. CLARK, Agent.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed. Apply to JOHN PILKINGTON, POLONCEAU'S BITUMEN PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.—N.B. Country Agents, and Railway Engineers and Contractors, supplied with the best Bitumen for covering Bridges and Arches.

SOHO CROWN, SHEET, ORNAMENTAL, PATENT PLATE, AND PLATE-GLASS WAREHOUSE, 98, SOHO-SQUARE.

ALFRED GOSLETT begs to inform Builders, &c. that he is prepared to Tender for the supply of EVERY DESCRIPTION of Glass now manufactured at WHOLESALE PRICES.

ORNAMENTAL WINDOW GLASS, at very short notice.—The patterns symmetrically adjusted to size ordered, and free from the much complained of defects in squares cut out of sheets, from 1s. per foot super; borders, 6d. per foot run.—At CHARLES LONG'S, King-street, Portman-square.

PLATE and PATENT PLATE GLASS, of unequalled colours quality, and finish, for glazing and other purposes, supplied by J. LUES and CO. cheaper than any other house in London. All applications for estimates, &c. to be made to the Plate-glass Warehouse and Looking-glass Manufactory, 12, Rathbone-place, Oxford-street.

E. and W. H. JACKSON beg to call the attention of Builders and the Trade to the LOW PRICES of their PATENT PLATE GLASS, BRITISH PLATE, silvered and for glazing, of unrivalled quality and finish; ROUGH PLATE, CROWN, SHEET, COLOURED, and ORNAMENTAL GLASS, in every variety, of the best manufacture, at the lowest terms. Designs and estimates furnished for ornamental windows, either for house or church decoration.—All applications for estimates and lists of prices to be made at their warehouse, 315, OXFORD-STREET.

Also 16 oz. ground, do do 4d. per foot; Crown squares, in 100 feet boxes, varying from 14 by 10 upwards, 3d. per foot; 4-inch rough Plate Tiles, 12s. per dozen. Also Crown and Sheet Glass, in crates, British and Patent Plate, Fluted and Stained Glass, Glass Slates, &c. Sheet Lead, Pipe, White Lead, Oils, Turpentine, Colours, &c.—G. FARMILOE and SON, 118, St. John-street, West Smithfield.

TO AMATEUR GLASS-STAINERS.

TO BE DISPOSED OF, an excellent MUFFLE, as good as new, late the property of a gentleman deceased. Apply to G. JENNINGS, Plumber, Wisbech.

REPERTOIRE of MEDIÆVAL ART, 52, Wigmore-street, Cavendish-square.—Mr. BURTON, M.A. of the University of Cambridge, having made arrangements with parties who for many years past have worked from the designs, and under the superintendence of the late A. W. PUGIN, Esq. begs to inform the nobility, clergy, architects, &c. that he supplies every kind of Ecclesiastical and Domestic Gothic Work, viz.:—Metal work, chalices and patens, offertory, basons, candlesticks, crosses, branches, gas-fittings, crosses, lamps, monumental brasses, hinges, locks, handles, fire-dogs, lecterns, velvets, richly figured silks and stuffs, for altar hangings, &c. woven silk laces, embroidery in gold and silk, gold and silver llama, painted candles, picture frames, cryptlicks, banners, &c. &c. Church walls, altars, and reredoses, decorated in gold and disper. Designs and materials for all kinds of embroidery supplied and arranged.

THE PIMLICO SLATE-WORKS

Patronized by Royalty, the Heads of the Nobility, the Clergy, Architects of Eminence, Builders, Railway Contractors, and the Public generally. MAGNESS'S ENAMELLED SLATE is unrivalled standing the vile imitations and infringements of his patent that are attempted, continues to grow in favour with the public, being handsomer, more durable, and very much cheaper than marble.—Price-lists and a sheet of drawings, sent to any part of the kingdom gratis. Cisterns, Filters, Dairy and Larder Shelves, Wine Cellar Fittings, Slabs, and every variety of plain Slate-work, at prices that defy competition.—39 and 40, Upper Belgrave-place.

SLATES, Slabs, Cisterns, Enamelled Chimney-pieces, Plain ditto, Urinals, Baths, Sinks, Lining, Skirting, Roofing, Malting Floors, Patent Ridge and Roll, and Slate-work generally. Export orders supplied without detention, a large stock of slates and manufactured goods being usually kept on hand. Price-lists may be had upon application, either personally, or by post. Address, JOSEPH BRINDLEY, Slate Merchant, Steam Slate-works, Bermondsey-wall, London.
N.B. Wharf opposite the Wapping Entrance of London Docks.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prisons, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and Messrs Braby's, Belvidere-road, where terms may be obtained

GATES and GEORGE, late LUARD, BEEDHAM, and CO., Caen, Aubigny, and General Stone Merchants Caen Wharf, Rotherhithe, London. Goods delivered to order, by land or water conveyance, and by ship to any part of the United Kingdom.

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.

(DEPOTS.)

Great Western Railway Station....	PADDINGTON.
Great Western Railway Station....	BRISTOL.
Hope-street, Mount-pleasant	LIVERPOOL.
Castle-fields	MANCHESTER.

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

CAEN and AUBIGNY STONE.—F. FOUCARD, Stone Merchant and Quarry Proprietor, Quai des Abattoirs, Caen, and at 6, Red Lion-street, Borough-market. Contracts taken for any quantities. Cargoes shipped to order from Caen to any port.

BATH STONE DEPOT, Great Western Railway, Paddington.—EDWARD FLUESTER respectfully informs Builders, Masons, and Others that he continues to supply the first-bed, Ground-Stone, Corsham-down, Combedown, and Farleigh-down Stone, of the best quality, and at the lowest prices. Paddock and Forest of Dean Stone in blocks, steps, landings, or slabs of any thickness.—N.B. Stone and other goods landed and carted.

MARBLE.—Mr. J. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined, Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.—Office, 8, Crescent-terrace, Millbank, Mr. THOS. THOMPSON, Agent.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. MARTIN and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to

TO BUILDERS, MASONS, AND CONTRACTORS.

OBSERVE!!! the cheapest Depôt in England for MARBLE CHIMNEY-PIECES of superior quality and workmanship is the Westminster Marble Company's Patent Works, Earl-street, Holywell-street, Millbank. An inspection of their superior Stock of Statuary, Sienna, Black and Gold, Vein, and other Chimney-pieces, Tombs, Monuments, Tablets, &c. is earnestly solicited.

ANCASTER STONE.—JOHN WILSON, Stone-merchant, Grantham, begs to inform Architects, Builders, and the Trade in general, that he is prepared to execute orders to any extent, and on short notice.

GRANITE.—The Cheesewring Granite Company, of Liskeard, Cornwall, are now prepared to supply Granite of excellent quality, and the largest sized blocks. Prices may be ascertained on application to N. TREGELLES, 3, Pinner's-court, Old Broad-street, City, or to JAS. J. TRATHAN, Liskeard.

PAVING, in great varieties.—Sinks, sills, steps, &c.; rubbed coping; tooled ditto: rubbed and tooled sills; Harehill and self-faced slab; rubbed York paving; pipes, pots, &c. all at low prices. Builders and masons are invited to inspect a list sent free on application to E. and W. STURGE, Bridge wharf, City-road.—Established 1821.

HAWKCLIFFE QUARRIES, STEETON, near KEIGHLEY, YORKSHIRE.—To Architects, Merchants, Builders, and Others.—JOHN DIXON and SONS can supply any quantity of the finest stable stone from their quarries at Steeton. The quarries are situated close upon the railway and canal, so that the stone can be forwarded to any part at a very moderate cost.

The stone can be got of any size up to ten tons; it is of a very fine grit, perfectly uniform in colour, suitable for architectural constructions.

There is also a very extensive quantity of stone in the above quarries, forming the top bed of a coarser kind, suitable for dock buildings, bridge buildings engine beds, &c. &c.

Address—Agent, S. JACKSON, Hunter's-buildings, Bradford, Yorkshire, where prices and samples will be forwarded to any part free of expense.

By Her Majesty's Royal Letters Patent.

THE SILICEOUS STONE COMPANY are now prepared to UNDERTAKE CONTRACTS for the EXECUTION of WORKS of an Architectural or Ornamental character. This stone is composed of sandstone grit and other siliceous material, combined by means of flint (dissolved by the patent process), the result being a material most indestructible in its nature, and by its freedom from stratification, protected from those injuries to which natural stone is liable.

Specimens may be seen on application at the Office, and a variety of designs in open Terrace-work, Balustrades, Copings, Furniture, Tombs, Chimney-pieces, Pavements, Ecclesiastical and other decorative work.

Attention is also particularly requested to the Ashlar for facing buildings, and to Austin's Patent Hollowed and Dovetailed Building Blocks, manufactured in the siliceous stone, which combine great strength with economy and speed in erection, are perfectly fireproof, and offer peculiar facilities for ventilation and the circulation of warm and dry air.
8, John-street, Adelphi. E. MENDHAM, Secretary.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing, at one shilling the foot.
R. S. NEWALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world
OFFICES.—Gateshead-on-Tyne.
1, Sise-street, London.
67, Hyde-park-street, Glasgow.
27, Dale-street, Manchester.

VALUABLE ARCHITECTURAL and ENGINEERING WORKS for DISPOSAL at the BATSFORD'S Establishment for the Sale of Second-hand Books relating to Architecture, Engineering, &c. 52, HIGH HOLBORN, LONDON.

Also, Paris, 1859.

PART INDUSTRIEL: a Collection of Interior DECORATIONS and ARRANGEMENTS, and many models for every branch of industry connected with the fitting-up and furnishing of gentlemen's residences and with all articles of luxury appertaining thereto, such as wood-carving, and wainscoting, hangings, frames for pictures and looking-glasses, tables, carved furniture, billiard tables, chairs of all kinds, jewels for persons of both sexes, articles for the table, silver, bronzes, chandeliers, lamps, candlesticks, lanterns, iron grates and fenders, locks, keys, clasps, and fastenings, a blinds of church ornaments and plate, organs, chimney-ornaments, screens, flowers, and a variety &c. &c. Seventy two Plates, designed and drawn by Leon Feuchere Architect, Inspector of Works to the Empress Eugenie. 4to. cloth gilt edges, 14s.; published at 28s.

HUMPHREY'S (NOEL) TEN CENTURIES of ART. Twelve beautifully coloured plates. Red morocco cloth gilt edges, 14s.; published at 28s.

WYATT'S (DIGBY) METAL-WORK and its ARTISTIC DESIGN. Fifty Plates. Printed on tinted paper. Folio, half-bound morocco 2l. 12s.; published at 6l. 6s.

WYATT'S GEOMETRICAL MOSAICS of the MIDDLE AGES. Twenty-one plates, beautifully printed in colours and gold. Folio, boards, 2l. 2s.; published at 4l. 14s. 6d.

LETAROUILLY.—EDIFICES de ROME MODERNE. 2 vols. folio, sewed. 234 plates, with letter-press description, &c. Large Paper.

Published by JOHN WEALE, 59, High Holborn, London. In One large Volume, octavo, with numerous Engravings, price 6l. 6s.

A GENERAL TEXT-BOOK, for the constant use and reference of Architects, Engineers, Surveyors, Solicitors, Auditors, Land Agents, and Students, in all cases of several and varied professional occupations; and for the assistance and guidance of Trustees, Gentlemen, and others connected in the Transfer, Management, or Improvement of Landed Property containing fencing, fruniture, rules, and tables in geometry, mensuration, and trigonometry; land measuring, surveying, and levelling; railway and hydraulic engineering, timber measuring, the valuation of artificers' work, estates, leaseholds, lifeholds, annuities, wages, farming stock, and tenant right; the assessment of parishes, railways, canals and water companies; the law of dilapidations and nuisances, appurtenants and appendants, landlord and tenant agreements and leases, together with examples of villas and country houses.

By EDWARD RYDE.

To which are added several chapters on Agriculture and Landed Property. By Professor DONALDSON.

Now ready, price 7s. with Illustrations, by post, 7s. 6d.

CATALOGUE of BOOKS on Architecture and Engineering, civil, mechanical, military, and naval: new and old. Together with an unexpurgated list of members &c. of the several learned societies for the promotion of architecture and civil and mechanical engineering, and an index of contents.

ENGLISH MONASTICISM ANGLICANUM: a History of the Abbeys, Monasteries, and Colleges, and Cathedral and Collegiate Churches in England and Wales. A new and beautifully printed Edition illustrated with 250 Engravings, in English Cloth, half-bound morocco, price 2l.

JOHN WEALE, 59, High Holborn, London.

THE CORPORATION (CITY OF LONDON). Second Edition, now ready.

THE LAWS, CUSTOMS, USAGES, and REGULATIONS of the CITY and PORT of LONDON, with Notes of the various Charters. By Laws, Statutes, and Judicial Decisions by which they are established. With an Appendix on the City Election Acts, &c.

By ALEXANDER PULLING, Esq.
Barrister, of the Inner Temple.

"The standard work on the municipal usages of London." See *Daily News*, leading article, 6th February, 1847.
BUTTERWORTHS, 7, Fleet-street.

NEW PATENT LAW (15 & 16 Vict. c. 83). The CIRCULAR of INFORMATION, with full particulars as to the no need expense and facility of protection for inventions for the United Kingdom or foreign countries, may be had (gratis) by applying personally, or by letter, pre paid, to Mr. PRINCE, Patent Office, 4, Tavistock square, Charing cross, London.

SCHOOL BOOKS BY WILLIAM BUTLER.
Edited by Thomas Bourn.

ARITHMETICAL TABLES, &c. 25th and Cheaper Edition. 4d.

CHRONOLOGICAL, BIOGRAPHICAL, HISTORICAL, and MISCELLANEOUS EXERCISES. 8th Edition, 12mo. 7s. 6d. bd.

EXERCISES on the GLOBES and MAPS. With Questions for Examination. 19th Edition. 12mo. 6s. bd.

A KEY to the EXERCISES on the GLOBES 2s. 6d. sewed.

MISCELLANEOUS QUESTIONS in ENGLISH HISTORY and BIOGRAPHY. 6th Edition. 12mo. 3s. 6d.

GEOGRAPHICAL EXERCISES on the NEW TESTAMENT. 6th Edition. 12mo. 5s. 6d. bd.
London: SIMPKIN, MARSHALL, and CO.

Now published, quarto, price 1l.

A WORK (by W. R. DICK) on the INSCRIPTIONS and DEVICES in the BEAUCHAMP TOWER, TOWER of LONDON; containing Thirty-one Lithographic Plates, illustrative of the several Inscriptions, and also a short historical sketch of the authors thereof.

Published by P. RAMAGE, Tower of London, and to be had of Mr. NUTT, 270, Strand, London.

MR. BURNET'S NEW WORK ON ART.
Next Week, post 8vo. 10s. 6d.

THE PROGRESS of a PAINTER in the NINETEENTH CENTURY; containing Conversations and Remarks on Art.

By JOHN BURNET, Author of "Practical Hints on Painting," &c.
DAVID BOGUE, Fleet-street.

Just published, price 1s. the 41st edition of LAXTON'S BUILDERS' PRICES, for 1854, containing upwards of 11,000 PRICES and Memoranda. The whole has undergone revision, in consequence of the increased price of Timber, Deals, and other Materials. It also contains the whole of the Building Act and Table of Districts surveyors &c.

To be had at the Office of "The Builder," York-street; WEALE, High Holborn; SIMPKIN and CO., Paternoster-row; and all booksellers; also of the Proprietor at the Office of the "Civil Engineer and Architect's Journal," 16, Arundel-street, Strand.

THE QUARTERLY REVIEW, No. CXXXVII. is published THIS DAY.

CONTENTS:

I. LIFE AND WORKS OF HERAN.
II. HUMBOLDT'S COSMOS.—SIDEREAL ASTRONOMY.
III. MISSIONS IN POLYNESIA.
IV. WILD-FOWL.
V. RELIGION OF THE CHINESE REBELS.
VI. CAMPBELL'S TRAVELS AMONG THE LAPPS.
VII. MEMOIRS OF KING JOSEPH.
VIII. TURKEY AND RUSSIA.

JOHN MURRAY, Albemarle-street.

In 8vo. with woodcuts, price 9s. cloth, and 12s. calf, 2nd edition, much enlarged,

BRANDE'S DICTIONARY of SCIENCE, LITERATURE, and ART. Second Edition, corrected and enlarged by W. T. BRANDE, D.C.L., F.R.S., &c.

"We recommend it to the practical reader, to the student as one unrivalled for the best elementary treatise and the most comprehensive book of reference."—*Athenæum*.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

Just published, a New Edition, 12mo. 5s. cloth,

AN ELEMENTARY TREATISE on ALGEBRA, Theoretical and Practical.

By J. HOPKINS, M.A., LL.D.
Professor of Mathematics in the University of Glasgow.

"We recommend it to mathematical readers, teachers, and students as one unquestionably the best elementary treatise and the most comprehensive book of reference."—*Athenæum*.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

GOLDSMITH'S GEOGRAPHY IMPROVED BY HUGHES.
A New and much enlarged Edition, in 8vo. 8vo. price 3s. 6d.

GOLDSMITH'S GRAMMAR of GEOGRAPHY. For the Use of Schools and Young Persons; carefully revised, improved, and greatly enlarged, and in accordance with the Physical Geography of each of the Great Continents and of the Globe incorporated; a new set of Twelve Maps and many Diagrams, including a large coloured Physical Map of the World; and an entirely new series of illustrative Plates.

Edited by EDWARD HUGHES, F.R.G.S., Head Master of the Model and Normal Schools, Royal Hibernian Military School.

Also, in oblong 4to. price Eight-and-sixpence,

S. HALL'S FIRST or ELEMENTARY ATLAS for the Use of Schools; comprising Ten coloured Maps.

S. HALL'S FIRST GEOGRAPHICAL COPY BOOK, or Outline Maps; containing the coast line, for the pupil to fill up. Oblong 4to. price 6d.; or each outline separately, three for One Penny.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

BUTLER'S SCHOOL ATLASES AND GEOGRAPHY; New and thoroughly revised Editions, enlarged, and corrected to the present time, and brought up to the latest Discoveries, by the Rev. THOMAS BUTLER, Rector of Lowick.

A JUNIOR ATLAS of MODERN GEOGRAPHY; comprising 19 full-coloured Maps, selected from Bishop Butler's "Modern Atlas." Royal 8vo. price 4s. 6d. half-bound.

A JUNIOR ATLAS of ANCIENT GEOGRAPHY, comprising 10 full-coloured Maps, selected from Bishop Butler's "Ancient Atlas." Royal 8vo. price 4s. 6d. half-bound.

BUTLER'S ATLAS of MODERN GEOGRAPHY: enlarged to 28 full-coloured Maps; with a complete Index. Royal 8vo. price 12s. half-bound.

BUTLER'S ATLAS of ANCIENT GEOGRAPHY: enlarged to 23 full-coloured Maps; with a complete Index. Royal 8vo. price 12s. half-bound.

BUTLER'S GEOGRAPHICAL COPY-BOOKS, or MAP PROJECTIONS, Ancient and Modern. Oblong 4to. price 6d. each, or 3s. 6d. the Set of Six.

BUTLER'S GENERAL ATLAS of ANCIENT and MODERN GEOGRAPHY: enlarged to 51 full-coloured Maps; with Indexes. Royal 4to. price 28s. half-bound.

BUTLER'S SKETCH of MODERN and ANCIENT GEOGRAPHY, revised and corrected in both Parts from the best authorities. 8vo. price 6s. cloth.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

NEW EDITIONS OF NESBITT'S MENSURATION, LAND SURVEYING, &c.

A New and Improved Edition, augmented by a Treatise on Levelling, in 12mo. price 6s. bound,

A TREATISE on PRACTICAL MENSURATION, in Ten Parts, containing—

The most approved Methods of Mensuration of Solids and Superfices;
Drawing Geometrical Figures;
Mensuration of Superfices;
Land surveying;
Mensuration of Solids;
The Use of the Carpenter's Rule;
Timber Measure, in which is shown the Method of Measuring and Valuing standing Timber;
Artificers' Works, illustrated by the Dimensions and Contents of a House;
Haystacks;
Drains;
Canals;
Marl-pits;
Ponds;
Mills;
Embankments;
Quarries;
Coal-heaps;
and Clay-heaps;
The Questions answered and their Solids;
The most useful Problems in Gauging according to the New Imperial Measures;
Plane Trigonometry, with its application to the Mensuration of Heights and Distances;
Trigonometrical Surveys;
A Dictionary of the Terms used in Architecture.

By A. NESBITT.

New Edition, enlarged, and greatly improved: To which is added, a

TREATISE ON LEVELLING.

The whole illustrated by nearly Seven Hundred Practical Examples, and Forty Wood-cuts.

KEY to NESBIT'S PRACTICAL MENSURATION, containing Solutions to all Questions which are not answered in that Work, with References to the Problems, Rules and Notes, by which the Solutions are obtained. New edition, corrected and greatly improved. 12mo. price 5s. bound.

By the same Author. New Edition, with Plates,
Wood-cuts, and 6 Sliding Rules, price 18s.

TREATISE on PRACTICAL LAND-SURVEYING. Corrected and improved, with the addition of Plane Trigonometry, including the use of the Theodolite, and Railway Surveying, Railway Curves, Levelling, Planning, Laying out Curves &c. By T. BAKER.

TREATISE on PRACTICAL ARITHMETIC. Part I. 5s. Key, 3s. Part II. 7s. 6d. Key, 5s.

INTRODUCTION to ENGLISH PARSING, 12mo. 3s. 6d.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

Just published, in 8vo. price 6s. boards,

THE EXECUTOR'S GUIDE.

By J. C. HUDSON, Esq. late of the Legacy-Duty Office, London.

A New and enlarged Edition; with the addition of directions for having succession duty on real property under wills and intestacies, and a table for finding the values of annuities and the amount of legacies and succession duty thereon.

A small 8vo. price Half-a-Crown, boards.

Mr. HUDSON'S PLAIN DIRECTIONS for MAKING WILLS in conformity with the Law.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

A New and Improved Edition, in 8vo. price 12s. 6d.

WOOD'S ELEMENTS of ALGEBRA, for the Use of Students in the Universities of Cambridge, &c. A new edition (the fourteenth), carefully revised and improved.

By THOMAS LUND, B.D., late Fellow and Sadlerian Lecturer of St. Peter's College, Cambridge.

Also, A New and Improved Edition, post 8vo. price 6s.

LUND'S COMPANION to WOOD'S ALGEBRA: containing Solutions of the various Questions and Problems, and forming a Key. Second Edition.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

New Edition, 12mo. with Woodcuts, price 2s.; Key, 3s. 6d.

EXERCISES on MECHANICS and NATURAL PHILOSOPHY; or, an Easy Introduction to Legitimate, for the use of Schools and private students.

By THOMAS TATE, F.R.A.S. of Kneller Training College, Twickenham.

Sequel to the above, now with Wood-cuts, price 5s. 6d.

TATE'S PRINCIPLES of MECHANICAL PHILOSOPHY applied to INDUSTRIAL MECHANICS.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

SANDHURST MATHEMATICAL COURSE.
Second Edition, in 8vo. price 18s. bound,

ELEMENTS of ARITHMETIC and ALGEBRA. For the Use of the Royal Military College, Sandhurst.

By W. SCOTT, Esq. A.M. and F.R.A.S.
Examiner in Mathematics of Candidates for Commissions in Her Majesty's Service, and Professor of Mathematics in the Royal Military College.

Also forming part of the Sandhurst Course.

ELEMENTS of GEOMETRY. By Professor NARRIEN. 10s. 6d.

ANALYTICAL GEOMETRY. By Professor NARRIEN. 8s. 6d.

TRIGONOMETRY and MENSURATION. By Professor SCOTT. 9s. 6d.

ASTRONOMY and GEODESY. By Professor NARRIEN. 15s.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

New and enlarged Edition, 12mo. with Plates, 8s.; price 6s. 6d.

KEITH'S TREATISE on the USE of the GLOBES; or, a Philosophical View of the Earth and Heavens. A new edition, greatly improved by ALFRED TAYLOR, M.D., F.R.S. Lecturer on Chemistry, &c. in Guy's Hospital; R. A. Inc. Magdalen Hall, Scholar of Corpus Christi College, Oxford; and J. MIDDLETON, Esq. Professor of Astronomy.

KEY. 12mo. price 2s. 6d.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

A New Edition, in 12mo. price 3s.

ALGEBRA MADE EASY. Chiefly intended for the Use of Schools. By THOMAS TATE, of Kneller Training College, Twickenham.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

A New Edition, in 12mo. with Woodcuts, price 3s. 6d.

PRINCIPLES of GEOMETRY, MENSURATION, TRIGONOMETRY, LAND-SURVEYING, and LEVELLING. Containing familiar Demonstrations of the most important Propositions in Euclid's Elements; and Proofs of all the useful Rules and Formulæ in Mensuration and Trigonometry, with their application to the Solution of Practical Problems in Estimation, Surveying, and Railway Engineering. Designed for the use of Schools and Private Students.

By THOMAS TATE, F.R.A.S.
Of Kneller Training College, Twickenham.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

A New Edition in 12mo. price 1s. 6d.

A TREATISE on the FIRST PRINCIPLES of ARITHMETIC, after the Method of Pestalozzi: with numerous examples in all the several Rules, original and practical methods for constructing questions, and a new form for the extraction of the cube root. Designed for the use of teachers and monitors in elementary schools.

By THOMAS TATE, F.R.A.S. of Kneller Training College, Twickenham.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

Twelfth Edition, carefully revised, with new Discoveries introduced by the Author, in 12mo. 9s. with Plates, 10s. 6d.

CONVERSATIONS on NATURAL PHILOSOPHY, in which the Elements of that Science are familiarly explained, and adapted to the comprehension of Young Persons.

By JANE MARCET.
By the same Author, new Editions of
CONVERSATIONS on CHEMISTRY, 2 vols. 14s.; on LAND and VEGETABLE PHYSIOLOGY, 7s. 6d.; on POLITICAL ECONOMY, 7s. 6d.; on VEGETABLE PHYSIOLOGY, 9s.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

THE PRINCIPLES OF ARCHITECTURE, WITH NUMEROUS ILLUSTRATIONS.

GREGIAN ARCHITECTURE, Suggestions for Developing. Price 5s. in a wrapper.

NATURAL SYSTEM OF ARCHITECTURE, bound in cloth gilt lettered, 10s. 6d.

MEDIÆVAL ARCHITECTURE, Ancient Gothic Churches. Part I. 7s. 6d.; Part II. 8s.; Part III. 8s. The three Parts bound in cloth gilt lettered, 24s.

ARCHITECTURAL BOTANY. Part II. in Preparation.

By W. P. GRIFFITH, F.S.A., F.R.I.B.A., &c.
Published at 9, St. John's square, London.

Just published,

BATHS and WASH-HOUSES; the History of their Rise and Progress, &c. &c. &c. with copies of the Accounts and Statistics of the Metropolitan and Provincial Establishments, and Practical Hints to those concerned in their Erection, and for their Management. Illustrated with plans, &c. &c. 4s. 6d.

A HISTORY of the BATHS of the ANCIENTS, and a description (with plan) of the LAMBETH BATHS and WASH-HOUSES, price 1s.

By GEORGE A. CAPE, Jun. Secretary to the Lambeth Baths and Wash-houses Company.
London SIMPKIN, MARSHALL, and CO.

THE "RAISING of JAIRUS'S DAUGHTER," by STROTHING; a fine Picture, suitable for an Altar or Gallery. Size of canvas 15 feet 8 inches wide, 11 feet 10 inches high. The above to be DISPOSED OF. For further particulars and cards to view, apply to Messrs. DOLMAN, 10, Nelson-street, Greenwich.

WESTMINSTER ABBEY or VICTORY.—NELSON at the BATTLE of ST. VINCENT.—LEGGATT, HAWARD, and LEGGATT beg to inform their patrons and friends, that T. Jones Barker's last grand historical PICTURE of NELSON RECEIVING the SWORDS from the vanquished Officers on the Quarter-deck of the SAN JOSEF, on the memorable 14th of February, 1797, at the Battle of St. Vincent, is NOW on VIEW, at their Gallery, 75, Cornhill.

Court Circular, Nov. 24, 1853.—Winter Exhibitions.—Messrs. Leggatt had the honour of submitting to her Majesty and his Royal Highness Prince Albert, Barker's painting of Nelson receiving the Swords of the Officers on the Quarter-deck of the *San Josef* after the Battle of St. Vincent."

In consequence of the unfavourable state of the weather, the picture is exhibited by gaslight, and may be viewed from Ten till Six.

TO WHARFINGERS, BUILDERS, ENGINEERS, MANUFACTURERS, RAILWAY CARRIERS, &c. TO BE SOLD by Auction, and part Leasehold, BRUNSWICK WHARF and DRAW DOCK, many years established in the Brick, Tile, Slate, and Lime Trade. An excellent residence, offices, &c. Barges, and warehouses in substantial repair, Area, near 1 acre, adjoining the South Western Railway Goods Station, with 150 feet frontage to the River Thames, and 140 feet to the high road leading to Wandsworth. Apply on the Premises or to Mr. T. M. NELSON, Architect, 3, Charles-street, St. James's square.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE, used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 110, Fore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

The Builder.

SATURDAY, JANUARY 21, 1854.

BECAUSE the cold weather has stayed the progress of diseases dependent on the want of proper sanitary measures, several parishes have stopped proceedings into which they had been frightened:—

"The devil was sick: the devil a saint would be.
The devil got well: the devil a saint was he."

Earnestly, however, we caution all against being betrayed into negligence. There was the same lull during the winter when England was before visited by the cholera, and there seems too much reason to fear that with the spring the epidemic will return. That we may mitigate it (under higher power), if not escape it altogether, is proved,—proved beyond a doubt; and we ought most sedulously to employ the time before us with that end in view.

The over-crowded condition of the dwellings of the poor, which has been repeatedly referred to by us, continues to demand attention. The moral and physical effects of the present condition of things, the great degradation, ill health, and loss of life, meet us at every turn. Typhus, the disease of filth, has been busy. Those who have been engaged in the relief of some of the London parishes, tell a sad tale of the great expense and loss of life constantly resulting from dirt, ill drainage, and bad air. Not long since a man called on one so engaged, and asked to be assisted with a coffin in which to bury his wife, being too poor to provide one, in consequence of her sudden death from typhus fever. After two or three hours he came back for another coffin: one of his children had died. In the course of the same day he came back for two more: in all, four had died: in less than two days he was carried off himself. On another occasion, our informant was sent for to visit a house, and found three dead bodies on the floor, no bed in the room, and the place filled with people. Thus fever sweeps the ill-conditioned neighbourhoods. A remedy must be found—the mere pulling down of dilapidated and disreputable buildings is of no avail—it is only removing the poor from one district to another, and is no doubt at the present time raising the cost of rent to those who have the least means of paying it.

We once overheard a conversation between a veteran compositor and a young author: the latter was insisting that a certain amount of matter should be put into a particular space. "Type, sir," said the printer, "is not india-rubber, which can be pressed into less than its natural bulk." Human beings, like the compositor's type, also require a certain amount of space. The number of poor—the very poor—is unfortunately great in London, and this class must be provided for. In all directions the dwellings of the worst sort are being swept away: within the last few years, hundreds of houses have been demolished in the City liberties, in Marylebone, St. Clement Danes, and other parishes too numerous to mention. Persons congratulate themselves on the removal of "rookeries," and look with complacency at the noble warehouses and streets which rise to occupy the sites of the wretched hovels. But what has been done in this great metropolis to provide for the living creatures who by the improvements have had their hearths destroyed? Literally nothing. A short time ago we witnessed the ejectment, from Orchard-place, Portman-square, of nearly 1,500 men, women, and children: the place was in a bad condition, and fever was a constant visitor; yet the people were sorry to leave the place, knowing the difficulty of obtaining, with their limited means, a better lodging, or even any lodging at all. Single men could manage well enough, but it was distressing to see the wretched furniture, if so it could be called, and families in the muddy street on a rainy day, the parents hunting in all directions to obtain shelter. These poor people would go, as a matter of course, to the already thickly-crowded parts of Marylebone, St. Pancras, Clerkenwell, &c. for no provision had been made for them of an improved kind. "We must try our relations, for my husband cannot get a lodging," said a woman sitting in the rain, with her children, and some household goods which would not be to a broker worth half-a-crown; "surely they must take in their own flesh and blood." Poor things!

The Associations for improving the dwellings of the industrious classes in London, have not yet extended their aid to the large class to which we are alluding; they have, however, done much to remove the prejudice against new and convenient dwellings: respectable mechanics and others have gladly availed themselves of the private and convenient arrangements of the so-called "model houses," which where placed in eligible situations, will be a certain source of profit to their constructors.

Small, decently-built houses, which let for a rent of from 15*l.* to 18*l.* a year,—that is, from 6s. to 7s. per week,—seldom remain unlet. Persons may go over many streets in the Borough and other parts, where this class of houses are built, and not see a single one in good repair to let. The people, in too many instances, are annoyed with bad drainage and cesspools, but on complaint being made to the landlords, they are generally told, "If you do not like it you can leave; I can get plenty of tenants." A clerk or mechanic, with a family, and an income of about 30s. a week, can scarcely afford to pay 6s. a week for house-rent, yet what is he to do if he wish to keep himself in respectable privacy? There is no alternative but to hire part of a house let to others, a most uncomfortable and generally bad arrangement. To those who are poorer, the difficulty of obtaining proper house accommodation is still greater, and the profit to the landlord or agent proportionably higher.

As we descend in the scale of respectability and amount of property possessed by persons, the sum paid for inferior houses is proportionally increased: 3s. 6d. and 4s. 6d. and even more, is paid for a single room unfit for human habitation. See, for proof, the back parts of Peter-street, Westminster, Charlotte's-buildings, Gray's-inn-lane, &c. &c.

The system of agency in connection with such property is a necessary evil: the landlords cannot manage the tenants, and in many instances would be ashamed to be seen applying for money for such places. A proper man is found to manage the business, who, in too many instances, derives large profits from the necessities of the tenants.

This condition of things is a sad fact, which not only distresses the poor population of London, but other large cities. Many have no doubt sunk by misfortune and their own faults into these "immortal sewers," as the Rev. G. S. Osborne has called the dark shadows of city life; and thousands are born here and placed in circumstances where the chance of leading a proper life is almost hopeless. Education is but of little use to those living in filthy lanes and such over-crowded dwellings as have come under our observation. The first great means of raising the poorest classes is to reform their dwellings, to provide places wholesome and well ordered, at rents which they can afford to pay. We want, in London, first, decent yet not luxurious sleeping accommodation and means of washing, &c. for those who are entirely destitute; secondly, rooms for poor families, in which the members of them can be kept distinct, at rents ranging from 1s. 6d. to 2s. and 2s. 6d. a week. We believe that dwellings of this description, extensively carried out in a proper method and well constructed, would be attended with great benefit, and, moreover, would pay: and, thirdly, the erection of houses in flats, at rents of from 4s. to 10s. per week, the extent and finish to be graduated according to the rent.

In the City of London many houses have been taken down, but no provision whatever has yet been made for lodging the persons thus driven out. A large sum of money was voted by the corporation some time ago to erect dwellings for the working classes, and it is to be hoped that they will forthwith proceed to carry out the intention.

We asserted at starting that disease can be lessened by sanitary arrangements. The evidence to this effect is undeniable, and it has been largely increased within the last few days by the publication of a pamphlet on the subject by Dr. Southwood Smith.*

The writer shows, first, that the buildings for families erected by the societies afforded a return last year of nearly 5 per cent. on the outlay; secondly, that while the deaths in the whole metropolis during the year 1852 reached the proportion of 22 and a fraction in the thousand (that is, 22 persons died in every 1,000), the mortality in the establishments of the association (the average of the whole) was but 7 and a fraction, "consequently, the total mortality in London generally, taking together all classes, rich and poor, was proportionally more than three times greater than the mortality in these establishments." In the Kensington Potteries, the deaths equalled 40 in 1,000! And, thirdly, the Doctor gives examples out of doors, showing the efficacy of sanitary provisions to prevent the recurrence of epidemic diseases, and greatly to reduce the rate of mortality. One of the most unhealthy spots in the metropolis has recently afforded a signal instance of it:—

"Three years ago Lambeth-square was as unhealthy as the Potteries. The population remained the same; the occupations, mode of life, and habits of the people remained the same; no change of any kind took place, excepting the introduction of certain sanitary improvements. No history is more instructive.

Lambeth-square is situated in the Waterloo-road district of the parish of Lambeth. It consists of 37 eight-roomed houses which let at about 28*l.* a year, and are chiefly occupied by the foremen of large establishments, and the more skilled and highly-paid class of artizans. In outward appearance, and in their general aspect within, these houses are very superior to the ordinary abodes of the same class in other parts of the metropolis, and present no obvious cause of peculiar unhealthiness.

According to the last census, this square contains a population of 434 souls. Among this number, on a house-to-house examination, it was found that in one year (1851), there had occurred 80 attacks of zymotic† and other diseases, and 24 deaths; that is, nearly one person in every five had been laid up with sickness, which had proved fatal in the proportion of 50 and 60 in 1,000.

When built about twenty years ago, these houses had been fitted up with untrapped closets, communicating with flat-bottomed brick drains, then in universal use. A number of the drains passed directly under the houses: they were wholly unprovided with any regular water supply for cleansing: consequently, instead of carrying away the ordure, they retained it within the

* Results of Sanitary Improvement, illustrated by the Operation of the Metropolitan Societies for Improving the Dwellings of the Industrious Classes, the Working of the Common Lodging-houses Act, &c. By Southwood Smith, M.D. London: Charles Knight, and J. Cassell. 1854. This pamphlet can be had for 1s. 9d. per dozen, or 12s. 6d. per hundred, and should be largely circulated.

† From a Greek word, signifying to ferment. The term is employed metaphorically to all those diseases which are produced and propagated by a kind of fermentation.

houses; and the emanations arising from the stagnant mass of putrifying matter, were carried back into the houses, through the open closets, in a proportion increasing with the obstruction in the drains.

At the beginning of 1852, a new system of drainage was applied to the whole square. Water-closets were substituted for cesspools, and stoneware pipes for brick drains, and the apparatus was provided with an adequate supply of water.

By these improvements the houses were placed in the same sanitary condition essentially as the society's dwellings. The result on the health of the inhabitants was strikingly similar. On a re-examination of this property in November of the present year (1853), it was found that the mortality had been reduced from 55 in 1,000 to 13 in 1,000."

Results so extraordinary are beyond hope, and almost beyond belief, but derived from sources thus widely different and independent, they are confirmatory of each other. They have further received decisive confirmation to a most unexpected extent from the operation of the Common Lodging Houses Act.

"In the town of Wigan, for example, there are twenty-four lodging-houses, through which have passed during the last year, 29,655 lodgers. The superintendent of police reports, 'There has not been a single case of fever in any one of those houses since the Act has been in force.'

The town of Wolverhampton affords a still more striking instance. In this town there are 200 lodging-houses, through which have passed during the year the incredible number of 511,000 lodgers. The superintendent of police reports, 'There has not been a single case of fever in these houses since the Lodging Houses Act has been in force in July 1852.'"

Moral pestilence has, at the same time, been checked. The intemperate have become sober, and the disorderly well conducted, since taking up their abode in these healthful and peaceful dwellings. No charge of crime, no complaint even of disturbance has been lodged at any police station against a resident in these dwellings since their first occupancy.

With such results before us, shall we not persevere? We *know* that it is necessary to eat to maintain life, and we eat; we *know* that if the hand be put into the fire, it will be burnt, and we take care not to put it there; we equally well know that by the provision of salubrious dwellings for the labouring classes,—fresh air, pure water, and good drainage,—we save money, suffering, virtue, and life; and in the name of all we hold in reverence, let us endeavour to provide them!

It is impossible to over-estimate the practical importance of the results which are now before the world,—"They show the extent to which, under circumstances of the utmost difficulty and danger, it may still be possible to save life: they open a prospect of the physical and social improvement of the people, such as, before these results were obtained, there was no warrant from experience to anticipate: they indicate that the first step in this progress must be the removal of the degrading influence of the present dwellings of the labouring classes, and they prove the practicability, without loss to the capitalist, or additional rent to the tenant, of the universal substitution of houses for hovels. There must be compulsory enforcement of certain sanitary conditions wherever there are human habitations. There must be provision for the supply of better-ordered dwellings for the industrious classes: dwellings accessible to air and light, and no longer producing that malarious depression which resorts for relief to the fatal stimulus of ardent spirits: dwellings compatible with cleanliness, comfort, and those decent observances which are necessary to self-respect, and which must become habits before there can be respect for the happiness, property, or life of others. Until such dwellings are within the reach of these classes, they cannot be raised out of that physical debasement which has lately been so painfully depicted, and which has been shown to be the portion (the unnecessary portion) of large masses of the people. The physical improvement of these masses, it is now admitted, must precede their intellectual and moral elevation. When the house ceases to be a sty, and possesses the conditions which render it capable of being made a home, then, but not till then, may it receive, with some hope of benefit, the schoolmaster and the minister of religion."

LECLÈRE, VISCONTI, AND GAU.*

In November last it was my duty to communicate to you the death of our honorary and corresponding member, Monsieur Fontaine. I little expected so soon to have to inform you of other losses from among those with whom I stood at the tomb of Percier and Fontaine, when I had to express to those around me your sympathy in the loss which France had then experienced: little did I think, as the venerable and accomplished Achille Leclère stood trembling, weeping, his grey hair floating in the wind, and uttering the few words to which his grief gave vent, that he was standing himself on the verge of eternity: but he, too, has followed his brother architect. On the 26th of December last his remains were accompanied to the Cimetière du Nord, amid the regrets of his colleagues, his friends, and his pupils; and eulogiums were pronounced by Messrs. Raoul Rochette, Vinet, Visconti, and Isabelle.

It appears that M. Leclère carried off the *Grand Prix* in 1808, at twenty-two years of age—a very unusual circumstance in the life of an architect. The programme of the competition was a large establishment of public and private baths for the capital; and the manner in which he had carried out his conception was most remarkable. During his residence at Rome the studies of the young *pensionnaire* were always well chosen, and conscientiously and well executed. His restoration of the Pantheon was the crowning point of his many researches amongst antique monuments, and placed him amongst the most distinguished architects who had given their attention to the restoration of that magnificent building of the Augustan age. M. Leclère also made an interesting collection of studies on the modern edifices of Italy. A student in the celebrated school of Percier, whose taste and learned maxims extended throughout Europe, the pupil, after his return to Paris, was attached by his worthy master to the administrative department of the Conseil des Bâtimens, in whose works he took part for thirty years; and when the celebrated Professor was unable to continue his labours in the school, he intrusted them to the direction of M. Leclère. These circumstances were the chief cause which prevented M. Leclère from being engaged in the erection of more public buildings; however, he executed in France many large country houses, and in Paris some of the finest houses of modern times. One of the most remarkable monuments in the Eastern Cemetery of Paris, that of Casimir Pèrier, was designed and executed under his direction. His brilliant *début* as pupil, and his subsequent works as *pensionnaire* of the Academy, were followed by M. Leclère's early entrance into the Institute, where he was called upon to take part in the works of the Professors in the School of Fine Arts, who appointed him "*Archiviste.*" Of a kind and conciliating disposition, full of love for his art, persevering in those principles which he believed to be the best, encouraging those pupils who were studious and distinguished, M. Leclère well deserves all the encomiums which accompany his memory to the tomb. M. Leclère presented to this Institute some very important tracings of the constructions of the Pantheon at Rome, next the portico, with a view to explain whether the portico formed a portion of the original design, or was a subsequent addition of a later period: they are preserved in our collection of original designs and drawings, which are now forming a very valuable series.

In the funeral *cortège* of M. Leclère, just noticed, you will perhaps have remarked the name of Visconti, as one of those who addressed the assembly at the grave of his friend: within one short week Visconti was himself cut off suddenly by an apoplectic fit, and borne to the cemetery of Père la Chaise amidst the grief of all France—and—may I not add?—of all Europe. M. Visconti was present on Thursday, the 29th of December, at the first meeting of the commission for the Exhibition of 1855, at the Palais Royal, under the Prince Napoleon, and remained there from one to half-past three o'clock: he then left, and went to his office at the Louvre with a friend, M. Semard: with him he had an animated conversation, and having to dine out, he asked for his carriage, but it being then only half-past four, and earlier than the time he usually quitted the works, it had not arrived, and he sent for a hackney carriage. M. Semard saw him into the carriage, and it drove off, and soon reached his residence: the coachman got down and opened the door, when he found M. Visconti quite dead.

He had just reached the culminating point of glory for an artist, by having had confided to him the completion of the Louvre, which had occupied the genius of French architects for two centuries. He had reaped the fruits of laborious and profound studies in the very highest departments of our art, by solving the problem, which seemed to present difficulties apparently irreconcileable and almost insurmountable; and he had commenced, and to a great extent carried into effect (to the height of 30 feet in some parts), with inconceivable rapidity, the outlines of his grand design, which united all suffrages, and promises to render the palaces of the Louvre and Tuilleries the finest sovereign-residences in the world. At the same time it must be confessed that the conceptions of other architects, as Percier and Fontaine, and more recently, of M. Dusillon, had considerably assisted him in the solution.

I had from his own lips the following account of his appointment to this important work. He received very unexpectedly, about three years since, a notice from the officer of the household of the President of the Republic, to the effect that he would be received next day at the Elysée Bourbon at a certain hour: he duly attended, and was soon ushered into the cabinet of the chief of the State, by whom he was received most courteously. "It appears to me," said Louis Napoleon, "that the palace of the Louvre should no longer remain in a condition which reflects disgrace on the Government, and it is desirable that employment should be provided for the working classes: I have therefore conceived the design for the completion of this palace, which I wish you to undertake." "Sir," replied Visconti, "I am gratified by so honorable a mark of your confidence, but I venture to remind you that M. Duban is architect of the Louvre, and it is impossible for me to interfere with a position which he fills with so much credit and ability. "True," replied the President, "but M. Duban is architect of the works of the Old Louvre: I wish you to undertake this appointment as architect of the works of the New Louvre, which are to be quite distinct, and to be a charge entirely separate, and not interfering with or superseding the other." "In that case," said M. Visconti, "I am quite at your command." The prince then explained a scheme that he had himself conceived and roughly sketched, which he wished Visconti to draw out architecturally, and asked how much time would be required. When informed a month, he said, "Well, in a month I shall expect you to come, and you shall be admitted at once." At the end of that time Mons. Visconti took the plans, and submitted them to the President, who highly approved of the manner in which his views had been carried out. Mons. Visconti then ventured to suggest that, in the course of study to which the plans had given rise, it had occurred to him that a much nobler and more desirable arrangement could be adopted, which he should wish to submit to his highness's approval. The prince immediately encouraged the architect to develop his views, and this he did in his succinct, clear, and convincing

* The following is the memoir read at the Institute by Professor Donaldson, to which we referred last week.

manner, so as to carry the conviction of the President, who then asked how much time he would require to prepare the necessary drawings. Six weeks. "Enough," said L. Napoleon; "and in six weeks bring me your project thoroughly considered." Accordingly, in six weeks Visconti again attended at the Elysée Bourbon; but, during the interval, the Republic had become an Empire, and the President Emperor. It was sufficient for Louis Napoleon to see the design which his architect had prepared: his ready aptitude seized all the superiority of the arrangements proposed, and he expressed himself perfectly satisfied. Taking out a paper from his breast-pocket, he presented it to Visconti, saying, "Take this document: it constitutes you architect of the new works of the Louvre." In fact, it proved to be a formal document, signed by the proper authorities. The Emperor desired him to be ready to attend a council in a few days, and explain the plan, and to be prepared with general estimates as to the cost. Our architect, of course, was punctual to the appointment, and while awaiting the meeting of the council, engaged in conversation with several of the members. Being anxious to ascertain their sentiments, he asked their opinion: one thought it a very fine design; another, that it must cost a great deal of money; but none would venture to pronounce that it was a desirable and executable project. At length the council met, and the most vehement objections were taken to the idea; the principal one being, I believe, to its vast cost. At length the chief minister said, "It is the wish of the Emperor." These words at once calmed the storm, like oil poured upon the waves: not a dissentient was heard: many raised their voices in praise of the noble conception of the Emperor, and the immense talent of the architect; and the requisite millions no longer forming any obstacle, the design was approved, and ordered for execution with the necessary funds.

I do not at the moment call to mind any very large public building that M. Visconti has erected at Paris; but the monument of Molière in the Rue Richelieu, the fountain on the site of the old Opera Place Louvois, the noble fountain of the Place S. Sulpice with the sedent statues of the four great doctors of the Gallican church, a fine façade at the angle of two streets in the Rue Neuve des Petits Champs, and lastly, the tomb of the Emperor Napoleon under the dome of the Invalides, attest the fertile imagination, originality, knowledge, and taste of Visconti, and doubtless contributed to indicate to Louis Napoleon one capable of realizing the noblest projects in his art.

In October last I experienced many marked attentions from our colleague, due doubtless to the position I hold among you as your foreign secretary. He received me at his house, and I must own that his reception-rooms displayed refinement and elegance superior to any other private residence in Paris. The furniture was of a superb description, and full-sized chiffonnières of black ebony with glazed fronts contained most exquisite enamels of various sizes, dishes and vases of Raffaelle and Lucca della Robbia ware, or china of the revival: there were fine bronzes and choice pictures: in fact, one seemed to breathe an atmosphere of art, evidencing the host a man of refined taste, and one who possessed a perfect discriminating relish for all the arts.

He was heir to a great European name, one of a family distinguished for archæological learning, and has nobly maintained the reputation of his ancestors. His personal presence did not seem to indicate the noble qualities within him; but his exalted genius, his simple unaffected manners, his cordial address, his loyal and generous sentiments, won the confidence, the esteem, and admiration of all who were admitted to his friendship. I need hardly say how highly he valued the gratifying compliment paid him by this Institute in electing him an honorary member. He intrusted me for presentation with a copy of the work showing his design for the completion of the Louvre, inscribed with his own hand, and, at my request, has sent you full-sized drawings of certain iron girders for the floors, one of 70 feet span, which he purposed employing. Hereafter, with your permission, I may perhaps give a history of the Louvre and Tuilleries, note the various projects for their union, describe that of our lamented colleague, and explain some points of ingenious construction in the floors.

Last Wednesday, only five days ago, his remains were deposited in Père la Chaise, followed by one of the carriages of the emperor, and attended by many ministers of state and noble functionaries, the leading men in science, literature, and the fine arts; his pall borne by the most distinguished men in France, and accompanied by the tears and regrets of several hundred workmen, who felt that they had lost indeed a noble leader. The long line of streets which led to the cemetery abounded with testimonies of respect to the memory of this great man. And a minister of state, the perpetual secretary of the Academy of Fine Arts, our colleague, M. Caristie, M. Rohault de Fleury, and M. le Baron Paul de Richemont, successively addressed the thousands assembled, as did also our honorary and corresponding member, M. Hittorff, from whose touching discourse I borrow a few sentences, which seem penetrated with a due appreciation of the character of his colleague and friend.

"The loss," said M. Hittorff, "of an artist, who united the highest faculties of the mind to the no less noble qualities of the heart, is afflicting to those who were privileged to possess the opportunities of appreciating in him those high natural gifts. But when, as now, this artist is carried off in the midst of the most important works, at the moment when he might naturally look forward, as we all might, to their happy completion and glorious success, this loss is no longer a mere family bereavement, it is a public calamity. Certainly, in the immense and grandiose work, which fell to the lot of Visconti, it required, in addition to the conception of the architect, a rare combination of circumstances to carry up, in less than two years, that which had occupied nearly half a century under the greatest of our kings; it required still more to know how, as did our friend, by incessant activity, by a rapid *coup d'œil*, by a discernment as prompt as just, to render available all those precious elements, and to organize an army, as it were, of able and intelligent assistants and artificers to carry out the work.

"The head of the State was doubtless glad to connect his name with the completion of the finest palace in the world, and, perhaps, still more to recall by such a work, minds which had too long been led astray; nor did the architect peril his fair fame in this surprising rapidity of execution, which astonished all Paris, and excited the wonder of those foreigners who flocked thither. Mons. Visconti bestowed the utmost care upon the soundness of the construction, as upon the exquisite beauty of the design. These incessant occupations and flattering combination of circumstances did not at all alter the natural character of our friend. Although naturally aware of his own capacity, surrounded by numerous gifts of fortune, raised to the enviable position of Architect to his Emperor, Member of the Institute of France, President of the Central Society of Architects, nothing altered the constant amenity of his character; he was still the same unaffected modest man, always ready to oblige, and ever disposed to recognise the merit of others."

To such a eulogium it is unnecessary for me to add one word; but, in conclusion, I beg to notice an inadvertent expression which escaped M. Rohault de Fleury in his address: it is contained in these words,—"*It has been said with just reason that the loss of Monsieur Visconti is irreparable.*" To his family and friends such a bereavement is irreparable: but you and I, gentlemen, must feel, that however great this loss may be to architecture, it cannot be irreparable to France, when she possesses so many men of such distinguished talents to uphold the high rank which she has attained in the commonwealth of the arts.

It is my melancholy duty to announce also the death of M. Gau, also our Honorary and Corresponding Member, author of the noble work on Nubia, and architect of the new Gothic church, S. Clotilde, in the Faubourg S. Germain. M. Gau had also erected a very extensive prison at Paris, and had executed various other works of considerable importance. He was a native of Cologne, but had passed his professional life at Paris.

These few notes, hastily put together, may prove to our professional brethren abroad, that we are watching their works, admiring their talents, sharing their sympathies. Let architecture, at all events, produce harmony and good feeling among all her sons, in whatever country they may be.

PHOTOGRAPHY AND THE PHOTOGRAPHIC EXHIBITION.

ONE of the marvels of the present time, and certainly not the least interesting of them, is the rapidity with which photography, a creation of yesterday, has attained its present position; a remark which the exhibition just opened in Suffolk-street by the Photographic Society of London will amply justify. The first impression on entering the room is one of unmixed admiration and astonishment at the number and variety of the pictures, amounting to about 1,000 specimens. Nevertheless, although many of them are eminently beautiful, we feel bound to say that, while some individual exhibitors have undoubtedly improved, and new names appear in the catalogue, the art itself has made but little progress among English photographers since the exhibition held at the rooms of the Society of Arts about a year ago. We had hoped that the formation of the Photographic Society would have led to a more systematic investigation of the chemical agencies upon which the art is based, and to a prompt and unreserved publication of the result of such investigations. Such, however, appears not to have been the case: the council have done nothing more than call the members together seven times within the twelvemonth to talk the matter over among themselves, without, as a body, having issued or sanctioned a single communication tending to the improvement of the art, or even having made an attempt to publish a clear and minute account of the several processes already in use. Supposing they had it not in their power to promulgate anything *new*, it might have been expected they would have applied a portion of the ample funds placed at their disposal to the obtaining and disseminating, for general use, of some authorized and well-tested exposition of all the best means known or employed *up to the present time*. This want—and a most urgent want it is—was well expressed by the honorary secretary in the very first number of the journal, when he says,—"One of the simplest, but not least important, offices of the society, will be to define *what is already known*. In the works which at the present time treat of photographic subjects, our attention is constantly attracted by the announcement of new discoveries, which on inquiry, turn out to be old: there being *no recognised record* to which students may refer, to ascertain *what has been already done*, they are continually rediscovering the same facts, and wasting time in the working of unprofitable veins of ore." Such was the unsatisfactory position of the photographic student in March, 1853, and such, or worse, is it in 1854. The spread of this *elementary* knowledge is the more important, because it must be borne in mind, that while the *best pictures*, as such, will continue to be produced by those who devote their whole time to photography, it is to those hundreds of men who, having occasion to travel to distant lands, and to the most remote corners of the earth, on business, and who, if the several photographic processes were clearly and minutely explained, giving them a fair chance, or rather an assurance, of success, would arm themselves with a good lens and camera for their own recreation, if for no higher purpose—that we may look for shadows of scenery, character, costume, and modes of life of the highest interest. It is possible, nay, probable, that those who are now practising photography successfully, are producing pictures quite as good as the present knowledge of photographic chemistry will enable them to do, but this knowledge is at present confined to a few. Nine-tenths of photographers are *no chemists*, and depend entirely for success upon a patient and careful carrying out of such processes as good chemists or lucky operators may be pleased to communicate to them; but,

as the majority of such successful operators, finding a wise and fertile field open to them, have taken to practise the art professionally, it follows, as a matter of course, that the mass of amateurs are left to grope their way in the dark, and, having no other guide, are constantly being misled by the many faithless books published on the subject. No wonder, then, that so many, after expending large sums in the purchase of cameras, lenses, and all the manifold and indispensable apparatus and materials, should, after a long, tedious, and fruitless attempt, throw it up in disgust. That such is the case, is evident from the fact, that out of the immense number of persons who, from first to last, have taken up photography, the catalogue contains the names of less than 100 English exhibitors, and that, of the 1,000 pictures exhibited, 153 have been produced by four persons, viz. Fenton, Delamotte, Berger, and Stokes. Can this state of things be remedied? The day is near at hand when the society will have to elect so many of the council as shall be required to fill up the vacancies created by the retirement of such members as go out by rotation; and on the manner in which they shall discharge this duty, will depend the future fate of the society itself. They will, of course, look among the most expert amateur photographers of high standing, for men of business-like habits. They must carefully weigh the propriety of electing *professional* photographers. Each professional photographer has some secret or peculiar process of his own, which he, of course, keeps to himself. He makes money of it, and it cannot be expected that he should disclose it, or that he would earnestly lend a hand to the publication of any process, treading upon the heels of his own, which might happen to come before the council. But there is another class of candidates to whom the most decided objection must be made; we mean those who deal in photographic chemicals. We lay the more stress on this objection, because an active canvas was carried on in their favour in the Exhibition-room on the evening of the opening. To elect such men would be a fatal step. We do not object to them because they are in trade, but because they trade in the wrong article. Take an instance. One of the greatest wants of photographers, at this moment, is a good recipe for iodizing collodion. Now place on the council the makers of collodion (and we understand that three of them, at least, expect *to come in*), all of them advertising their own collodion as better than their neighbour's, would it be reasonable to expect that they could, by any possibility, become willing parties to the publication of any process, by which, if it succeeded, their own interests would be so materially affected? It would not; and the operations of the council, when they have made up their mind to do *something*, as they speedily must, would be constantly clogged by the influence of members having so decided a pecuniary interest in *secrecy*, while what the society demands is, above all things, *publicity*.

The journal of the society by no means comes up to our notion of what such a publication ought to be; but seeing that in the last number of the year the editor declares that "it has more than fulfilled the largest expectations formed of it," we must despair of any improvement.

All these matters concern the Photographic Society alone, for it is evident that whether that society stand or fall, photography itself is safe. Strictly scientific in its origin, and already beginning to rank as an art, the immense value of the aids it will undoubtedly afford to both the arts and sciences in a way and to an extent unattainable by any other means is too obvious to be insisted upon. Although photography is still in its infancy, the time has arrived when its professors must begin to take higher ground, and to look about for some systematic application of their powers to particular objects. One man to one thing, one to another. The Count de Montizon illustrates natural history, how beautifully and truthfully, this exhibition proves. The Rev. T. R. Kingsley and Mr. Delves are leading the way to a photographic development of the wonders of the microscope. Delessert's reproductions of scarce and valuable engravings already equal, in an artistic point of view, the originals. Rousseau and Deveria's zoological photography, of surpassing beauty, is already well known, and promises immense facilities to the student. Mr. Llewellyn's rock scenery shows with what advantage it may be applied to the study of geology. Contencin's reproductions of chalk drawings and paintings are charming things. The Viscount Vigier's scenery in the Pyrenees, most masterly productions, reminding one of Mr. Stewart's views of last year, show how truly and beautifully the several distances in these gigantic localities can be rendered.

Mr. Hennah's portraits are faultless: one would not begrudge a journey to Brighton for no other purpose than to be Calotyped by him. Sir Thomas Wilson's "Snow-storm" (692) is excellent: it is really a snow-storm.

To the architect and civil engineer we commend a consideration of Mr. Fenton's views of the progress of the bridge now constructing across the Dnieper; and to Mr. Delamotte's views of the works of the Crystal Palace at Sydenham, as instances of the valuable aid photography is destined to afford to our craft; to say nothing of the stone for stone representations of all the chief edifices in all parts of the world, with numerous examples of which our readers are already familiar. Mr. Tenison's panoramic view of Toledo is an interesting specimen. The rural scenery of England has had justice done to it by Messrs. Rosling, Bedford, Stokes, Sedgefield, Turner, and others. The ladies Neville, too, are entitled to high praise for their spirited contributions. A little later, when, by the aid of the Bromides, or other improvements in the iodizing process, foliage shall be as easily obtained as any other object, only think what delicious bouquets of flowers the lady members will be showering down upon us!

We here close our brief notice of this most interesting exhibition, trusting that the society and its council will do all they can to hasten the day pointed at by Mr. Berry, of Liverpool, when "the glorious *uncertainty* of photography may no more be heard of in our midst."

ON THE FRENCH METHOD OF CONSTRUCTING IRON FLOORS *

IN describing the system of the "*Planchers en fer*," or wrought-iron floors, it is not my intention to enter into a detailed account of the various experiments made before the systems now so generally used in Paris were brought to their present state of perfection,—to occupy your time with calculations of the resisting powers of rolled iron,—or discuss the suitability of the forms adopted; but avoiding all that might tend to embarrass the question, I propose to confine myself to a succinct and simple description of the systems now most frequently executed, and to furnish such practical information as I have obtained by visiting the works where they are employed, and hearing the opinions of the architects conducting them.

It would seem that, for some years past, floors composed of rolled iron joists have been occasionally executed in Paris: in most cases the joists were flat and without flanges: such constructions were known as the Système Vaux. The systems to which I am now about to draw attention are little more than an improvement in the form of the joists, and may be said to have come into general use at the commencement of the extensive alterations in the Rue de Rivoli, in the spring of 1852.

In the various works treating on the subject several systems are described, but upon visiting the Parisian buildings now in progress, we perceive but two; one purporting to be the system of Mons. Thuasne, and the other appearing to be that of any one who may get an order to execute it. From the observations made by parties conversant with the matter, I am induced to believe that the different systems are no longer recognised in general practice, and that the architect or builder combines at pleasure the advantages of all.

The "Système Thuasne" may be described as being composed of joists of iron, rolled in the form of the double T, and slightly arched in the proportion of 0·005 mètre in the mètre, or of 1 in 200. They are placed at the distance of 1·00 mètre (or 3 feet 3⅜ inches) from centre to centre, and are united by interties, formed of flat iron bars, fixed at the same distance of one mètre apart. These interties rest on the lower flanges of the joists, and are let into wrought-iron bands fixed round them: a small pin is then driven through the hole at the extremity of the intertie, between the joist and the band, and the transverse tie is formed.

The fantons are light iron rods, from ⅜ to ½ inch square, of the same length as the joists, and parallel with them: they are laid on the interties, and bound to them with copper wire, and may be said to take the place of the ceiling laths. Some of the joists and interties next the walls have their ends so formed as to make them act as ties: thus the ends of the system being firmly built into the walls, the sides of the house are effectually united. The iron work is usually painted, and allowed to dry thoroughly, before it is brought to the place of construction.

The above-described net-work of iron being completed, the next process is the plastering or grouting. This process differs so materially from the English mode of forming a ceiling, and is so important a part of the scheme, that it requires to be understood before the success of the whole can be comprehended. It is done thus: a board or flat centering is placed under the part intended to be filled in: a grouting composed of the coarsest quality of plaster is then poured in upon it, and running in between the lower portions of the iron-work, it stops against the board beneath, and forms the ceiling of the room below, which one coat of fine plaster serves to finish. The plastering thus applied is from 2½ to 3 inches thick, and sets in about half an hour: it shortly becomes as hard as stone, and assists much to stiffen the floor.

The second system referred to differs in some degree from the first, the joists being placed nearer together, perhaps from 2 feet 4 inches to 3 feet apart. The interties are formed of iron bars, from ⅝ to ½ inch square, bent at the ends so as to clip the upper flange of the joist, and again crooked downwards to rest on the lower one: the elbow so made pressing against the side of the joist, a strut and tie is at once formed between the joists. Interties upon this principle are of course made as nearly as possible of the same size, and when placed between the joists, a blow with a hammer is sufficient to fix them in their position, and make them touch at the required points. They are placed about 3 feet apart, and as nearly as may be in a direct line, so that one may resist the action of the other. The fantons or light iron rods lying parallel with the joists are laid on the interties, and the grouting performed as in the former method. The floors of the New Louvre are made upon this principle, and filled in with pottery.

It need scarcely be remarked of these rolled iron joists, that they may be made of any intermediate thickness between the stoutest and lightest of the patterns given, the depth of course remaining the same. This offers some advantages, particularly in France, where iron is dear, and the apartments divided into rooms of very different dimensions; as, in many cases, it may be desirable that the floor of the smaller room should be of the same depth as that of the larger one; but the span being less, the lighter description of joist would suffice, the internal walls being assumed to have the necessary strength to take the bearing.

As I have elsewhere observed, the grouting is always more or less of plaster, but in many cases the space between the joists is filled with pottery, that is to say, small cylinders of baked earth, about 7½ inches high and 4 inches in diameter, having the ends closed, and somewhat resembling flower-pots: these are bedded in a layer of plaster, poured in between the lower portions of the iron-work, and then receive a grouting to fill in the interstices. Perforated bricks, and pipes like those used to form land drains, are manufactured for the purpose, but are rarely used. Where a wooden floor is required (which is frequently the case), it is nailed to small joists notched in between the iron joists: sometimes, however, where

* Read at the ordinary general meeting of the Royal Institute of British Architects, January 9, 1854. By H. H. Burnell, Associate.

economy of space is less an object, the wood joists are laid across the top of the iron work.

With regard to the relative merits of the two systems, little need be said: that of M. Thuasne binds the joists more effectually at the bottom, where they are best calculated to resist the expansion of the plaster, and it may also be accompanied with some trifling economy of iron, but notwithstanding this, it has the character of being on the whole the dearer, and on this account the other method is more generally adopted. Both offer advantages on the score of being easily fixed, and when executed with common intelligence, answer well, producing a light fire-proof floor in two-thirds of the space of the ordinary wooden construction. It will be seen that floors made upon either of these principles are as incombustible and sound-proof as most others professing to offer the same advantages. It is clear that violent heat, if long continued, would calcine the plaster and ultimately bend the joists; but even in this case, were pottery of any kind judiciously employed, it would offer a serious opposition to the flames, and would be infinitely less dangerous to those in or near the building than cast-iron girders or joists with heavy masses depending upon them. I have here, however, alluded to an extreme case, as it is highly improbable that an extensive conflagration should take place where the floors and staircase are of incombustible materials.

It is with some misgiving that I speak concerning the cost, feeling that it is unlikely that a common calculation made from the French tariffs should be found a correct guide to the expense in England, as so much depends on the skill and enterprise of the parties undertaking the manufacture, the effect of competition, and the demand for the material. Perhaps for present purposes it may suffice to consider the probable prices in England to be the same as those of Paris, for it should be remembered that though we have iron in greater abundance, the wages of English exceed those of French workmen. The want of a material like the French plaster will next be felt. I am not aware that we have anything that effectually takes its place at a moderate expense. The price of French plaster in London is 32s. or 33s. per ton, about 30 per cent. dearer than in Paris; but I believe I am correct in saying that this plaster, when fresh, may be mixed with an equal quantity of sand, cinders, or ground brick, and answer the purpose in question. The cost of grouting in England must therefore be considered as double that of Paris.

The accompanying table is translated from a tariff of prices circulated by M. Thuasne last year: it also gives the weights and depths of the floors for the various spans.

PARIS PRICES.

Bearings.	Depth of Joist.	Depth of Floor complete.	Weight, per Square.	Iron-work, per Square.	Including Grouting (12m.) per square.
Ft. In. Ft In	Inches	Inches	lbs	£ s. d	£ s. d.
From 10 0 to 11 6	4	7½	370	2 19 5	3 11 5
11 6 -13 0	4½	7½	420	3 6 5	3 18 5
13 0—16 0	5½	8½	465	3 14 4	4 6 4
16 6—20 0	6½	9½	510	4 1 6	4 13 9
20 0—23 0	7½	10½	615	4 17 6	5 9 6
23 0—26 0	8½	11½	700	5 12 4	6 4 4

I regret that I am not in a position to furnish more ample information on this head, and that I am unable to produce accounts of some experiments which might convey an idea of the resisting powers of the floors when complete, though I know that these experiments have been made; but, perhaps, the general adoption of one or other of the methods may be received as the best guarantee of their results being satisfactory.

In connection with the subject of the general use of iron in France, much might be said on the French manner of constructing wrought-iron girders, but as the most remarkable of these are to be found in the buildings of the New Louvre; and as we have heard that all matters connected with that important building will be treated at a future meeting by our honorary secretary for foreign correspondence, I shall abstain from offering any remarks on the subject.

In conclusion, I would add that I have been induced to offer the foregoing remarks, because I conceive that an invention that is well received in a city so important as Paris, must be practically interesting to us, particularly if in our own country the advantage of that invention be partially wanting: it is true that our mode of building and inhabiting our houses differs generally from that of the French capital, where they are usually let in apartments or flats, but in many instances the same arrangements occur here, and in such cases, at least, we might avail ourselves of the experience of our talented neighbours. Many prejudices and conflicting interests must be overcome before any invention can be generally adopted: those of the Parisian building world seemed to have yielded readily to the desire to improve, and the opportunities offered to the development of a new method by the extensive character of their alterations; and though the improvements in our own metropolis proceed with less vigour, we may endeavour to evince as little prejudice as our neighbours in our inquiry into the merits of that principle, which constructively has done its part to invest their newly-erected buildings with stability and refinement worthy of the age.

The Chairman, Mr. G. Godwin, Fellow, observed that the questions of weight and expense were among the most important in reference to the construction of iron floors, and it would be desirable to compare the method described by Mr. Burnell with similar plans which had been adopted in England. Mr. Hosking, in his book on "Building in Towns," had described a another method of flooring used in Paris, consisting of wood and plaster, and some floors upon a similar principle had, he believed, been constructed at Messrs. Clowes's printing-office, and had been found to answer exceedingly well.

Mr. Fowler, Fellow, inquired what was the effect of weights on the floors described in reference to elasticity. Although doubtless strong, the joists were apparently slight; and he wished to know whether any particular deflection might take place, in the case of persons dancing on such floors.

Mr Burnell stated that the *Revue Generale de l'Architecture* gave the following experiment made upon a floor 16 feet span (*système Vaux*), the joists being 5½ in. deep, ⅜ in. thick, and cambered 2 in. in the 16 feet. Upon the grouting being filled in, the camber was reduced to 1⅞ in.: upon the floor being loaded with 1,000 lb. per yard super. it was reduced to 1⅞ in. and after forty-eight hours' pressure again decreased to 1 in. the deflection from the load being ⅜ in.: the weight being removed, the floor resumed a camber of 1⅛, having lost ⅛ in the experiment. When filled in with pottery, these floors were lighter, but the filling in with solid plaster formed the whole, in his opinion, into a stronger and more solid mass.

Mr. G. R. Burnell, C.E. referred to a paper read by himself at the Institute in 1849, in which he had alluded to Vaux's system. Since that time several works had been published on the subject,—the most recent and the best being one by General Morin, who in the fourth volume of his "*Cours de Construction*" gave an elaborate set of experiments on the resistance of these floors, and the formula on which their thickness and general dimensions might be calculated. From these experiments it appeared that a floor of 26 feet span showed a deflection of 7 centimetres, with a weight of 70 lb. on the square foot, in addition to the weight of the floor itself. It appeared to him (Mr. Burnell) that one of the great objections to the modern French system of filling in with plaster, was not so much the weight as the expansive action of the plaster. In practice the effect of this was to bring the floor down nearly half the amount of deflection, produced by the extreme load which the floor would bear. The use of pottery was therefore preferable, and it would be especially so in this country, where plaster of Paris was comparatively expensive. The conflagrations which had lately occurred in the city rendered it important to devise some incombustible flooring; and it was to be much regretted that in England insurance from fire was a tenant's tax, instead of being a landlord's tax, as in France, because there was no inducement to builders and landlords in this country to construct fire-proof houses.

The Chairman thought our system of *short leases* was rather the cause of the construction of houses to burn than the circumstance mentioned.

Mr. Papworth, Fellow, referred to a house in Hinde-street, Manchester-square, built by Dr. Gillies, the Scottish historian, the roof of which was made of cast-iron bars, little more than 4½ inches deep, with a sufficient flange, and filled in with flower-pots, precisely as in the French method, but cambered so as to form a vault. This had always stood exceedingly well until the walls began to settle: there was then a fracture which had caused considerable trouble; but that had been remedied, and the roof still stood very well indeed. With respect to the expansion of the plaster, mentioned by Mr. G. R. Burnell, he could not understand why it should press downwards, when there was no abutment above to prevent it expanding in an upward direction.

Mr. Fowler observed that it had an abutment above, being turned up against the joist, in a form equivalent to a curve; and, therefore, if expansion did take place, it must press downwards.

Mr. Piper, visitor, stated that the plaster would expand in all directions. The floor at Messrs Clowes' warehouse, referred to by the chairman, was of the ordinary construction, with timber joists: but a plaster of Paris ceiling was attached to it, or a sort of flat centering was fixed and secured below the joists, and the plaster was filled in from above the laths; the laths being of oak, and stronger than usual, both in material and scantling, and placed at a wider interval. The plaster therefore passed through and formed the ceiling below and a sort of pugging above: it consisted of two parts of sand to one of plaster. The floor was constructed of three courses of plain tiles, in order to make it a perfectly fire-proof and air-proof chamber, used as a drying-room: no bad effects had arisen from the expansion of the plaster. With reference to the use of cast iron in floors, he had had great experience in those constructed on Fox and Barrett's principle, and it had always occurred to him that cast iron was an unsound material to be subjected to a permanent set, and to be strained as a floor was liable to be: and therefore the introduction of rolled iron joists, which were produced so successfully at the Butterley Works, was a great advantage. Six floors had been constructed with cast-iron joists in the Albert Buildings, Spitalfields; and at the top of the building a defective joist broke, and fell down vertically, striking out one joist in every floor as it fell, without disturbing the rest—an illustration of the extreme brittleness of the material. Regarding the concrete as an addition to the weight without being any addition to the strength, or having any natural cohesion or connection with the iron, he had not been prepared to expect a very firm floor as the result of the combination, in a span of 18 to 20 feet, in a coach manufactory in Regent-street; but, on the contrary, he was surprised to find that when the mass became set, it was rigid to an extraordinary extent, forming a kind of uniform landing, in which there was a good brotherhood between the concrete and the iron, the whole forming a trustworthy mass. With regard to the cost, his experience had shown him that in Messrs. Fox and Barrett's construction it was equal to that of an ordinary floor, with the addition of the price of the floor boards; but the present state of the iron market would somewhat interfere with that calculation. From the actual rigidity to which he had referred, he was disposed to think the French floors described would have a great amount of strength. Alluding generally to the facilities for the spread of fire in houses, by means of skirtings, staircases, quarter partitions, and roofs, as at present constructed, he illustrated the power of an ordinary plaster ceiling to resist the action of fire, by referring to a severe fire on his own premises, which began in the shop, and spreading upwards by the staircase ignited the roof, and then burnt downwards. The first-floor was, however, left entirely perfect, and the second nearly so; the only obstacle to the fire reaching them being the plaster ceiling of the ground-floor, where the fire commenced.

Mr. Barrett, visitor, said that, from the remarks made this evening, he was more convinced than ever that the use of iron in the construction of floors was only a question of time. With regard to these French floors, their liability to deflection was a radical defect, as no finished floor ought to be liable to the slightest deflection or want of rigidity. The system described could moreover prevail only where plaster was abundant—as in Derbyshire, Leicestershire, Nottinghamshire. Objections were also raised to plaster on the ground of its imparting a disagreeable smell, and of its tendency to swell. He had adopted rolled iron in his own method in consequence of the prejudice against cast-iron joists, and he proceeded upon this safe principle, that, taking the concrete as so much dead weight, his joists were so proportioned that that dead weight, together with the extreme load which could subsequently come upon the floor, should not exceed the elastic limit of the iron. He used rolled iron joists for spaces not exceeding 24 feet. On reference to the table of weights used in Paris, he found that the French floors had not more than half the strength of his own: thus, with a bearing of from 16 feet 6 inches to 20 feet, the French used a weight of iron of 510 lbs. per square, whereas he should use 8 cwt. in addition to the difference in the weight of the grouting; and therefore, if the French floors were safe with 5 cwt. of iron, his floors must be more than safe with 8 cwt.; and

the cost of the latter, in joists only 18 inches to 2 feet apart, as compared with a timber floor, was about 7 to 10 per cent. additional. The thickness of concrete, on his plan, in a floor of 20 feet span, would be 7 inches from the flange of the joint, the whole substance being 12 inches thick, including 2 inches for the floor itself; and as a question of expense, it would be very easy to reduce the strength of the iron (and with perfect safety), so as to bring down the cost to that of an ordinary timber pugged floor.

Mr. C. H. Smith, visitor, stated, for the consideration of the members, the fact that no material could be more destructive to iron, especially wrought iron, than plaster of Paris. The girders might be coated with some material to protect them, but in moving them about it was liable to be chipped off; and if the smallest pinhole were exposed to the plaster of Paris, the iron would be corroded. On the contrary, lime tended to preserve iron; and therefore a coating of 2½ inches of ordinary mortar next to the girders, before using the plaster of Paris, might be desirable.

The Chairman, observing that it was impossible to overrate the importance of the subject, suggested an adjournment of the discussion, in order to elicit the careful and deliberate opinions of the members, rather than their hasty and unconsidered observations; and the meeting was accordingly adjourned to the 23rd inst.

LIGHT IN ROME.

THROUGH the energy, skill, and capital, of some of our countrymen, fine gasworks have been erected in Rome, as we mentioned some time ago, and on the first day of the new year some of the principal streets were illuminated, to the great satisfaction of a multitude of persons of all ranks who filled them. The *Giornale di Roma* congratulates the municipality on the great advantage which has been conferred by the company on the city, and especially praises the ability and devotion of the engineer, Mr. James Shepherd, under whom the works have been executed. We happen to know something of the difficulties which have been surmounted, and cannot sufficiently admire and applaud the indomitable perseverance with which Mr. Shepherd has laboured through them. The history of the affair, and of the intrigues with which it was opposed, would form a curious and instructive story.

PROPOSED ROAD BETWEEN BROMPTON AND HYDE-PARK.

WITH your permission, I cannot allow an assertion of Mr. Elger, quoted in your journal of Saturday last, to pass uncontradicted. That gentleman states that the object in question, viz. the opening of a communication between Brompton and the Kensington-road, is one "which no parties resident in Brompton could have contemplated when purchasing property there, and, indeed, which could not have been effected but for the manner in which I have arranged my building operations on the Kingston House estate."

To ordinary capacities, it must be self-evident that the builder of Brompton-square, in leaving uncovered the plot of ground at the north end, could have had no other object in view than that it should afford a means of communication between his own and Lord Listowel's estate, and through the latter to the Kensington-road. But what I wish particularly to refute is Mr. Elger's assumption that no purchasers of property in Brompton could have been endowed with the small degree of foresight requisite to perceive that even if any lessee of the Kingston House estate should pertinaciously resist the opening of a direct communication between Brompton and Hyde-park, as Mr. Elger has done for several years (except on the receipt of an exorbitant consideration,—so large, indeed, that he himself imformed me, after finding there was no chance of its being offered, that he *intended* it to be almost prohibitory), Parliament would ever reject an application for giving to an important and populous district like that of Brompton, direct access to Hyde-park and Kensington-gardens. If the Legislature were to do so, it would *pro tanto* stultify its general efforts to improve the sanitary condition of the metropolis and its suburbs. For my own part, as a purchaser of houses in Brompton-square in the year 1842, I can aver that I bought that property on the express understanding that an opening into the Kensington-road would in all probability, at no distant period, be effected; and a plan was actually exhibited by the vendor to myself and three other purchasers with whom I am acquainted, defining a road through the Kensington estate precisely similar to that which Mr. Elger has made. Certainly he may safely assert that we could have known nothing of the details of his subsequent "building operations," or that after the lapse of a few years he would erect a particular row of houses, which he has designated Prince's-terrace, and *that* we care little about; but what we solicit of Parliament is, that whereas a public road exists, maintained at parochial cost, and reaching to the very edge of the Brompton district, the inhabitants of that district should not be capriciously debarred from passing over that road, as being the only short and convenient line of access to the Kensington-road, Hyde-park, and Kensington-gardens, which are as much the property of the inhabitants of Brompton, as they are of Mr. Elger or the twenty families resident in Prince's-terrace, some of whom, I am happy to say, have petitioned Parliament to grant the thoroughfare. * * *

Rutland-gate. DAVID ROBINSON.

EARLY ENGLISH CAPITALS: STONE CHURCH.

WESTWELL CHURCH, KENT.

IN the early spring of 1848 the writer of this article commenced a series of notes of the ancient churches of Kent: since that time he has visited nearly 300 of these interesting structures.

As a matter of course, in so large a number, very many have been found that have hardly repaid the trouble taken on their account, while on the other hand there have been some that would amply compensate for any disappointment. Among them is the church at Westwell, of which the accompanying engraving gives an illustration. The village, of which the church forms the principal feature, is situated about three miles from Ashford, and therefore is easily to be reached in these days of rapid travelling. The exterior has but little to recommend it, but the interior is not to be equalled by any church in the county. It consists of a chancel, nave, and aisles: the general style is the Geometrical. The whole of the work is very excellent, but the part that most merits attention is the chancel. As will be seen, the division between that and the nave is formed by a sort of stone screen composed of trefoiled arches on very slender and lofty shafts; between these shafts, the wood screen once stood,—a small portion of it still remains, which has been carefully covered over with carpet and baize, for the comfort of the occupants of the next pews. There are also a few of the old stalls remaining, but in a very sad state—indeed, this is the case with the whole church. With the exception of the church of St. Cross, it would be difficult to find a more liberal supply of whitewash than has been lavished on this fine chancel; nor is this the worst—very much substantial repair is required. The neighbouring church of Eastwell has been restored at the cost of the Earl of Winchelsea; surely this far more interesting and valuable specimen might meet with like treatment at the hands of Sir Richard Tufton, who takes the great tithes.

There are others of the Kentish churches with beautiful interiors, such as Hythe and Wood churches, and of these and others we hope at some future time to give an account.

We give now, a representation of some of the beautiful early English capitals in Stone Church.

W. C.

AGE OF THE DOORWAY OF KILLESHIN CHURCH.

IN the observations which accompany the very beautiful elevation of the ancient doorway of Killeshin Church, from the accurate pencil of Mr. Johnston, that gentleman alludes to the imperfect inscription running along the abacus of the impost, and supposes it to be some Scripture text. So far as legible, however, it appears to commemorate the erection of the doorway, if not of the church. It is in Irish capital letters, and may be translated thus:—

A PRAYER FOR ART, KING OF LEINSTER . . . FOR THE ARCHINDECH . . . . LENA . . . . FOR THE CHIEF OF UI-DUACH.

In the present mutilated state of the inscription, it is impossible to fix the exact date, or to ascertain the king of Leinster to whom it refers: unfortunately, the name of the *Archindech*, or prior of the church, is also deficient. One thing, however, the inscription renders certain, viz. that the doorway was erected previously to the Anglo-Norman invasion.

JAMES GRAVES.

HARDENING OF ENGLISH CAST-STEEL FOR CUTLERY.—August Kiesor, of Issny, in Switzerland, prepares sharp instruments from English cast-steel, by immersing the blades at a dark cherry-red heat, into a bath composed of four parts of finely-powdered yellow resin, two parts of fish oil, to which is added, in a very hot state, one part of melted tallow, and allowing them to cool perfectly; after which they are heated without wiping them, and hardened in water in the ordinary way. The blades hardened by this process, according to the *Gewerbeblatt aus Wurtemberg*, are more uniformly done than by any other method; at the same time that they are not too much so, or the metal too brittle.

CHANCEL OF WESTWELL CHURCH, KENT.

"DESIGNS ON THE BRITISH MUSEUM."

INTERESTED in maintaining the honour of the architectural profession, we were somewhat startled by a smartly-written article under the above heading in the *Athenæum* of last week, which seemed to impute a "would-be job" to Sir Charles Barry, and led us to suppose that he had been intruding on the ground occupied by a professional brother, and issuing uncalled-for suggestions for the knocking about of the British Museum. We were led in consequence to make some inquiries, and find that the facts are simply these: that the demand for increased space in the library department being renewed to the Treasury, the latter office referred to the Woods and Forests Mr. Panizzi's proposal to erect a building in the quadrangle as a reading-room, and an article in the *Quarterly Review* of December, 1852, for a report. The Commissioners of Woods in their turn forwarded these documents to Sir Charles Barry, and requested him to report on them, and also to give his own opinion as to "the most economical and effective mode of providing the requisite increase of accommodation for the library as well as for meeting the wants of other departments of that institution, with reference to the probable additions that will be annually made to them."

With the concurrence of Mr. Smirke, Sir Charles Barry undertook the inquiry and made his report. The purport of his recommendation is, that the inner quadrangle should be covered with a glass roof, to form a Hall of Antiquities; and that such alterations should be made in the interior as would admit of appropriating a *separate story* to each department, the principal floor being reserved for the library department; the reading-room to be at the north side, and the Egyptian Gallery to be converted to an ornamental library. Accommodation, the report states, could be provided for thirty years' increase in each department; and the cost of the whole is calculated at 105,000*l.* It was further urged that the property surrounding the Museum on the east, west, and north sides should be purchased for the time to come.

Without adopting or discussing these recommendations, which involve to some extent a consideration of the proposed *new institution at Kensington*, a fact which probably gave a fillip to our contemporary's indignation, we think it but justice to Sir Charles Barry to say exactly what it is he has done.

PROVINCIAL NEWS.

Lynn.—The town council here having passed a resolution recommending that a poll be taken to decide whether a rate should be laid for the erection of public baths and washhouses, at a cost not exceeding 3,000*l.* a public meeting has been held, at which it has been decided that a poll be forthwith taken for the purpose.

Northwood.—On the 5th inst. a new church was consecrated at Northwood, in the parish of Ruislip, near Watford. The edifice has been built by subscription: Lord Robert Grosvenor, the patron, has given the ground and endowed it. The church, which is intended to accommodate 300 persons in nave and chancel, is in the Early Decorated style, from designs by Mr. Teulon, and has a tower, shingle spire, and five stained-glass windows.

Speenhamland (*Berks*).—A new parsonage-house is about to be built here for the use of the incumbent of the district, from designs by Mr. G. E. Street. The work is estimated at 1,240*l.*; and Mr. W. Low, of Speen, is the contractor.

East Lockinge.—The church of All Saints, at East Lockinge, Berks, was reopened on Sunday before last. The building has been thoroughly restored and refitted under the superintendence of Mr. Street. Messrs. Fisher, Oxford, contractors.

Bristol.—Lord Palmerston has ordered the city authorities to erect a new lunatic asylum, the Commissioners of Lunacy having reported to him that the present asylum is wholly inadequate. A meeting of council was held on Tuesday week, to consider the letter, and estimates were laid before it, showing that the sum requisite will be about 45,000*l.* It was determined to adjourn for a fortnight; and meantime, the order of the Home Secretary is to be circulated among the citizens.

Plymouth.—The Plymouth new workhouse was formally opened on Tuesday before last. It is conveniently situated at North-hill, near the new prison, and was commenced in April, 1852. The total cost of its erection and fittings-up amounts to about 10,300*l.* The front building is appropriated to the offices and board-room. Behind this and forming the centre of the establishment, is the building for the poor, capable of accommodating 700 inmates. Attached to this is a dining-hall and chapel, 60 feet by 30 feet. At the back of the dining-hall is the kitchen. The other principal buildings consist of hospital, and hospital buildings, including lunatic and fever wards, &c. There is also a separate building appropriated to married aged couples. The front building is 250 feet long, and the whole establishment covers nearly four acres of ground.

Burslem. — The demolition of the old Town-hall, which is to be replaced by the new and more spacious erection, has been commenced. One of the men, in removing the vane from the cupola, slipped and fell upon the roof, but fortunately suffered only a very slight injury.

Chester.—The present theatre in this city (which, by the way, belongs to the Ecclesiastical Commissioners), is to be converted into a music-hall, which will accommodate an audience of 1,400, and an orchestra of 300 performers. It is proposed to raise the sum required for the alterations (3,000*l.*) in 5*l.* shares.

Liverpool. — A discussion took place at a meeting of the Health Committee last week, as reported in the local *Journal*, on the dangerous state of many warehouses, which were frequently over-loaded, and on the necessity of more summary power to insure the public safety than as yet exists. Mr. Rishton said that, had they succeeded in carrying the Building Act, there would have been summary power: he was satisfied that unless they got some power as to the loading of bonded warehouses, the consequences would be very serious indeed; and Mr. Gladstone hoped this remark would arrest attention through the press.

Stanley.—Three windows have been just put up in the chancel of St. Ann's Church, Stanley, near Liverpool. A painting of the Ascension fills the centre window: seven figures are introduced, on a deep blue ground. The two side windows are occupied by life-s ze figures of St. Peter and St. Paul, each bearing their respective emblems. Below St. Peter are introduced in an ornamental compartment the family arms of Mr. Preston: below St. Paul, in a similar compartment, are the armorial bearings of the Rev. Mr. Gardner, the incumbent. Each window is surrounded with a border. Messrs. Pilkington, of St. Helen's, designed and executed the windows, which are the gift of Mary Ellen, George Theophilus Robert, and Margaret Jeanette, children of William and Margaret Preston, of Rock House, West Derby.

Rochdale.—At Blue Pits, a mutual improvement institution has been established, and a new building has been opened, dedicated to its uses. The building is one story high, containing three rooms decorated.

Blackburn.—The Master Bricklayers' Society held their annual meeting at the King's Head Inn, on Monday in last week, when about forty masters sat down to "a sumptuous dinner, replete with all the delicacies of the season. After dinner, the company having been joined by their wives, dancing was kept up till a late hour."——The contractors for the erection of the New Bull Hotel, Messrs. Baron and Sons, gave a "rearing" dinner, on Thursday in last week, to the workmen employed, when about 140 were present.

Preston.—On removing a quantity of sand and bricks from the cellar of the old Cockpit, or Temperance Hall, which belongs to the Earl of Derby, the foundation sank considerably, and the front wall of the building was rent to a dangerous extent, threatening the demolition of the whole structure, especially as an extensive fissure before existed in the back wall also. A crowd of poor factory operatives had occupied the building, and separated just previous to the accident, otherwise there might have been a repetition of a recent catastrophe of a similar kind.

Barnsley.—A new national school is about to be erected, at a cost of about 400*l.* at Hoyle Mill, near this town.

Doncaster. — Instead of the donation of 1,000*l.* originally offered by Mr. W. Forman, of Pipbrook House, near Dorking, some of whose ancestors are buried in the south-east chapel of the parish church, he has now proposed to take upon himself the entire restoration of that chapel, on a plan more highly decorated than the rest of the church, and involving an expense of more than double his former offer. The lessees of the great tithes are bound to restore the adjacent chancel. Mr. Scott's surveyor worked out the details of the estimate of 2,500*l.* which he furnished to them last July, to a still higher sum, merely for rebuilding the chancel as it was before, but without the screen and the painted window, put in by a former lessee, but which the present lessees refuse to restore, and not including architect's commission. The tithe-owners, however, only offer to pay 2,100*l.* in full of all liability; and rather than risk their spoiling the whole work by rebuilding the chancel themselves without regard to Mr. Scott's plans, which their trustee threatened, the committee have accepted the offer.

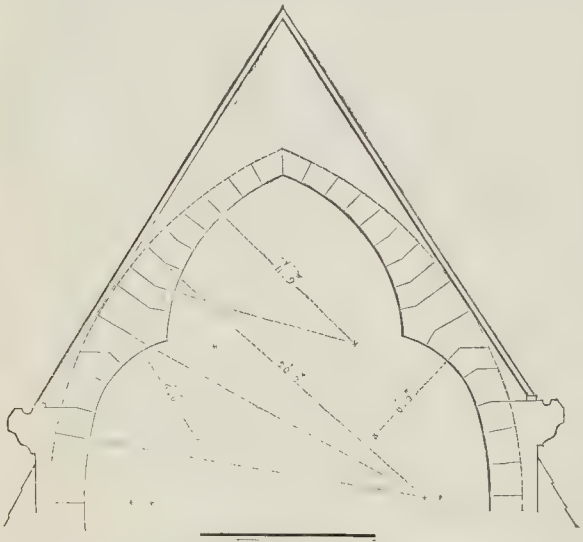
Hartlepool.—The new ferry at Hartlepool has been put into operation. The landing-places are formed by extensive piers on both sides of the harbour, facing directly into it, and will, it is feared, be much exposed in heavy weather. The collector's lodge is furnished with a check style on the principle of that at the Thames Tunnel, which registers the number of passengers.

Sunderland.—Reports of a somewhat alarming nature, in regard to further appearances of insecurity having shown themselves at the west side of the south abutment of Wearmouth-bridge, have been prevalent; but Mr. Moore, the engineer of the bridge, reports to the council that a settlement of the flagging at the north-west corner of the terrace adjoining the bridge-house, is only what might have been expected under existing circumstances.

Gateshead.—A spectator thus describes, in the *Gateshead Observer*, some electrical phenomena observed during the late snow-storm. "The chimney of the chemical manufactories here is above 200 feet high, and is surmounted by a massive stone coping, the top course of which is secured by a metallic ring communicating with the lightning-conductor. At the commencement of the storm, this ring, which is about 24 feet in circumference, was perceived to exhibit a multitude of short bluish pencils of electric light. These gradually increased, in sparks or flashes, apparently 5 or 6 feet long, accompanied by sharp reports, increasing in violence to a certain point, when suddenly the whole of the top of the chimney became immersed in a mass of light of overpowering intensity, and at the same instant a sharp and terrific crash was heard, more like the explosion of some enormous quantity of detonating powder than the sound of thunder." Nevertheless no harm seems to have been done to the chimney, and the circumstance affords strong evidence of the protective power of the lightning-conductor, even though it were insisted that, in fact, the lightning was attracted to the chimney by the conductor.

Maryport.—The trustees for the town and harbour have decided on the construction of a wet-dock at the western end of the existing dry-dock. The works, which are expected to be completed in eighteen months, at a cost of 10,000*l.* are to be carried on under the direction of Mr. Rendel. This activity, says the *Carlisle Journal*, is the result of the Silloth Bay movement.

Glasgow.—The opening of Victoria-bridge took place on Monday in week before last, in presence of an immense concourse of people, and was followed up by a convivial meeting in the City and County Buildings, the Lord Provost in the chair, when his lordship, in his address, expatiated on the advantages of building wide, spacious, and level bridges. "The city of Glasgow," he added, "could boast of two bridges the widest in Britain—each 60 feet over the parapets. The next widest was Londonbridge, being 53 feet; the next, Westminster, 48 feet; the next, Waterloo, 42 feet; and the



next, Southwark, 42 feet. The citizens of Glasgow had reason to be proud of their bridges. In addition to the new and elegant structure which had been opened this day, they had Glasgow-bridge, which was built to replace one begun in 1768, and opened this day eighteen years. In 1829 Hutcheson's Bridge was opened." His lordship regretted that at the opening of Victoria-bridge he was only able to say, "Open to her Majesty's lieges in terms of Act of Parliament;" for his desire was, that all their bridges should be free. He trusted, however, that arrangements would be concluded before the expiry of the present year, which would enable him to announce the gratifying fact. The usual compliments were paid to Dr. Walker, the engineer, and to Mr. York, the contractor, and his son, Mr. James York.

STONE ARCH, BRUEN TESTIMONIAL CHURCH, CARLOW.

At the Bruen Testimonial Church, now building in Carlow, under Mr. J. Derick, architect, two granite arches have been erected over the chancel which have excited some attention. According to the local *Sentinel*, "the architect's difficulty was this:—a simple arch was impossible without a greater counterfort than he could give to it, as he could not avail himself of pinnacles over buttresses, the building having been commenced and carried up with a view to support ornamental oak trusses in the usual way, these requiring little counterfort as compared with arches of stone, as each arch weighs about 22 tons. The difficulty of finding materials for the oak trusses prompted the architect to avail himself of the material at hand—the Carlow granite—and to adopt an entirely new principle in constructive arches of large span, where great counterfort could not be given. The principle consists in the connection of a trefoiled arch within a simple lancet arch, the radiation of the voussoirs being to the centres of the several curves. The voussoirs which compose the trefoil being common to those composing the lancet, and the trefoiled arch exercising a force within the building which neutralises the outward thrusting force of the lancet arch, the two forces produce a state of rest."

The real principle, however, will be better understood from the annexed diagram, with which we have been favoured by a correspondent.

Without desiring to lessen the praise given to the architect, we may remark that the object of this arrangement is met to a certain extent by every foliated arch: the structural requirement indeed probably produced the form.

ARCHITECTURE:
ITS RELATIONS TO NATURE AND THE INTELLECT.

A Lecture on the above subject was delivered at the Institution, Avenham, a few evenings ago, by our contributor, Mr. Huggins, of Liverpool. After some preliminary remarks, the lecturer observed that architecture was based on external nature, and on the powers, physical and mental, of man,—as much on external nature as consisted with the due exercise of human intellect,—and was an intellectual rendering of the forms around us. Nature, in the material universe, presented us with no literal model, but she gave us *principles* of construction for observance in the erection of our edifices, which were therefore built as nature would build them for the same purpose: we gathered how she *would* build ours by observing how she *did* build her own. While the affinities of the solid walls of our edifices were with the arrangement of inert matter in the quarry, there were yet various parts, as framed floors, partitions, and roofs, cradling for curved ceilings, &c., which followed the example of organic nature shown in the animal frame: of these the flooring boards, the slates, the outer and inner coating of plaster or cement, were the integument skin of the skeleton, which was strikingly imitative of nature in her organic productions. There were materials, as metals, from which probably an entire system of architecture of other affinities might be derived: wood had capacities for form superior to stone, but was weak and combustible: metal was free from these objections, and was susceptible, from its peculiar strength, tenacity, and flexibility, of effects more emulative of the landscape—more suggestive of the charms of grove and thicket than masonry could pretend to. The forms and proportions he educed from nature, the architect was capable of applying according to different circumstances, in which operations invention might be said to consist. Elements gathered from various and distant departments, kingdoms, or families of creation, were, before being embodied in stone, so variously distributed in his imagination, under the laws of intellect, that in the higher works, as those of the Greeks, the resemblance was only perceived by subtle thought, kindred to that of the designer himself. But into these forms and combinations nothing could enter that had not its origin in nature; and even in the minutest divisions and subdivisions of architectural form, down to *finish* and texture, nature had been the prompter. Indeed, decoration *proper* was chiefly obtained from direct imitation of natural foliage and flowers, fruits and shells, as without direct imitation we could not have the perfection of beautiful form: those images of beauty that delighted us in our temples and palaces, our halls and mansions, were derived from organic life, from the leaves and flowers of the field, through all the various tribes of animals, up to man himself; and the highest object of architectural decoration imitated from nature was the human figure; for when the Greeks and mediævalists essayed to go farther, and embellish with gods or angels their pediments and niches, nature was still their type and source: the Greek divinities were the apotheosis of mortal beauty; and in the Middle Ages angels were human figures, with the wings of the peacock or eagle, or, in the case of evil ones, of the bat. Nor was this obligation to nature which he had endeavoured to trace an after-thought of architecture,—the result of advancement and civilization: the infancy of every true style of art betrayed its origin from nature, which was resorted to in the very first structures designed on æsthetic principles: in the tabernacle of the Israelites, erected in the wilderness, the pattern of the furniture was from vegetation. The golden candlestick, "branching like the almond tree," was adorned with flowers and knops. Some of the richest and most beautiful of the ornaments of Solomon's Temple were imitated from the palm and the pomegranate: "Upon the tops of the pillars was lilywork: the brim was wrought with flowers of lilies." The lotus was probably the type of the first Egyptian column. The so-called Corinthian capital evidently originated (on the banks of the Nile) in the shape of bells of flowers, which became decorated with leaves and stems of the reed and palm. The lotus in its different stages of bud, bloom, and blossom, was also profusely employed as an element of decoration in the Egyptian temples, where flower and foliage decoration clung round the bases of their columns, like living plants. Of Indian architecture, much the same might be said. Among many whimsical elements, the results of their superstition, we found floral sculpture, representations of men and animals, employed in decoration. The temples of Genesa were profusely ornamented with carvings and paintings of the different limbs of the elephant, but most frequently of the head, repetitions of which often formed the ornamental design of the cornice and pillars, where it was most successfully employed in carrying out the expression of mystery sought to be conveyed. In the works of the more refined Greek we found but a more refined application of nature's lore. The Greeks followed the example of the Egyptians in selecting their ornaments from the plants of their own country. They adopted the foliaged capital of the Egyptians, and in its further improvement were guided by natural objects and forms: they added the acanthus and the tendril like volutes, and on their friezes, architraves, columns, and soffits, they sculptured leaves, berries, flowers, roses, palms, heads of victims, and busts: nearly all the attributes and emblems employed by them to give expression to their temples, were from natural objects, flowers, or animals. In the Ionic capital they adopted the spiral line of shells and horns for a volute: the ovolo they so largely employed is a natural curve. As to the Greek shaft flutings, he believed they were not the symbol of the bark of the tree, but an imitation of natural reedings or flutings of stalks, &c. In conclusion, Mr. Huggins glanced at the error of architects in neglecting the fountain of wisdom thus open to them in nature. Its professors had imitated the old masters rather than the old mistress, and sacrificed the interest of art at the shrine of precedent. The prevalent notions on the subject of architecture were in consequence far from the truth. According to these architecture was a mere name—a glory long since past—a thing dead both to the realities of the present and the hopes of the future. But if architecture had the living and infinite relations for which he contended, it must be something more than this. He defined architecture "the spirit of beauty in building." It was the essence that was to pervade the work, whatever the proposed plan, whatever the material of its construction. It was no re-

specter of materials or modes of structure, nor was it confined to one type of form or class of building; it would inhabit the simple oratory or auditorium no less than the aisled and vaulted cathedral.

NOTES AND INQUIRIES.

ARCHITECTURAL AND ARTISTICAL.

Sound.—In reply to your correspondent (page 6), who wishes to be informed of a covering to a partition to prevent sound, I know of nothing better for the purpose, with the advantage that it adds little to the thickness and is inexpensive, than Croggon's asphaltic felt. As a precaution against vermin, if the partition is or is likely to be infested, wash it well with a solution of the corrosive sublimate of mercury, which may be had of most chemists, but should be used with caution, being a powerful poison. When dry, attach the felt, which may be papered or coloured over. T.

"A." inquires on the subject of a non-conductor of little weight for preventing sound from passing through a boarded partition, or one of lath and plaster. One of the most effective modes for effecting this object is by filling in the quarterings of the partition with sawdust, moss, or similar materials. It is necessary to consider ventilation, and to guard against the dry rot. This is important in the construction of houses; for it is known that the best measures for preventing the spread of sound are equally effective in preventing the spread of fire. In 1838, Messrs. Borrodaile and Co. manufactured a felt as *pugging* for deafening sound, either between the joists of stories or in partitions. F. L.

Flues.—I perfectly coincide with your other correspondent (page 6); but if Stourbridge clay pipes were allowed to be used they possess decided advantages, particularly in random rubble walls, and will in most cases ensure a free and uninterrupted draught, are a great security against fire, and easily swept by the machine brush, the joints being filled with pargetting. T.

Notices of Books.

The Laws of Artistic Copyright, and their Defects. By D. ROBERTON BLAINE, Esq. of the Middle Temple, Barrister-at-Law. Murray, Albermarle-street. 1853.

To artists, sculptors, engravers, printsellers, &c. this little volume will be found to be very essential. Such a treatise was much needed, as it appears that so little knowledge prevails amongst artists themselves of the actual conditions under which their works become copyright, that it is doubted whether the copyright be really acquired or retained in more than *one* out of every hundred works of sculpture, for instance, produced in this country. Yet a good deal more has been done by the Legislature for their protection than they thus seem to have done for themselves. There are various Acts under which such protection is granted; nevertheless, farther legislation is very much needed, and the present author points out the defects of those Acts which are already in force, and suggests amendments and consolidation. Every requisite information is also given as to the law in its present state, and all that is necessary to keep to the right side of it, so that by aid of such a guide, every artist may know his rights, remedies, and the only proper mode of transferring such rights. In treating of the Sculpture Copyright Acts, for example, we find that if a sculptor be employed to make any new and original sculpture, the copyright vests in the employer, although that is not the case where the employer commissions the execution of a work already modelled by the sculptor. Neither in one nor other, however, will any such right be vested, except on condition "that before the work is put forth or published, the proprietors shall cause to be put thereon, first, their names; second, the date." The sculptor, therefore, can only claim copyright of a work of his own origination executed for an employer, where he has engraved on the *model*, as well as on every cast or copy, his names and the date, namely, the day of the month and year when the model is first shown or otherwise published in his studio or elsewhere, *and such date must never be altered;* whereas it is a popular and fatal error among sculptors to suppose that their names, and the year when the finished *copy* from the model is executed, are sufficient to engrave on such copy. And the law has a very good reason, too, for the stringency of its rule in this respect, since it is from this date alone that the public can know, legally speaking, when the copyright shall expire, or whether it has already expired. In order to have any right under the Copyright of Designs Act, moreover, the work must be registered under that Act, and the word "registered" marked upon it, and upon every copy or cast of it, together with the date of registration. In the transfer of copyright, too, there are fallacies in practice which ought to be avoided; but for this and much other valuable information, as well as for copies of the Acts relating to works of art, we must refer to the useful little treatise now before us.

British Classics: The Works of Oliver Goldsmith. Edited by PETER CUNNINGHAM, F.S.A. Vol. I. London: John Murray. 1854.

PROMISCUOUS and aimless reading is a characteristic of our time, and a great mistake. We step slightly out of our way to say this, because we feel that the error is a serious one, and its correction of the utmost consequence. A week never passes without bringing us inquiries for the names of books to read in hours of recreation. Compliance is of course out of the question, but we would here urge that class of our readers from whom these inquiries come, to master those works which have become part of our literature, before they seek to cope with the flood of new books, good, bad, and indifferent, which every month brings up. They may be none the better for reading the "Melancholy Milkmaid, or Midnight Murder made Manifest," and will incur no reproach by the omission, while they may feel sure of deriving pleasure and advantage from the works of Pope, Addison, Johnson, or Goldsmith, and will find themselves oddly situated in society if they do not know them. The remark is made of course to a very limited class.

The issue of a new edition of the standard classic authors of England has been commenced by Mr. Murray, and the volume named at the head of our notice is the first of the series. Besides the merit of cheapness, it is to have "the higher recommendation of a text purified from error, notes tending *bonâ fide* to elucidate the text without encumbering it, with the additional attractions of a beautiful and legible type, fine paper, compactness of bulk, and economy in price."

In addition to the works of the authors we have named, Gibbon's "Roman Empire," and the works of Dryden and Swift, are already announced.

The gentleman to whom the editorship of the volume now published and other works in the series has been confided, Mr. P. Cunningham, is peculiarly well fitted for the task: his studies have long been specially directed to the literature, manners, and people of the last century; and the large amount of minute information on these points which he possesses, conveyed as it will be by a practised pen, will tend to give great value to the edition. With respect to the notes in the volume before us, Mr. Cunningham says, "I hold myself responsible for all, although to the authorship of many I can lay no claim whatever. It was once my intention to distinguish those of previous editors by their names, but I abandoned that idea, because in many cases I was unable to identify the writers; while I had myself taken some liberties, either of correction or compression, with almost every note: I therefore resolved to adopt the notes of my predecessors with this general caution and admission, and to let my own appear without the often recurring ostentation of my name attached to them." This course, as it seems to us, exposes him to comment, and we would suggest to him the advisability of going back to his first intention, and distinguishing the notes of others by the initials of their authors.

The writer with whose works the series commences is one of our especial favourites, and we shall be anxious to see how Mr. Cunningham treats his biography. The life of "Poor Goldsmith," who touched nearly every style of writing, and lent a grace to everything he touched, is full of interest and instruction, teaching, amongst other things, that genius cannot always avert the evils of a defective early training, and that a man may be a lasting benefactor to his race, and the author of much sorrow to himself.

We welcome warmly the "British Classics," and recommend this edition to our readers.

Miscellanea.

SCENERY AT THE PRINCESS'S THEATRE.—Although great pressure on our space has prevented us from giving so much attention to the scenery of the Christmas pieces as we have at other times done, it would be unfair to those who produced what we are disposed to call the best pantomime of the season, not to point attention to "Harlequin Miller and His Men," which gives evidence throughout of the same careful watching and scrupulously tasteful direction, which make every thing produced here a success. The first scene, the Azure Lake (by J. Lloyds), is a charming piece of fairy architecture and landscape, but the great scene of the introduction is the Fire King's "Hall of Audience," painted by Gordon, and arranged by Mr. Oscar Byrn—the life, movement, dresses, and transformation (four men into one most flesh-like face), are all artistic in the highest degree. It is too late to say more, although there is much more might be said.

THE IRON TRADE.—All the quarterly meetings have passed without any change in the determination of the iron-masters to abide by current prices. Indeed, as remarked by the Wolverhampton trade correspondent of the *Morning Herald*,—"There is a very strong determination on the part of the leading members of the trade to check any further advance of prices: in fact, that could not be attempted without speedy injury to the trade." For all descriptions of iron—bars, hoops, sheets, and strips, and plates, the orders both for home and abroad are declared to be abundant, but buyers are cautious in regard to purchases as well as sellers, the latter of whom are said still to have enough to do with old orders. American orders are said to have been plentiful, and iron ship and house building in this country continue in an active state. One of the leading iron-masters (an employer with his partners of some 8,000 persons), states that the quantity of iron exported last year fell little short of 4,800,000 tons, which is about three times the amount altogether produced no longer since than 1825.——Letters from Vienna announce that a reduction in the Austrian duties, both on pig and railway iron, was to take effect from the 1st inst. The reduction in pig iron is to the extent of 10s. per ton; that is to say, from the existing rate of about 25s. to 15s.; while on rails it is to be 2*l.* per ton, or from 7*l.* to 5*l.*

INDUSTRIAL EDUCATION AT PADIHAM.—Sir James K. Shuttleworth, late Secretary to the Council of Education, being of opinion that the schools for primary instruction now working in Padiham and Habergham under the guidance of himself and other gentlemen, were insufficient for the requirements of the district, has conceived the idea of founding a school for children of the middle classes, where secondary instruction may be imparted, or, in other words, where they may learn a sufficiency of science and of art to make them useful as managers of manufactories, surveyors, and practical mechanics; and further, to enable them to reach, if possible, a higher grade of artistic and scientific excellence. With this view arrangements have been made, and a school has been opened in Padiham, to be self-supporting; although Sir James guarantees preliminary expenses. In order to give *éclat* to the opening, and to afford the people for whose benefit it is intended an opportunity of understanding his plan, Sir James invited about two hundred of the respectable middle classes of the neighbourhood to drink tea with him at Gawthorpe Hall. Dr. Lyon Playfair attended as a representative of the Department of Practical Science and Art, and took an active part in the proceedings. Some designs, illustrative of mechanics, prepared by the Department under the direction of Dr. Playfair, for the use of schools (to be supplied to such establishments at half price), were disposed about the walls of the hall where the *fête* was held. Sir James read an address two hours long, explanative of the objects in view, and the meeting was also addressed by Dr. Playfair, and other gentlemen. Business was interspersed with music as well as more physical enjoyments, and the company at length dispersed, evidently delighted with their combined entertainment and instruction.

THE PRESIDENT'S ADDRESS AT INSTITUTION OF CIVIL ENGINEERS.—On the 10th inst. Mr. James Simpson, on taking the chair for the first time after his election as president, made an address, in which he alluded to the difficulties formerly experienced by young engineers at the commencement of their career, chiefly from want of opportunity of contact with, and experience of, the proceedings of the older practitioners: contrasting it with their present freedom of communication with the seniors, at the meetings of the institution. He then gave a slight sketch of the professional career of his father, who entered the metropolis as a millwright in 1778, and before his decease had raised himself to eminence as a civil engineer, and was the coadjutor of Smeaton, Jessop, Watt, Rennie, Telford, and others. Under him Mr. James Simpson commenced his practical career, of which he gave a rapid outline. He then gave an account of the great engineering works in progress in India, Egypt, Sweden, Norway, Denmark, Canada, Australia, Cuba—on the European continent generally, and in Russia; chiefly under the direction of members of the institution. The maritime works on the Thames, the Tyne, the Severn, the Clyde, the Avon, &c.; the harbours and docks at Harwich, at Dover, at Guernsey, Jersey, Alderney, Portland, Holyhead, Plymouth, Leith, Hartlepool, and other places: the works at the Norfolk Estuary, the reconstruction of the Bishop's Rock Lighthouse, and other important labours of civil engineers, were also noticed. He also alluded to the subject of screw propulsion, and the hitherto unrewarded labours of Mr. F. P. Smith. A short history of the waterworks of the metropolis was given, to show that the extensions of filtering and high service had closely followed the facility for obtaining cast-iron pipes in large quantities and at a reasonable rate; and that the improvement in steam-engines and pumping machinery had also produced corresponding advantages. Attention was directed to the present state of the sewerage of cities and towns, and also that of the drainage of farm lands: for the former it was urged, that more had been done than was generally admitted, and for the latter, the partial steps hitherto taken were contended to be inefficient, unless the system was introduced on a larger scale, and extended to arterial and trunk drainage, and the improvement of the principal drains and water-courses in the low-lands.

RAILWAY MATTERS. — At a recent meeting of Liverpool merchants, a committee was appointed to urge the town council and dock committee to form a high level line of railway along the line of docks.—— The Great Western have at length begun to pour in coals from South Wales and the Forest of Dean into the metropolis, which will shortly tend, it is hoped, to prevent the metropolitan public from being so unmercifully fleeced as they have of late been, and are still being, in the article coals. The new station of the Great Western at Paddington, was opened on the 16th inst. for passengers' departure trains.—— A new map of England and Wales, prepared under direction of Capt. Simmons, for the use of the Board of Trade, has just been presented to Parliament. The specific object of the publication is to show the railways, canals, and inland navigation of the country on a considerable scale. The compilation has been made from the Ordnance survey, of which indeed it is an epitome with regard to the three points to which it refers. —— The *Salut Public* of Lyons, says—"The works of the great railway station at Vaise are being urged on with great activity. The length of the central building will be 190 metres, with thirty-seven side arches, leading to the various buildings erected there. The roof is to be of zinc and glass, supported on cast-iron pillars. The front façade is to be in three compartments, all constructed with great magnificence." —— The self-acting signals are being adopted on French lines. *Galignani* speaks of an experiment made in presence of a commission on the Bordeaux to Teste railway. The invention consists of mechanisms placed on the external edge of the rails, and united together by an electrical wire, which gives the signal of the arrival of the train on a curve or in a tunnel. The apparatus may be established in such a manner as to act not only at a distance of 700 metres, but even 3,000 metres. The passage of a train on entering on a curve or on approaching a tunnel causes, by the pressure on the springs of the apparatus, the explosion of petards, which are heard at a great distance, and at same moment moves a coloured disc, which gives the signal to the approaching train to stop.

NEW BUILDINGS IN LIVERPOOL.—The following is a return, prepared by Mr. Rishton, the building-surveyor, of the dwelling-houses and warehouses erected, or in the course of erection, within the municipal borough of Liverpool during the year 1853. Under 12*l.* per annum, 52; from 12*l.* to 75*l.* 75*s.*, from 25*l.* to 35*l.* 79, from 35*l.* upwards, 39, total, 924. Warehouses, 3.

THE DARGAN INSTITUTE.—The committee of the proposed Dargan Institute, at a recent meeting, the Marquis of Westmeath in the chair, resolved that a building should be erected in Dublin as a Public Gallery for the Exhibition of Works of Art. The committee in their report explain that, for the proper carrying out of such an object, a building must be erected of such magnitude and style of architecture as shall be in harmony with the beauty and interest of its contents, that for this purpose, the funds already collected cannot be regarded as sufficient; and that a sum less than 10,000*l.* would not suffice for the erection of a building suitable as a testimonial of the practical patriotism of Mr. Dargan, and adapted for advancing the progress of Ireland in the most interesting branches of art and manufacture.

DWELLINGS OF AGRICULTURAL LABOURERS.—A very influential meeting was held last week in the Hopetoun Rooms, at Edinburgh, for the purpose of promoting the improvement of the dwellings, and by this means of the social condition, of agricultural labourers. The Duke of Buccleuch was voted to the chair, on the motion of the Duke of Hamilton. Among the gentlemen present were Lord Kinloch, Lord Morton, Sir A. Hay, Sir Ralph Anstruther, General Lindsay, Sir J. Ogilvy, Sir J. S. Forbes, Sir Archibald I. Campbell, Sir J. D. Elphinstone, Sir Robert Arbuthnott, and many other land-owners, besides the Dean of Faculty, Professor Alison, &c.; and it was stated that letters approving of the object of the meeting had been received from the Duke of Sutherland, the Earl of Aberdeen, Lord Kinnaird, the Earl of Haddington, Lord Elibank, the Earl of Home, Lord Blantyre, Sir George Sinclair, Bart., Sir James Carnegie, Sir Thomas Gladstone, the Earl of Rosebery, Mr. John Fergus, M.P., Mr. J. Johnstone, M.P. &c. The Duke of Buccleuch addressed the meeting at considerable length, as did other gentlemen, and various appropriate resolutions in favour of the objects of the meeting were unanimously passed.

INDUSTRIAL FÊTE.—An interesting ceremony, called the *Fête de l'Industrie*, took place at Amiens, on Sunday before last, namely, the distribution of prizes to deserving workmen. The Bishops of Amiens and Perpignan, and the civil and military authorities were present, and the bureau was composed of the Prefect of the Somme as president, and the presidents of the Chambers of Commerce of Amiens and Abbeville, and the Mayor of Amiens. The prefect, in an appropriate speech, pointed out the object of the meeting. The council-general of the Somme, he said, had proposed the establishment of the *Fête de l'Industrie*, at which prizes were to be annually awarded to such workmen as were distinguished by their good conduct. The Emperor had graciously condescended to add 1,000*f.* to the sum appropriated by the department. After the speech of the prefect the different rewards were distributed. They consisted of medals and sums of money, varying from 60*f.* to 400*f.* which were paid in new gold pieces, bearing the effigy of Napoleon III. accompanied by a certificate bearing on the four corners, in large characters, the words—"Travail, Probité, Honneur, Devoir,"—as the principal virtues of an honest workman.

THE DALTON MEMORIAL, MANCHESTER.—A low monumental erection, designed by Mr. R Lane, is to be placed over the grave of Dalton. It is about 10 feet long, 7 feet wide, and 3 feet in height; and is to be enclosed by an appropriate iron railing, leaving a space between it and the lower slab of the design of 5 feet 3 inches at each end, and of 7 feet on each side. The erection may be described as a low table tomb; but the upper surface is not flat, but slightly coped, and the centre of its ridge again is flatted by a long label, upon which is to be deeply cut the name, John Dalton. The base is a slab, slightly coped from the plinth; and a few simple mouldings carry the upper coped slab. The whole is to be of polished red Aberdeen granite. A bronze sitting statue is to be executed by Mr. Theed.

BALANCED CARTS, &c. —We not long since noted the invention of a wheelbarrow, in which the load was mainly balanced over the wheel. A Lyons journal reports something similar as to carts and other vehicles. A new plan it says has been invented, by which a horse can be made to draw a load one-half heavier than by carts as at present constructed. The new vehicle has four wheels, and when the horse is harnessed the foremost pair come to about the middle of his body. The weight is thrown on the axles, and the vehicle is constructed in such a way that part of it covers the horse up to the neck.

INSTITUTION OF CIVIL ENGINEERS OF IRELAND. —A general meeting of this institution was held in their new rooms, Sackville-street, on Tuesday, the 10th inst. the president in the chair. Mr. Robert J. Hampton was elected secretary, *vice* Mr. Fred Villiers Cavendish, resigned, thanks being first voted to the latter gentleman for the manner in which he had discharged the duties of office for a number of years.

ST. ANDREW'S, ISLINGTON.—The new church in Thornhill-square, Islington, was consecrated on Monday. It is stated to be of the Decorated period, cruciform in plan, with tower and spire at west end of south aisle, and is built of Kentish Rag and Bath stone. The cost was 6,000*l.*: the architects were Messrs. Newman and Johnson. The design was obtained in a limited competition, when a much smaller sum, by the way, was named to the competitors to restrict them in their views. It may be worth while to inquire into this.

FRIGHTFUL ACCIDENT IN THE CITY.—During the operation of pulling down the range of buildings known as the Inland Revenue Office, in Old-Broad-street, a portion of them fell down, and buried the men in the ruins, killing two poor fellows, and injuring several others. It is supposed that the catastrophe took place either from overloading the floors with the bricks taken from the walls, or from some defect in the timbers, as it is asserted that none of the walls fell until the uppermost floor sank, and its additional weight settling upon the others caused them likewise to fall. A few weeks ago there was a fatal accident at the same place. At the inquest on the last occasion, Mr. John Shaw, official referee under the Metropolitan Buildings Act, said that he had no hesitation in stating that the main cause of the occurrence was the insertion of the binders into the girders. The binders ought not to have been let in so far. He found that there was likewise a horizontal split in the wood. The ends were all decayed, but not to any great extent. It did not occur to him that any blame was attributable to any person in not finding the fracture out before. If the girder had not been cut into in the manner it was, it would have been strong enough to bear twenty tons. He thought the practice of loading the floors with bricks injudicious. He never allowed it. The only fault, if any, rested with the persons who built the premises ninety years ago.

PROPOSED ERECTION OF NEW LAW COURTS.—Judging from the statement made by the Earl of Aberdeen a few days ago, to a deputation who attended him on this subject, the present government are favourable to the proposed erection of new Law Courts. The deputation stated that the proposed site for the new courts is between the Temple and Lincoln's-inn, in the centre of the metropolis and of the law district. It would consist of a quadrangle, about 700 feet by 480, in the centre of which the new courts and offices would be erected. The effect of clearing away the lanes and alleys within that area would be to widen the Strand and Fleet-street by 100 feet, Carey-street by 60 feet, and to unite them with the new street into the City of London from the Record Office, now in course of erection on the Roll's estate in Chancery-lane. The estimated cost of the building and site is 1,197,074*l.*—viz., cost of the site (about eight acres), 675,074*l.*; building for common law and equity courts, 300,000*l.*; approaches, foundations, sewerage, warming, ventilating, gas, furniture, fittings, decorations, &c., 180,000*l.*; contingent and incidental charges, 42,000*l.* From this there was to be deducted 523,500*l.*, for the value of ground rent for chambers on the proposed site, for the sale of the various offices of the Masters, Record, and Writ Clerks, Registrars, Accountant-General, value of the present site at Westminster, and of the Roll offices, &c., leaving the ultimate cost of the site and building, 673,574*l.* It was also urged that a favourable opportunity had now occurred for clearing the site of the present insufficient courts, and appropriating it to the completion and improvement of the Houses of Parliament.

TUBULAR DRAINAGE.—Mr. John Francis, surveyor, in a report to the paving, sewering, and highways' committee of the council of the city of Manchester, states that the seventh year's experience in tubular sewerage has served further to strengthen his conviction of the complete adaptation of glazed fire-brick tubes to the purposes of town-drainage, under judicious regulations. The Manchester system of sending through the tubes not only house-sewage, but the general surface drainage of the town, up to the measure of their capacity, he says, is preferable, and has met with a success unknown, to the "separate system," because the tubes are flushed in every shower and storm, and deposit is thereby prevented or removed.

ROADS IN BROMPTON.—Referring to the contemplated improvements about to be effected in the opening of new roads, &c. in the neighbourhood of Brompton, I beg leave to call your attention to the comparative ease and small expense with which an almost straight road, extending from Prince's Gate, Hyde Park, to Chelsea Hospital, could be formed. No person can disprove the usefulness of such a line of road, which would at once connect the river-side with the Park and Kensington Gardens, and bring the much-frequented thoroughfare of King's-road into direct communication with the Kensington-road and Kensington-gore.—R. J.

THE COAL FIELDS OF THE WORLD.—The following information as to the great coal fields of the world is given in *Herapath's Journal*:—The United States contain 129,032 square miles of coal; Great Britain contains 11,850; Spain, 3,408; France, 1,719; and Belgium, 518; but the actual yearly product of coal in different countries was as follows in 1852:—Great Britain, 31,500,000 tons; Belgium, 4,960,000; United States, 4,000,000; and France, 4,140,000 tons.

FALL OF HOUSES AT HORNSEY.—On Monday evening the inhabitants of Hornsey-road were alarmed by the falling of a part of the wall of two old houses near the Hanley Arms. The houses had been left unsupported by the removal of others which had been pulled down to enlarge the premises of the tavern.

TO CORRESPONDENTS.

Purification of Gas With reference to Dr. Letheby's report on this matter, and some statements by Mr. Leslie, we had prepared a few remarks, but are obliged to postpone them till next week.

ADVERTISEMENTS.

TO BUILDERS' CLERKS.

A CLERK WANTED in the Office of a Builder, in an extensive business in the county of Kent, about forty miles from London. He must write a good hand; be thoroughly acquainted with book keeping, measuring and estimating works, getting out quantities and the usual duties of a builder's office. It is indispensable that he be a good draughtsman and correspondent. A liberal salary will be given.—Address, stating age, salary required, where last employed, and references, to W. W. at Messrs. Nicholson and Co.'s, 9, Cousin-lane, Upper Thames-street, London.

AN Architect is in want of the assistance of a very efficient DRAUGHTSMAN, well acquainted with Italian classical architecture, and ornamental detail.—Write, stating full particulars and salary, to O. P. Office of "The Builder."

A VACANCY now offers for an Out-door PUPIL to the business of Painting and Decorating. He will have the advantage of learning all the various branches under the guidance of a practical man. The youth must have a knowledge of drawing and a taste for the fine arts. A premium required. Address, A. B. 3, Craven-place, Conduit-street West, Hyde-park.

TO PARENTS AND GUARDIANS.

AN Architect in the City has a VACANCY in his office for a youth of education and taste as Out-door Articled PUPIL. Premium moderate.—Address, X. Y. care of Messrs. Dawson and Sons, Abchurch-yard, City.

WANTED, an ARCHITECT'S ASSISTANT capable of getting out general and detail drawings, measuring and valuing architects' work, and preparing specifications, who can give good references. A moderate salary only will be given, as the engagement will probably be permanent.—Address, naming salary, to O. N. Office of "The Builder." There is a vacancy in the same Office for an Articled Pupil.

TO CIVIL ENGINEERING DRAUGHTSMEN.

WANTED, a first-class DRAUGHTSMAN, experienced in getting up working drawings of drainage and water works.—Address particulars to ALPHA, Office of "The Builder."

WANTED, an experienced CLERK of WORKS who thoroughly understands pipe draining and road-making.—Apply to Mr. GEORGE MORGAN, 3, Chancery lane, City.

WANTED, an APPRENTICE to a Builder. No premium required. Apply to 93, Newgate-street, between the hours of FIVE and SIX o'clock

WANTED, a PRACTICAL MANAGER for a BRICK, TILE and PIPE MANUFACTORY, the same being made by steam-machinery. The duties required are to superintend the whole, and to keep the accounts of sales &c For particulars, apply to RICHARD CAIL, Contractor, New castle-upon Tyne.

TO MANUFACTURING IRONMONGERS, ENGINEERS, IRONFOUNDERS, &c

WANTED, an ENGAGEMENT as CLERK or DRAUGHTSMAN, having a general knowledge of the iron trade, and disposed to make himself useful in the above line.—Address, W. M. B. Mr Locke's, News Agent, Gray's-inn-road

TO MASTER BRICK AND TILE MAKERS.

WANTED, by a respectable Man, who thoroughly understands his business, a SITUATION as FOREMAN in the above line, or by CONTRACT, with good references.—Address, T. H. C. No. 3, Cheapside-street, Manor-place, Walworth.

WANTED, a SITUATION as GENERAL FOREMAN, or CLERK of WORKS; has had considerable experience in contracting, estimating, &c.—Apply, J. H. G Office of "The Builder."

WANTED, JOINERS' WORK, with or without Materials. No objection to a moderate-sized carcase in part payment. Northern or western suburb preferred —Apply to J. W. R. Office of "The Builder."

WANTED, JOINERS' WORK.—The Advertiser, who is an experienced Workman, would take any quantity of Task work, such as sashes and frames, shop fronts, doors, staircases, office fittings, &c. The highest references given.—Direct, W. J. New-street-cottage, Kenning-on-cross.

TO BUILDERS.

WANTED, a SITUATION, by a Young Man, practically conversant with the carpentry business, accustomed to measure off works, take out quantities, and builder's accounts. Most respectable references. Address, V. O. Y. Office of "The Builder."

TO ARCHITECTS AND SURVEYORS.

WANTED, an ENGAGEMENT, by a Gentleman accustomed to getting out working and detail drawings, specifications, &c and who is well acquainted with the duties of an office; also understands land surveying.—Address, A. B. Mr. Norton's Newspaper Office, 22, Cumberland-market, Regent's-park.

WANTED, by the Advertiser, a Situation in an Architect's Office; he can make fair and working drawings and is well acquainted with the general routine of office duties.—Address, X. Z. Office of "The Builder."

TO BUILDERS, SURVEYORS, &c.

WANTED, EMPLOYMENT, by a Young Man, with a practical knowledge of Carpentering Building, in either of the above offices, or to take charge of a small shop Writes a good hand, and can keep accounts.—Address, A. H. 9, Gilbert's-buildings, Westminster-road, London.

TO ARCHITECTS AND BUILDERS.

WANTED, a SITUATION as CLERK of WORKS, or FOREMAN. The Advertiser is competent to take the management of a Church, either building or on repair, and has just finished extensive works at a country mansion First-rate references.—Address, F. K. R. Office of "The Builder."

TO BUILDERS AND IRONMONGERS.

WANTED, by a good SMITH and FITTER, a RE-ENGAGEMENT. Can forge and fix gates, staircases, conservories, &c. Is a good sanitizer, locksmith, and bell-hanger, and has erected apparatus for the hearing of buildings on every known principle. — Direct, J. N. Kemp's Library, New Brompton.

A YOUNG GENTLEMAN, whose articles have expired, is desirous of an ENGAGEMENT in an Architect's Office of good practice, for further experience; and should an opportunity offer, would have no objection to a share of the business.—Address, T. HELSTONE, Esq. Alveston House, near Bristol, Gloucestershire.

A YOUNG MAN of respectable connexions, aged 23, is desirous of meeting with a PERMANENT SITUATION in the several branches of Hot-pressing, Paper-hanging, Gilding, and Ink-tempering; as I will make myself generally useful, measuring of work, &c. No objection to town or country. Can give first-rate reference if required.—All letters, post-paid, stating terms, to E. S., "Two Brewers," 15, Queen's-buildings, Knightsbridge, will meet with immediate attention

TO ARCHITECTS, &c.

A GENTLEMAN is desirous of a RE-ENGAGEMENT in the OFFICE of an ARCHITECT; has been accustomed to prepare finished, detail, perspective, and water-colour drawings.—Address, Y. Z. Post office, Ossaburgh-street, Regent's park.

TO CONTRACTORS AND BUILDERS.

A STONEMASON, of steady and industrious habits aged 40, wishes to meet with a SITUATION as FOREMAN. He has held a similar situation for eighteen years, is competent to take quantities and make estimates in stone or brickwork, has had great experience in measuring works, and can be well recommended.—Apply, T. B. 27, Byrom-street, Liverpool.

TO ARCHITECTS.

A GENTLEMAN, who has had experience in Gothic and Italian Architecture, is open to an ENGAGEMENT.—Address, T. T. T. Office of "The Builder."

TO BUILDERS.

A SHOP FOREMAN, of great experience, wishes a RE ENGAGEMENT; he has had the entire management of a shop of seventy joiners in a large building establishment for the last eight years. References unexceptionable.—Apply, L. A. M. Office of "The Builder."

TO ARCHITECTS AND SURVEYORS

AN ASSISTANT, with the highest testimonials as to care and rapidity as a draughtsman, writing specifications, and general practical ability, is now open to an ENGAGEMENT.—Address, R. S. 3, Oxford-terrace, Clapham road.

A THOROUGHLY qualified BUILDER'S CLERK is open to an ENGAGEMENT, in town or country. He is an excellent draughtsman, writes a fine hand, under-stands book-keeping by double and single entry, measuring, taking off quantities, and the whole routine of the office. Any gentleman having a mixed jobbing and contract trade, would find the advertiser a valuable aid Unexceptionable reference and security if required.—Address, Mr. CULLEY, 14, Harmer-street, Gravesend, Kent.

TO ARCHITECTS AND SURVEYORS.

AN ASSISTANT is desirous of a RE-ENGAGEMENT. Country preferred.—Address, T. B. Mr Fither's, Harrow-road, Paddington.

TO ARCHITECTS

A GOOD DRAUGHTSMAN is desirous of a SITUATION in London.—Address, S. S. Office of "The Builder."

BUILDER'S CLERK.—A Young Man, thoroughly acquainted with the duties required, and with excellent references, is open to an ENGAGEMENT in a Builder's Office at a moderate salary.—Address, A. G. Post-office, South Lambeth road.

TO SCULPTORS, MARBLE AND STONE-MASONS.

THE Friends of a Young Man, 18 years of age, who has served part of his apprenticeship, desire to place him for a year or more where he will be employed and instructed in the trade.—Address, W. X. Post-office, York.

TO BUILDERS.

THE Son of a Builder, who has had two years' experience in the business, well acquainted with builders' accounts, and writes a good plain or ornamental hand is desirous of improving himself in a knowledge of PLANS and DRAWINGS, would for the consideration of comfortable Board and Lodging, give his services to a gentleman in whose office that might be effected, or otherwise for a small salary Unexceptionable references Address, 329, Strand.

TO ARCHITECTS AND SURVEYORS.

THE Advertiser is desirous of meeting with a RE-ENGAGEMENT in either of the above offices. Unexceptionable references can be given.—Address, free, to 9, Harpur-street, Red Lion-square, Holborn.

TO CIVIL ENGINEERS AND LAND SURVEYORS.

THE Advertiser has had upwards of ten years' experience in Land and Engineering Surveying, as a Surveyor and superintendent of surveyors, engaged on extensive surveys of towns for sanitary, &c. improvement in all its branches, and is now OPEN for an ENGAGEMENT. Testimonials and specimens of the first class can be produced. Salary not so much an object as permanency of employment.—Address, X. Z. Office of "The Builder."

TO GLASS-STAINERS AND DECORATIVE PAINTERS.

THE ADVERTISER, having lost a very valuable member of his family, is in WANT of a PARTNER to take one half, or a less share, in an old established BUSINESS. The establishment is situate in the country, and commands an extensive first-class trade comprising glass staining, decorative painting, ornamental ceilings, gilding, paper-hanging, plumbing, &c. The establishment is well known; it commands a wide circle, and the trade may be considerably increased. If required, a bronze medal will be awarded to the proprietor at the Exhibition in 1851. The Advertiser requires an active business-like man, who thoroughly understands at least one branch of the business; or an architect and surveyor would be useful, but it must be some one who can take a prominent part as none others need apply. Good reference will be given, and the same expected from applicants.—For further particulars apply by letter, addressed A. B. Mr. Gundry's, 1, Poland-square, London.

TO ENGINEERS, FOUNDERS, IRON AND WOOD SHIP-BUILDERS, &c

A FIRST-RATE BUSINESS TO BE DISPOSED OF, most advantageously situated on the banks of the Thames. The buildings are all arranged in a very complete manner, and the plant, machinery, and tools of the best description, and all appliances ready to hand for carrying on an extensive and lucrative trade. A moderate capital only required. Respectable parties will be liberally dealt with.—Apply to R. A. CHARLTON, 14, Bucklersbury.

TO IRONFOUNDERS, AGRICULTURAL IMPLEMENT MAKERS, AND OTHERS.

TO BE DISPOSED OF, by PRIVATE CONTRACT, the BUSINESS, with the plant, implements, and stock, of a small FOUNDRY, now in full work, and employing about twenty hands. The premises are situate in a considerable market-town in Essex, and have an old-established connection attached, which by good practical management may be much increased. Coming in about 300. For further particulars, apply to Messrs. FULLER and HORSEY, Billiter-street, London.

TO PAINTERS, DECORATORS, &c.

TO BE DISPOSED OF, a very old-established BUSINESS in the above line, at the west-end, with a first-rate connection. To any one with a moderate capital this is an excellent opportunity Apply by letter, prepaid, to J. M 74, Piccadilly.

TO BE DISPOSED OF, in an old and improving port and Market Town, a WHARF and STOCK IN TRADE of a TIMBER MERCHANT. The premises are freehold, and may be had on Lease or purchased. There is a Cottage Residence with Garden, substantial brick-built three-floor Granary, Stabling, and other Buildings. River frontage 200 feet.—Apply to Messrs VALPY and STOKES, Estate Agents, Chelmsford

FREEHOLD.—TO BE SOLD, within three miles of the Bank, a FREEHOLD ESTATE, consisting of a large well-built house, with good garden, and having a considerable frontage to the street; available for building purposes. To builders and speculators, this presents a desirable opportunity for the investment of a moderate capital. If preferred, the proprietor would be subject to lease for a long term, at a ground-rent, with permission to take down the house.—Application to be made to Mr. LAMBERT, Surveyor, 4, New Basinghall-street, City.

FINSBURY and GENERAL FREEHOLD LAND SOCIETY.
Established 1854.

The Mitcham and Merton Estates will be ballotted for shortly. All shares issued previously, on which one month's subscription has been paid, will be eligible for the ballot. Monthly subscription, 4s.; entrance and rules, 1s. 6d.
48, Bedford-row. R. A. MARCH, Secretary.

FREE-TRADE FREEHOLD LAND SOCIETY.—Offices, 86, St. James's-street, Pall-mall, and 43, Poultry Shares, 4l. Monthly subscription, 6s. Entrance fee, 1s. per Quarterage, 1s. per share. The FIRST PUBLIC DRAWING amongst the uncompleted Shareholders in this Society, for priority of choice on the Society's estates, will take place on MONDAY, the fourth day of JANUARY instant, at the Whittington Club, Arundel-street, Strand, when fifty rights of choice will be drawn in the ballot. The chair will be taken at HALF PAST SEVEN o'clock. All shares taken prior to the final number being placed in the wheel of the subscriptions whereon are not in arrear, will participate in the advantages of the drawing. The estates at present purchased for the Society, are situate at Anerley and at Camberwell Shares may be grouped to the number of three, on payment of a fee of 2s. per share the conditions of which may be ascertained at the office, where also plans may be had after the 20th instant. Post office orders for 8s. 6d. being the first monthly subscription per share, in the name of the persons or parties drawing the lots, at the office, will ensure immediate enrolment on the register of the Society Prospectuses and further information may be obtained on application
THOMAS SHERWOOD SMITH, Secretary.
January 13, 1854.

PARIS BUILDING LAND COMPANY.—No. 6 bis du Nouveau Quartier Bréda. Liability of each shareholder strictly limited to the amount of his subscription. Capital, 12,000l. in 21,600 shares to bearer, of 2l. each; 18,000 shares subscribed for in Paris; 5,000 reserved for London Deposit, 2l. per share A minimum dividend of 6 per cent. per annum, and the return of the capital with a minimum bonus of 25l. per cent. are guaranteed by unbooked securities.

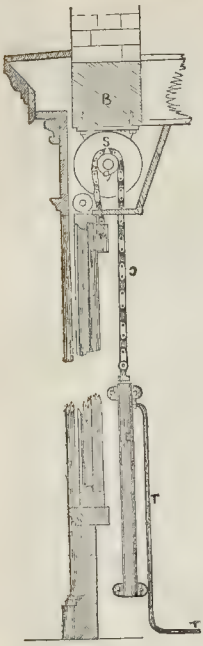
SOLICITORS.

Messrs. Hollingsworth and Tyerman, No. 24 Gresham-street.

SHARE BROKERS.



Messrs. J. H. Sperling and Son, 12, Copthall-court.
Offices in Paris—No 14, Rue Drouot.
Offices in London—No 8, Laurence Pountney-hill, Cannon street.

A large extent of valuable building ground, known as the Quarter Rollin, in a populous district, and in the midst of the chief railway stations of Paris, has been purchased by the Company on exceedingly advantageous terms

The objects of the Company are the opening of three new streets through this property, under a concession from the City of Paris, and the disposal of the land for building purposes, at prices which will admit of doubling the capital in a few years. In the meantime, interest at 5 per cent. per annum and the return of the capital, with a minimum bonus of 25 per cent. are guaranteed by freehold securities of ample value.

Applications for a portion of the 5,000 shares reserved for England to be made to Messrs. J. H. Sperling and Son, 12, Copthall-court; or to Mr. George Woods, at the Offices of the Company, 8, Laurence Pountney-hill, where copies of the statutes, prospectuses, and plans may be obtained.

GEORGE WOODS,
THEODORE ALPHONSE BAYLE, } Gérants.
London, Jan. 17, 1854.

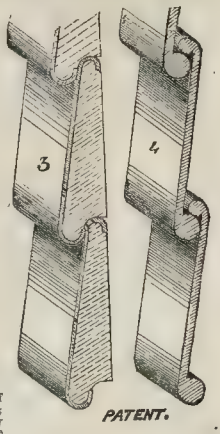
PATENTS DATED 9TH DAY OF OCTOBER, 1852, AND 12TH DAY OF OCTOBER, 1853.

CLARK & CO.'S

NEW

PATENT HYDRAULIC APPARATUS,

FOR



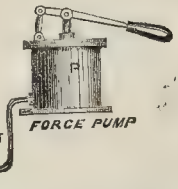
OPENING AND CLOSING

THEIR

PATENT RECTILINEAR REVOLVING SHUTTERS,

AND

PATENT COMBINED IRON AND WOOD REVOLVING SHUTTERS.



PATENT.

THE advantages of the Hydraulic Apparatus are,—great facility of application; a saving of seventy-five per cent. of friction in the working parts over the old plan of worm and wheel; cannot get out of repair, and it is impossible for the shutter to run down; are more easily opened; require no labour whatever to close them; the cost is reduced; and does not affect the architectural or other arrangement of the building, as the pump can be placed at any distance from the shutter, and in any position.

The annexed cuts show the arrangement: fig. 4 is a section of the rectilinear, and fig. 3 the section of combined iron and wood revolving shutters.

NOTE.—Where the water is constantly on from the main, shutters under this patent can be opened or closed by merely opening a stop-cock.

PROSPECTUSES, ENGRAVINGS, AND DESCRIPTIONS FORWARDED.

CLARK AND CO.

15, GATE-STREET, LINCOLN'S-INN-FIELDS, LONDON.

Also Sheet Lead, Lead Pipe, Brass Taps, Pumps, Closets, White Lead, Oils, Colours, Varnishes, Brushes, Paper Hangings.

Glazing for the Trade with despatch

OLD LEAD BOUGHT OR TAKEN IN EXCHANGE IN ANY QUANTITY.

REVOLVING SAFETY WOOD and IRON SHUTTERS.—SNOXELL, Patentee, 96, Regent-street, and at his Steam works, 105, Old-street. The shutters have fully borne out their superiority over other revolving shutters for security, durability, and simplicity. References can be given to noblemen whose mansions are fitted herewith, and numerous large establishments, where some are fixed measuring upwards of 400 square feet in one shutter, and which are opened and closed in a few moments with the greatest possible ease, without the use of machinery. The Patentee manufactures Brass Sash Bars, Stall Board Plates, &c.

DISSOLUTION of PARTNERSHIP.—HENRY PASK (late Johnson and Pask) Baker-street, Clerkenwell, Sash, Shop Front, and Door Maker to the Trade, begs to inform his customers and the public generally that he intends carrying on the business as usual, and solicits a continuance of their favours, which shall meet with his prompt attention.

N.B By inclosing a postage stamp a full list of prices may be had by return of post.

FARMER and CO. Sash, Door, and Staircase Manufacturers.—Counting-house Fittings, Shop and Public-house Fronts on the shortest notice. Estimates given for contracts of any description. By enclosing a postage stamp, a list of prices will be returned for any kind of joiners' work, &c. 125 St. John-street-road, and No. 1, Edward street, Pentonville.

J. MILLS (late Shop Foreman to Messrs. Lawrence and Sons), JOINER to the TRADE, 7, Princes-street, Stamford-street, Lambeth. Shop-fronts, fittings, staircases, &c. Well-seasoned materials and superior workmanship, at the lowest possible prices. A quantity of doors and sashes always in stock.—By enclosing a postage-stamp, a full list of prices will be returned.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 313, Oxford-street, adjoining Hanover-square and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 9d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 2s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

SEASONED FLOORING.—A large stock of dry WHITE and YELLOW FLOORING, prepared by machinery, always on sale, at reduced prices as under, for cash.

1-inch Yellow, 17s. per square.		1-inch White, 16s. per square.	
¾-inch " 16s.	"	¾-inch " 17s.	"
1-inch " 21s.	"	1-inch " 19s.	"

Dantzic Timber, 8os. per load.

Mouldings by machinery in very great variety

ARCHBUTT and ATKINSON, St. Pancras Saw Mills, Old St. Pancras-road

---

MUIR'S PATENT — PLANING MACHINE

SAW MILLS, GILLINGHAM-STREET, PIMLICO.

TIMBER of any size, PLANKS, DEALS, and BATTENS, &c. sawn on the most approved principle; boards, &c. prepared, matched, and grooved, by Muir's Patent Machinery. The Mills have all the advantages of navigation and water-carriage, being connected with the Thames by the Grosvenor Canal. Goods fetched from the docks and carted home free of charge. Address to HENRY SUTTHAM, Saw Mills, Gillingham-street, Pimlico.

N.B. Estimates given for Sawing and Planing.

A LARGE ASSORTMENT of WELL-SEASONED, DRY, PREPARED WHITE and YELLOW BATTEN FLOORING, also a large quantity of SCAFFOLD POLES, FOR SALE, at a low price, at DRUCE'S, No. 2 Wharf, Queen's-road West, Chelsea. Bricks, Lime, Cement, Sand, Plaster, Slates, and Slate-Slab, Tiles, &c. on sale at the lowest remunerative prices. Goods landed and carted. Ladders for sale. Apply to H. P. DIXON and CO. as above. Great facilities for the prompt execution of country orders.

REDUCED PRICES.—EDWARD SIMMS (late William Cleave), of Wilton-road, Pimlico Basin, beg to acquaint Builders and the Trade that he has now on hand, at his Manufactory (the first of its kind ever established), a very large Assortment of Dry and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from ¼ inch to 1¼ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber, Deals, Oak Plank, Scantlings, Sash Sills, Mouldings prepared by Machinery, Laths, &c.—Apply at E. SIMMS'S (late W. Cleave's) Flooring Manufactory Wilton-road Pimlico Basin.

PREPARED FLOORING, &c.—ALFRED ROSLING begs to inform parties shipping wood goods to the colonies that he can supply any quality or description at the lowest prices of the day, and with the greatest possible despatch. Also mouldings in great variety. A large stock of Baltic deals kept in bond for export.—Southwark-bridge Wharf, Bankside.

TIMBER WHARF, SAWING, PLANING, and MOULDING MILLS, Belvidere-road, Lambeth.—The General Wood-cutting Company beg leave to inform their customers that the temporary additional charge of 20 per cent. on their mouldings (as advertised on the 8th of November last) is removed, from this date, consequently, the prices will be those inserted in their Moulding List, as heretofore.

1st January, 1854.

TO BUILDERS AND OTHERS.

AT the LOWEST PRICES.—TIMBER, DEALS, MAHOGANY, and WAINSCOT. A large assortment of seasoned prepared FLOORING and MATCH-BOARDING, of all descriptions. Also an extensive stock of dry White, Yellow, and Pine sun Stuff, Sinting, Battens, Pantile Laths, Oak Plank, Sash Sills, &c. Timber of all kinds, Planks, Deals and Battens, fetched from the docks, sawn by patent machinery in the best manner, and delivered at the shortest notice.—THOMAS JACKSON, Sawing and Planing Mills, Commercial-road, Pimlico, London.

TIMBER, DEALS, and FLOORING.—Builders and other consumers may effect a considerable saving by purchasing of Mr. GEORGE WALLEN, Timber Merchant, of Adelaide chambers, 93, Gracechurch-street, City, who has a large well-selected stock in the docks, which he is determined to sell at the lowest remunerative prices for cash.

ABOUT 300 LARCH FIR-TREES for DISPOSAL, at HAYWARD'S HEATH STATION, on London and Brighton Railway, well adapted either for cutting into scantlings, or for fencing purposes.—Apply to Mr. BEST, Cuckfield, Sussex.

PADDINGTON TIMBER-YARD SAWING, PLANING, and MOULDING MILLS, 3, Irongate Wharf, Praed street, Edgware-road, near the Great Western Railway Station, and abutting on the Grand Junction and Regent's Canals, affording the advantage of railway and water carriage.

GEORGE W. FRY, in returning thanks for the liberal support received by the late firm of W. R. Fry and Son, begs respectfully to solicit a continuance of the same, and calls attention to his large and well-seasoned stock of Flooring Boards, Matched Boarding, and Mouldings, of every description, prepared in a superior manner from the best goods, at the lowest remunerative prices.

GEORGE W. FRY can also offer every advantage to purchasers of any description of Timber and Deals. The extensive Mills afford convenience for immediate conversion on the most moderate terms. All sawn and prepared goods delivered free to any part of London, or carefully packed and delivered at any railway station in town.

G. W. F. has published an enlarged and improved sheet of Moulding Designs, which will be forwarded, with prices of flooring, &c. post-free, on application.

MONEY on LOAN, at 3½ per Cent. per Annum.—ARNEWAY'S CHARITY.—NOTICE IS HEREBY GIVEN, that the Trustees of this Charity are enabled to lend out the Trust Money to poor occupiers or traders residing within the City and Liberty of Westminster, that is to say, within the parishes of St. Margaret and St. John the Evangelist, St. Anne, Soho, St. Clement Danes, St. George, Hanover-square, St. James, St. Martin-in-the-Fields, St. Mary-le-Strand, and St. Paul, Covent-garden. The amount of each loan is not to exceed 100l. is to bear interest after the rate of 3l. per cent. per annum, and is to be secured by the bond of the borrower, with two sureties. Printed Forms of Application, and all necessary information, may be obtained by applying personally, between the hours of Ten and Three o'clock in the day, at the office of the Clerk and Solicitor to the Trustees, No. 14, Great Queen-street, St. James's Park.

By order, EDWARD S. STEPHENSON, Clerk and Solicitor to the Trustees.

NOTE.—The Trustees meet on the second Wednesday in every month, to consider such applications for loans as have been sent in one clear week at the least before the first day of the month.—The sureties must be unexceptionable.

TERRA COTTA.—Vases, Figures, Capitals, Coats of Arms, Friezes, Consoles, Chimney Shafts, Flower-pots, &c. &c. manufactured by J. M. BLASHFIELD, Mill Wall, Isle of Dogs (near the West India Docks), and sold at No. 1, Praed-street, Edgware-road, Paddington.

TODD'S PATENT METALLIC PROTOXIDE PAINT.

The PATENT METALLIC PROTOXIDE PAINT now offered, has been found, after the most severe trials, to be peculiarly efficacious in preserving Iron from Oxidation, Wood from Decay, and Masonry and Brickwork from dampness.

Applied to Iron it unites with it almost intimately, forming a complete coating; so that thus protected, it will be found equal to the best galvanized Iron. Hence its great value to all Engineers and Iron Founders as an application to Iron Vessels, Iron Roofs, Steam and Water Pipes, &c. &c. It adheres firmly to Iron even at a red heat.

Many attempts have been made to discover a substitute for White Lead, that should possess all its virtues, without partaking of its offensive character. This Paint is not affected by sulphuretted or carburetted hydrogen gas, bilge water, or indeed foul air of any kind: hence it is well adapted for the interior of Ships, Warehouses, Offices, Stabling, &c.; and from its total freedom from deleterious properties, it will be found of great value for painting the interior of Hospitals, Asylums, Unions, Gaols, and other Buildings which may require to be painted during occupation.

This Paint resists the action of the sun's rays, and also that of the sea air: it is therefore well suited for the Colonies and all tropical climates.

For Stuccoed Buildings it will be found to be effectual in preventing the discolourations formed by vegetation, and keeping out all dampness.

The Protoxide Paint, as at present produced, is a Pale Stone Colour; but it may be tinted with any other colour to suit the taste and purpose for which it may be required.

TESTIMONIALS.

"Brighton, Croydon, and Dover Railways,
Locomotive Department, New Cross, Sept. 25, 1845.

"SIR,—In reply to yours respecting the 'Patent Protoxide Paint,' I have much pleasure in stating that what has been used in this establishment has been highly approved of, and I consider it the best description of paint yet used, particularly for iron-work, for which purpose I can strongly recommend it.

"I am, Sir, your obedient servant,
"BENJ. CUBITT."

"Regent's Canal Iron Works, Eagle-wharf-road, Dec 5, 1845

"SIR,—As it is always my wish to render justice to every one, as far as it is in my power to do, I have great pleasure in informing you, that I have very severely tested your 'Patent Protoxide Paint;' that the results are most satisfactory; and that I consider it a very valuable article for an Iron-founder. I have ordered it to be used with us wherever circumstances will allow us to do so. I will, moreover, use it for all my own work, and wish I had known it somewhat earlier.

"I am, Sir, yours respectfully,
"HENRY GRISSELL,
"Pro H. and M. D. Grissell.

"P.S.—It must be good for Boilers."

"St. Kitts, August 29th, 1843.

"Gentlemen,—Having had some experience with Todd's Patent Paint (for which your firm are Agents), I beg to state my unqualified approval of it. I have tried it against White Lead of the first quality, and at the end of seven or eight months find Todd's Paint fresh as when laid on, while the White Lead, owing to the excessive heat, may be rubbed off like chalk. It answers equally well on wood or iron, effectually preserving the latter from rust. I feel obliged by your quick attention to my further order by the 'Parrack Hall,' which ship we are daily expecting.

"I am, gentlemen, your obedient servant,
"(Signed) GEO. G. MOFFATT.

"Messrs. Davidson and Peter, Bishopsgate-street, London."

For terms, application to be made at the Offices of the Company, 12, Bishopsgate-street Within; or to the following Agents:—

Messrs. PITCHFORD, ISLAND LEAD WORKS, LIMEHOUSE ... } LONDON.
Messrs. G. and T. WALLIS, 64, LONG-ACRE ..... }
Messrs. D. and G. BRYMNER ..... GREENOCK.

JOHNS'S PATENT PERMANENT STUCCO WASH. STUCCO CEMENT, AND STUCCO PAINT.

JOHNS'S PERMANENT WASH, WITHOUT SIZE OR OTHER CORRUPTIBLE INGREDIENT, is now fully established. It has been adopted EXTERNALLY and INTERNALLY at some of the largest Hospitals and Asylums, and is acknowledged to be the most useful Colouring Material in the trade, for its WHITENESS, NON-ABSORBING, UNIFORMITY of COLOUR, and APPLICABILITY to small or large surfaces. IT MAY BE EXPORTED TO ANY CLIMATE.

JOHNS'S STUCCO CEMENT.—This Cement, which has been established many years, is now manufactured on such improved principles that its acknowledged advantages and its suitableness for INTERNAL as well as EXTERNAL purposes are unquestionable. It NEVER CRACKS, BLISTERS, or VEGETATES; has no Caustic qualities, becomes hard as stone in a few days, when it may be painted or papered; may be cleaned with a brush and water, and will STAND THE TEST OF ANY CLIMATE.

JOHNS'S STUCCO PAINT.—The merits of this Paint are so justly appreciated by the trade, for its ready affinity to Stucco, Brick, or other Rough Surfaces; its durability, comparative cheapness (two coats being equal to three of lead paint), that it is of the first importance to the public generally, AND WELL WORTHY THE ATTENTION OF SHIPPERS AND EMIGRANTS.

Each Material in Casks of 1 to 5 cwt.

MANUFACTURERS,

PHILIP HARE and CO. 22, STEEL-YARD, UPPER THAMES-STREET.

HUBBUCK'S PATENT WHITE ZINC PAINT. The PERMANENT WHITE of the Ancients, previously confined by its cost to the use of the artist, is now, by Hubbuck's Patent, reduced to the price of White Lead.

The principal characteristics of HUBBUCK'S ZINC PAINT are—Economy, Health, Beauty, and Durability.

Builders and Contractors find Hubbuck's Paint the only one adapted to all their purposes; possessing the great desideratum of economy, combined with its high excellence as a paint, it ranks alone. Contractors effect a saving of 25 per cent. by using HUBBUCK'S ZINC PAINT.

HUBBUCK and SON feel it necessary a caution should be circulated against imitations of their Paint. These manufactures, containing frequently pernicious ingredients, are baneful to health and worthless in use, whilst the disappearance of them universally in the production of pigments is established, not alone by the coarse grainy appearance, but also by the deficiency of that body in their produce, which is essential to the painter to be all-essential. That an imposition be not practised, therefore, notice that the cask is marked with the name of the original manufacturer, thus—

HUBBUCK—LONDON—PATENT.

not so marked, the reason may be inferred.

Every information in the colour line may be had of THOMAS HUBBUCK and SON, Paint and Varnish Manufacturers, Upper East Smithfield (opposite the London Docks), London.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphurous or any other vapours or emanations. Being completely innocuous, and free from the pernicious effects of whitelead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, as imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy ventured by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—In Hull, by Messrs. HUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. R. MORLEY and CO.; and by the Company's Grinding Mills. In London, Messrs CHARLES DEVAUX and CO. wholesale agents, 99, King William-street, City; Mr. CHARLES JACK, wholesale and retail agent, 8, Tottenham-court, New-road, and 89, Upper Thames-street, City. In Manchester and Liverpool, by Messrs. LAWFORD and CO. of 49, Norfolk-street, Liverpool, who are also acknowledged Painters to the Company for Zinc Paints, and undertake painting ships, warehouses, dwelling houses, &c. In Leith, by Messrs. K. ANDERSON and CO. Timber-bush. DRY OXIDES and PAINTS, in kegs of 1s, 2s, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 12, Manchester-buildings, Westminster.

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs. T. and S. KNIGHT, of Great Suffolk-street, Southwark, as their painters, who will be ready to execute any description of painting and decorating with the Pure Patent White Zinc Paint.

PERMANENT ZINC COLOURS and WHITE.—Emerald and Brunswick Greens, Chromes, Blues, Reds, and all other Colours, are now produced from Zinc, as pure, which render them an advantageous substitute to the Lead, Arsenic, and Copper Colours. These Zinc Colours are most brilliant, and never change by exposure to any Gases, Salt Water, &c. For Ships and Machinery, also for all kinds of House Painting, no other but Zinc Colours ought to be used to insure durability and economy. For Prices, apply to the Patentees, Messrs. GRAY and KEYELIN and CO White Zinc and Permanent Colour Works, Victoria-wharf, Regent's-park-basin, London.

BLUE LIAS LIME.—NELSON and CO. beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders, and others connected with the building trade, to the superior quality of their BLUE LIAS LIME, the natural hydraulic properties of which, and the great estimation in which this kind of Lime is held for buildings in wet and damp situations, such as wharf-walls, docks, &c. and for concrete foundations, is a sufficient recommendation for the adoption of it in all works of the above description. It is also peculiarly adapted for stucco. Orders received by—London Agents, BLYTH, BROTHERS, 16, South Wharf, Paddington; and at the Works, Stockton-fields, near Southam, Warwickshire.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS Cements of the best quality.

SEWER'S, PAVIORS', STOCKS, and other Bricks.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements, with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not require to be stored in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. Manufacturers of the very best PORTLAND CEMENT for all purposes Cement is applicable, solicit a continuance of that patronage with which they have so long been favoured.—Orders received at Great Scotland yard, and at the Works.

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs. ASPDIN, ORD, and Co. have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery (patented by Mr. ASPDIN) much improved the quality of this Cement without any increase in price.

Engineers and architects are recommended to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cement, resembling it only in colour.

ASPDIN, ORD, and CO. beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper.

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at the their Office, New Wharf, Westminster, London; at their Works, Gateshead-on-Tyne; or from their Agent, Mr. HENRY ROBINSON, 31, King-street, Liverpool.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality (a desideratum never before attained in Portland Cements). It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vecetate, turn green, or crack; combined with which its eminent hydraulic properties stamp it at once as the first cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly. Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses.—These well-known hard stuccoes dry quickly, and can be painted upon within a few days. Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL. Light and Dark, equal to any made. Manufacturers also, and dealers in Plaster, Parls White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Firebricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

PARIAN CEMENT, for internal use, to be painted in a few hours, and papered within a couple of days. CHARLES PRANCIS and SONS, Manufacturers of Roman, Parian (under patents), and all other Cements in use for building purposes, Nine Elms, London.

ATKINSON'S CEMENT, so long known and esteemed in London, for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster, and Seel street, Liverpool.

PREMIUMS REDUCED THIRTY PER CENT.
Annual Division of Profits.

GREAT BRITON MUTUAL LIFE ASSURANCE SOCIETY,
14, Waterloo-place, London, and 30, Brown-street, Manchester.

DIRECTORS.

THE CHISHOLM, Chairman.
RICHARD HARTLEY KENNEDY, Esq. Deputy-Chairman.

Colonel Michael E. Begnold.	William Morley, esq.
Francis Brodigan, esq.	Robert Frances Howe, esq. M.D.
Alexander Robert Irvine, esq.	Archibald Spens, esq.
John Inglis Jerdan, esq.	Frederick Vezian, esq.
James John Kinloch, esq.	Rev. F. W. J. Vickery.
Henry Lawson, esq.	

This Society is established on the tried and approved principle of Mutual Assurance. The funds are accumulated for the exclusive benefit of the Policy holders, under their own immediate superintendence and control. The profits are divided annually, and applied in reduction of the current premiums.

The Annual General Meeting of this Society was held on the 26th of May, 1853, when a Report of the business for the last year was presented, exhibiting a statement of most satisfactory progress. It appeared that whilst the Assurances effected in 1851 were 44 per cent. beyond those of 1850, nearly 70 per cent. beyond those of 1849, and 170 per cent. beyond those of 1848, the Assurances effected in 1852 considerably exceeded the set of 1851, 325 new Policies having been issued in that year, covering Assurances to the extent of 136,000l. The yearly premiums on which amounted to 6,106l. 15s. It also appeared that the transactions of the first five months of the present year were greater than those of the corresponding months of 1853, or of any preceding year, whilst during the whole period referred to, the claims arising from deaths were much below their estimated amount. A resolution was thereupon passed, continuing a reduction of 30 per cent. on the premiums payable on all Policies on the participating scale, on which five or more annual premiums had been previously paid.

Credit is allowed for half the Annual Premiums for the first five years.

The following Table exemplifies the effect of the present reduction.

Age when Assured.	Amount Assured.	Annual Premium hitherto paid.	Reduction of 30 per cent.	Annual Premium now payable.
	£	£ s. d.	£ s. d.	£ s. d.
20	1,000	20 17 6	6 5 3	14 12 3
25	1,000	23 0 0	6 18 0	16 2 0
35	1,000	43 15 0	13 3 0	30 12 0
45	2,000	80 11 8	24 3 6	56 8 2

INSTITUTED 1831.

SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY.—Incorporated by Royal Charters, and Special Act of Parliament.

Head Office Edinburgh, 37, St. Andrew-square.
MANAGER—Robert Christie, Esq.
London, 124, Bishopsgate-street, Within.
Glasgow—193, St. Vincent-street.

The Scottish Equitable Life Assurance Society is an institution peculiarly adapted to afford Provision for Families. It was established in the year 1831, upon the principle of Mutual Contribution, the whole profits or gain being wholly divisible among the members; and the additions which have been made to policies at the periodical investigations of the Society afford satisfactory evidence of the prosperity of the Institution, and the great advantages derived by its members. The following examples exhibit the additions already made:—

A policy for 1,000l. opened in 1839, is now increased to £1568 9 4
A policy for 1,000l. opened in 1836, is now increased to 1407 18 1
A policy for 1,000l. opened in 1841, is now increased to 1297 15 7

The profits are continued and divided triennially amongst policies of more than five years' duration.

The annual revenue is upwards of 140,000l.

The amount of assurances in force is upwards of 4,000,000l. sterling.

The amount paid to the representatives of deceased members exceeds 500,000l. sterling.

The total amount of vested additions allocated to policies exceeds 800,000l.

The accumulated fund is upwards of 760,000l.

Loans granted to members to the extent of the Office value of their policies.

Copies of the annual report, forms of proposal, and all information may be had on application at any of the Society's Offices, in town or country.

ROBERT CHRISTIE, Manager.
WILLIAM INVERARITY, Secretary.
Dec. 1853. W. COOK, Agent,
126, Bishopsgate-street, London.

SOLICITORS' and GENERAL LIFE ASSURANCE SOCIETY, 99, Chancery-lane, London.

Subscribed Capital, One Million.

This Society presents the following advantages:—
The security of a subscribed Capital of One Million.
Exemption of the Assured from all liab lity.
Premiums affording particular advantages to young lives.
Participating and Non-Participating Premiums.

In the former 80 per cent. or four fifths of the profits are divided amongst the Assured triennially, either by way of addition to the sum assured, or in diminution of Premium, at their option.

No deduction is made from the four-fifths of the profits for interest on Capital, for a Guarantee Fund, or on any other account.

Policies Free of Stamp Duty and Indisputable, except in case of fraud.

At the General Meeting, on the 31st of May last, a Bonus was declared of nearly Two per cent. per annum on the amount assured, or at the rate of from Thirty to upwards of Sixty per cent. on the Premiums paid.

Policies share in the Profits, even if One Premium only has been paid.

Next Division of Profits in 1856.

The Directors meet on Thursdays, at Two o'clock. Assurances may be effected by applying on any other day, between the hours of Ten and Four, at the Office of the Society, where prospectuses and all other requisite information can be obtained.

CHARLES JOHN GILL, Secretary.

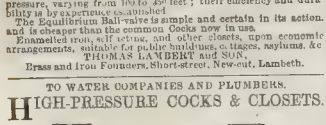
PRIZE MEDAL, CLASS 32.

HIGH-PRESSURE VALVE COCKS.—

LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 100 to 450 feet; their efficiency and durability is by experience established.

The Equilibrium Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.

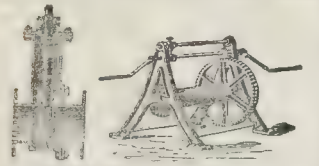


Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c.

THOMAS LAMBERT and SON,

Brass and Iron Founders, Short-street, New-cut, Lambeth.

TO WATER COMPANIES AND PLUMBERS.



HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin street, London.

IMPROVED SLUICE COCKS, for Water,

Gas, or Steam, brass faced, and sluices raised by square thread, engine-turned screw, working in brass nut, in every respect as good as can be manufactured, are offered at the following prices per inch

2 inch.	3 and 4 inch.	5 to 9 inch.	10 to 15 inch.
16s.	15d.	14s.	13s.

Lithographs of the improved self-acting and various other constructions, with descriptions and prices attached, may be had on application.

Single-pair brass builders' cocks, as above, fitted with two handles, and wrought iron braces and spindles, with set to throw in and out of gear.

Price	70s. each.
Stronger and larger ditto	80. 10s. do.
Double purchase	85. 8s. do.
Treble purchase	120. 12s. do.

BARRETT, EXALL, and ANDREWS, Kate's Grove Ironworks, Reading. Agents in London, DRAY and CO, Swan-lane.

FOWLER'S IMPROVED

WROUGHT PUMPS for CONTRACTORS, BRICKMAKERS, EXCAVATORS, and OTHERS

The attention of this house for more than fifty years past having been most exclusively paid to the manufacture of every description of pump-work for every variety of purpose, attention is respectfully requested to their very superior Wrought Pumps, with plain or sucking telescope suction, galvanized and ungalvanized. A large stock of all sizes is kept ready to finish off to order, according to length required, at the shortest notice.

This description of Pump-work varying in almost every case, it is impossible to quote a general price, but the fullest particulars will be given on application.

A large stock of Wrought Pumps, from 3-inch single to deal 16-inch barrel, is also kept on hire prepared for hand or steam power, on reasonable terms, at

BENJAMIN FOWLER'S

ENGINE-PUMP MANUFACTORY,

Whitefriars-street, Fleet-street, London.

TO BUILDERS AND PLUMBERS.

The attention of the Trade is called to

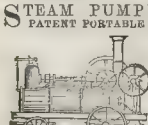
JOHN WARNER & SONS'

PATENT VIBRATING STANDARD PUMP,

which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and guides are unnecessary, rendering the price considerably less than pumps made on the old plan.

Beer and Water Engines for raising fluids from a depth not exceeding 28 feet; also, Garden Engines constructed on the same principle.



JOHN WARNER & SONS,

8, Crescent, Jewin-street, London,

Manufacturers and Patentees.

STEAM PUMPING ENGINES.—

PATENT PORTABLE STEAM-ENGINES, from four to ten-horse power, always ready to let on hire, by the week or month, for pumping sawing, pile-driving, raising materials, &c. &c.

Contracts taken for pumping any quantity of water.

JAMES BURTON & SONS,

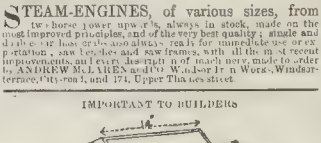
Engineers and Contractors,

John's-place, Holland-street,

Southwark, London.

PUMPS.—Engineers, Contractors, and Parties

engaged in raising water will find it their interest to examine into the merits and advantages possessed by the PATENT CENTRIFUGAL PUMPS over every other. They are applicable for lifting, draining, and irrigating. Are used by the first engineers, builders, and contractors of the day, who may be referred to. Contracts entered into for the supply of all sizes, varying from 25,000 to 30,000 gallons per minute. Can be seen daily at work, and all information obtained respecting them, by application to GWYNNE, SON, and CO., Essex-wharf, Strand.



TO BE SOLD, a new and powerful

PASSENGER LOCOMOTIVE ENGINE, being the last made by the late Charles Todd, of Leeds.—Apply to Mr. TANNETT, of the firm of Smith, Beacock, and Tannett, Iron-founders and Tool Makers, Victoria Foundry, Water lane, Leeds.

STEAM-ENGINES, of various sizes, from

two-horse power upwards, always in stock, made on the most improved principles, and of the very best quality; single and double cylinder boilers also always ready for immediate use or erection; saw benches and saw frames, with all the most recent improvements, and every description of machinery, made to order by ANDREW McLAREN and CO. Windsor Iron Works, Windsor-terrace, Old-road, and 174, Upper Thames-street.

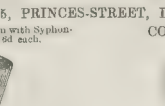
IMPORTANT TO BUILDERS

REGISTERED CAST-IRON CHIMNEY-

POT, EAR and CHIMNEY-BAR COWLS, ensuring a perfect formation of the Flue, and rendering smoky chimneys impossible. One trial will cause their adoption in every building. Price from 8s. 6d. each, according to size.

CAST-IRON KITCHEN SINKS, with overflow-pipe, 8s. 6d. each.

IRON PIPES and connections for gas, water, and liquid manure.



RAIN WATER PIPE and EAVE GUTTERS, at wholesale prices. Also, O-G Gutters. Sash-weights, STABLE FITTINGS, rimps, hench railing, cattle and pig troughs, and COLUMNS with caps and bases, and CREST of Builder's pattern, in stock, at LYNCH, WHITE'S Iron Wharf, Upper Ground-street, London, near Blackfriars-bridge.

SUCCESSFUL VENTILATION.—

WATSON'S PATENT SELF-ACTING DOUBLE CURRENT VENTILATORS have been successfully applied to Churches, Chapels, Public Halls, Stables, Sick-wards, Lecture-rooms, Model Dwellings, as well as to withdraw Steam, Smoke, Dust, and Foul Effluvia from Sewers, Drains, Cesspools, Water-closets, Manufactories, Mines, Ships, &c. &c. Testimonials and other information forwarded on receipt of a postage stamp. The Ventilators are of novel arrangement, simple and durable. Illustrated and descriptive Pamphlet sent free on application at the Manufactory of CHARLES WATSON, Bridge-street, Hunslet, Leeds, where the latest and most improved Ventilators are fixed for inspection.

VENTILATION.—PURE AIR.

Sheringham's Ventilator for the

admission of pure air through an

EXTERNAL WALL.

With single pulley, from 6s. each, with cadmus pulley, from 6s. 6d. These Ventilators are so arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment with all the slightest draught being fairly the occupants, and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 198, Blackfriars-road, and 117, Union-street, Borough; and of all respectable ironmongers, builders.

BRICKS.—500,000 Stocks, Pickings, and

PAVIORS, for SALE, at H. R. BARLOW'S Brickfield Queen's road, Dalston, near the turnpike gate.

BRICKS from COWLEY and KENT.

Also WHITE, YELLOW, and RED FACING BRICKS.

BLUE VITRIFIED BRICKS;

Fire Bricks, Lumps, and Tiles.

CHARLES RICHARDSON, 6, SOUTH WHARF, PADDINGTON.

BRICKS.—Malm Cutters, Yellow and Pale

Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. respectfully requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-washed Stocks and Place Bricks also on sale. These bricks are sound, well burnt, and universally free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Paving Heads of approved quality constantly on sale upon reasonable terms. This Sand, from its containing any saline matter, is acknowledged to be preferable to river sand.

BRICKS.—KENT, GREY STOCK, and

other Bricks of superior quality delivered alongside per Barges.—Apply to W. ALLAWAY, 4, Catherine-court, Tower-hill.

BRICKS.—400,000 GRIZZLES for SALE.

Apply to Messrs. HARDY and DOUGHTY, Brickmakers, Cowley Brickfield, Uxbridge.

600,000 STOCK BRICKS for SALE.—

Apply at 113, Union-court, Old Broad-street.

MAW'S ENCAUSTIC TILE

PAVEMENTS.

MAW and CO. send free, per post, their NEW BOOK OF DESIGNS,

with prices, adapting the most durable, economical, and decorative production of mediæval art to entrance-halls, passages, conservatories, verandahs, and every description of modern and ancient building.

BENTHALL WORKS, near Broseley, Shropshire.

BRICKFIELD TO BE LET, about one mile

from Highgate, adjoining Hornsey-wood, opposite the White Lion, on the Great North-road; has been worked some years. Can be viewed, and particulars had of Mr. ALDER, 11, Edith-grove, Brompton, Middlesex.

PEAKE'S TERRO-METALLIC TILES,

PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for the WARE is REMOVED to No. 21 WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor, and, thirdly, that the "REPORTS OF THE JURORS," page 908, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

TO BRICKMAKERS.

FOR SALE, 4,000 Chaldrons of House-ashe

and Breize, 1,000 Gravesiles, and 500 Loads of straw.—Apply to J. A. SMITH, Contractor, Newport-street, Lambeth-walk.

WANTED to RENT, a MINE of STONE-

WARE and FIRE CLAY, in the Midland Counties, to be accessible by rail.—Apply to Mr. W. J. EMERY, Cannock, near Walsall.

FOUNDERS' SAND or LOAM for SALE;

100 LOADS.—Inquire at the late foundry, 1, Devonshire-place, Commercial-road, or of JOHN GOODMAN, 25, Hereford-place.

HENRY MILLICHAMP, Son-in-Law and Successor to THOMAS BULLOCK,

MANUFACTURER OF

GLAZED STONE-WARE DRAIN-PIPES, BENDS, JUNCTIONS, TRAPS, &c.

65, PRINCES-STREET, LAMBETH, and BRUNTON'S WHARF POTTERY, COMMERCIAL-ROAD EAST.

A LARGE ASSORTMENT OF STRAIGHT TUBES, IN 2 FEET LENGTHS.

Bends, Elbows, Urinals, Gulls-Traps, Flap-Traps, Syphon-Traps, &c. always kept in Stock.

DRAWINGS and LIST of PRICES FORWARDED FREE ON APPLICATION.

Watercloset Pan with Syphon-Trap connected, price 7s. 6d. each.

WILLIAM NORTHEN'S

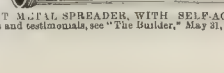
WHITE ENAMELLED STONEWARE,

UNION POTTERY, 14, VAUXHALL-WALK, LAMBETH, LONDON.

W. N. solicits an inspection of his IMPROVED WHITE ENAMELLED STONEWARE CLOSET PANS, being an entire new description of stoneware, perfectly vitrified and highly glazed, far surpassing anything of the kind yet offered to the public.

SAME PRICE AS BROWN STONEWARE.—7s. 6d. Pan and Trap. WITH BLUE INSIDE, ENAMEL, 1s. extra.

STEPHEN GREEN and CO.'s IMPROVED DRAIN PIPES, GLAZED



IN SIDE. WORKS, IMPERIAL POTTERIES, PRINCES-STREET, LAMBETH.

Common shape Closet Pans, well glazed inside, 7s. 6d. each.

Extra, if fitted with the patent air-tight valve, by which the trap can be cleansed without removing the seat, 1s. 6d. each.

Various patterns of improved shapes always on hand.

Straight Tubes, Junctions, Bends, Curves, Elbows, Siphon-traps, Flap-traps, Urinals, Surface-sinks, and Horseshoe Pipes always kept in stock.

Manufacturers of the

PATENT SIPHON FLUSHING-BASIN, WITHOUT METAL SPREADER, WITH SELF-ACTING CLOSET CONNECTIONS. For illustrative drawings and testimonials, see "The Builder," May 31, 1851.

CLOSET-PANS ARE NOT WATER-CLOSETS, UNLESS THE BASINS CONTAIN WATER,

AND THE DAY IS FAST APPROACHING WHEN PANS, SHAPED LIKE INVERTED EXTINGUISHERS, WITHOUT A WATER SURFACE, WILL CEASE TO BE USED.

JENNINGS'S IMPERISHABLE WATER-CLOSETS

HAVE A

LARGE WATER SURFACE, TO PREVENT ADHESION AND CONDENSE EFFLUVIA.

The backs are so formed, that they can not be soiled. They are free from all machinery, imperishable in their material, displace no water, and save the usually expensive lead-trap. In their different varieties of ware, they are fit for the Palace of the Queen, or the Cottage of the Poor Man.

Immediately publicity was given to this Closet, the Patentee received orders to fix Thirty-three in the Great Industrial Exhibition, Dublin. Ninety-six in Guy's Hospital, Ninety-eight at the New Westminster Workhouses, and their Weekly sale now exceeds 300.

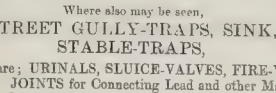
ARCHITECTS, BUILDERS, AND PLUMBERS ARE INVITED TO SEE THIS CLOSET IN ALL ITS VARIETIES OF WARE, IN ACTION ON THE PREMISES.

Where also may be seen,

JENNINGS'S STREET GULLY-TRAPS, SINK, AREA, AND STABLE-TRAPS,

LAVATORIES, Angular or Square; URINALS, SLUICE-VALVES, FIRE-VALVES, HIGH-PRESSURE BALL, and other COCKS; JOINTS for Connecting Lead and other Malleable Pipes, without Solder: SHOES for Preserving the Corners of Shop Shutters, and securing them without a Bar; SUPPLY-VALVES to CLOSET BASINS, which combine the Waste and Service in one, and require neither Ball, Lever, nor Wire; and many other things necessary to comfort and health.

A BOOK, containing ILLUSTRATIONS, DESCRIPTIONS, and PRICES, can be had free, on application, or by post, if two stamps are sent, to



GEORGE JENNINGS,

ENGINEER AND BRASSFOUNDER,

No. 29, Great Charlotte-street, Blackfriars-road.

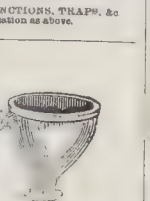
DOULTON AND WATTS'S

REGISTERED CLOSET PANS IN

ENAMELLED STONE WARE,

LAMBETH POTTERY, LONDON.

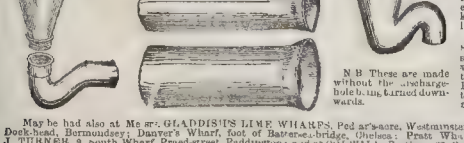


These Closet Pans are manufactured in a new kind of stone-ware, HIGHLY GLAZED, vitreous, of a white colour, are much improved in form, and are used and recommended by the engineers connected with the General Board of Health.

The Traps are smaller at the inlet, gradually enlarging towards the outlet, as a security against the introduction of improper substances into the drain.

They may also be had turned down.

PRICE 7s. 6d. each,



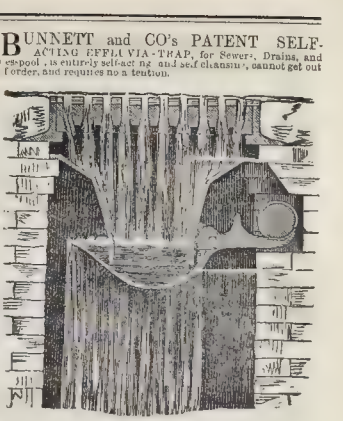
The same as for ordinary stone-ware, and may be had fitted with copper fans of the best construction at 1s. 3d. each extra.

JAMES STIFF, MANUFACTURER of GLAZED STONE-WARE DRAIN PIPES, BENDS, JUNCTIONS, TRAPS, &c. 39, HIGH-STREET, LAMBETH, LONDON. Established 1751.

Water-Closet Pans, with Syphon Traps, 7s. 6d. each.

STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths.

N.B. These are made without the discharge-hole being turned downwards.



The great advantages attending the use of these articles are now so generally understood, as to render any enumeration of them almost superfluous. Their cheapness, efficiency, and durability, are universally admitted; while the rapidly increasing demand for them proves their estimated superiority over every other kind hitherto before the public for similar purposes.

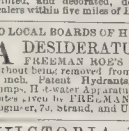
Inspection is invited to an assorted Stock of Drain Tubes of every form and size adapted to the various situations for which they may be required; as also to the WATER-CLOSET PANS OF IMPROVED CONSTRUCTION, and interior Glaze far surpassing any other manufactured of Brown Stone Ware.

May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge, City-road Wharf, City Basin Dock-head, Bermondsey; Danvers Wharf, foot of Battersea-bridge, Chelsea; Pratt Wharf, King's-road, Camden New Town. J. TURNER, 2, South Wharf, Praed-street, Paddington; and at COLWILL Brothers, 12, Brydges-street Covent Garden.

Drawings and List of Prices will be forwarded free, on application.

BUNNETT and CO.'s PATENT SELF-ACTING EFFLUVIA-TRAP, for Sewers, Drains, and Cesspool, is entirely self-acting and self-cleansing, cannot get out of order, and requires no attention.

The above is a sectional view of the Trap in its ordinary position with the pointed weight at the extremities of the lever attached to the movable pan. The body of the trap, dipping into the moveable pan, forms a perfect vapour-proof joint, and should the former at last spell, the water will rise in the body of it till it overbalances the weight, when it then rolls towards the centre, and allows the pan to fall to its fullest extent, effectually discharging all obstructions; the weight then rolls back, and brings up the pan to its former position, catching sufficient water to form a fresh joint.



Five years' extensive use in various parts of the kingdom have thoroughly tested the practical superiority and utility of the above invention over all others, as proved by a constant repetition of orders, and numerous testimonials from various local boards, town surveyors and others who have adopted them.

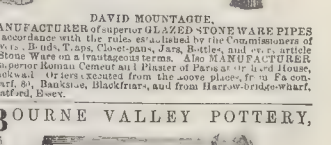
Office, 28, LOMBARD STREET, LONDON. Works, DEPTFORD, KENT, where particulars, testimonials, &c. may be obtained; also of most respectable Iron mongers.

MANUFACTURERS of GLAZED STONEWARE PIPES, Bends, Junctions, &c., also FIRE BRICKS, Vitrified Blue Bricks as used by her Majesty's Commissioners of Sewers, White Fire Clay, Facing Bricks, &c., &c. Agents, CHARLES RICHARDSON, & Co. 6, South Wharf, Paddington, London.

GREAT SIMPLIFICATION and Economy in FIXING CLOSETS.

By the use of Underhay's Patent Regulators, the separate cistern, service-box, valve, cranks, and wires are dispensed with, making a closet as simple to fix as a Pan-sock, and yet ensuring a perfect flush of water.

The Manufacturers, CHARLES BOTTEN and SON, solicit a call from all parties interested, they having Pan, Valve, Self-acting, and Jennings's Closets fitted with this apparatus, and fixed for inspection, or will forward drawings of the same.



CHARLES BOTTEN and SON, Brass Founders, Engineers, Gas Meter and Fitting Manufacturers, Crawford-passage, Clerkenwell.

STAFFORDSHIRE POTTERY.—WILCOX, BARNARD, and CO. Earthenware Manufacturers, Millwall, Poplar. Closet basins, urinals, slop pans, plug-basins, wash-hand-bowls, beer-machine handles, closet handles, bath-knobs, &c. toilet ware, fancy jugs, pan-pots, &c. white, printed, and decorated, delivered carriage-free to wholesale dealers within five miles of London.

TO LOCAL BOARDS OF HEALTH, WATER COMPANIES, &c.

A DESIDERATUM in SLUICE-VALVES, FREEMAN ROE'S Patent Sluice-valve, can be repaired without being removed from the main. All sizes, from 2 inch to 36 inch. Patent Hydrants, self-closing Cocks, fire and other Pumps, Hot-water Apparatus, Baths, &c. Surveys made, and estimates given by FREEMAN ROE, Hydraulic, Sanitary, and Gas Engineer, 70, Strand, and Upper Mark, Lambeth.

Catalogues of P. HARDWICK, Esq. 21, Cavendish-square; of Messrs. LEE and SIVELL, Inspectors of Works, Greenwich Hospital; and of PULLEN and Son, 80, Fore-street, Cripplegate.

1, 2, and 3, NEW BRICKS, Shepherd's Bush.

MESSRS. EVERSFIELD and HORNE beg to announce that they will SELL by AUCTION, early in MARCH, at the BRICKFIELD, SHEPHERD'S BUSH, near Hammersmith, about a million of capital sound STOCK BRICKS, which will be arranged in lots to suit purchasers, to whom accommodation in the way of approved bills will be granted.—Auction and Estate Offices, 40, Parliament-street, Westminster.

Great Western Railway. First Portion of the Valuable Materials of the old Terminus, at Paddington.

MESSRS. EVERSFIELD and HORNE are honoured with instructions from the Directors of the Great Western Railway Company to SELL by AUCTION, on the PREMISES, on MONDAY, JANUARY 30, at TEN for ELEVEN, in consequence of the number of lots, the very valuable materials and fittings of the booking offices, first-class waiting-rooms, and Carriage Sheds: comprising, 300 squares of capital duchess slating, 100 pairs of sound timber principals with rafters and tie-beams, 4 inches and 6 inches, the stone plinking of platforms, board and timber floors, weather boarding, quartering, lining boards, large gates, doors, sashes, and skylights, 60 iron columns, 4 snare and 6 cheese lamps, 1500 feet of iron gas piping, 5,000 feet of Yorkshire paving, large tinned cisterns, fittings of ten water closets and urinals, fittings up of the ticket-offices and waiting-rooms, ball stoves, very excellent turret clocks, a large metal bell, about 10 tons of lead, 12,000 superficial feet of zinc, sound stock brickwork, a large quantity of timber of prime materials, and a variety of other effects.—May be viewed three days previous to the Sale the day of which will be very shortly announced; when Catalogues may be had on the Premises, and of the Auctioneers, 40, Parliament-street, Westminster.

TO TIMBER MERCHANTS, SAW-MILL PROPRIETORS, and others, requiring extensive Premises.

MR. WARD will SELL by AUCTION, on the PREMISES, on THURSDAY, FEBRUARY 9th, at TWO o'clock precisely, the LEASE, of the capital TIMBER-YARD, situate in the Hermitage Road, Southwark, near the Bricklayers' Arms Rails 5 stations, and within ten minutes' walk of London-bridge. These premises comprise a large yard, with dining-house and garden over, capital range of timber scaffolding for laid drying sheds, veneer room, loft, stabling for seven horses, &c; the whole containing nearly an acre of ground The rent is exceedingly moderate. The business of a timber-merchant has been carried on in the above premises for the last fifty years with great success. From its close vicinity to the City and Docks, cannot fail to make it a very eligible opening either in the present trade or as a saw mill.—For further particulars apply to the Auctioneer, No. 8, Oxford street.

TO TIMBER-MERCHANTS, BUILDERS, CARPENTERS, Cabinet, Coach, and Pianoforte Makers, Shipbuilders, Wheelwrights, and others.

MR. WARD will SELL by AUCTION, on the PREMISES, Bermondsey New-road, Southwark, on THURSDAY and FRIDAY, the 9th and 10th of FEBRUARY, at ELEVEN o'clock each day, the dry and well-seasoned STOCK of a Timber-merchant, consisting of Indian and Spanish mahogany, in planks, logs, &c, and veneers, American and other birch board and plank, 2 sets dry well-waine plank and deals, 2,500 white and yellow lowland lumber, 1 set of lands [in a state for preparing] flooring boards, moulding, 100 English oak trees, 50 loads of dry ash plank, beech plank, planks and deals, &c, stacks, cut deals and planks; and also the whole of the utensils in trade, consisting of two timber-carriages, cart, truck, horses, harness, pit saws, screws, cutters, two-feet rules, &c. Catalogues may shortly be had on the Premises; and of the Auctioneer, No. 8, Oxford-street. The Lease of the above Premises will also be disposed of, if not previously sold privately, at TWO o'clock precisely, on THURSDAY, FEBRUARY 9.

TO BUILDERS AND OTHERS.—Stock-in-Trade, Ladders, Scaffolding, Household Furniture, and Effects.

MESSRS. LOCKWOOD will SELL by AUCTION, on the PREMISES, No. 2, Bruton-place, Berkeley-square, on TUESDAY, the 24th JANUARY, at ONE o'clock punctually, STOCK-IN-TRADE of a Builder, consisting of a small quantity of deals, in various thicknesses, timber in scantling, joiners' work unfinished, framed work of various descriptions, small quantity of York paving, sundry old materials, two good sized ladders, and sundry of various lengths; sundry paints, oil, and turps, and painters' utensils, small quantity of crown and sheet glass, household furniture of the usual description, and miscellaneous effects. — May be viewed the day preceding the sale, when catalogues may be had on the premises; of Messrs. BICKNELL, Solicitors, 73, Connaught-terrace, Edgeware-road; and at the Offices of the Auctioneers, No. 1, Burwood place, Hyde park, or 44, Upper Baker street

---

EVERDON, near WEEDON, NORTHAMPTONSHIRE TO TIMBER-DEALERS AND OTHERS. Important Sale of 500 superior Ash and Elm Timber Trees, now standing, lopped and numbered, on the Farm in the occupation of Mr. John Goodman, comprising 420 Ash and 80 Elm TO BE SOLD by AUCTION, by

THOS. BALES, on FRIDAY, the 27th of JANUARY, 1854, at the PLUME of FEATHERS INN, Everdon, aforesaid, by order of R. Canning, esq. and others—as per bills to the usual credit. N.B. The above trees are of long length, large meetings, and of superior quality, admirably suited for removal, being within 3 miles of the Grand Junction Canal Wharf and Weedon Station of the Grand Junction and North Western Railway. For further particulars, and to view the timber, apply to Mr. PETERS, Surveyor, Everdon, who will appoint persons to show the same, and also supply Catalogues, on account of the extent of the farm, parties intending to purchase are requested to view the timber previous to the day of sale. Dinner will be on the table at ONE o'clock, and the sale commence punctually at TWO.

To Freehold Land and Building Societies. Valuable Freehold Land, part of Stoke's Farm, Wokingham, Berks.

MR. DALLEY is favoured with instructions from Mr. Rand, the proprietor, to SELL by AUCTION, at the AUBURN MARKET, London, on THURSDAY, JANUARY 26, at TWELVE precisely, the following valuable FREEHOLD ARABLE and MEADOW LAND, being part of Stoke's Farm, in the parish of Wokingham, containing 34a. 3r. 3p. which will be laid in 10 lots. The above valuable property is well worth the notice of Building Societies, having an extensive frontage to the Turnpike-road, five miles of the rising market town, and eligible sites for the erection of villa residences. It is within an easy distance of two railways, and on the completion of the new rail from Staines to Wokingham will bring the property within one hour's ride of the city. The lots may be viewed any time previous to sale, on application to Mr. RAND. Printed particulars, with a plan of the estate, and conditions of sale, may be had fourteen days before the sale, at the Mart; King's Arms and Station Hotels, Twyford; Black Horse, Reading; King's Arms, Blackwater; of HENRY MARSHALL, Esq. Solicitor, Godalming, Surrey; and of Mr. DALLEY, Auctioneer, Wokingham.

SALES BY AUCTION.

Double Ticket, 21s. Lady's, 15s.; Gentlemen's, 14s.; to be had of the Stewards; also of the Honorary Secretary, Mr. JOSEPH BIRD, 38, Portman-place, Edgeware-road; at the office of the Institution, 11, Southampton-street, Bloomsbury; and at the Bar of "The Builder." As the tickets are limited, an early application is desirable.

MASONS' PROVIDENT INSTITUTION. Established 1845, for granting Pensions and the Erection of an Asylum for Aged and Decayed Masons, their Widows and Orphans.

THE EIGHTH ANNUAL GENERAL MEETING of the above Institution will be held on TUESDAY, JANUARY 31st, 1854, at HAWKSTON HALL, Waterloo-road, for the purpose of receiving the Report of the Managing Committee and Auditors, and other General business of the Institution.

The Committee respectfully beg to state that the General Meetings of the Institution are entirely confined to its subscribers, and the Committee feeling convinced that the Trade at large should avail themselves of the inestimable benefits to be derived from so excellent an institution, earnestly invite their attendance, and pledge for themselves, as to the expediency of co-operating to carry its benevolent objects.

The Chair will be taken at EIGHT o'clock precisely.

Reserved seats will be arranged for those ladies who might honour the meeting with their presence.

By order, WM. DIX, Secretary.
14, William-street, Hampstead-road.

DECORATIVE ARTISTIC PAINTING.—Mr. F. SANG, from the Royal Academy at Munich, whose works may be seen in the leading public and private buildings in the metropolis and the country, draws the attention of his patrons to his new and improved STYLES of ARTISTIC EMBELLISHMENTS of INTERIORS, in the modern and ancient styles. Address, Mr. SANG, 38, Pall mall, London

COMPETITIONS.

TO BUILDERS AND OTHERS.

NOTICE is hereby given, that Plans and Specifications for BUILDING a NEW CHURCH, on Hyde Common, within the parish of Fordingbridge, and county of Southampton, will lie at the Office of Mr. JOHN HANNEN, Junr. Austinmer, Fordingbridge, from the 4th until the 18th FEBRUARY next inclusive, between the hours of NINE and FIVE o'clock. All persons willing to CONTRACT for the execution of the works, are to send in sealed Tenders, indorsed "Tenders for Works, Hyde Church," addressed to the Rev. C. HARTH, Vicarage, Fordingbridge, on or before the 20th of FEBRUARY, 1854. The Building Committee do not bind themselves to accept the lowest tender. Fordingbridge, January 26, 1854.

TO ARCHITECTS AND OTHERS.

THE Burial Board for the Parish of St. Marylebone will meet at the Court-house, St. Marylebone, on WEDNESDAY, the 1st day of MARCH, 1854, for the purpose of receiving DESIGNS for laying out the Newmarket Farm at East End Finchley, consisting of about twenty-five acres, as a CEMETERY, and for the erection of Two Chapels, Lodges, and other buildings thereon. Each design to be accompanied with an estimate of the cost of the execution of the several works. A premium of 50 guineas will be paid for the selected design, which is to become the property of the Board, provided the author of such design is not appointed to carry out the works. Full particulars and instructions may be obtained on application to Mr. GREENWELL, Clerk to the Board, at the Court-house, St. Marylebone. By order, W. E. GREENWELL, Clerk.

CONTRACTS.

ORDNANCE CONTRACTS. — Notice is hereby given, that the Honourable the Board of Ordnance will receive TENDERS on or before THURSDAY, FEBRUARY 2, 1854, for the performance of such WORK as may be required by them of the undermentioned Trades, at YORK, HULL, and LEEDS, from the 1st of APRIL, 1854, to the 31st of MARCH, 1855, viz.:—

Bricklayers'	Work.
Masons' and Paviors'	Do.
Carpenters'	Do.
Slaters'	Do.
Plasterers'	Do.
Plumbers'	Do.
Smiths'	Do.
Painters', Glaziers', and Paperhangers'	Do.

N.B. Parties are particularly required to observe, that it is desirable their Tenders should include every trade in the schedule; and that the per centage is to be separately expressed for each trade.

Printed schedules for the different trades and form of Tender can be obtained on application to Mr. GLEGG, Clerk of Works, at the Royal Engineer's Office, 16, Parliament-street, York; the Foreman of the Works, Royal Engineer's Office, Barracks, Leeds; and of the Barrack Master, Citadel, Hull, any day (Sunday excepted) between TEN and FOUR o'clock, until WEDNESDAY, the 1st FEBRUARY, 1854.

Royal Engineer's Office, York, 11th January, 1854.

TO BUILDERS

PARTIES willing to CONTRACT for the several works to be performed on the ERECTION of a CONGREGATIONAL CHAPEL, on Lyncombe Hill, near Bath, may inspect the drawings and specification at the offices of Messrs. GOODRIDGE, Architects, 7, Henrietta-street, Bath, on and after TUESDAY, the 24th instant, between the hours of TEN a.m. and FOUR p.m. The Tenders must be delivered, in, or before the 10th day of FEBRUARY, directed to the Building Committee. The lowest Tender will not necessarily be accepted. Bath, January 12, 1854.

TO ROAD CONTRACTORS.

TENDERS are required for the REPAIR of the ROADWAYS and FOOTPATHS on the CHALCOT ESTATE, in the parish of St. John, Hampstead, and for their MAINTENANCE for Twelve Months after such repair. Contractors willing to make such Tenders may see the specifications and conditions of contract, at the Office of Mr. JOHN SHAW, Architect, at Lord's Hospital, Nags-head, Kentish-town, on or before the 31st day of JANUARY next. The Commissioners do not bind themselves to accept the lowest Tender.—By order of the Commissioners.

H. A. VILES, Clerk.

Commissioners' Offices, Bilston, Jan. 18, 1854.

TO BRICKMAKERS AND OTHERS.

STRATFORD-UPON-AVON LOCAL BOARD OF HEALTH.—IMPROVEMENT WORKS.—CONTRACT No. 1. The Board hereby give notice that they are prepared to receive TENDERS for the supply of 1,000,000 BRICKS for a SEWER and for the erection of Two Houses, in accordance with the conditions and specifications, and signed by a form of Tender, to be had at the Office of Mr. EDWARD GIBBS, Engineer and Surveyor to the Local Board, Stratford-upon-Avon. Tenders are to be sent to the undersigned, under cover, addressed to "The Stratford-upon-Avon Local Board of Health," before Twelve o'clock on Wednesday next, being the 1st day of FEBRUARY next. The Board do not bind themselves to accept the lowest or any Tender. By order of the Board,

HENRY O. HUDD, Clerk to the said Local Board

Stratford-upon-Avon, January 25, 1854.

CONTRACTS.

TO CONTRACTORS FOR PUBLIC WORKS.

CARDIFF SEWERS.—The Cardiff Local Board of Health are prepared to receive TENDERS for the EXECUTION of the WORKS connected with the GENERAL DRAINAGE of the Town of CARDIFF, comprising Brick Culverting, with Manholes, Side Entrances, Junctions, &c. &c.

Plans, sections, specifications, and form of Tender will be open to the inspection of Contractors at the New Guildhall, in the said town, between the hours of TEN a.m. and FIVE p.m. from the 30th instant until the 3rd day of FEBRUARY, 1854, both inclusive.

Printed forms of Tender may be had at my Office, and none others will be received.

Sealed Tenders, endorsed "Tender for Sewers," must be sent in to me on or before the 23rd of FEBRUARY, 1854.

The Local Board do not pledge themselves to accept the lowest or any Tender.

By order, T. WATKINS, Clerk.

Offices of Local Board of Health, Cardiff.

TO IRONFOUNDERS, &c.

THE Loughborough Local Board of Health are desirous of receiving TENDERS for the supply of the necessary CAST-IRON WORK connected with the Town Drainage Works, and comprising grates, gulley traps, and manhole covers. The drawings, together with the specification, may be seen at the Office of Mr. C. TEBBUTT, of Loughborough, Surveyor to the Board, on and after THURSDAY, the 26th instant. Tenders to be sent, addressed to me, on or before SATURDAY, the 4th of FEBRUARY next.—By order of the Board,

Loughborough, Jan. 18, 1854. W. J. WOOLLEY, Clerk.

BRISTOL LOCAL BOARD OF HEALTH.

TO MASONS. The Committee of the Bristol Local Board of Health hereby give notice, that they are ready to receive TENDERS for the performance of the following Works for Three Years, from the 25th day of MARCH next, viz.:—

FOOTWAYS

For the supply of Curb, Lining, Paving, and Pennanting of the best Hamhaw, Mendip, Pitching, Welsh, or other Stone of equal quality, and for Setting and Laying the same in the Footpaths of the Streets, Squares, Courts, Yards, Lanes, Passages, and Places within the city and county of Bristol, as such times as the said Local Board of Health and the Surveyor may direct. The Committee have divided the said city and county into Four Districts, and any person or persons who may be desirous of contracting for the above-mentioned Works in all, or any, or either of the said districts, are required to deliver sealed Tenders for doing the same on or before Twelve o'clock on THURSDAY morning, the 2nd day of MARCH next, indorsed "Tender for Paving in District No. 1, 2, 3, or 4," and addressed, "To the Committee of the Local Board of Health, No. 13, Prince-street, Bristol," where a specification of the works, the terms of the contract, and a form of the Tender, and any other information, may be obtained. Each contractor will be required to find two good and sufficient sureties for the performance of his contract. The committee will not bind themselves to recommend the acceptance by the Local Board of the lowest or any Tender, nor until inquiry and approval of the proposed sureties. By order of the Committee,

JAMES HARRIS, Clerk.

Offices, 13, Prince-street, Jan. 19, 1854.

TO SHIPOWNERS, ENGINEERS, CONTRACTORS, AND OTHERS.

THE MEDITERRANEAN ELECTRIC TELEGRAPH COMPANY are prepared to receive TENDERS from parties willing to PROVIDE a suitable VESSEL or VESSELS, to TRANSPORT in the FIRST PORTION of the MEDITERRANEAN SUBMARINE CABLE, which is consisting of 100 miles or thereabouts, from Indret, near Nantes, down the same under the sea, between Spain and the Island of Corsica; and also to receive on board, off or in the vessel or vessels so aforesaid to be ready to receive the Electric Cable on or before the 1st day of MAY next. Further particulars and conditions of contract may be had by letter duly addressed to the Secretary as under, and after the 5th instant.

JOHN W. BRETT, Gérant,

Offices, 117, Bishopsgate-street Within, London,
January 19, 1854.

EXTENSION OF TIME.

BERWICK-UPON-TWEED.—LOCAL BOARD of HEALTH.—DRAINAGE WORKS.—To Contractors, Ironmasters, and others.—The Local Board hereby give notice, that they are prepared to receive TENDERS from parties who may be willing to undertake the following contract:—

CONTRACT, No. 2.—For EXCAVATIONS and LAYING SEWER and DRAIN PIPES, and for the CONSTRUCTION of BRICK SEWERS, GULLIES, MANHOLES, and OTHER WORKS.

The drawings may be examined on and after the 16th instant, and copies of the specifications, schedules, rules of quantities, and form of Tender, may be had (upon payment of 5s. for each copy), together with any further information, at the Office of the Local Board, Berwick-upon-Tweed; or at the Office of ROBERT RAWLINSON, C.E. No. 34, Parliament street, Westminster. Tenders to be delivered at the Office of the Local Board, Berwick-upon-Tweed, before Twelve o'clock on the 1st day of FEBRUARY next, endorsed, "Tender for Contract, No. 2." The Local Board do not bind themselves to accept the lowest or any Tender.

JAMES C. WEDDILL, Clerk to the Local Board.

Berwick-upon-Tweed, 21st January, 1854.

TO CARPENTERS AND BUILDERS.

TENDERS will be received until WEDNESDAY, the 1st of FEBRUARY, for sundry extensive WORKS [illegible] at the Fitzalan Granite Works, Penton-road, Islington. Plans, specifications, and forms of Tender may be seen, and quantities obtained, at the Offices of Messrs. [illegible], Architects and Surveyors, Arundel-street, Strand, on and after Monday next. The lowest or any Tender will not be necessarily accepted.

[For remainder of Contracts see next page.

CONTRACTS.

GRAVESEND.—The Commissioners acting under the Acts of Parliament for Paving, Cleansing, Lighting, and Improving the Town of Gravesend are ready to receive TENDERS from persons willing to CONTRACT for the performance of the work of TAKING UP and CARRYING AWAY the FILTH swept up in the various streets and middle passages in the town; and also of taking and carrying away the soil, dirt, ashes, and filth from the houses and premises in the town for the period of THREE YEARS from the 25th day of MARCH next. A specification of the duties required to be performed may be seen at my Office, King-street, Gravesend, where Tenders are to be delivered on or before the 8th day of FEBRUARY next, sealed and marked "Tender for Scavenger's Work." The Commissioners do not bind themselves to accept any Tender, and require the Contractor to enter into Bond for the due performance of his contract. By order of the Commissioners,

FRANCIS SOUTHGATE, Clerk.

Gravesend, Jan. 21, 1854.

TO BUILDERS.

PERSONS desirous of CONTRACTING for the ERECTION of TWELVE FOURTH-RATE HOUSES on the Parkhill Estate, Gravesend Mile end, for the Second East London Pedestal Co-operative Benefit Building Society, may inspect the plans and specification, on application at the Office of F. Rogers, Esq., 10, Fenchurch-street, City, between the hours of TEN and SIX o'clock, up to the 4th of FEBRUARY. Tenders to be delivered at the Office of the Society, No. 1, Hatfield-place, Mile end Road, by THURSDAY, the 9th of FEBRUARY, addressed to the Secretary, endorsed "Tender for Houses, Gravesend."

LAMBETH BURIAL GROUND. — TO BUILDERS &c.—The Lambeth Burial Board are prepared to receive TENDERS for the ERECTION of the CHAPELS and LODGES on the proposed burial ground in Tooting. The drawing and specifications may be seen, and any further information obtained, at the Office of the Architects, Messrs. WILBERT and ASHDOWN, 42, Charing-cross.—Sealed Tenders, endorsed "Tender for Chapels and Lodges," to be delivered at the Office of the Vestry Clerk, Kennington-green, addressed to the "Lambeth Burial Board," on or before the 11th day of FEBRUARY. The Board do not bind themselves to accept the Lowest Tender.

BRISTOL and EXETER RAILWAY.—CONTRACT for WORKS.—NOTICE.—The Directors of this Company are ready to receive TENDERS for the construction of a GOODS SHED, an EXCURSION PLATFORM, and other Works in connexion therewith, at Pylehill, Bristol. The drawings and specifications may be seen, and any further information obtained, at the Office of the Engineer, Temple Meads Bristol, on and after MONDAY, the 23rd of JANUARY. Tenders endorsed "Tenders for Goods shed, &c." must be sent to the Secretary, before TWELVE o'clock on the 14th of FEBRUARY.

By order of the Directors,

J. H. BADHAM, Secretary.

Temple-meads, Bristol, 14th January 1854.

TO BUILDERS.

PERSONS desirous of giving TENDERS for the ERECTION of a NEW CHURCH in the parish of Leyland, near Preston Lancashire, are informed that the drawing and specification may be seen on and after WEDNESDAY, FEBRUARY 1st, by application to Mr. MORRELL, Church House, Leyland; and that all necessary further information may be obtained at the Office of the Architect, Mr. CHRISTIAN, 14, Whitehall-place London, to whom Tenders are to be sent on or before WEDNESDAY, FEBRUARY 22nd. The parties do not bind themselves to accept the lowest Tender.

TO BUILDERS, PLUMBERS, &c.

THE Guardians of the Strand Union are desirous of receiving TENDERS from persons who may be willing to CONTRACT with them for refitting UP the WATER-CLOSETS and other WORKS connected therewith, in their Workhouse Cleveland-street. Fitting sample, Plans and specifications of the work may be seen, and other information obtained by applying at the Welsh Office as above. Sealed Tenders to be delivered at No. 6, Bow-street Covent Garden, not later than SIX o'clock p.m. on the 7th of FEBRUARY, and endorsed, "Tenders for Water-closets." Parties tendering, or a member in their behalf, to be in attendance at 7 p.m. The Guardians do not pledge themselves to accept the lowest or any Tender.

By order,

JAMES KILNER, Clerk.

6, Bow-street, Covent Garden, January 25, 1854.

TO BUILDERS.

PERSONS desirous of TENDERING for the ERECTION of a small PARSONAGE-HOUSE at Erith, Kent, for Sir Culling E. Eardley, bart. may see the drawings and specifications, on application to the Architects, Messrs. W. G. and E. HABERSHON, 38, Bloomsbury-square, London, who will receive the Tenders on MONDAY, FEBRUARY 6, at TWELVE o'clock, but who do not bind themselves to accept the lowest or any Tender.

LONDON TERMINUS, January 26, 1854.

SOUTH-EASTERN RAILWAY.—STROOD to MAIDSTONE. — TENDERS for WORKS.—The Directors of the South Eastern Railway are prepared to receive TENDERS for the CONSTRUCTION of a DOUBLE LINE of RAILWAY from STROOD to MAIDSTONE. Plans, specifications, and conditions can be seen, and forms of Tender obtained, at the Engineer's Office, London Terminus, on and after the 7th day of FEBRUARY next. Sealed Tenders, endorsed "Strood to Maidstone," are to be addressed to the Secretary of the South-Eastern Railway, and they are to be delivered to him, at his Office, on or before the 21st day of FEBRUARY next. No Tender will be accepted unless it is sent in upon the printed form provided by the Company. The Directors do not bind themselves to accept the lowest or any Tender.

G. S. HERBERT, Secretary

London Terminus, January 26, 1854.

STEPHENSON and PEILL, 61, Gracechurch-street, London, and 2, New Palace-yard, Southwark, Manufacturers of G. PEILE'S ALIZARIC ACID, and improved CONICAL IRON BOILERS, and Consulting Engineers and Hot-water Builders, either in wood or iron, respectfully call the attention of the nobility, gentry, and nurserymen to the simple but efficacious method of warming horticultural and other buildings by Hot Water. From the extensive scale on which we have executed orders of the smallest respectability can be given, and full particulars furnished on application.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,

THE ARGARDEN LEAD WORKS, SOUTHWARK,

Invite the attention of Manufacturing Chemists to their Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER.

Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

BUILDERS, Contractors, Carpenters, and others are invited to inspect the stock of NAILS, TOOLS, BRASS, AND GENERAL IRONMONGERY, at PEILE and SONS, 2, EDALLS, Nos. 5 and 6, BROAD-STREET, BLOOMSBURY.

The prices will be found the lowest, and the stock one of the largest in the trade. A price list sent on application.

HART and SON,

WHOLESALE AND EXPORT IRONMONGERS AND MANUFACTURERS,

53, 54, & 55, WYCH-STREET, STRAND.

PITT'S PATENT DOOR FURNITURE.

LOCKS, LATCHES, HINGES, &c.

THOS. B. LAWRENCE and CO. Zinc Dealers and Manufacturers, 10, York place, Lamb th, having removed to their new premises, are selling SHEET ZINC at 23s. per cwt.; Perforated Zinc, at 4d. per foot; Rain-pipes, 3 in. 4d. per foot; Gutters, 4 in. 4d. per foot, and its proportion. Chimney-shafts, Cowls, &c. equally cheap. Plumbs' Zinc, 4s. Zinc Paint and Galvanized-iron Plates. A prize medal was awarded them at the Great Exhibition.

LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE,

Manufacturers of Bar Iron, Railway Bars Forge and Engine Work, Cast-iron Goods, and

STEWART'S PATENT CAST-IRON GAS and WATER PIPES.

Office, No. 7, Size-lane, London.

FENDERS, STOVES, and FIRE IRONS. Buyers of the above are requested, before finally deciding, to visit WILLIAM S. BURTON'S SHOW-ROOMS, 39, Oxford-street (corner of Newman street), Nos. 1 and 2, Newman-street, and Perry's-place. They are the largest in the world, and contain such an assortment of FENDERS, STOVES, RANGES, FIRE-IRONS, an GENERAL IRONMONGERY, as cannot be approached elsewhere, either for variety, novelty beauty of design, or exquisiteness of workmanship. Bright Stoves with or without ornaments and two sets of bars, 2l. 14s. to 5l. 10s.; ditto with ormolu ornaments and two sets of bars, 5l. 10s. to 12l. 12s.; Bronzed Fenders complete, with standards, from 2s. to 3l.; steel Fenders from 2l. 12s. to 6l.; ditto, with rich ormolu ornaments, from 3l. 15s. to 7l. 7s.; Fire-irons, from 1s. 3d. the set to 3l. 3s. Sylvester and all other Patent Stoves, with radiating hearth plates. All which he is enabled to sell at these very reduced prices.

First—From the frequency and extent of his purchases; and

Secondly—From those purchases being made exclusively for cash.

WILLIAM S. BURTON has TEN LARGE SHOW-ROOMS all communicating, exclusive of the shops, devoted solely to the show of GUINEAL FURNISHING IRONMONGERY, including cutlery, nickel silver, plated and japanned wares, iron and brass bedsteads, all arranged and classified that purchasers may easily and at once make their selections.

Catalogues with engravings sent (per post) free. The money returned on every article not approved of.

39, OXFORD-STREET (corner of Newman street), Nos. 1 and 2, NEWMAN-STREET; and 4 and 5, PERRY'S-PLACE.

RECENT TESTIMONIALS
of the practical worth and efficient security of
CHUBB'S LOCKS AND STRONG-ROOM DOORS.

CHUBB and SON beg to lay before the public the two following Letters, which they have lately received, as affording further proof of the security of their Manufactures:—

Ineffectual Attempt upon the Strong Room of the London and North-Western Railway, Liverpool

"London and North-Western Railway Company,
Liverpool, 17th Mar., 1853.

"Gentlemen,—I have much pleasure in being testimony to the efficiency of the Iron Doors and Locks of your make, which secure the Strong Room at this Office, and which completely baffled the efforts of one or more persons to get at the money-chest on the night of Thursday last, although it is evident that considerable force was used to break open the door.

"I am, gentlemen, your obedient servant,

"Messrs. Chubb and Son." "GEO. PALMER.

From Mr. Otway, Superintendent of Police C Division.

"Great Vine-street, May 4, 1853.

"Gentlemen,—I have the pleasure to inform you, that having one of your Locks on the street door of my house prevented my being robbed last night. The thief tried to open it, but succeeded, as he supposed with the first answer to you for inspection, and shall feel obliged if you will have it repaired.

"I am, gentlemen, your obedient servant,

"Mr. OTWAY, Superintendent of Division of Police.

"Messrs. Chubb and Son."

CHUBB'S LOCKS, with all the recent Improvements; Cash, Deed, and Paper Boxes of all sizes; Fire-proof Safes and Chests; Iron Doors and Frames for Strong Rooms, all fitted with the Detector Lock. Complete Illustrated Lists, with Prices and Sizes, will be sent on application

CHUBB and SON, 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley-fields, Wolverhampton.

PARNELL'S PATENT DEFIANCE LOCKS.

DEP.T, 72, STRAND, LONDON.

Messrs. PARNELL and PUDRIDGE respectfully inform the public, that they have in stock of these Locks ready for inspection. To give a detailed description of this Lock within the limits of an advertisement is impossible; Messrs. P. and P. must therefore content themselves with saying, that it is not one lock, but several locks in one; that no instrument but its own key can possibly open it; that it cannot, by any art or ingenuity, be picked; that the principles of it are simple and applicable to locks of all sizes; that it cannot be put out of order, and, notwithstanding, that it is moderate in price.

Messrs. P. and P. satisfied of the peculiar excellence of this Lock, respectfully set with great confidence, place it before the public as being what they have called it—THE DEFIANCE LOCK THAT CANNOT BE PICKED.

Messrs PARNELL and PUDRIDGE have also in stock of Fire-proof Safes of the best make, Deed and Cash Boxes, Copying and Lever Presses.

PARNELL'S PATENT NOISELESS BOX STAPLE & STRIKING PLATES,

52, STRAND, LONDON.

This very simple and efficient invention entirely obviates the slamming of doors, and the consequent irritation disturbance caused by it in every house. Indeed, it may truly and fairly lay claim to the title of "one of the wants of the age," for it has been wanted for a very long period; and in looking at it one involuntarily exclaims with surprise that it has never been discovered before. The Patent Noiseless Box Staple is made of strong malleable iron of the best quality, and is adapted for use in all situations as a substitute for that which the present box staple is used; for dead-locking, it possesses double security to the present article, and at very little more cost.

Sold by M. L. PARNELL, Inventor and Patentee of "Parnell's Patent Defiance Lock," and may be had of every Ironmonger in Great Britain.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Iron-ageu, Brass Furniture, Nails, wrought and cut, Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, 4s.; and the new registered Venetian Ventilator, so much admired, 5s. 6d. each.

Best Patent Sash Line.					
4s.	4s 6d	5s 6d.	7s.	8s.	10s. per gross.
1	2	3	4	5	6

6 in. Mortise, white China Furniture, 3s. 6d each.

J. H. BOOBYER (late STURCH and BOOBYER), established nearly forty years, for the supply of Goods from the best Manufactories, at the lowest prices.

1a, Stanhope-street, Clare-market, London.

PATENT CRAMP FOR FLOORS, DOORS, AND SASHES.

W. BISSELL, PATENTEE, WOLVERHAMPTON.

AA. A set screw and pin moving in slab C, to regulate for any thickness of joist, from 2 to 4 inches.

B. An eccentric notched lever, to be turned and pressed against the joist.

Lay the cramp upon the joist close up to the board, move the set screw in the slab up to the side of the joist, then fix the set screw FIRM. Turn the notched lever B against the joist, then, by turning the handle D, the lever will gradually fix itself and hold the cramp firm; the greater the strain, the more rigidly by its eccentric action will the lever bind. The Patentee, in asking the attention of Builders and others, assures them that he can supply possessed advantages. It is a most powerful cramp of the best kind, and as well suited for doors and sashes as for floors. From its superior mechanical principles, it has greater power, and will be found to be more quickly and safely used than any yet brought out, and at the same time it is light and portable.

NEW HOUSES OF PARLIAMENT.—DEPRIES'S GAS STOVES, RANGES and BATHS, just completed for the Architect, are the newest and most varied assortment in stock upon the same principle. Gas Baths from 7l. by which a warm bath may be obtained for three-halfpence. Gas Cooking Stoves, more economical for all classes, from 3l. Defries's celebrated Dry Gas-Meters.—50,000 in use. Testimonials at the Office, 143, Regent-street. Manufactories removed from 91, Long-lane, and St. Martin's-lane to more extensive premises, Nos. 30 and 31, Charles-street, near Albion-street.

B. C. CROWN IRON.—82, Upper Thames-street.—W. BOWMAN begs to inform engineers, smiths, wheelwrights, and coopers, he is now SELLING BAR, HOOP, and SHEET IRON, of the above make at prices are the advantage to consumers. Parcels may be had in small quantities at the wharf, or use is done. N.B. Cut nails taken in or supplied direct from the works at 10s. per ton reduction on town prices.

PLUMBIC ZINC.

MOREWOOD AND ROGERS'S PATENT PLUMBIC ZINC.

POSSESSES THE DURABLE QUALITIES OF LEAD, and not requiring to be more than ONE-FOURTH AS HEAVY AS SHEET LEAD, is, with great ECONOMY and ADVANTAGE, substituted for that Metal FOR ROOFING, RIDGES, GUTTERS, FLOORING, and all other purposes to which Sheet Lead is applicable.

THE EXPENSE OF THIS METAL IS LESS THAN ONE-HALF THAT OF LEAD.

For further particulars, apply to

MOREWOOD AND ROGERS, GALVANIZED TINNED IRON WAREHOUSE, STEEL-YARD WHARF, 87, UPPER THAMES-STREET, LONDON.

IRON ROOF By Royal **WORKS.** Letters Patent.

JOHN WALKER, SON OF THE PATENTEE, GENERAL CONTRACTOR,

Having extended his means for executing Orders, and Contracts for

CORRUGATED IRON BUILDINGS AND ROOFS,

Galvanized or otherwise will be happy to wait, by appointment, on ARCHITECTS, ENGINEERS, &c. Merchants are invited to ascertain the Prices for Shipping Orders. The Trade supplied with Corrugated Iron, Plain or Galvanized, or Iron Corrugated. References to Firms of the first class

FIRE-PROOF FLOORING.

The earnest attention of ARCHITECTS, ENGINEERS, &c. &c. is called to a particularly economical mode of erecting Fire-proof Floors capable of sustaining great weight, without any thrust against the walls. Any information, with Estimates, Drawings, &c may be obtained at the Offices.

JOHN WALKER, Manufacturer of IRON and WOOD HOUSES, Stores, &c. calls the attention of merchants, shippers, and others to the following testimonial, which he publishes by consent of the writer.—Copy "16, New Broad-street, July 11 1853.—John Walker, Esq.—Dear Sir. I have much pleasure in sending you the following extract from a letter received from my friends, Messrs. Mitchell and Wood, dated Geelong, April 1, 1853:—'We are just erecting the back of the store. You can tell Mr. Walker that it is admired by every one; and we are only saying what he deserves, that he has done us every justice and given us complete satisfaction. I would give something to take you over the premises; I am sure you would approve of all that has been done.' I remain, dear sir, yours truly, (signed) Alexander Morrison." The original may be seen at John Walker's Offices, and cards may be obtained to view the works, where some stores are in progress.

Offices: Corner of Arthur-street West, London-bridge; and 3, India-buildings, Liverpool.

IRONMONGERY, NAILS, STOVES, RANGES, &c.

AT WALMSLEY'S,

126, 127, and 128, LONDON-ROAD, SOUTHWARK.

FOR THE SUPPLY OF BUILDERS, CARPENTERS, UPHOLDERS, CABINET-MAKERS, SMITHS, WHEELWRIGHTS, AND OTHERS, AT WHOLESALE PRICES.

Best Sheet Floor-brads, 1s. 6d. per cwt.
Best fine Cut Clasp and Rose, 1½, 2, 2½, and 3 inch.
Sash Weights, 6s. 6d. per cwt. Air Bricks, 3s. per doz. Hooping for bend, 11s. per cwt. Cast Lath, 11s. per cwt. Sash Pulleys, 8s. 6d. per gross. Arnott's Ventilators, 4s. each. Elliptic Stoves, with double backs, 2l. per inch.
Register Stoves from 4½d. per inch.

Improved Self-acting Ranges with oven and boiler { 30 | 32 | 34 | 36 inch. / 22s. | 30s. | 33s. | 34s. each.

Bes Set-acting Ranges, with oven and boiler, wrought bars and bright fittings { 36 | 38 | 40 inch. / 50s. | 55s. | 60s. each.

An extensive stock of bright and black Register Stoves in every variety of design, at remarkably low prices. A large assortment of Rim, Drawback, Mortise, Iron Gate, and every other kind of Locks and Latches. Finger plates, Levers, and Bell-pulls, en suite.

BAR, HOOP, SHEET, AND ROD IRON. RAIN-WATER PIPES AND GUTTERS, ALL SIZES.

The Stock of this Establishment is too extensive to be described in the limits of an advertisement, and the most correct idea that can be given of it is by saying that every trade consuming Ironmongery can here select whatever they require at WHOLESALE PRICES.

WALMSLEY'S, 126, 127, 128, LONDON-ROAD, SOUTHWARK (Six Doors from the Obelisk).

AUSTIN'S IMPERIAL

PATENT SASH and BLIND LINE,

can be obtained of all

COPEMAKERS, IRONMONGERS, FACTORS, AND WHOLESALE HOUSES IN TOWN OR COUNTRY.

THE attention of Builders is directed to the important improvement in WEBB and GREENWAY'S PATENT IRON BARREL BOLT, which is perfectly even on the back, consequently can be fixed in much less time than the old tower or barrel bolt.

WEBB and GREENWAY also draw attention to their
Patent Brass Barrel Bolts.
Patent Brass and Iron Casement Stay and Fastener.
Patent Double-action Floor Door Springs.
Patent Brass and Wood Knob Cupboard Turns, with revolving Spindles: Brass Gothic Drop ditto; China and Glass Knob ditto.
Patent Warwick Piston Latch.

The above can be had from all Ironmongers throughout the United Kingdom, and from the Manufacturers, WEBB and GREENWAY, Brassfounders and Locksmiths, Steelhouse-lane, Birmingham; sole Agents for Mortimer's Patent Mortising-machine.

HIGGS and GEORGE, Wholesale and Export Ironmongers, Agents for the sale of the Patent Wrought Nails, Cannon-street and College-hill, London (Hayward's from 176, Borough.) HIGGS and GEORGE beg to acquaint their friends and the public that they have removed to the more central and extensive premises, where they keep an ample store of Nails, general Ironmongery, and the Patent Wrought Nails, for the supply both of the home and export demand.

GEORGE and SAMUEL CUTLER, WENLOCK IRON WORKS, 8, Wharf, Wenlock-road, City-road, London.—Contracts for Cast-iron Tanks, Gasholders, Purifiers, and all descriptions of Gas Apparatus (Gas-works etc. executed). And manufacturers of Corrugated and all kinds of Iron Roofing for Railway Stations, Sheds, Warehouses, &c. &c. executed on the most reasonable terms. Ship Tanks, Steam and Range Boilers, and every description of Smith's Work of the best materials and workmanship.—N.B. Improved Slide Valves, Cross Bars, and Screws, and Bolts, and Nuts, of all sizes, kept in stock.

GALVANIZING WORKS.—SKAIFE'S PATENT GALVANIZED IRON (Superior Process).—Works at the Regent's canal-basin, Commercial-road, Limehouse, London.—J. SKAIFE supplies this Metal in every form, viz. Sheets, plain and corrugated, of all sizes and gauges; Wire of every gauge, and Wire Netting of all descriptions; Guttering, Rain-water, Screwed Gas and Water pipes; Hoops; Castings, Pans, Cisterns, Baths, Buckets, &c. Made to order, retail and for export. Every description of Ships' Ironwork Galvanized; Deck-spikes, Bolts, &c. kept ready Galvanized. Estimates and drawings given for roofs and buildings fixed complete. J. SKAIFE is also Agent for Yarnwood and Hayes's Patent Galvanized Plain Iron, both flat and corrugated, also for Morewood and Rogers's Patent Galvanized Tinned Iron Tiles, for exportation; and Plumbic Zinc. Portable Emigrants' Houses and Substantial Stores supplied at moderate prices, and on the shortest notice. An allowance to the Trade.

COLLINGE'S PATENT HINGES.—Sole Manufacturers, CHARLES COLLINGE and Co. 83 and 84, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, counting-house, and other gates and doors of far and small dimensions, a rate of action weekly moving with those hinges as well as a wicket. Ornamental Hinges, adapted for drawing-rooms, &c; doors fitted with them may be lowered and replaced in an instant. Hinging and fitting up strong hinges, and separate gate Fastenings at moderate prices. None genuine unless marked "Charles Collinge, patent. Lambeth." Plain and ornamental cast and wrought iron-work, for bonding and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.

TO BUILDERS CARPENTERS, UPHOLSTERERS, SMITHS, BELL HANGERS, AND THE TRADE IN GENERAL.

WHOLESALE IRONMONGERY WAREHOUSE, 18, Blandford-street, Manchester-square (running out of Baker-street, Portman square) where a large stock is always kept on hand for the exclusive supply of the above trades.

JOHN YOUNG, Birmingham and Wolverhampton, Agent and Factor.

GEORGE HART, 253, STRAND, Near Temple-bar.

WHOLESALE, MANUFACTURING, AND FURNISHING IRONMONGER.

Proprietor and Manufacturer of Pitt's Patent Self-adjusting Spindled Door Fastening.

Drawings on application.

CHEAP GAS-FITTING and BELL-HANGING. Public and private buildings fitted with iron tubes for gas at 6d. per foot. A private residence fitted up with four lights complete for 2l. Bells hung in secret with porcelain levers, as per pull. BARRATT, Gasfitter and Bellhanger, Spa-road, Bermondsey.

THE LATE JOHN SYLVESTER, C.E.—The undersigned are to announce that the Warming, Ventilating, and General Domestic Engineering Business of the late Mr. John Sylvester, is still carried on by them at 93, Great Russell-street, Bloomsbury. SYLVESTER and CO.

January 1, 1854

TO RAILWAY COMPANIES, CONTRACTORS, AND BUILDERS.

JAMES LAURIE and CO. Warehouse, Cousin-lane, Upper Thames-street, supply Railway Chairs and Sleepers, Fish and Pins, Bolts and Nuts, Spikes and Trenails, Columns, Girders, Socket Pipes, Rain-water Pipes, Gutters, Railing and Palisading Bars, and all kinds of Iron Castings. Also, Henderson's Patent Derrick Cranes.

212 SAFES.—MILNER'S HOLDFASTS, fire-resisting by means of the only perfect non-conductor, vaporisation, are the strongest, best and cheapest, because the only effectual safeguards against fire, robbery, violence, forgery, deeds, bonds, or valuables. Lord Chief Justice Campbell, in summing up on the late trials for infringement of MILNER'S SAFES, was pleased to observe: "He could say he had been astonished to find such strong evidence of their usefulness; up to the hour he had no idea but there were any human means of so effectually preserving papers from the action of fire. It was a comfort for one to know that there was such an invention, by which valuable documents might be rendered secure, notwithstanding the calamity of fire." As to whether it is useful, it appears to be all used on all hands; it seems to be almost MARY LLOYD'S PRESERVATIVE AGAINST FIRE. For the water remains permanently held in artificial or natural vessels, AND THE VERY CALAMITY BRINGS THE CURE—for the heat releases the water or moisture, and then it is turned into steam, and the steam moistens the substance that is to be preserved. AND SO IT IS AN EFFECTUAL GUARD AGAINST FIRE.—Milners' Phœnix Safe Works, Liverpool. London Depôt, 47A, MOORGATE-STREET, City, London.

THE PATENT GALVANIZED IRON.

TUPPER and CARR,
Owners of Crawford's Patents, and Successors to
THE GALVANIZED IRON COMPANY,
Supply Patent Galvanized Sheets, plain or corrugated, for roofing, &c. Water or Gas Pipes Castings, Wire of all gauges, Guttering, Hooping, &c. Wholesale, retail, and for export.

An allowance to the Trade.

GALVANIZING WORKS,
REGENT'S CANAL DOCK, LIMEHOUSE;
BROAD-STREET and PERKLEY-STREET, BIRMINGHAM.
LONDON OFFICE, 4, MANSION-HOUSE PLACE.

IRON BUILDING AND ROOFING WORKS, BIRMINGHAM.

PORTER (BROTHERS) AND STUART,
(LATE JOHN H. PORTER),
IRON FOUNDERS, SMITHS, AND MANUFACTURERS OF CORRUGATED IRON.

PATENT GALVANIZED IRON.

(IMPROVED PROCESS.)
JOHN SYMONDS and CO.
WORKS—GLASS-HOUSE YARD, opposite the principal Entrance to the London Docks.

GALVANIZED SHEET-IRON and WIRE of every description, superior to all respects to that produced by any other process. THE TOUGHNESS AND MALLEABILITY of the Iron being unimpaired.

Estimates given for IRON ROOFS, Corrugated Sheds, Houses, Palings, Wire, Submarine Cables, WIRE-ROPE, Fencing, &c. Roofs fixed complete.

CALORIFERE.—Gold Medal, Paris Exhibition, 1849. A 200,000 cubic feet room warmed by hot air only, at 60 degrees Fahrenheit, in burning 11 lbs. of coal per hour. The most complete safety against fire, the healthiest and most powerful ventilation, with no any machinery, are obtained by BOLLEVE'S PATENT CALORIFERE. The constant supply of fresh air carries out instantaneously, by a new well-improved process, all damp or vitiated air, that makes it very feasible for churches, schools, theatres, hospitals, manufactories, clubs, houses of any size, conservatories, and greenhouses. The Calorifere heats, dries, and ventilates the Duke of Bedford's Western Agricultural Museum, and it may be seen in operation, by any one, in London and country.—Apply, per post, to T. BOLLEVE, French Engineer, 99, King William-street, City.

WARMING by HOT WATER.—Churches, Chapels, Public and Private Buildings, heated with hot water from 50 to 150 degrees, upon the most approved principle, by C. WILLIAMSON, Engineer, Coventry. N.B.—A guarantee given with each apparatus.

WARMING CHURCHES, &c. by HOT WATER.—JOHN WEEKS and CO., King's-road, Chelsea, Hot Water Apparatus Manufacturers, beg respectfully soliciting the attention of architects, builders, &c. to their superior apparatus for warming churches, mansions, halls, offices, and public buildings, by the circulation of hot water in pipes, beg to call particular attention to the scientific statement in the "Builder" of Jan. 14, 1854, which fully bears out the able address of the Rev. H. J. Boger, delivered at a meeting of the Architectural Society, wherein Mr. Brice shows that heating by hot water is truly the only effective system applicable to warming churches and other large buildings. It is free from all objections, is economical in its working, and produces perfect ventilation with a uniform comfortable warmth throughout the largest buildings.—Messrs. JOHN WEEKS and CO. will guarantee their Hot Water Apparatus for thirty years at 5 per cent.

TO GAS-FITTERS, ENGINEERS, BUILDERS, DECORATORS, &c.

F. P. M'CARTHY, 7, Beech-street, Barbican, begs to inform the above and other trades, that he is now SELLING, wholesale, all requisite FITTINGS for GASWORK—pendants, brackets, chandeliers, &c.; compo. tin, and iron gas piping, and fittings in general; sheet zinc, galvanised iron, tin plates, iron wire, &c.; best lacquer, 1s. per gill. Old metals bought or taken in exchange. List of prices sent on receipt of stamp. Observe, 7, Beech-street, Barbican.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Zinc Tube, and Copper Wire. Gas Pendants, Brackets, and Chains of all descriptions for Gas-fitting, in Brass and Iron; Tin, Composition, Iron and Brass Tubing Cornice-poles, Rings and Lacquered Case Tube for Picture Rods, Peak Rails, &c. &c.

Superior Rolled Brass for Engravers, Castings in Fine and Common Brass Gun Metal, &c. at

RICHARD EVERED, Brass and Bell Foundry and Metal Warehouse, Nos. 10, 11, and 12 Charles-street, Lower-acre, London.

IMPORTANT TO ENGINEERS AND GAS-FITTERS.

WORMALD and POLLARD'S

UNIVERSAL PIPE-WRENCH.

This patented Wrench can be adjusted at pleasure to take and retake, without slipping, every description of piping, from ¼ to 2-inch bore, including couplings, and the various nuts on, keyed in engines; thus doing singly what would otherwise require, say a dozen tongs or nut-wrenches, effecting, moreover, what no other tool hitherto invented has yet been able to perform. It possesses the greatest strength and durability. When in use, press on tongue A, in the sliding part up to 1½-c, then let go tongue, and it will be in operation.

To take from 1-inch barrel to 2-inch ditto, 1l. 5s.

N.B. This is less than half the price of any set of tongs now in use

Messrs. WALCOTT and HIDINDALE, Sole Agents.

Apply to Mr. WALCOTT, at the Provincial and Continental Consumers' Gas Company's Offices, 64, Mark-lane.

S. TRICKETT, VICTORIA STONE WHARF, Isle of Dogs, informs his friends and the building public generally, that he is prepared to execute orders to any extent, wholesale or retail, by vessel or rail, or from his Depôt, Isle of Dogs, for all kinds of York Block, Westwood Bramley Fall, New Bramley Fall, Potternesdon, Hatchill, West-hill, Rawdon-hill, Grinshaw, and other Block Stones, steps, cills, sinks, copings, landings, headstones, fire-bricks, &c. Punctuality, despatch, good articles, and low prices guaranteed. Estimates given for the supply of large contracts.

TO ARCHITECTS, MERCHANTS, BUILDERS, &c.

TRICKETT and PERKIN can supply any quantity of their IMPERISHABLE RAWDON HILL STONE from their quarries at Harewood, near Leeds. This stone is of a fine grit, perfectly uniform in colour; can be seen to advantage in the much-admired buildings now being erected in Albion-street, Leeds, for the Leeds and Yorkshire Assurance Company; and also at Harewood House, where it was used for the extensive and other improvements made by Sir Charles Barry, who has a high opinion of the stone; no part of the most exposed mullions, or carved Scotch-cills, showed the least signs of decay. The stone has been analysed by an eminent chemist and geologist, who is of opinion that it is the most durable stone in the market, and, as known, must be most extensively used where a good, strong, and durable stone is required. The stone can be got of any size or length up to 20 tons, is in all suitable for steps, stairs, balcony landings, ashlar fronts, columns, tombs and monumental work, &c. &c. Superior grindstones, large or small.—Address, S. TRICKETT, Victoria Stone Wharf, Isle of Dogs, as the London agent, who will keep a stock for selection, for immediate use or supply, direct from the quarries, by vessel or railway, to order.

SAW-MILL MANUFACTORY, Chelsea, London.—WORSSAM and CO. invite the attention of all concerned in sawing, planing, and moulding wood to the simplicity and superior working qualities of their new saw in use, which are both economising and expensive. Drawings and prices sent on application. Estimates given for complete saw-mills for exportation or otherwise.

THOMAS EDINGTON, IRON MERCHANT AND CONTRACTOR, Inspector of Railway Bars and Castings, 17, GORDON-STREET, GLASGOW.

TO TOOL DEALERS, IRONMONGERS, &c.

WILLIAM BAKER, BRADAWL MANUFACTURER.—Manufactory, No. 14, Allen street, Clerkenwell, London. Established twenty-five years.

EXTRAORDINARY ECONOMY in COOKING.—FITCH'S EXHIBITION PRIZE OVEN has this year been patented a second time, having received several important and improvements. It contains a set of cooking chambers, in all of which the heat is equally diffused; and it having now stood several severe tests, it stands unrivalled for economy, convenience and despatch with which it cooks ALL KINDS OF PROVISIONS. In one of these ovens with three chambers a dinner was cooked, in April, 1853, at the Savanen's Head Hotel, Chelmsford, sufficient for 100 persons, at a cost of FOURPENCE only for fuel! The provisions consisted of

Sirloin of beef, 22½ lbs.; five ribs ditto, 28 lbs.; two legs of mutton, 25½ lbs. roasted before furnaces.

Round of beef, 33 lbs.; four legs of mutton, 36 lbs.; half bushel of potatoes, twenty-four loaves of bread, boiled in the chamber above furnace.

Half a bushel of bread, twenty-four puddings and tarts baked in second chamber above furnace.

The oven is now available for private families, hotels, schools, and other large establishments; also for farmhouses and cottages.

Mr. Fitch will wholesale, retail, and for exportation, at the Oven Manufactory, Chelmsford, England, all of which are warranted to be such good and superior articles of their kind as are represented. Price according to capacity and finish, from 3l. and upwards.

WIRE STRAND FENCING, as furnished with all its fittings, by R. S. NEWALL and CO., having elicited the unqualified approval of practical men, is confidently recommended as the best fencing for park and farm inclosures, or sub-dividing for temporary agricultural inclosures instead of any kind of hurdles), for road-side and all other fencing.

The PATENT WIRE STRAND FENCE possesses an economy, security, and durability, not to be found in combination in any other fence hitherto introduced. This fence, as fitted by R. S. Newall and Co. after the model of the fences of this material in the Slopes and Home-park, at Windsor, has the inherent property of remaining equally tight and rigid, under any variations of temperature.

N.B. Estimates given at so much per running yard, for fencing, fixed complete. Specimens, sketches, or any other particulars, will be forwarded on application.

ENGINEER.

W. M. Stears, esq. 43, Moorgate-street, and Sydenham, Kent.

The calls will be 1l. per share on the 1st of each month.

The importance of the Crystal Palace for lighting which an engagement has been entered into, and the rising district consequently requiring a second 10l. imperatively call for a large supply of gas.

A few observations will be sufficient to set forth the object and necessity of this undertaking, which holds out an unparalleled prospect of success.

One of the principal features in this project is the lighting of the Crystal Palace, and the number of lights required for that purpose alone will amount to thousands, besides an immense consumption of gas for warming the various departments of the building, for lighting the splendid refreshment-rooms, and cooking for the same; in addition to the above consumption, is that required for the magnificent hotels now built and about to be erected immediately adjacent to the Palace and others of a large size and great business in the district, to which must be added the show-rooms, private mansions, and the next district of public lamp, which are imperatively called for in all the approaches, as well as tunnels on the railway from the west end of London under the Palace, and the stations connected therewith.

An eligible site is secured, suitable for works of the first class, and which has been approved by the Directors of the Crystal Palace as being the most advantageous locality for the district.

This Company has been registered under the Joint Stock Company's Act, and even will be done in the deed of settlement, that no shareholder shall be responsible one for the other, or in any case beyond the amount of his shares.

The necessary steps have already been taken for forming the Company, and a considerable number of share-applications by parties having property in the district, so that its operations will be brought into existence on a most favourable and remunerative scale with certainty of success, that will place the whole beyond the least speculation as an investment for capital. Calculations have been made of the cost of working, and upon results of experience on gas-lighting; and there is every reason to believe that a handsome percentage will be immediately realized; and it is an incontrovertible fact that gas-works, when not exposed to unfair competition (and which in this case would be prevented), greatly increase the rate of profit, in a few years after commencement.

The building will be erected in an ornamental style, and the apparatus of the most approved construction, so that the gas produced will be of the purest and most brilliant description, and in every respect suited to the general requirements of the undertaking.

Applications for shares to be made in the annexed form to the brokers, Messrs. CROSLEY, BROTHERS, 30, Cornhill, or to JOHN DOWNES, Esq. 38, Moorgate-street, London.

FORM OF APPLICAT ON FOR SHARES.

To the Provisional Directors of the Crystal Palace District Gas Company.

GENTLEMEN,—I request you to allot me ..... shares, of 10l. each, in the above company, and I undertake to pay the instalments on the same, or such of them as may from time to time be called for, and to execute the necessary deed when required so to do.

Dated this ..... day of ....., 185 .

S. JAMES'S CHURCH, LOUTH.—The TOWER of the CHURCH of S. JAMES, LOUTH, LINCOLNSHIRE: Elevation and Vertical Section. Measured, drawn, and lithographed by JOSEPH MAUGHAN and JAMES FOWLER, Architects, Louth. Scale 8 feet to an inch. Price 8s. 6d.

NOTICES, &c.

"We believe we may say it is the most really correct representation of that beautiful spire which has been as yet brought before the public."—*Art of the Dissenters, Architectural Society.* 1853.

"It is a very fine example of the late or late towers of the Perpendicular period, and the drawing is extremely well executed."—*Builder*, Nov. 13, 1852.

"Seems a nice one."—Wickes's Towers and Spires of England," in *Builder*, Dec. 31, 1853, in which a view is given.

"This drawing is one of the most interesting examples of the Perpendicular period, and is executed with great accuracy of particular examination, indeed, for somewhat elaborate and beauty of detail, is not known to us, at present, to be equalled. We need say nothing more than the name of the talented and useful body which is our knowledge of mediæval architecture owes its first impetus to ensure the merit of this drawing; therefore, a testimony to the character on the face of it, but always regret to see the absence of architect-draughtsmen."—*Art Journal*, July, 1853.

"As an example of the Perpendicular, the Church of St. James, Louth, is remarkable, and we are much indebted to Mr. Fowler for his spirited drawing, and for peculiar facilities for ventilation and the circulation of warm and dry air.

8, John-street, Adelphi. E. MENDHAM, Secretary.

PARIS BUILDING LAND COMPANY.—(Société du Nouveau Quartier Rollin). Liability of each shareholder strictly limited to the amount of his subscription. Capital, 10,000l. in 21,600 shares to bearer, of 5l. each; 16,000 shares subscribed for in Paris; 5,000 reserved for London. Deposit, 2l. per share. A minimum dividend of 5 per cent. per annum, and the return of the capital with a minimum bonus of 25 per cent. are guaranteed by undoubted securities.

ACTING ARCHITECT AND ENGINEER.—G. R. Burnell, esq.

SOLICITORS.

Messrs. Hollingsworth and Tyerman, Gresham-street.

SHARE BROKERS.

Messrs. J. H. Spurling and Son, 12, Copthall-court.
Offices in Paris, No. 14, Rue Neuve.
Offices in London.—No. 9, Laurence Pountney-hill, Cannon-street.

A large extent of valuable building-ground, known as the Quartier Rollin, in a healthy and central situation in the midst of the skin and leather manufactories of Paris, has been purchased by the Company on highly advantageous terms.

The objects of the Company are the opening of three new streets through this property, under a concession from the City of Paris, and the disposal of the land for building purposes at prices which offer the prospect of doubling the capital in a few years.

Applications for shares to be made to Messrs. J. H. SPURLING and SON, 12, Copthall-court; or to Mr. GEORGE WOODS, at the Offices of the Company, 9, Laurence Pountney-hill, where prospectuses, &c. may be obtained.

PARIS BUILDING LAND COMPANY.—NO APPLICATIONS for SHARES in the above Company will be RECEIVED after TUESDAY, the 31st instant.

GEORGE WOODS, } Gérants.
THEODORE ALPHONSE BAYLE, }
9, Lawrence Pountney-hill, Cannon-street, Jan. 21, 1854.

BONUS to SHAREHOLDERS.—HOME COUNTIES and METROPOLITAN FREEHOLD LAND SOCIETY, a bonus of 2l. 8s. 4d. per cent. will be added to the past year's subscriptions, and in future Interest at the rate of 5l. 8s. 4d. per cent. per annum will be given on all subscriptions, with such additional bonus at the end of the year as the profits of the Society may allow. Two Estates have been purchased for this Society during the past year. That at Wood Green chiefly allotted has been very satisfactorily and profitable, both to the allottees and the Society at large. The other Estate (not yet allotted) promises to be a more successful purchase than the first, there being a great demand for plots upon it. It is situated in Wimbledon Park, in the midst of gentlemen's seats and is adapted for first-class villas. There are two special advantages in this Society, viz. members are not required to pay down any part of the price of the land prior to choosing plots. The full amount of the shares drawn in the ballot is advanced; also, that more shares are not drawn in the ballot than can be applied with facility, that the Members may have the advantage of selling their drawn shares at a premium. A share in full is 30l. with an entrance fee of 1s. By order HENRY KNIGHT.

FINSBURY and GENERAL FREEHOLD LAND SOCIETY.
Estabd shed 1850.

The Mitcham and Merton Estates will be balloted for shortly. All shares issued previously, on which one month's subscription has been paid, will be eligible for the ballot. Monthly subscriptions, 4s.; entrance and rules, 1s. 6d.

48, Bedford-row. R. A. MARCH, Secretary.

GREAT SUCCESS of Mr. ROBERT KENYON'S "EIGHTH IMPROVED BUILDING SOCIETY!!"—NOTICE.—Any amount of money advanced to the members at interest from one to five per cent. to enable them to purchase or build freehold properties. The whole amount of purchase money and law charges advanced.

ROBERT KENYON, Manager.
1, Copthall-chambers, Copthall-court, near the Bank.

TO PERSONS WISHING TO PURCHASE A HOUSE

NOTICE.—5,000l. will be advanced at the SECOND MEETING of the "EIGHTH IMPROVED BUILDING SOCIETY," which will be held at No. 32, Sackville-street, Piccadilly, on TUESDAY EVENING, the 7th of FEBRUARY, from SEVEN to NINE o'clock.

For shares apply to the Manager, ROBERT KENYON.
1, Copthall-chambers, Copthall-court, near the Bank.

LAND WANTED.—The Clapham Burial Board are desirous of obtaining a SITE for a BURIAL-GROUND, containing about eight or ten acres and situate within three or four miles' distance from the parish church.—Communications to be addressed to Mr. G. F. MERRIMAN, Solicitor, 3, Church-buildings, Clapham-common.

PATENT VULCANIZED INDIA-RUBBER TUBING, for Gas Fittings, Chemical Purposes, Fire Engines, Manure Pumps, &c. JAMES LYNE HANCOCK, Sole Manufacturer and Licensee, Goswell-mews, Goswell-road, London, begs to invite the attention of Architects, Builders, Engineers, and the Trade to his Patent Vulcanized India-Rubber Tubing, which is now manufactured from 1-8 inch bore and upwards, in lengths from 50 to 100 feet, and of various strengths, suitable for all purposes. This Patent Tubing, VULCANIZED HOSE for FIRE ENGINES, LIQUID MANURE, and for conveying HOT WATER to BATHS in DWELLING-HOUSES and BREWERIES, manufactured to resist great pressure of any length and size to order.

*** Testimonials may be had on application at the Manufactory.

N.B. VULCANIZED WASHERS and SHEET RUBBER or Steam and Hot-Water Pipes, and Packings for Pistons and Gland-Boxes of Steam Engines, cut any size to order.

By Her Majesty's Royal Letters Patent.

THE SILICEOUS STONE COMPANY are now prepared to UNDERTAKE CONTRACTS for the EXECUTION of WORKS of an Architectural or Ornamental character. This stone is composed of sand-stone grit and other siliceous material, combined by means of flint (dissolved by the patent process), the result being a material most indestructible in moisture, and by its free tom from stratification, protected from those injuries to which natural stone is liable.

Specimens may be seen on application at the Office, and a variety of designs in Terrace work, Balustrades, Copings, Finials, Tombs, Chimney-pieces, Pavements, Ecclesiastical and other decorative work.

Attention is also particularly requested to the Ashlar for facing buildings, and to Austin's Patent Hollowed and Dovetailed Building Blocks, manufactured in the siliceous stone, which combine great strength with economy and speed in erection, are perfectly fireproof, and offer peculiar facilities for ventilation and the circulation of warm and dry air.

8, John-street, Adelphi. E. MENDHAM, Secretary.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

It being universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLEY and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 8 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, blinds are unnecessary, and when used in Greenhouses no scorching occurs; its NON-TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories. Workshops, &c. for which purposes it is supplied in squares of all sizes, from 8 by 8 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.

N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate.—May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to

Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

THOMAS MILLINGTON

ENGLISH AND FOREIGN SHEET GLASS, PLATE, PATENT PLATE, PATENT ROUGH AND FLUTED PLATE

MILLED SHEET LEAD, PATENT PIPE, LEAD, IRON, AND BRASS PUMPS,

And Water-closets, genuine White Lead, Colours, Varnish, Brushes, and every article in the Trade.

FOR PRICE SEE ADVERTISEMENT FIRST SATURDAY IN EVERY MONTH, OR UPON APPLICATION AT THE WAREHOUSE.

87, BISHOPSGATE-STREET WITHOUT, LONDON.

MARBLE.—Mr. J. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined, Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.—Office, 8, Crescent-terrace, Millbank, Mr. THOS. THOMPSON, Agent.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. MARTIN and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

TO BUILDERS, MASONS, AND CONTRACTORS.

OBSERVE!!! the cheapest Depôt in England for MARBLE CHIMNEY-PIECES of superior quality and workmanship is the Westminster Marble Company's Patent Works, Earl-street, Holywell street, Millbank. An inspection of their superior Stock of Statuary, Sienna, Black and Gold, Vein, and other Chimney pieces, Tombs, Monuments, Tablets, &c. is earnestly solicited.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.

THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred, and manufactured by steam power from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in good marble work. The Stock consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble; bold, massive Chimney-Pieces, in Black, Black and Gold, Marbilla, Sienna, Verd Antique, Brocatella, Dove, St. Ann's, and Serpentine Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, San Joan, Emperor's Red and Amber Marble, for Boudoirs, Breakfast-Rooms, Best and secondary Bed-Rooms, &c.; also, Monuments, Tombs, Tablets, and Ped-stals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

THE PIMLICO SLATE-WORKS.

Patronized by Royalty, the Heads of the Nobility, the Clergy, Architects of Eminence, Builders, Railway Contractors, and the Public generally.—MAGNESS'S ENAMELLED SLATE notwithstanding the vile imitations and infringements of his patent that are attempted, continues to grow in favour with the public, being handsomer, more durable, and very much cheaper than marble.—Price-lists and a sheet of drawings, sent to any part of the kingdom gratis. Cisterns, Fillers, Dairy and Larder Shelves, Wine Cellar Fittings, Slabs, and every variety of plain Slate-work, at prices that defy competition.—39 and 40, Upper Belgrave-place.

SLATES, Slabs, Cisterns, Enamelled Chimney-pieces, Plain ditto, Urinals, Baths, Sinks, Lining, Skirting, Roofing, Malting Floors, Patent Ridge and Roll, and Slab-work generally. Export orders supplied without detention, a large stock of slates and manufactured goods being usually kept on hand. Price-lists may be had upon personally or by post.—Address, JOSEPH BRINDLEY, Slate Merchant, Steam Slate-works, Bermondsey-wall, London.

N.B. Wharf opposite the Wapping Entrance of London Docks.

VALENTIA SLATE SLABS.—

The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedford-hire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and Messrs. Braby's, Belvidere-road, where terms may be obtained.

CORSHAM-DOWN and other BATH STONE.—Prices for the above, delivered either in town or country, may be had on application to MARTIN and WOOD, Market-s wharf, Regent's-park-basin.

GRANITE.—The Cheesewring Granite Company, of Liskeard, Cornwall, are now prepared to supply Granite of excellent quality, and the largest sized blocks Prices may be ascertained on application to T. TREGELLES, 3, Finner's court, Old Broad-street, City; or to JAS. J. TRATHAN, Liskeard.

BATH STONE DEPOT, Great Western Railway, Paddington.—EDWARD FLUESTER respectfully informs Builders, Masons, and Others that he continues to supply the Box-hill Ground Stone, Corsham Down, Coombedown, and Farleighdown Stone, of the best quality, and at the lowest prices. Panswick and Forest of Dean Stone in blocks, steps, landings, or slabs of any thickness.—N.B. Stone and other goods landed and carted.

SANDS AND EMERY,

CURSITOR-STREET, CHANCERY-LANE.

MANUFACTURED JOINERS' WORK AND MOULDINGS OF EVERY DESCRIPTION ON THE SHORTEST NOTICE, AND AT THE LOWEST PRICES, PACKED AND FORWARDED TO ALL PARTS OF THE COUNTRY.

Lists of Prices and Estimates forwarded on application.

PAVING, in great varieties.—Sinks, sills, steps, &c.; rubbed coping; tooled ditto: rubbed and tooled sills; Harehill and self-faced slab; rubbed York paving; pipes pots, &c. all at low prices. Builders and masons are invited to inspect a list sent free on application to E. and W. STURGE Bridge wharf, City-road.—Established 1821.

J. MILLS (late Shop Foreman to Messrs. Lawrence and Sons), JOINER to the TRADE, 7, Princes-street, Stamford-street, Lambeth. Shop-fronts, fittings, staircases, &c. Well seasoned materials and superior workmanship, at the lowest possible prices. A quantity of doors and sashes always in stock.—By enclosing a postage-stamp, a full list of prices will be returned.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 313, Oxford-street, adjoining Hanover-square and 4, Queen street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 9d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 2s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 2s. 6d. Transparent blinds in great variety. Drawings, with prices and discounts to builders and the trade, forwarded on application, post free.

THE BUILDER.

PAPIER MACHE AND CARTON PIERRE ENRICHMENTS MANUFACTORY,
49 & 50, RATHBONE-PLACE.

GEORGE JACKSON AND SONS

Beg the attention of Architects, Builders, Decorators and others, to their large assortment of ENRICHMENTS in every style, executed in the highest class of art. Enrichments for ceilings of every period and style of Arabesque, Elizabethan, pedantive or Gothic, Louis XIV. in such variety, and to any degree of cost; Italian and Greek, Renaissance, and many modified characters, executed to their Exhibition, and from designs of subjects of the choicest interest; wall-lessons, rich panels of every period, rich Elizabethan and Gothic Dados, in many designs. Door caps, mouldings, and dressings.

A large assortment of Gothic Bases to many varied intersections of all sizes, traverse and panel

the direst richest works, organ dressings, of most periods, and faithfully executed to the traits of each. The general decorations of Drawing and Dining Rooms, Libraries, &c of very considerable extent, as furniture, glass frames, tables, window cornices, screens, candelabra, and the whole range of new appointments to receptions rooms of the first class, as well as new lobby decorations.

The facilities and repeated enlargement of means enable GEORGE JACKSON and SONS to announce the execution of works of the above descriptions in these advantageous materials at a cost considerably below any known method, while for quality, relief, and finish, they flatter themselves they stand unrivalled.

DESIGNS MADE FOR ANY WORKS.

PAPIER MACHE AND CARTON PIERRE WORKS, 49 & 50, RATHBONE-PLACE, LONDON.

Just published, a large Quarto Work of their ENRICHMENTS, with dimensions for reference and price.

A New Edition, in 12mo price 3s.

ALGEBRA MADE EASY. Chiefly intended for the Use of Schools. By THOMAS TATE, of Kneller Training College, Twickenham.
London: LONGMAN, BROWN, GREEN, and LONGMANS

NEW AND IMPROVED EDITION OF DR. URE'S DICTIONARY BROUGHT DOWN TO THE PRESENT TIME.
Just published, in two volumes, 8vo with numerous woodcut engravings, price 42s.

DR. URE'S DICTIONARY of ARTS, MANUFACTURES, and MINES: containing a clear Exposition of their Principles and Practice. The fourth edition much enlarged and corrected throughout, with the information comprised in the "Supplement of Recent Improvements," brought down to the present time, and incorporated in the "Dictionary:" most of the articles being entirely rewritten, and many new articles now first added.
London: LONGMAN, BROWN, GREEN, and LONGMANS

NEW EDITIONS OF NESBIT'S MENSURATION, LAND SURVEYING, &c.
A New and Improved Edition, augmented by a Treatise on Levelling, and greatly improved, 12mo.

A TREATISE on PRACTICAL MENSURATION; containing Solutions to all Questions which are not answered in that Work; with Rules for the Problems. Ruled and neatly bound. The Solutions to the Questions. New edition, corrected and enlarged, 12mo. 2s. 6d. bound.

By the same Author New Editions, with Plates,
Wood's New Field Book, price 12s.
TREATISE on PRACTICAL LAND-SURVEYING. Corrected and improved, with the addition of Plane Trigonometry, including the use of the Theodolite, and Railway Surveying, Roman Engineering, Levelling, Planning, Laying out Cities &c. By T. BAKER.
TREATISE on PRACTICAL ARITHMETIC. Part I. 5s. Key, 3s. Part II. 7s. 6d.; Key, 7s.
INTRODUCTION to ENGLISH PARSING, 18mo. 2s. 6d.
London: LONGMAN, BROWN, GREEN, and LONGMANS

A New Edition, in 12mo price 4s. 6d.

A TREATISE on the FIRST PRINCIPLES of ARITHMETIC, after the Method of Pestalozzi; with numerous examples in all the essential rules, original and practical methods for constructing questions, and a new form for the extraction of the cube root. Designed for the use of teachers and monitors in elementary schools.
By THOMAS TATE, F.R.A.S. of Kneller Training College, Twickenham
London: LONGMAN, BROWN, GREEN, and LONGMANS

New Edition, 12mo with Woodcuts, price 3s.; Key, 3s. 6d

EXERCISES on MECHANICS and NATURAL PHILOSOPHY; or, an Easy Introduction to Engineering, for the use of schools and private students.
By THOMAS TATE, F.R.A.S. of Kneller Training College, Twickenham.
Sequel to the above, 8vo with Woodcuts, price 10s. 6d.

TATE'S PRINCIPLES of MECHANICAL PHILOSOPHY, and its INDUSTRIAL APPLICATIONS.
London: LONGMAN, BROWN, GREEN, and LONGMANS

A New and Improved Edition, in 8vo. price 12s. 6d.

WOOD'S ELEMENTS of ALGEBRA, for the Use of Students in the University of Cambridge. A new edition (the fourteenth), revised and improved.
By THOMAS LUND, B.D. late Fellow and Sidlerian Lecturer of St. John's College, Cambridge.
Also a New Edition of the Same, in 8vo. price 6s.

LUND'S COMPANION to WOOD'S ALGEBRA: containing Solutions of the more difficult Questions and Problems, and forming a Key. Second Edition
London: LONGMAN, BROWN, GREEN, and LONGMANS.

Now ready, the Second Edition, with Additions and an Index, in 1 vol. post 8vo. price 9s. 6d.

AUTOBIOGRAPHY of B. R. HAYDON, Historical Painter. Edited, and continued to his Death, from his own Journals, by TOM TAYLOR, M.A. of the Inner Temple, Esq.
"It is difficult to say in which sense the work before us possesses the greater interest, whether as a contribution to the critical history of art in England, during the first half of this century, or as an illustration of high moral truths, enforced by a terrible conclusion. In either point of view it is one hardly to be overrated. The artist and the moralist may alike pore over its pages, and learn from it lessons of no slight and profound value. The editor has performed his difficult and delicate task in a manner which does him the highest credit." *John Bull.*
London: LONGMAN, BROWN, GREEN, and LONGMANS.

A New Edition, in 12mo with Woodcuts, price 3s. 6d.

PRINCIPLES of GEOMETRY, MENSURATION, TRIGONOMETRY, LAND-SURVEYING, and LEVELLING; containing familiar Demonstrations of the most important Propositions in Euclid's Elements, and Proofs of all the useful Rules and Principles in Mensuration and Trigonometry, with their application to the Solution of Practical Problems in Levelling, Surveying, and Railway Engineering. Designed for the use of Schools and Private Students.
By THOMAS TATE, F.R.A.S.
Of Kneller Training College, Twickenham.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

TABLES OF THE AREA, ETC. OF CIRCLES.
A New Edition, in post 8vo. price 6s.

A SERIES of TABLES of the AREA and CIRCUMFERENCE of CIRCLES; the Solidity and Superficies of Spheres, etc. Areas and Length of the Diagonal of Squares; and the Specific Gravity of Bodies, &c.: To which is added, an Explanation of the Author's Method of Calculating these Tables. Intended as a Facility to Engineers, Surveyors Architects, Mechanics, and Artisans in general.
By CHARLES TODD, Engineer.
The Second Edition, improved and extended
London: LONGMAN, BROWN, GREEN, and LONGMANS

SHALL THE NEW STREET which is to form the grand communication between the eastern and western parts of the Metropolis be straight or crooked? An Inquiry, with Suggestions.
By an ARCHITECT.
London: JOHN WEALE, 59, High Holborn; LETTS, SON, and STEEL, 8, Royal Exchange.
Price Sixpence.

WOOLRYCH ON PARTY-WALLS, &c.
In 8vo. price 6s. boards,

THE LAW of PARTY-WALLS and FENCES, including the Metropolitan Building Act, with Notes.
By H. W. WOOLRYCH, Esq. Barrister-at-Law
London: STEVENS and NORTON; S. SWEET; and W. MAXWELL.

WOOLRYCH ON SEWERS.
In 8vo. price 7s. 6d. boards,

A TREATISE on the LAW of SEWERS, including the Practice Acts. Second Edition.
By H. W. WOOLRYCH, Esq. Barrister at L.w.
London: STEVENS and NORTON; S. SWEET, and W. MAXWELL

In 8vo. price 16s. boards.

AMOS and FERARD on the LAW of FIXTURES, and ANNEXATIONS to FREEHOLDS in GENERAL; with Practical Rules and Directions respecting the Removal, Purchase, Valuation, &c. of Fixtures between Landlord and Tenant, &c.
London: STEVENS and NORTON; S. SWEET; and W. MAXWELL.

NEW PATENT LAW (15 & 16 Vict. c. 83).
The CIRCULAR of INFORMATION, with full particulars as to the reduced expense and facility of protection for inventions for the United Kingdom of Great Britain and Ireland, may be had gratis by applying personally, or by letter, post paid, to Mr. PRINCE, Patent Office, 4, Trafalgar-square, Charing-cross, London.

THE QUARTERLY REVIEW, No CLXXXVII. published THIS DAY.
CONTENTS:

I. LIFE AND WORKS OF GRAY.
II. HUMBOLDT'S COSMOS.—SPIRITUAL ASTRONOMY.
III. MISCELLANEOUS POEMS.
IV. MR. GLADSTONE.
V. RELIGION OF THE CHINESE REBELS.
VI. CAMPAIGNS IN TEXAS AND THE LAPES.
VII. MEMOIRS OF KING JOSEPH.
VIII. TURKEY AND RUSSIA.
JOHN MURRAY, Albemarle-street.

Published by JOHN WEALE, 59, High Holborn, London
In One large Volume, octavo, with numerous Engravings.

A GENERAL TEXT-BOOK, for the constant use and reference of Architects, Engineers, Surveyors, Builders, Students, Land Agents, and Stewards, in all their several and varied professional occupations; and for the maintenance and guidance of Country Gentlemen and others engaged in the Transfer, Management, or Improvement of Landed Property. Containing three essays, treating, practically and fully, on the mensuration, and the modes, and measure of the several kinds of Building; railway and hydraulic engineering; timber measuring; the valuation of Estates, Reversions, Annuities, Advowsons, Annuities, Pilages, farming stock, and tenant right; the assessment of Property, railways, gas and water companies, the law of dilapidations and nuisances, repairs, sections, landlord and tenant, agreements and leases; together with examples of villas and country houses.
By EDWARD RYDE.
To which are added seven chapters on Agriculture and Landed Property by Professor DONALDSON.
Now ready, price 1s. with 14 illustrations, by post, 1s. 6d.

CATALOGUE of BOOKS on Architecture and Engineering, civil, mechanical, military, and naval: new and old. Together with an incorporated list of members, &c. of the several learned societies for the promotion of architecture and civil and mechanical engineering, and an index of contents.

ENGLISH MONASTERIES.
DUGDALE'S MONASTICON ANGLICANUM: a History of the Abbies, Monasteries and Cathedrals, and other Churches in England and Wales. A new and beautifully-printed Edition, illustrated with 250 Engravings, in Eight Volumes, half-bound morocco, price £8.
JOHN WEALE, 59, High Holborn, London

BUILDERS' PRICES, CORRECTED TO THE PRESENT TIME.
This day is published, price 4s. a New Edition of

CROSBY'S BUILDERS' PRICE-BOOK for 1854: containing a Correct Account of all the Present Prices allowed by the most eminent Surveyors. Including the New Building Act, a New Plate showing the Sections of Walls for Dwelling houses, Warehouses, &c. Also a complete List of Surveyors.
London, sold by WM. JOY, 4, Paternoster-row

THE CORPORATION CITY OF LONDON.
Second Edition, in 8vo.

THE LAWS, CUSTOMS, USAGES, and REGULATIONS of the CITY and PORT of LONDON; with Notes of the various Charters, By-Laws, Statutes, and Judicial Decisions by which they are established. With an Appendix on the City Election Acts, &c.
By ALEXANDER PULLING, Esq.
Barrister-at-Law of the Inner Temple.
"The standard work on the laws and usages of London."—See *Daily News*, leading article, 6th February, 1854.
BUTTERWORTH'S, 7, Fleet-street.

WOOD ENGRAVINGS.—Illustrations for Books, Periodicals, Newspapers, &c. executed in a superior style, at reasonable prices, by GEORGE DORRINGTON, Designer and Engraver on Wood, 4, Ampton-street, Gray's-inn-road.—Specimens and estimates post-free.

THE HIGHEST STYLE OF ARTISTIC LITHOGRAPHY WILL BE FOUND IN THE WORKS PRODUCED BY

DAY & SON,

LITHOGRAPHERS TO THE QUEEN.

Landscapes, Architecture, Shipping, and Figure Subjects. Portraits direct from Life in Stone, or from Paintings, Drawings, or Daguerreotypes. Medieval and Venetian Subjects, executed in a superior style peculiar to the Establishment. Co-types copied.

The large Staff of Draughtsmen required by Messrs. DAY and SON to execute the

MAPS, PLANS AND SECTIONS, DIAGRAMS, &c. &c.

FOR HER MAJESTY'S STATIONERY OFFICE,

Others to Solicitors, Engineers, and Surveyors, Stationers, and Printers, throughout the country, great advantages for the rapid and economic execution of their Lithography. If required, a plan receive by the morning post may be lithographed and despatched by the return post.

To meet the growing demand upon
LITHOGRAPHY FOR COMMERCIAL PURPOSES,
Messrs DAY and SON have just erected the largest premises for the purpose in the world. In directing orders from Manufacturers and others for

PATTERN-BOOKS, SHOW-CARDS, LABELS, &c.

And every other description of Lithography and Colour Printing, Messrs. DAY and SON promise a style of work of unequalled excellence, with economy and rapidity of execution. The smallest consumers of the productions of Lithography in any part of the kingdom should apply to Messrs. DAY and SON for estimates, and it will be found, owing to the extent of their establishment, that its manifold advantages, viz. superiority of work, great speed, and moderate charges, can be secured with satisfaction and saving to the customer.

PRINTING IN COLOURS,

As perfected and practised by Messrs. DAY and SON, has assumed a position hitherto unattained for artistic excellence, rapidity of execution, and economy of production. The first and only perfect imitation of a painting in oil-colour "Le Bon Ladre" after Tenniers, executed at this establishment, secured for itself the designation of a Painting Print. Other examples of great merit, more particularly illustrating rapidity and economy of production, combined with artistic excellence, will be found in the three important works by

MATTHEW DIGBY WYATT, Esq.

Namely, "THE GEOMETRICAL MOSAICS OF THE MIDDLE AGES," "METAL-WORK AND ITS ARTISTIC DESIGN," and "THE INDUSTRIAL ARTS OF THE NINETEENTH CENTURY."
These works, although elaborately printed in colours and gold, have been sold at the price of uncoloured works. The last-named, consisting of one hundred Folio Plates, by Parts of four plates, proves the possibility of adapting chromo-lithography to Periodical Works. Book Plates requiring long numbers cheaply and quickly and of a good class, either in Colour or Gold.
Messrs. DAY and SON are prepared to estimate and undertake Works of any extent, and to meet every requirement as to quantity and speed, or necessity as to price.

STEEL AND COPPER-PLATE PRINTING OF EVERY DESCRIPTION.

LADIES, Amateurs of Drawing, will find the reproduction by themselves of their own Sketches by means of lithography, a most delightful occupation for leisure time. Materials and instruction can be had of

MESSRS. DAY AND SON,
LITHOGRAPHERS TO THE QUEEN.
17, Gate-street, Lincoln's Inn Fields, London.

QUANTITIES, SPECIFICATIONS, SCHEDULES of PRICES, WORKING DRAWINGS, &c. copied, lithographed, or printed.
Plans, Elevations, Drawings of Machinery, &c. lithographed or engraved.
BUILDERS' and CONTRACTORS' ACCOUNT-BOOKS; DRAWING PAPERS, ditto, mounted and continuous; TRACING PAPER and CLOTH; ditto in lengths.
GENERAL STATIONERY, for the use of BUILDERS, ARCHITECTS, SURVEYORS, and ENGINEERS at the lowest current rates.
WATERLOW and SONS, 65 to 68, London-wall; and 49, Parliament-street, London
Contracts for the supply of large establishments.

TO ARCHITECTS

COMPETITION and other DRAWINGS.—Mr. THOMAS S. BOYS, Member of the New Society of Painters in Water Colours, and author of "The Picturesque Architecture of Paris, Ghent, Rouen," &c. and of "London as it is," offers his services in Tinting Backgrounds, Landscapes, Perspective Views, Interiors, &c. From the long experience he has had in such subjects, he is fully aware of the points most advantageous to be attended to. Drawings and Engravings lithographed in a superior manner.—Address, Mr. BOYS, 3, Albany-street, Regent's-park.

BILLS of QUANTITIES, &c. Lithographed with the greatest celerity, and on the lowest scale of charges. Maps, Plans, &c. reduced or enlarged. Architectural Engineering, and Mechanical Drawings executed in the most superior style of plain or tinted lithography.—ABBEY and DAWSON, Architectural and Engineering Lithographers and Draughtsmen, 22, BEDFORD-STREET, COVENT GARDEN, LONDON.

SURVEYING, ARCHITECTURAL, and ENGINEERING ESTABLISHMENT.
For preparing gentlemen for Surveyors, Architects, Engineers, Levellers, Draughtsmen, Measurers, Valuers, &c. and for giving EVENING INSTRUCTION, in Architectural, Civil Engineering and Mechanical Drawing, Colouring, Perspective, Mathematics, Mechanics, Specifications, Taking out Quantities, Preparing Estimates &c. &c. Terms very low for cash. For prospectuses, &c. apply at the Offices, 21, Guildford-street, Russell-square.

The Builder.

SATURDAY, JANUARY 28, 1854.

AT a meeting of her Majesty's justices for Middlesex, last week, Mr. Armstrong called attention to a return relative to the district surveyors of the county, laid before the Court on a previous day. The hon. magistrate, as we are informed, charged the surveyors with neglect of duty in not sending to the Clerk of the Peace returns required under the standing orders of the court, and said that those gentlemen who canvassed for their situations with such avidity, ought to be compelled to do their duty properly. He had a return of nine cases of serious accidents, seven of which were in Middlesex, and these would have been avoided had the surveyors done their duty. As to the returns, some were imperfect, but in seven instances no return at all had been made; and as the surveyors held their situations only during the pleasure of the Court, the Court was bound to exercise its control over them.

In the course of the discussion which followed, it was truly stated that in the complicated provisions of the Buildings Acts, the surveyors had not the power of doing that for which really the public thought they were appointed. Nevertheless it was ordered that a copy of the standing order, stating that they held office "during the pleasure of the Court," should be sent to each of them, with an intimation that the Court must compel their compliance with the regulation laid down as to the returns.

Ultimately, Mr. Burslem gave notice that he would at the next Court move for the appointment of a committee to take the subject into consideration.

The district surveyors are placed in a very awkward and embarrassing position: their powers on some points being misunderstood by the public, more is expected of them than they have the means of effecting. The Act is full of weaknesses, and the Metropolitan Buildings Office uncertain; while the builders in too many cases are with difficulty led to comply strictly with the requirements of the Act, their immediate interest being opposed to it. Moreover, if we may venture to say so without offence, some of the sitting magistrates themselves have not always given the district surveyors that support in their endeavours to carry out the awards of the referees, which was to be desired.

As to the non-fulfilment of the by-law, ordering the surveyors to forward to the Clerk of the Peace copies of the returns made to the Registrar of Metropolitan Buildings, this has proceeded in one or more cases, as we happen to know, simply from the fact that the requirement had not before been brought under the attention of the surveyor. It does not appear in the Act of Parliament.

Some of the surveyors more immediately connected in their districts, held a meeting a few days ago, with the view of obtaining a greater uniformity of practice than exists on some few points. We would urge builders to remember that the district surveyors have a duty which they have *sworn* to perform, and that they are amenable for any dereliction of it. In cases where district surveyors have sought to strain their powers, we have never shrunk from saying so, and from defending strenuously what we believed to be right. *Nor will we now: of that the London builders may rest assured;* but in the proper discharge of their onerous and most unthankful duties, the surveyors are entitled to the support of all, and will, we have no doubt, have it.

NOTES ON THE HISTORY AND CONDITION OF THE BUILDING TRADES.

PLUMBERS *

THE important relations this trade bears to the progress of sanitary economy, will lead us to treat at some length of its history and purpose.

The word *plumber*, it may be worth while to observe, is derived from the French noun, *plombier*, which again is based on the Latin substantive *plumbum*, lead. Both words signify an artificer or worker in that metal; but it will be seen in course of our remarks, how widely it has changed from its original signification, and how the modern artizan, who calls himself *plumber*, is about as much entitled to the name as the barber is to that of chirurgeon. We will speak first of the useful metal from which this trade derives its position. Lead is one of the most widely diffused, and one of the most important metals we possess; and it was probably worked before any of the nobler metals were discovered. It is mentioned as common in the time of the Exodus; for Moses in his song of triumph at the destruction of Pharaoh's chariots and host, in the Red Sea, uses the time-honoured metaphor familiar to all the ancient poets,—"They sank as lead in the mighty waters." We have other proofs of its common application among the Hebrews. It was among the spoils taken from the Midianites, and the articles made from it were ordered to be melted up. But one of its most singular applications was that alluded to by Job:—"Oh, that my words were now written! Oh, that they were printed in a book! That they were graven with an iron pen and lead in the rock for ever!" This passage has excited considerable discussion among commentators. It is commonly supposed to refer to engraving on a leaden tablet, which we know from Pasaninus and Pliny was a common practice among the ancient Greeks and Romans. Again, it has been held that the passage refers to a practice of cutting indented letters in the solid rock, and of filling the indentations with lead, a practice which was likewise common in several early nations. Rosenmüller, however, thinks the expression more poetical, that it is to be regarded in the same light as the metaphor used by Moses, and that it was simply intended to give a proper idea of the enduring character of his language. It is not probable, therefore, that the high art of inlaying metals was known at this early period; although there can be no doubt the metal was well known. No trace of ancient lead mines has been found within the boundaries of Palestine; and hence it is probable the Israelites obtained their supply through the Phœnicians. The Phœnicians we know imported tin and lead from Britain, and both are enumerated in the graphic account of the commerce of Tyre in the 27th chapter of Ezekiel. Ores of lead, we may mention, however, are very widely distributed over the surface of the globe. They are met with chiefly in veins, sometimes in siliceous rocks of the primary formation, and sometimes among the limestone strata of mountainous districts.

It is a very curious question whether the plumber, properly so called, was first acquainted with his business as regards covering roofs with sheets of lead, or as regards the conveyance of water through lead pipes. We are inclined to take the view that it was on roof-work the trade took its origin; for the art of casting lead into sheets is of immense antiquity. The terraces of Nebuchadnezzar's hanging gardens were covered with sheets of lead, soldered together to retain the moisture in the soil. The employment of sheet-lead as a covering for roofs seems to have also originated in the East. It is still extensively used there for this purpose. Tavernier, in speaking of the mosques at Aleppo, says their domes were covered with lead, and so was the roof of the great hall of the Divan at Constantinople. It is uncertain whether the ancients were acquainted with the art of rolling lead into sheets. The specimens we have referred to obviously consisted of sheets cast on beds of sand, after the manner which was common in this country up to a recent period. The Chinese method of manufacturing sheet-lead is probably the oldest process connected with the metallurgy of this metal; but such sheets could never be properly applied to the purposes of exterior coverings or of water supply. In the splendid temples of Greece and Rome there was, from their character and construction, no use for leaden roofs; but, as we shall presently see, this form of roof constituted an important architectural feature in the churches and castles of the Middle Ages.

Leaden pipes, we believe, are as old as the dawn of history. Archimedes used pipes of lead to distribute water by engines in the large ship built for Hiero; and the same kind were doubtless common among the Babylonians, the Persians, and the Egyptians, whose hydraulic machines were complete in their construction before the civilization of Greece and Rome. In the terraces we have mentioned in Babylon, it is plain that lead pipes must have been employed, since the great height to which the flood was raised would render earthenware or wooden pipes inapplicable. We have no information concerning the mode of making lead pipes previous to the Roman era; but as the Romans borrowed their arts chiefly from the Greeks, and through them from the earlier nations, we may feel assured that the method practised by the Romans is entitled to a still higher antiquity. Respecting the Roman pipes (*fistulæ*) Vitruvius distinguishes three modes of conveying water by such means: first, by channels of masonry; second, by leaden pipes; and, third, by earthenware pipes; and of these two latter the lead was most commonly employed. Roman plumbers, we learn from the same authority, generally formed their pipes by bending up plates of cast lead into a form not perfectly cylindrical, but having a sort of ridge along the whole length of the pipe formed by the junction, whether that was effected by solder or by the process called *burning*. The plates were cast of a length not exceeding 10 feet, the thickness of the metal being proportioned to the bore, according to a rule (Vitruvius, book viii. cap. 7) which, to a modern hydraulic engineer, seems unscientific, since it takes no account of the well-known hydrostatic law which teaches us that the pressure of fluids in pipes increases in a ratio with the squares of their diameters. In plainer terms, the Romans made a large pipe and a small pipe of equal thickness in the sides. We know very little of the earthenware pipes: they must have been, from Pliny's account, precisely analogous to the faucet tile drains of our day. They were considered best when they were made $1\frac{1}{2}$ inch thick in the sides. They were joined together by inserting the end of the one in the faucet of the next, and by filling the interspace with cement, which would stand the action of water. They were usually applied to the purpose of horizontal pipes, and were not used where water rose in a vertical position. It is particularly worthy of notice, that the Romans considered water-pipes of earthenware much more wholesome than those of lead.

We cannot pass without notice the system of plumbers' work in its connection with the different methods of water supply at that period. We will take for our examples the fountains and aqueducts. The word "fountain" (*fons*) signifies originally a natural spring of water; but both the Greeks and Romans had artificial fountains. These were made either by covering and decorating a spring with buildings and sculpture, or by making a jet or stream of water, supplied from an elevation, play into an artificial basin. Among the Greeks these formed the only public source of supply excepting the rain water, which was collected in cisterns. And at Rome, when the poor people could not afford to pay for a private supply, they, no doubt, were indebted to the public fountains. The decorations of these fountains, we may mention, were sometimes splendid. The Corinthian fountains especially were noted for their grandeur. One was adorned with covered cisterns of white marble like grottoes, out of which the water flowed into the open air, and was decorated by paintings. Others were adorned with bronze statues, with figures of dolphins, out of which the stream poured into the basin. And the celebrated fountain at Lerna was surrounded by a colonnade with seats for those who desired a cool retreat in summer. Vitruvius mentions the celebrated fountain at Salmacis, which rendered

* See V. I. XI. pp 709 733, 777.

effeminate all who drank of its waters, as among the most admirable works in Halicarnassus. The Romans likewise erected splendid structures over natural springs. The well-known grotto of Egeria (who, according to the ancient mythology, melted into tears, and was changed by Diana into a fountain), near Rome, consisted at first of a natural cave, but was converted by the architect into a miniature temple. The forms given to the Roman fountains themselves were numerous. Large flat vases were commonly fabricated from hard stone such as granite, breccias, and marbles, and an ingenious contrivance is still shown on an existing specimen constructed in the form of a tripod, up the centre of which passes the jet, and down the legs of which the stream overflows. More frequently, however, the water was made to flow out of the mouths and eyes of Tritons, Nereids, Satyrs, and such like mystical beings—a practice which is still pursued by the architects of fountains in our own day.

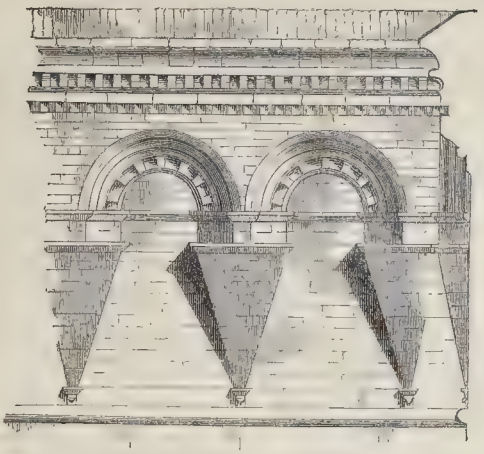
The next gigantic step in water supply was the introduction of aqueducts. Although it is out of our province to enter on the abstract subject of the Roman aqueducts, we cannot help adverting to the conflicting opinions held with respect to their construction. In Rome the population was peculiarly situated with respect to water supply. At first they had recourse to the Tiber, and to the springs and wells we have mentioned; but these soon proved unsuitable and insufficient. In order, then, to bring pure water from the hills which surround the Campagna, recourse was had to the construction of aqueducts; and these splendid erections were gradually increased until they at last amounted to fourteen in number, and became the admiration and delight of the citizens. The aqueducts, we need scarcely explain, were structures precisely similar to the viaducts of some of our larger canals, with the addition of a covering, and were carried at one uniform level over valleys and through mountains. It has been argued that from this method of conveying water, the Romans were ignorant of the fundamental law of hydrostatics, that water will find its level, or they would have made use of pipes. But it requires no great dialectical skill to prove that this argument is simply preposterous. The Romans had fountains before they had aqueducts, and had pumps employed in their fountains; and, in fact, as we have elsewhere observed, they did employ pipes even in their aqueducts, when sweeping round the base of a hill. In truth, it has been far too readily assumed that the aqueduct is an unscientific mode of supplying water. Granting that their splendour arose from ostentation, this is no objection to their utility. The railway bridges and stations of our day are far worse off on this point. Besides, London is supplied on such principles; for the New River is little better than an aqueduct without arches and a roof, and is, therefore, a very bad aqueduct. But the celebrated Croton aqueduct of New York, the most striking piece of hydraulic engineering which modern times has produced, is, in all essential particulars, an exact reproduction of the *Aqua Claudia*, or the *Anio novus*; and might, with great propriety, have found a place in the treatise "De Aquæductibus" of that most estimable writer, Sextus Julius Frontinus *

With regard to the plumber's work in the fountains, much of it was exceedingly curious. In addition to the common practice of supplying them from an elevated cistern, Vitruvius tells us—and but for that circumstance we should have remained ignorant of an important branch in ancient hydraulics—that the forcing-pump was sometimes used to supply them. They had lead pipes attached to them, and earthenware pipes, and even leather pipes, where flexible tubes were necessary to pass the intricate grooves and channels which their devices occasioned. Ornamental wheels and artificial cascades were very common; and the practice of supporting a ball or other spherical figure at an elevation by means of a column of water, was likewise in use. In some of the private fountains in Rome, and in the specimens dug up at Pompeii, the tubes were formed of elaborate workmanship in bronze, and sometimes in silver. The valves were constructed with great ingenuity, chiefly on the ancient and primitive plan still in use in wooden pumps. Their bronze cocks were peculiarly fine work, as regards their design and material. Every main pipe which was laid down in the streets had a large cock attached to it, by which the water was turned off or on, and which was furnished with square heads turned by iron keys. Perhaps the richest specimens of these instruments are to be found in the illustrations of Montfaucon's "Antiquities." An ancient stop-cock, discovered in the ruins of a temple at Capri, is still preserved in the Museum at Naples. It differs from the common stop-cock of our day, by having what is technically termed a "round water-way," or a water-way equal in area to the tube, which ordinary stop-cocks have not. With regard to the invention of soldering, it is exceedingly difficult to determine the exact position in which it is to be placed in ancient history. It is certain the Greeks and Romans used something answering the purpose of joining metals in this fashion; and Pliny speaks of a solder which he denominates *plumbum argentarium*, and which would seem to have something of the same composition as our common plumbers' solder. On the other hand, the method of fastening metals together by means of rivets was far more commonly in use; and indeed we are not sure whether it was not the only method known to the Greeks in their best days. We know for certain they were utterly unacquainted with the art of welding iron, and it seems highly probable they were also ignorant of the cognate art of soldering lead, which involves a much higher and more extended knowledge of metallurgy. We will give an illustration from the Roman plumber work of the aqueducts in proof of this. In rounding a hill or in crossing a valley they sometimes used lead pipes. In the latter case the horizontal pipe had, at its lowest points, openings for the escape of air. But it does not appear that the plumbers could make a curve or even construct an acute angle on their pipe. Where such bendings were necessary an elbow was bored in a solid piece of stone into which the ends of the two pieces of pipe were cemented after the same manner in which the joints were made in the pipes of earthenware. The water from the aqueducts was finally received into huge reservoirs, one for public use in supplying the fountains, and one for private use in supplying the dwellings. When a supply was granted to a private individual a branch pipe was inserted in the main: from this it was distributed to the leaden cisterns common to every house, and the supply was measured by a bronze tube termed *calix*, and which was stamped like an imperial measure: this calix was in the time of Agnetus constructed of lead; but the fashion was put a stop to when it was discovered that the water-officers used to cheat the inhabitants by compressing the pipe. We may add that the Romans, when they wished for perfectly pure water, employed two cisterns at different levels for the purpose of allowing the sediment to deposit in the one before it was drawn into the other.*

We have said all, or nearly all, we had to say respecting ancient plumber-work. We must now take a rapid glance at its early history in our own country, and particularly with respect to its application to the churches of the Middle Ages.

The churches and castles of Europe during the Middle Ages were almost uniformly covered with lead. The Saxons, in the earlier periods of their history, covered their buildings with slate, but their most magnificent structures were overlaid with lead. In the time of King Edgar the buildings added to the monastery of Croyland were, according to Ingulphus, strongly built of stone and roofed with lead; and in a statute passed in the fourth year of the reign of King Edward I. (A.D. 1276) to ascertain the value of real estates, commissioners were appointed to "visit castles and also other buildings compassed about with ditches, to determine what the walls, buildings, timber, stone, with lead, and other manner of covering is worth." The lead in this case was what is commonly termed *cast lead*; the process of manufacturing which we shall afterwards have to describe. It was laid with all the skill and ingenuity which characterized the design and execution of the building of the period, and of the most approved methods known to the modern plumber. Thus the sheets were made narrow, and joined with the particular seams termed *roll joints*, which give to the mediæval plumber-work so much of its picturesque effect. Provision was made for the expansion of the metal; and neither solder nor nails were employed in the fastenings. But the department in which the plumbers of those days were particularly excellent was the ornaments of lead used in the exterior and interior decorations of the buildings. The beautiful trefoil and quatrefoil ornaments which were used to decorate the ridges, were always cast in lead; and we have a good example of such work on the roof of Exeter Cathedral. The little gilded stars planted on the ceilings over the altars were likewise cast of the same metal. Some remarkable specimens still exist in England of ornamental work in cast-lead. The leaden coffins which were dug from underneath the effigies of knights in the Temple Church are most curiously decorated with work of elaborate design. Some of the leaden fonts which are assigned to the tenth century are also distinguished by their ornaments of foliage and figures of animals. The water-cisterns were especially the object of profuse decoration. We have ourselves been familiar with some exquisite productions of this kind, but we regret to say that our impressions were most frequently obtained in the casting-shop of the plumbers before they were consigned to the melting-pot as old metal. We may mention here as a curious fact, that many old cisterns bearing dates from the twelfth to the fifteenth century have been discovered to contain a large alloy of antimony and tin. Now it is well known that though the Church of Rome enjoins her people to make all vessels in connection with the holy church of silver, many of these vessels, especially chalices and salvers, were, during the Middle Ages, made from pewter; and it is reasonable to suppose that the same method had found its way into the plumbers' shops and was applied to cisterns. We have also heard it suggested that in later times the enormous quantities of "tea-lead" imported from China, which is absolutely unfit for the common purposes of the plumber, were applied to the same use.

Another very remarkable point of the plumber's business during the middle ages was the construction of the organ-pipes in the churches. This scientific work was executed often by the same artists who covered the pointed roofs with sheets and cast the ornaments for the altar. The practice was common even down to the foundation of St. Paul's Cathedral for the fire which occurred there during the progress of the works was attributed to the plumbers who were repairing the organ-pipes.



"Last scene of all which ends this strange eventful history" was the plumber's connection with the obsequies of the dead. We have mentioned the ornamented leaden coffins of the Knights Templars; and we have only to add that these were very common in England, particularly after the Crusades. Geoffrey Mandeville, who died during the reign of Henry I. under the curse of excommunication, could not be buried in consecrated earth. "Therefore," says Camden, "some of the Knights Templars enclosed him in a pipe of lead and hung him upon a tree in an orchard at the old temple!" Edward the Black Prince being dead, "his body," says Froissart, "was embalmed and put in a vessel of lead;" and the corpse of his successor, we are told by Harding, was "lappe in lede," and so from that time thenceforward were the mortal remains of the kings of England.

In our next article we shall speak of the causes which have led to the great change now to be found in the whole scope of the trade, a change among the most remarkable in the history of trades connected with building.

* See for a compendious summary of the arguments, as well as a description of these structures, the art. "Aquæductus," in the "Dict. of Classical Antiquities."

* See the last three chapters of Vitruvius; Montfaucon's "Antiquities;" Sir W. Gell's "Pompeii."

COMPETITION: NATIONAL SCHOOLS, BRIDGNORTH.—This competition has been decided in favour of Mr. Barry, of Liverpool, whose design is to be forthwith commenced.

BRICK CORNICE FROM SIENA.

BRICK CORNICE FROM SIENA.

WE would add one example to the specimens of brick architecture from abroad recently given.

Nearly all the picturesque town-gates of Siena are studies both for the architect and painter. They were all probably once of a similar character,—a square tower, pierced with a gateway; but they have been terribly mutilated. The bold and elegant brick cornice now engraved is from one of these.

ON THE CONTRAST BETWEEN CLASSIC AND GOTHIC ARCHITECTURE AS EVIDENCED IN THE TREATMENT OF APPARENT WEIGHT.

EVERY material which is at the disposal of the architect has two sets of properties, those of inertia and the like, connected with the laws of motion, inherent in matter, and those which arise from the process of formation of the specific material. The former class of properties we admire in a building of antiquity. The weight and solidity of its masses, the perfect resistance of the several thrusts, all the forces caused by the arrangement of its parts, being perfectly balanced. The latter class, the internal qualities of the material, we should admire where it is employed mainly for its appearance, and whenever a form of construction is adopted which is not either simple superposition, or arching.

Connected with this broad distinction is another, peculiar to the designs of the architect, that, namely, between the modes of communicating his ideas;—the first, where this communication is effected notwithstanding the nature of the material; and the second, where the communication is effected by bringing more prominently into view some peculiar quality of the material. To illustrate this, I may suggest that all arches are instances of construction, notwithstanding some properties of the materials employed, their fragile character, and their weight; and that a span roof brings into notice the tenacity of the timber or iron.

I think we may assume that construction, when dependent on general qualities, leads to the grand; while that on the peculiar qualities of the material, nearly as surely to the merely useful. It has been told us frequently to study nature, to go to nature: we have a right to all the employment of the natural qualities of our materials, their peculiarities, going to nature. Wood, hemp, and iron are adapted by nature for tension, for they are tough, but a savage could know this, and yet remain a barbarian in art. An artist goes to nature to perceive those general laws which are to be found, spite of the natural peculiarities of the material. All this the great architects of any age must have felt intuitively, and they have adopted styles. They have found that the ideas which they had to convey were best transmitted as by their fathers, but they feared not to alter; for, knowing the ideas, they could recognise them in the expression, and could vary their details till that was produced. Hence their styles succeeded each other, and proceeded in the same direction. The improver of a style expressed in his work all that the previous work had expressed, and something more. Such progress cannot be accomplished but by the possession not only of the power of adapting details, but also of the key to their meaning. This power of adaptation I am sure we possess at the present time. Of a clue to the meaning of our art I see hardly any signs. As others have done, so have I, inquired of those most capable, as I supposed, to afford me information. Why do you adopt such and such forms of detail in connection with others of a general character? For instance, why with the echinus capital do you introduce triglyphs in the entablature? Why dentils only with an attic base? Why not have an entablature when you have clustered columns? Why do you so carefully vary the shape of the fillets in Gothic mouldings with the form of the arch and the arrangement of the traceries? These and many others might be instanced as requiring an answer more satisfactory to the inquiring student than reference to the works of Vitruvius, or Paley's "Mouldings;" to the authority of the Parthenon or of Canterbury Cathedral. The buildings are fine; but why, we all ask, are these peculiar and unnatural-looking arrangements chosen by the architects to convey their ideas of solemnity and grandeur?

On such a subject each of us must take up a position and have in mind a central thought, wherewith to unite all the information he may obtain, and to act as a landmark in all his studies. Before our art can assume its proper position it must have its scientific basis. We must have learned to reason out the arrangements of the old styles, or of one at least of them, before we know the position which we occupy. The closer we examine the styles with which we are acquainted, the more likely are we to arrive at their meaning; and for this reason I have chosen to direct your attention to a single phase of architectural character. It was the evident intention of classic, and specially of Greek architects, to convey an impression of the weight of their materials, and of the Gothic architects to overcome any such impression. In fact, while the details of Greek and also of Classic architecture are generally contrived to represent the result of forces overcome, or *rest*, the Gothic intention is to exhibit those forces in the most striking aspect. This consideration is mixed up with another (indeed the latter is but a consequence of the former), that while, in the temple, the actuating principle or motive is to produce horizontal lines, that is, pressure,—in the cathedral the motive is to produce vertical lines, that is, extension or growth: in fact, to use an analogy carried too far in both directions, the Greek would use the trees when cut down, the Gothic would show the growth and progress of the forest.

In the first place, let me notice this remarkable difference between a Greek and a Gothic building. The Greek tells its whole story of weight and resistance, whether you examine it without or within. The Gothic values not this immediate satisfaction to the eye, but within you see arches whose thrust is unresisted; without, you see buttresses whose balance is out of sight.

Again, in considering a Classic arch, we readily perceive, that had not the arch been executed, the wall would have occupied its place. The opening was wanted, and the arched form and construction were adopted to carry the superincumbent mass; whereas in pure Gothic architecture, the piers, responds, and arches, so completely occupy the space between other piers, used also for carrying arches, that it is evident the arch itself was the important part of the design. This is also to be seen in the section of the mouldings; for whereas, in the Roman, though the architrave is of similar section to the epistylium, the surface only is discernible, while both architrave and soffit may be highly ornamented, or even paneled. In the Gothic, the mouldings are so formed in the substance of the masonry, that the solidity and proper form into which the materials are wrought, are brought clearly into notice; in the one case the surface representing the weight, in the other, the direction representing the force, is made the more important. If we pursue this investigation into the vaults of these two manners, we shall perceive this same difference, for while the Classic vaults consist of a surface from which panels are sunk and ornamented, leaving the angles alone of the original surface,—in the Gothic the surface is not touched save by superficial decoration, the angles where the forces of the vault must be supposed centred, are strengthened, and made the prominent part of the design.

It is difficult to speak decidedly on the subject of external roofs, for the question of their appearance is commonly considered as entirely dependent on the purpose of the covering consequent on the climate. No doubt the classic architects did not use steep roofs, because the rain would readily run off flat ones; but can we suppose that had the effect of a higher roof been compatible with, or advantageous to, their design, they would have had any scruple in using it? Neither can we doubt that the Gothic architects would have taken more pains to disguise their highly pitched gables, had there been anything discordant in their appearance with the rest of the composition. The striking contrast in the effect of roofs higher and lower respectively than 45 deg. is obvious. The low roof as clearly assists in giving pressure to the frieze, as the high roof assists in completing the general expression of those thrusts with which the Gothic structure seems to be kept in equilibrium.

The general system for giving importance to features in the Classic style is that of adding the mouldings to the surface of the wall, while generally that of the Gothic architects is cutting away till the lines are made more evident. The pursuance of this course on the part of the Classic architects shows that bringing the form more conspicuously into view (as appears to be the intention of Gothic mouldings) was not sufficient for their purpose, but that additional apparent substance must be given to the parts to enable them to fulfil their ostensible duties. This is another instance of the favour in which the inert qualities of their materials were held by the Classicists.

Another view which may be taken of this great difference between superficial and solid character in the moulding of an arch is, that the Classic intention is seen best by making prominent its depth, to convey the idea of its great

power of resistance to the superincumbent weight which they seemed to fear, and that the Gothic intention is to render more striking the force consequent on this weight by the multiplication of the representative lines. The Gothic arch strikes, as containing its power in the thickness of the wall, and more strikingly in its central portion,—power which is the effect of the weight in the act of its conveyance to the springing as the point of its support. In short, the striking characteristic of the Gothic arch is its thrust; and to express this, all its members combine; while the Classic arch strikes as containing its power in its depth, its representative lines being all situated on the surface,—power which is of resistance to the weight supposed to be entirely absorbed in the arch itself. Not that the Classic is deeper than the Gothic arch: I speak but of the relative apparent prominence of these qualities in them,—of depth and solidity, answering to bearing and thrust.

The use of a shaft in Classic architecture is for supporting a superincumbent weight, which must be laid on it without exercising any lateral pressure. Even admitting that it may be used to support arches alone, still their pressure must be counterbalanced by others equal and contrary, and the shaft is still the same, prepared for a dead weight only. But in refined Gothic this is not the case; for where several arches are supported on one shaft, each of them is represented in its section.

The square outline of the arch section, and the simplicity of the pier, may be traced from their origin, when both are rectangular, the pier being represented by the jamb or respond, in the Early Roman, till the square sectioned arch is found with the circular pier in the later Roman. This circular pier continues a connecting link to a late period: it is found in the French Flamboyant, but not in the English Perpendicular. But as the representation of forces became more valued, both pier and arch assumed first regular figures, as in the Early English, the pier composed of circles, the arch of rectangular suits; and then the architects giving themselves up more and more to the representation of force, all the varieties of sections, and what is as important, all the varieties of imposts, were designed to vary their expression, as we find them in the geometrical and Decorated styles of Northern Gothic.

I have now drawn your attention to the contrast exhibited in the representation of forces, overcome or active, as architects have treated them, in the arch and in vaults, in roofs, in the general modes of giving importance to the edges of openings, and in that most interesting of our studies, the relation between the arch and its pier. I would also say a few words on some other, perhaps more striking, contrasts—the form of the arch, that is to say, the omission by the Gothic architects of the horizontal portion of the semicircle in its conversion to the ogival form; also, the conversion of the leading lines of the building from horizontal to vertical. Both these alterations in the elements of composition, together with the absence in our own styles of diminishing columns, afford additional tests for us to discover the reasons for the operations of the Gothic architects, the key to their progress. The discovery of a single stone lying with its longest dimensions horizontal, is proof to us that the weight of the material has done its utmost, and hence the rest in which we find it; while the fact of a stone standing on its smaller base is a proof to us that a counter force has been used for the purpose of so placing it.

The horizontal lines of the Greek and Roman buildings recall the impression derived from the first of these positions: the vertical lines of the Gothic recall that of the second.

But it will be said that one of the most important features of classical architecture is the column: surely this is a stone set on end. There is, however, to be noticed this difference between the Classic and pure Gothic round column: the former is diminished, while the latter has universally its sides parallel. The diminution has this effect, that it gives the Greek column a firm seat, for it may be moved till one of its sides becomes perpendicular before any reduction in its stability is effected, before any portion of the mass overhangs the base, while the cylindrical pier has no sooner its vertical position varied than it becomes increasingly unstable. The distinction between these two forms is sometimes stated as that the diminished column has a character, an apparent object in its form, while the form of the cylinder is without motive. This being the case, that which displays design in itself is a better representative of the result of force, that is, as I would have you to consider Greek architecture, than the figure without motive, which is merely calculated to convey the forces resultant from the form of the building from one part of the structure to another; and thus, from its position alone, deriving a character, of which, in the hands of the Gothic architect, it becomes the exponent.

I have now said enough, I trust, though I have not done so as clearly as I would wish, and as so difficult a subject requires, to show that the general principle to which I have called attention, the expression of forces existing in the structure, is to be found in the pure Gothic, and is carefully avoided in the Classic. The masons of the Middle Ages may not have said one to another, "we will represent these forces," nor may they even have thought of their object in this particular light: if, however, they had a principle more general, this, at all events, among others, was contained in it.

THOMAS M. RICKMAN.*

WARMING CHURCHES.

I AM pleased to find that the subject of church warming is beginning to force itself on the notice of those most interested in the matter, viz. the clergy; for the large sums of money expended in attempts to warm churches, with the few instances where success has been attained, makes it really an important question. It is to be regretted that architects do not always provide in their plans for the introduction of some efficient mode of warming; it is often left until the first cold weather is felt, after the church is finished, when as a rule, the nearest ironmonger is called in to supply the omission, which he does by recommending any hot-air stove or stoves he may have in his stock, generally the latest novelty in name or form, and from the want of better information his recommendation is adopted; but when the stove is to be fixed it is found that no chimney has been provided, and the only alternative is to carry an iron pipe to the outside of the church in the readiest manner.

The rev. author of the paper on this subject in your last number but one, has, either from a misconception of, or defective information on the laws of heat, fallen into error; for instance, he says, "another objection to iron stoves is, that the heat, being transmitted through a metallic substance, which expands under the influence of fire, carries with it any impurities existing in the coal which are evolved in combustion; producing that stifling and oppressive sensation which every one must have experienced who has come within their reach." Now the effects here described arise, as is well known, from the over-heating of the stove, and the consequent decomposition of the air coming in contact with its surface, for the products of combustion can only escape when the stove is imperfect; again, in describing the mode of heating adopted at Rockingham and Weldon churches, he says, "the superiority of this plan of warming over that by means of iron stoves, consists in the purity of the heated air which ascends from the furnace, and being filtered, as it were, through the tiles, rises into the space above, purer than when contaminated by passing through any heated metallic substance." Here the case is exactly the reverse of that above—the materials forming the floor, and at the same time the cover to the flue, being imperfect conductors, do not become over-heated, and consequently the air in contact is not vitiated.

The rev. author's description of the arrangements for warming St. Stephen's, Westminster, is very vague, and as I happen to be acquainted with the system adopted there, I will supply his omissions. The church is warmed by hot-water pipes nearly in section of the form **A**, disposed in channels formed below the floor: fresh air is admitted through the internal walls, and after passing over the surface of the pipes, enters the church principally at the window cill: an extracting flue is carried under the centre aisle and west door, to a ventilating shaft erected at the back of the schools, where the furnace and boilers for heating the whole establishment (church, boys', girls', and infant schools) are fixed. There is also provided a means for closing the extracting flue, and then circulating the atmosphere of the church through the warming apparatus, to economize fuel when the church is unoccupied. These arrangements were designed by the late Mr. Sylvester, C. E., and adopted by Mr. Ferrey, architect, before the church was commenced. The system of heating recommended by the rev. gentleman cannot claim any merit on the score of novelty, as it is that now fallen nearly into disuse for warming forcing and other garden-houses, and the cost appears exorbitant if nothing more than the furnace and flue were included in the charge.

* Read at a meeting of the Architectural Association on the 6th January. We must commence at the number of the Association on their actuals and zeal.

DRAINAGE OF LONDON.

INSTITUTION OF CIVIL ENGINEERS.

AT the renewed discussion on Mr. Harrison's paper "On the Drainage of the District, South of the Thames," January 17th, it was argued as to the general question of the drainage of London, that with a good system of intercepting sewers, the gravitation plan could be adopted, for the upper districts, on both sides of the river; and on the north side, the whole sewage might be so disposed of; but on the south side, on account of the deficiency of fall, it would probably be necessary to resort to a system of pumping the low sewage, at some point, say at Deptford Creek, and there lifting it to such a height as to give the requisite fall from thence, by a sewer, into reservoirs, as proposed by Mr. Harrison, whence the matter should be delivered into the river, without any deodorizing, at a point low down, at the first turn of the tide from high water, so as to preclude the possibility of any pollution of the stream above the point of the admission of the sewage. It was contended, that the same skill by which steam power was enabled to be continuously used, for long sea voyages, could preclude any but very remote chance of casualty from a derangement of the pumping apparatus; and that in the cases of excessive rainfall, flooding might be prevented, by permitting the present outfalls into the river to be used.

As to the general question of deodorizing, it was argued, that like the employment of the diluted sewage for agricultural purposes, the schemes might be feasible for small towns, but that the immense quantity proceeding from such an area of houses as in London, appeared at present to preclude the general adoption of the system.

It was stated, that all the plans proposed, up to the present time, for the drainage of the southern district, were defective in providing capacity of main sewers, for conveying away the excessive rainfall.

It was shown that at present, when a heavy rainfall occurred simultaneously with a high tide, the districts by the York-road and along the river side down to Bermondsey and lower down, were flooded from the river, which flowed over the surface and down the gullies into the river, whence it flooded the houses. Therefore a greater pumping power would be required than had been mentioned, if the habitations were to be guaranteed from casualty, as they should be under a new and expensive system. It was contended that the outfall should be extended even below Greenwich, as any system of sewerage for the southern districts should be permanent, and allow for any amount of extension of buildings to the eastward.

It was hoped that the facts elicited by the discussion would be found serviceable in determining the ultimate system to be adopted, and that special care would be taken to avoid the "fallacies" which, it was contended, had been promulgated in some of the documents emanating "by authority" from the General Board of Health, particularly in the "minutes of information collected with reference to works for

the removal of soil-water, or drainage of dwelling-houses, public edifices, &c." (1852.) Asserted errors, both of theory and practice, contained in these documents, were pointed out, and it was contended that they set at nought all the received laws of hydraulics, the formulæ of De Buat and other experimenters of acknowledged scientific skill, and even the "Principia" of Newton, and only substituted fallacies for those rules which had hitherto formed the basis of the best practice. A promise was given that this should be proved at an early meeting of the institution.

DISCOVERIES IN THE APPIAN WAY.

SOME time ago we gave an account of the results of excavations in the Appian Way. We find the following more recent particulars in Förster's *Bau Zeitung*, under the head of "Italy:"—

A Roman journal contains a circumstantial account of the present state of the Appian Way, which has been excavated as far as the eleventh mile. Several popes attempted this gigantic undertaking, particularly Pius VI. who wished to lay open the whole road from Rome to Terracina, but was prevented from so doing. The reigning pontiff began the excavations in December, 1850, near the celebrated tomb of Cecilia Metella, some three and a half miles distant from the old Porta Capena, and extended them in the course of three years to the site of the ancient Bovilla, a length of eight Roman miles. The breadth of the excavation amounts to 100 palms, the middle depth one yard: the mass of earth thrown aside amounts to 277,532 yards. About twenty monuments were restored as nearly as possible to their original condition, and it is the intention to place all the most remarkable objects found during the excavations *in situ*.

Further researches are to be made sideways to about the depth of a yard, for it is to be noted that the now-opened Appian Way is not the old Roman road, but that which was formed over the first one in the Middle Ages. To raise the present one, all the remains of adjoining monuments were used, so that valuable historical inscriptions must lie buried under the modern level, as has often been shown whenever it was required to make excavations in the soil. Besides a number of valuable inscriptions, about twenty statues were found, all with the toga, among which antiquaries recognised those of Seneca and other great men. The operations are conducted by Canina, and cost 5,000 scudi yearly.

A NEW GERMAN PAPER-FACTORY.

AMONG the largest erections through German enterprise we may reckon that of the new paper-manufactory lately erected in Freiburg for Mr. Flinsch, of Frankfort-on-the-Maine. Hitherto, with but few exceptions, one has only seen such establishments there composed of detached buildings: here, on the contrary, everything is united in one vast fabric. The ground-floor of the west wing contains a store-room for unsorted rags, and holds 6,000 cwt. The roof is supported by three pillars. Parallel with this lies the sorting-room, where between forty and fifty persons are daily employed. After this come the washing and boiling rooms, the colouring-room, &c. On the upper story is the room for the sorted rags, consisting of three divisions, and, reaching to the roof, it extends over the whole wing, and holds 6,000 cwt. The centre building contains the machinery. In the two first stories are the cylindrical machine, the turbines, the half-manufactured material, the vats, the reservoir, &c. The room for the cylindrical machine is 42 feet wide, and reaches up to the third story. Sixteen cast-iron pillars support the eight machines which tear the rags. These pillars sustain all the motive powers of the machinery, and are made hollow, to let off the water used in the machine. At the foot of each pillar is a receptacle for anything which may have remained in the water. North of the machine-room is the glass enclosure for the turbines—a terrace-like erection of 42 feet in length and 15 feet in depth; the roof forming a gallery, from which is a fine prospect of the surrounding mountains. The three turbines (after Jonval's invention), of sixty-horse power, work the machine, pumps, &c. The room for the half-converted material runs parallel with, and is of the same size as, the machine-room. The material is kept below in firmly-pressed masses, each of which contains from 600 to 700 cubic feet, ready to be transported above, and from thence to the machine, which completes the process. It is raised by machinery on the west side of the room. The pump, reservoir, and other water-works are all on the third story, the centre of which is arranged as lodgings for married and single workmen, each consisting of a bed-room, kitchen, &c. East is the machine-room, which occupies more than half the wing. The machine itself is from the manufactory of Messrs. Wyss and Co. of Zurich. The improved smoothing or facing apparatus is constructed after the design of Mr. Flinsch, and is the largest in Germany. There is an hospital, too, for sick workmen, and the establishment is warmed by hot-water pipes. The design for the building, together with the machinery, was made by the firm of Mr. Schroeder, of Carlsruhe; and the execution is the work of Professor Schneider, of Freiburg.

THE WEAR OF IRON ROOFS.

OUR attention was directed a short time ago to an iron roof in the yard of a Bayswater omnibus proprietor, near Whitechapel, which had fallen after the late snowstorm. It was formed (between two low buildings) of corrugated iron, curved, standing on iron pillars, with a light tie-rod and king-bolt at intervals: it was about 30 feet in span, and 50 or 60 feet long, and was put up about a year ago as a shed for omnibuses. It cost 100*l*. With about 5 inches of snow upon it, as was stated, it came down; and when we saw it, it was closely embracing a heap of omnibuses below it. The iron both of the covering and the supports was rusted and broken in all directions. It had been painted over with gas-tar and resin. We mention the occurrence to show the necessity for care in the construction of such roofs, and for occasional examination and repair.

STATUES.

THE plaster model of Richard Cœur de Lion, by Marochetti, for the execution of which in bronze money has been raised by subscription, has been set up in Palace-yard, Westminster, immediately opposite the doorway of Westminster Hall, and in a line, the other way, with the gate into a court of the Houses of Parliament. The back of the statue is turned to the latter building, the face looking round towards Westminster Hall. The effect, in some points of view, is far from good, and yet we can scarcely point to a better site for it.

The statue of Sir Robert Peel, by the same sculptor, will probably be set up in the open space adjoining Gwydyr House, Whitehall, opposite the Treasury. The question of site has been the subject of long discussion.

A marble statue of Admiral Lord de Saumarez, by Mr. John Steell, of Edinburgh, has been erected in the hall of Greenwich Hospital, facing the statue of Lord Exmouth. It was commissioned so long ago as during Sir Robert Peel's government.

COMPETITION FOR THE NAPOLEON MUSEUM AT AMIENS.

THE Society of Antiquaries of Picardy have published the programme of a competition for the design of the *Musée Napoléon* at Amiens, for which structure the State has appropriated a site, and we are requested by the Commission to make their invitation known. The Museum is to consist of four principal divisions, appropriated to painting, sculpture, antiquities, and natural history, for which galleries and cabinets are needed. Amongst the other requirements are a grand staircase, a saloon properly decorated for the meetings of the society, a library for 10,000 volumes, and a hall for public meetings. The maximum cost, exclusive of heating and paving the approaches, is fixed at 18 000*l*. The designs must be sent in before the 16th of April, and will be publicly exhibited on the five following days. 120*l*. will be given to the author of the best design; 60*l*. to the author of the second; and 20*l*. to the author of the third. The programme has full particulars, and includes a schedule of prices, on which the estimate of each design is to be framed: it will be found at our publishing office, should any of our readers desire to measure swords with the French architects on their own soil.

NOTES AND INQUIRIES.

ARCHITECTURAL AND ARTISTICAL.

Roman Cement.—Much of the Roman cement which has been used to stucco houses within the last four years has a defect which perhaps the manufacturers can explain. After being painted—no matter how many coats or with what pigment—white lead or the oxide of zinc,—a black bloom comes through, sometimes within six weeks, and at others not for as many months. This must have been noticed by most of the users of this now invaluable stucco. I am just about to repaint two fronts, which have been done, one with zinc and the other with lead, within the last twelve months, and wish to learn if I may expect a recurrence of the evil. INQUIRER.

THE GREAT WESTERN STATION AT PADDINGTON.

THE new station for the Great Western Railway, at Paddington, covers a very large area, and presents a remarkable piece of construction in the iron roofs which cover the arrival and departure platform. There are three of these, side by side, with a centre transept, where four light iron pillars carry the diagonal ribs at the crossing in the centre. The ironwork displays a considerable amount of design, and the whole is very congruous. Colour is sparingly introduced,—red and grey. Each vault is covered at the sides, about half way up, with corrugated iron: the remainder is glazed.

The booking-office is very plain, but has a little colour effectively introduced in and round the skylight.

PROVINCIAL NEWS.

Yarmouth.—New barracks for the Norfolk militia are about to be erected in this town. They are to accommodate more than a thousand men, and will cost upwards of 10,000*l*.——A new wing is also about to be built to the town hospital, at the sole cost of a benevolent individual, who withholds his name.

Dunstable.—A new congregational chapel has been erected in this town, from drawings and under the superintendence of Mr. John Usher, of Bedford, architect. The building is Italian in style, 58 feet long, 41 feet 6 inches wide, and 26 feet high. It is constructed of grey bricks and Corsham stone dressings. The principal front is divided into three compartments, the two outer divisions projecting and forming staircase entrances to the gallery. The centre compartment, which is approached by a flight of stone steps, consists of three doorways with elliptical heads, above which is a window with nine lights. The stairs, turrets, and parapet are capped with stone on ornamental brackets and frieze. The interior of the building is fitted up with platform in lieu of pulpit, approached by two flights of stairs. From the platform, and leading to the first row of seats, is an acoustic apparatus. The seats are open, with solid chamfered and rounded ends. The roof consists of Memel timber framed into queen trusses, covered with diagonal boarding as high as the straining piece, the upper portion being ceiled horizontally and decorated with open iron-work in panels and flowers, to assist ventilation. The timbers of the roof are supported by story-posts standing on carved stone corbeilles descending the walls 6 feet. All the woodwork is stained and varnished. The interior is fitted up for gas. The cost of the whole was 1,400*l*. The building will accommodate 700 persons.

Littlehampton.—The contract for the extensive defensive works and barracks for Littlehampton-harbour, which has been taken by Messrs. Locke and Nesham, of London, will be executed under a low tender. The works will be on the west side of the harbour.

Evesham.—On re-opening Harrington Church, Evesham, Worcestershire, the other day, Mrs. Wyld, formerly a poor girl of the village, contributed 1,000*l.*

Carnarvon.—Considerable improvements are to be made in the county buildings here, which are to be rebuilt. The proposed new building will be in the Tuscan style, according to a plan proposed by Mr. Lloyd, architect and surveyor for the county. The principal fronts will be made of Mona marble worked up with a tool. The body of the court will be 52 feet by 12 feet. The building will be principally lighted by means of a plated glass dome. Apparatus will be fixed under the basement-floor to introduce a warm current of air, and to keep the court at an even temperature; and arrangements will also be made in the roof for ventilation.

Birkenhead.—An iron church is about to be erected here for seamen.

Birmingham.—The Bristol-road Wesleyan chapel, recently erected, was opened for public worship on Wednesday before last. The building has been erected by Mr. Thomas Upton, from designs by Messrs. Wilson and Fellows, of Bath. It is in the Perpendicular style, the front and southern side being constructed of Alvechurch stone, relieved by freestone dressings. The main feature of the front consists of two small towers, between which is the principal entrance-door, above this being a large window filled with tracery. Two doors (on either side of the towers) opening into a lobby, leading to the gallery, complete the front. The side walls are each pierced with five windows, with mullions, transoms, and tracery; and a pierced parapet runs along the top of the building. The pulpit and communion rails are made of polished oak. The roof is open, the rafters and tie-beams being stained of a dark colour. Accommodation is provided for about 850 persons, the whole of the side seats being free. In the rear of the building are class-rooms and vestries suitable to the Wesleyan economy; and also school-rooms. The cost of the whole of the erections has amounted to about 4,000*l.*

Huddersfield.—The Lion-arcade, which has been about two years in course of erection, was to be opened on Monday last. The whole of the shops and warerooms, with about two exceptions, are taken. The length of the building is 112 feet, and its width 43 feet. More than 6,000 feet of glass have been used in the roof, and 9,000 feet of plate glass in the shops and warehouses.

Sunderland.—Mr. Meik, the engineer to the River Commissioners, has published a statement of the cost of dredging in that harbour for the last twelve years. It appears that during that period the average cost has been 3¼d. per ton, which includes every expense (except interest of capital) connected with the dredging-machines, and conveying the dredged material to deep water at sea in hopper barges. In 1853, the quantity raised was 276,800 tons, at a cost, for labour, of 2,464*l.* 11s. 6d.; materials for repairs, 1,297*l.* 17s. 2d.; total, 3,762*l.* 8s. 8d.; being at the rate of 3¼d. per ton. At the Tyne, where the dredged materials are employed to make land, instead of being taken to sea, dredging costs, it is said, three times as much as at Sunderland.

Newcastle.—A wet dock, 23 acres in extent, in connection with the various railways, having their termini in Newcastle, is proposed for construction on the north bank of the Tyne, with a deep-water entrance of 23 feet.

Maryport.—A similar dock is also suggested for this place.

Dundee.—The Board of Ordnance have offered the Barrack-park to the town council as a place of recreation for the inhabitants on favorable terms.

Elgin.—The South Free Church, designed by Messrs. A. and W. Reid, architects, was opened on Sunday in week before last. It is in the Decorated Gothic style, with buttresses at each side, and a tower and spire at the north end (the latter not yet completed). The principal entrance is through the tower, the lower part of which forms the porch to the church. From the principal lobby a broad flight of steps at each side leads to the galleries. At the other end is the vestry. The exterior is of dressed stone from the Hospital quarry. The roof is somewhat open in the interior, and is painted in imitation oak, with gilt pendants. The windows are filled with obscured glass, with stained glass borders and rosettes. The south windows are of a more ornamental character—having the "burning bush" on the tracery, and borders of ornamental glass. The whole building is surrounded by an iron railing. The church is seated for 800. The various contractors were Messrs. John Lamb, mason; John M'Kenzie, house-carpenter; F. W. G. Urquhart, slater; John Gordon, plumber; Joseph Stewart, plasterer: John Kintrae, painter—all of Elgin; and Mr. Geo. Donald, of Aberdeen, glazier. The estimated cost is reckoned about 2,000*l.*: a debt of upwards of 600*l.* still remains on the building.

THE THREATENED CHURCHES IN LONDON.

In connection with our plea against the threatened wholesale destruction of churches in the City,—public buildings, the handwriting of a past generation, houses of memory,—we have thrown together, in one prospect, views of all those which have been pointed out for erasement.

No. 1 is St. Mary's-at-Hill, in Thames-street, of ancient foundation, as are all the others. It was injured, not destroyed, by the great fire of 1666, and was restored and partly rebuilt by Sir Christopher Wren, between 1672 and 1677.

No. 2. St. Martin's Outwich, in Bishopsgate-street, rebuilt in 1798 by the late Mr. S. P. Cockerell. It contains some interesting monumental remains, brought from the old church, and churchwardens' accounts from 1508 to 1545.

No. 3. Allhallows', Lombard-street, rebuilt in 1694, Wren being the architect. It has some very good carvings.

No. 4. Allhallows' Staining, where Princess (afterwards queen) Elizabeth stopped when she left the Tower. It escaped the Great Fire.

No. 5. St. Matthew's, Friday-street, rebuilt by Wren in 1685.

No. 6. St. Helen's, Bishopsgate-street, founded in honour of Helena, the mother of the Emperor Constantine, full of monuments and useful memories. The interior of the church is singularly picturesque and interesting.

No. 7. St. Swithin's, London-stone, in Cannon-street: was burnt, and was rebuilt by Wren in 1680. Within a modern case against the south end of the church, shown in our view, is all that remains of the famous "London stone."

No. 8. St. Michael's Bassishaw, in Basinghall-street, which being burnt, was rebuilt by Wren in 1679. It contains a tablet to Dr. Thos. Wharton, who distinguished himself by his exertions during the great plague of 1665.

No. 9. St. Michael's, Paternoster, Thames-street, originally rebuilt by Whittington, who was buried there. Those who erected his monument punned on his name, and inscribed it "*Richardus Albificans Villam.*" After the fire the present church was built by Wren in 1694; the spire was erected in 1713. There is an altar-piece by Hilton.

No. 10. St. Mary's Somerset, Thames-street, which serves also the parish of St. Mary Mounthaw,—formerly called St. Mary *de Monte alto*, or Monthaut. It was rebuilt by Wren in 1695.

No. 11. St. Margaret's, Pattens, Fenchurch-street, rebuilt (after the fire) in 1687, by Wren. It contains some good carving and a painting on the altar-piece.

No. 12. St. Catherine's Coleman, in Fenchurch-street, rebuilt 1734.

No. 13. St. Clement's, Eastcheap, rebuilt by Wren, 1686. According to the register books, the parishioners in 1685 gave the architect "one-third of a hogshead of wine."

No. 14. St. Mildred's, Bread-street, close to the new opening in St. Paul's-churchyard. It was rebuilt by Wren in 1683, and is remarkable for its interior.

No. 15. St. Anne and Agnes, in Aldersgate-street, formerly called St. Anne-in-the-Willows. The fire destroyed the old church, and Wren built the present structure in 1680.

No. 16. St. Edmund's, Lombard-street, destroyed by the fire and rebuilt by Wren in 1690. In the old church was buried John Shute, who published "The first and chiefe grounde of architecture" soon after 1550. The present building contains some stained glass and "Moses and Aaron," by Etty.

No. 17. St. Mildred's, Poultry, where originally a tablet said—

> "Here Thomas Tusser, clad in earth doth lie,
> That sometime made the 'Points of Husbandrie.'"

After the fire the present church was built by Wren, in 1676. There is a bust here by Nollekens.

No. 18. St. Michael's, Wood-street, the asserted burial-place of the head of James IV. of Scotland. The old church was burnt in '66, and the present erected by Wren in 1675.

No. 19. St. Mary's, Abchurch, completed by Wren in 1686. The interior is very peculiar, and has carvings by Grinling Gibbons of wonderful beauty.

No. 20. Allhallows, Bread-street, wherein Milton was christened. The present church was built by Wren in 1680.

No. 21. St. Peter's, Cornhill, traditionally called the first church founded in London. It was rebuilt by Wren after the fire, and has a carved oak chancel screen.

No. 22. St. George's, Botolph-lane, finished in 1674 by Wren, in lieu of the old structure, destroyed by the Fire. It contains a memorial of Lord-mayor Beckford.

No. 23. St. Benet's, Gracechurch-street, as completed by Wren in 1685.

No. 24. St. Olave's, Jewry, suggesting a long story of a mysterious people. It was rebuilt by Wren in 1676, and is the burial-place of Alderman Boydell.

No. 25. St. Michael's, Queenhithe, rebuilt by Wren in 1677. A doorway at the west end displays some carvings, probably by Gibbons.

No. 26. St. Nicholas' Cole Abbey, on Fish-street-hill: rebuilt by Wren (after the Fire) in 1677.

No. 27. St. Peter's Le Poor, Old Broad-street: rebuilt by Jesse Gibson in 1792.

No. 28. St. Mary's Aldermary, in Bow-lane: built in 1510 by Sir Henry Keble, called

> "A famous worthy wight,
> Which did this Aldermary Church
> Erect and set upright."

The body of the church being destroyed in 1666, was rebuilt by Wren, and is a very curious specimen.

No. 29. St. Alban's, Wood-street, restored by Wren after the Fire, in the style of the old church. Inigo Jones had rebuilt the church a few years previously. Attached to the pulpit is an hour-glass, that the preacher when he "doth make a sermon, may know how the hour passeth away."

A glance at the spires and towers here brought together suffices to prove, amongst other things, the great fertility of design possessed by Wren,—and these are not the most important of his works. They all differ in a striking degree, and suffice to render the appearance of London when viewed from a distance different from that of any other in the world.

THE THREATENED CHURCHES IN THE CITY OF LONDON.

BRICKLAYERS' TASK-WORK.

SOME two or three years ago I took advantage of the extensive circulation of the *Builder*, to lay before the public certain facts respecting what is called task-work or sub-letting, as regards the bricklaying department of the building trade, on which occasion I endeavoured to show them the mysteries connected therewith, and to give an *exposé* of the evils consequent upon the prevalence of that obnoxious system in the builder's trade. The result of these exposures, which you were kind enough to publish (although emanating from a humble operative), has, I flatter myself, been very beneficial to the trade in the metropolis; for I have observed with some satisfaction that since that time there has been a gradual diminution of task-work; and, with the exception of the houses that are carried up in the fields in the suburbs of London, which is vulgarly called by the bricklayers "field-ranging," the system might almost be considered abolished. Something of a revival has taken place at the new Cattle-market at Islington, but with what profit to the builder, or with what additional solidity to the work, it will be best to leave to the reader's conception.

A residence of a few weeks in Manchester has afforded me an opportunity to ascertain how work is carried on in that important town and in different parts of Lancashire; and the alarming extent to which sub-letting brickwork prevails, is a matter which ought to occupy the serious attention of persons engaged in the building trade residing in that part of England. It is a rare thing to see the brickwork of a building carried up by the original contractor: it is in nineteen cases out of twenty let to a bricklayer, who does the labour at a wonderfully low price—too low even to admit of an idea of good or solid work. Let your readers imagine common 9-inch walls, outside and inside labour, per yard average 7d. or about 25s. or 26s. per rod, and I think he will be able to judge what sort of work is done at Manchester; the consequence of which is that there is no time to perfect flues, or even to cut the bricks in the gatherings. The result is sure to be smoky chimneys, party-walls carried up by the run (and it is a wonder they don't come down in a similar manner), and in such a condition that not unfrequently a person engaged in conversation in one house has been known to suffer the serious inconvenience of being overheard by his next-door neighbour. I think, sir, something might be done to remedy this state of things in so large a town: it would be an improvement if there was a Buildings Act similar to London, as I was given to understand during my stay that there was nothing of the kind there: in fact, at the job where I worked there was no district surveyor, nor any one else to interfere, or to see that the work was properly done. Too much cannot be said in favour of the solid construction of buildings: language cannot be found too strong to condemn the pernicious system of piecework as regards brickwork: quality as well as quantity ought to be regarded, but the latter appears to be the ruling principle of those engaged in building pursuits at Manchester, at least according to the opinion of

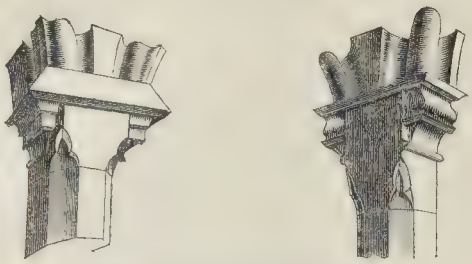
A LONDON OPERATIVE BRICKLAYER.

A SUGGESTION FOR A FREE LIBRARY.

THE three requisites for starting a "Public free Library," are, as I would put it, a few books, a small room, and money enough to pay for the fittings, lights, and firing, for a person to be present during the time the library is open, and for the printing of a few circulars, to inform the neighbourhood of its existence. After it is fairly begun, these books may be lent out to subscribers of 3s. or 4s. a year. This subscription you expect will in some degree defray the expenses. As this is for a working base, you then apply to a more wealthy portion of the community to subscribe 10s. a year, with the privilege of choosing a book not exceeding 12s. 6d. in value, which will circulate among them; and also among subscribers of 6s. a year (who do not choose a book), and which books, after they have been sufficiently used, will be placed in the public free library. You now apply to the wealthy portion of the community to subscribe 20s. a year, with the right to order a book not exceeding 25s. in value, which, after they have been finished, and sent round to subscribers of the same amount, will then be placed in circulation among the 10s. and 6s. subscribers, to be eventually deposited in the free library. As soon as you have your system in good working order, get your subscribers to choose three among themselves, who will be willing to act as a committee to regulate the expenses, and sanction the purchase of works for the library. You will find that the value of the books chosen by subscribers will fall far short of their subscriptions. The 10s. subscribers (I speak from experience in this instance) generally order works of the value of 5s. or 8s. Some are content with what the others obtain, and neglect the privilege without reducing their subscription. Having now a considerable number of every class interested in the success of the institution, you are justified in expecting donations of books or money, which will enable you to increase your accommodation, and thus confer a greater benefit on the community.

Now this reads pleasantly enough on paper, but let us consider the motives and desires that will induce people to assist in carrying out the system. Every one will be benefited. You have united the whole community in a personal interest without mixing the classes, as the books at first only circulate among those who subscribe equally, and therefore the same care and cleanliness will be secured as in the country reading societies; and as few people have the time or inclination to read a book twice over in which they have not a personal interest, they can see it pass into the free library with the satisfaction of knowing that others are enjoying the same pleasure from which they have previously had ample gratification, and surely the charity that can confer a benefit on others without inconvenience to one's self must be pleasant, though it may not possess the material of self-denial to any considerable extent.

Then, as regards profit, each book will pay you interest on three classes of subscribers before it is fairly deposited in the free library—an advantage, if looked upon as of equal success with the common circulating library, of three to one,—a sufficient reason, I hope, to give you ample security against loss, and a justifiable confidence in eventual success.



If you allow the previous arguments in its favour, you need not be afraid of any material falling off of subscribers: the appetite grows with what it feeds on, and its popularity will increase as the pleasure and instruction are appreciated. So, without saying anything about the social elevation and moral improvement which we trust will be duly developed, or of the spread of knowledge or marked intelligence of the masses, you may fairly consider your experiment will fully answer your expectations, and may therefore be pronounced a practical speculation.

W.

THE SALARY AND DUTIES OF THE CITY ARCHITECT.

AT a recent meeting of the City Corporation Commission, Mr. Bunning being examined, said,—I am architect and surveyor to the corporation, and have been so since 1843. The appointment is with the Court of Common Council. I am solely employed by the City for all the operations which are carried on at their desire. When I was appointed, in 1843, the salary which I received was 1,600*l.* a-year, out of which I had to pay office expenses. In 1847 the salary was raised to 2,500*l.* a-year, out of which I had to pay office expenses, amounting, at that time, to 1,000*l.* a-year; but my present salary is 2,500*l.* a-year, with the addition of 1,000*l.* a-year for office expenses. The salary is made up in this wise:—1,300*l.* from the city's cash, 600*l.* for attending to the Bridge-house Estates, 500*l.* from the Finsbury Estate, 50*l.* from the coal fund, an estimated amount of 50*l.* for preparing plans of any property that may be leased, and 50*l.* from the Conduit Mead Estate. My income, on the whole, is less than that of my predecessor, and I am not permitted to engage in any private practice. My duties are very multifarious. I have to attend the Court of Aldermen and the Court of Common Council when required. For the former I have to watch all ruinous and dangerous buildings within the City. I have also to attend the committees of aldermen in respect to the prisons, and I have recently erected a prison at Holloway. There are in it 436 separate cells, and 14 work-rooms, which are equal to 96 additional cells; and there is, in fact, every accommodation for carrying out almost any kind of discipline that could be wished. The total cost of its construction was 92,655*l.* I have nothing to do with the City Bridewell. The Holloway Prison was executed by contract, and so are all works of any magnitude. The mode is to write to twelve or fourteen of the most respectable builders in the country, inviting them to send in tenders, and to select the lowest offer. I also built the Coal Exchange and Billingsgate Market. I prepared an amazing number of plans for a new cattle-market, when it was proposed to build it on the present site; but these plans are now all abandoned, and I am forming a new market for the corporation at Copenhagen-fields. I am designing a dead-meat market, to be placed on the site of Smithfield. In the case of the Royal Exchange, designs were advertised for from various architects. Whether it would be desirable to adopt that plan in all cases it is not for me to say: I can only hope it will never be done while I am City architect. As to the average expense of the works carried out under my control,—In the year 1852 I certified for 36,300*l.* To continue my duties—I am at this moment looking out for a plot of ground on which the corporation propose to erect a lunatic asylum; and I am in treaty for a site by the Seven Sisters-road, near the New Metropolitan Cattle-market. Emmanuel Hospital also comes under my care, and the almshouses connected with it. The great City street improvements have likewise been conducted entirely under my management. On the Lord Mayor's-day also I have to prepare the hall for the banquet. I have to attend, moreover, to the Guildhall, the courts of law, the officers' residences, the Monument, the Sessions-house, and the public stairs, which are very numerous. I have to do with London-bridge, and I have recently submitted to the committee a proposition for throwing hanging footpaths over each side of the bridge, which is now under consideration. There are no apprehensions entertained of the condition of the bridge, but Sir John Rennie and Mr. Page, the engineers, will be consulted before the committee make their report. My proposition will involve a projection of 12 feet on each side of the bridge, which, of course, will not improve its appearance as an architectural structure. I have also to survey the City Estate, which consists of 6,084 houses—to survey dilapidations, to assess the rents, and to report to the City Lands Committee. The Bridge-house Estates in like manner come under my care. I have to attend the committees, and to survey the property, which consists of about 6,000 houses. I have also to attend the Coal, Corn, and Finance Committee, and under that committee I built the Coal Exchange. I have to fix the boundaries under which the coal duty becomes payable. I attend the General Purposes Committee, and under them the Mansion-house comes within my care. I attend the Markets Committee, and have the management of the markets, and execute any repairs that are required. I have also to attend to the police-stations—six in number—and the chief commissioner's house, the city schools, and the Small Debts Court. There are, too, numerous works being carried out under my superintendence by direction of the Improvements Committee, including Cannon-street, from William IV.'s statue to St. Paul's; works in Threadneedle-street, Mark-lane, Dowgate-hill, and a new street from Farringdon-street to Clerkenwell, where it is contemplated to erect lodging-houses for the poor. There are also now before the Improvements Committee a new street from Cannon-street to Blackfriars-bridge, and the levelling of Holborn-hill. The expense of these improvements is very great, owing to the enormous sums required in the shape of compensation for goodwill, compulsory sales, and so on. The claims sent in, in this respect, for the portion of Cannon-street already completed amounted to no less than 1,177,153*l.* 2s. 4d. and they were settled for by the payment of 796,566*l.* 3s. 5d. The total loss to the City is about 200,000*l.* the difference being accounted for by the sale of the frontages in the new street, which are very valuable.

When asked as to the sufficiency of the main thoroughfares of the City, Mr. Bunning said,—Cheapside will be greatly relieved when Cannon-street shall be opened, which I anticipate will not be long. Frequent obstructions take place between the Strand and Cheapside. I think that the removal of Temple-bar would contribute very much to diminish that inconvenience. There would certainly be room for one more carriage if it were removed. The estimate for the new cattle-market as at present proposed is 300,000*l.*; but a hide-market and increased fairage are in contemplation, which would augment that estimate.

ARCHES AND CAPS IN WINDOWS.

A JUNCTION OF ARCHES AND CAPS IN WINDOWS.

YOUR recent illustrations of windows from Syracuse (Vol. II. page 767), show two ways of effecting this. In the accompanying sketches there is a somewhat similar arrangement, and I think the way in which the arch and jamb mouldings are brought down on to the plain chamferred mullion, so as to preserve the face of wall down on to the top of corbelling cap, is very ingenious, and does away with the awkward mitre, and overhanging effect of deeply-cut mouldings in such positions. The difficulty here encountered, appears to me greater than that shown in the illustrations I have referred to, where the arrangement is very straightforward.

The examples are from Sturry, near Canterbury. Couplets, trefoil headed in both instances, and each light is about 6 feet high by 1 ft. 6 in. wide. R. H. P.

PURIFICATION OF GAS.

As if to give force to our remarks lately on this subject, it has been simultaneously exciting no little interest in the City, and the *Times* has had a leading article on the matter. Dr. Letheby having sent a report to the City Sewers Commission as to the quality of the gas of the different City companies, in which he had given a favourable account of the Great Central Company's gas, was called on by the Court for some details, and appeared personally before the Commission, to whom, in reply to various incidental questions, he stated that in the course of his investigations during the last two years, he had found that some of the companies were supplying gas to this metropolis that, in the course of a few years, would tend to damage very much the atmosphere and the property in it, for it was so highly charged with noxious matter that he had obtained 21 *grains of oil of vitriol from* 100 *cubic feet of gas*, which was getting into the atmosphere. Then, again, there was a quantity of ammonia, which held in solution a large quantity of tar, and whenever there was a leakage in the streets it oozed out. During the last fifty years, when it had got into the public roads, it had rendered the soil near it so offensive that one could hardly move the pavement without doing a great deal of harm. What it may be in twenty years hence he could not say, but he thought it would be almost unsafe that the Sewers Commission should then disturb the pavement at all. The oil of vitriol which is in the gas had, he remarked, a decided tendency to injure furniture; and there was not a library in the metropolis the books on the upper shelves of which were not tumbling to pieces from this cause. There was *no controlling power over the different companies*, because the public were not aware of the presence of these impurities. They were burning this gas in shops where there was a large quantity of perishable fabrics. He thought nothing was more important than that the chemical qualities of the gas should from time to time be tested. Statements had been made in the public papers to the effect that invitations had been given to anybody to come to the works for the purpose of examining for themselves. This was all nonsense. The examination of gas at the gasworks went for nothing. It was the quality of the material as supplied to the public which must be tested. The combustion of gas so largely charged with sulphur, in combination with oxygen, was also very destructive to the windpipe and lungs, especially of persons in the daily habit of sitting for several hours in shut-up rooms where such gas was burnt. He had been examining the snow that had fallen lately round London, and had found it charged with sulphuric acid in combination with ammonia, and the same also with regard to the leaves of trees.* It proceeded sometimes in combination with ammonia, and sometimes in a free state; so that one could not get pure air within the bounds of the metropolis.

One fact we would wish to impress on all who feel an interest in this subject, namely, that defilement in the gas supplied to the metropolitan public is an old evil, which dates from the time when the companies had their own way entirely as to prices: so much so, that in frequently complaining of it in the *Builder*, before the movement in favour of "cheap and good gas" was begun, we used to remark that it would be bad enough to be obliged to pay even a low price for *bad* gas, but that it was doubly grievous and provoking to pay the high price then charged for so bad an article, and that the public might, at least, have their bad gas at a lower price. If compelled, therefore, at length, to provide a clean and inoffensive article, the companies have no more right to charge the public for making it clean and pure now than they had before they were compelled to reduce their prices, even were it the fact, which it is *not*, that the purification would cost them anything positively out of pocket, for the sulphuric acid, sulphuret of ammonia, &c. with which their gas is defiled are valuable, commercially speaking; and even although there should remain no positive balance of profit on the separation and retention of such products, the process of purification will, at least, very well pay its own cost, as smoke consumption does; and doubtless it is simply because it may not do more, if it be not from a still less excusable cause, connected with threats of adulteration for the purpose of raising prices, that so offensive and obnoxious an article is still sold, as of old, to the metropolitan public. Dr. Letheby, we may here observe, by the way, considers that however impure gas may be at the works, it becomes farther deteriorated on passing through miles of pipes; and this doubtless may be quite correct; but it seems to us that it only shows the greater necessity for original purification: and besides, according to Dr. Letheby's own report, the gas of one company is in reality found to be less impure after passing through the long line of pipes than that from other companies. Sulphur, comparatively innoxious, may readily be converted into the burning and virulent sulphuric acid or oil of vitriol, but this only shows that the sulphur or volatile sulphuret, whence it may be generated, ought, *ab initio*, to have been withdrawn.

Mr. Leslie, since the remarks by Dr. Letheby in explanation of his official report as examiner of the state of the City gas, has also been in communication with the City Sewers Commission, whom he reminded that six years since he pointed out the same fact which Dr. Letheby has brought under notice,—that the City gas, in passing through its long pipes, becomes deteriorated (*by previous deposits of a noxious description*), and urged that the gas ought to be purified on its exit from the mains of the companies. This, Mr. Leslie explained, was now done at the General Post-office, and at the *Times* office, by means of his "patents for the sanitary and economic combustion of gas for economy of fuel with ventilation;" and the consequence was, that while the weekly expenditure of gas at the Post-office, previous to the adoption of these improvements, was 245,000 cubic feet, it was now only 120,300; although, with the same number of burners, there is now more light than before. The success of the experiment at St. Martin's-le-Grand had induced the Government to send him to Liverpool, where the same improvements were carried out with the like success, as well as at Manchester. In these cases Cannel coal-gas had been used. In reply to a question put to Mr. Leslie, he stated that the cost of apparatus for each house was 5*l.* to 6*l.*; for large establishments, of course more. The Commission resolved unanimously to refer Mr. Leslie's important statements to the General Purposes Committee, to inquire and report.

So far as regards the companies, it is surprising they do not see the immense field of profit, in private dwellings, which strict attention to purification of their gas would assuredly open to them. For large establishments, or gentlemen's mansions, Mr. Leslie's patents are of great value, wherever gas is so impure in its manufacture as it is in London; but to admit, as a leading principle, that the gas supplied by companies ought to be purified by apparatus to be purchased by every tenant or landlord of a private dwelling, requires very serious consideration, since it would not only liberate the companies from all care or responsibility on their parts, as regards the purification of their gas, but must inevitably thereby lead to anything but sanitary improvement, inasmuch as every private dwelling assuredly never will have its gas so, separately, purified; and therefore, unless the companies are to be held responsible for the purity of their gas, matters are likely to fall from bad to worse, so far especially as regards private dwellings. As for the noxious matters alleged to be deposited in the pipes, from which the gas is supposed to absorb its impurities, whence can such noxious matter have been deposited, but from the gas itself; and if the gas deposit such impurities, how can these be consistently charged with the contamination of the gas? Originally, all such deposits, if really existent, must be attributable to a slovenly and filthy manufacture of the article; and the sooner the companies are compelled to "consume" their own gaseous impurities, the better for themselves no less than for the public at large; for no sooner will that be done, than an immense expansion of the manufacture will arise from the growing demand for gas in private dwellings.

* Will this explain the curious deposit which the late snow-storms left on the painted stucco fronts of many houses in London? -ED.

PORTUGAL-STREET GRAVEYARD.

As a law writer, my *habitat* has been for twenty years in Clare-market, and my walk to chambers Lincoln's-inn, daily, past the cemetery which, until last year, was open to view, and fenced in only by an iron railing. The place was certainly not attractive, being crowded with graves, and bristling with tombs of every shape; but lately a hoard shrouded it from the public gaze.

Last week, seeing the gate open, and some loaded carts inside, I ventured to enter, and to my surprise not a vestige was left of a tomb, of a mound, nor of the sedgy vesture with which it was erstwhile clothed. The whole glebe was upturned, and all the monuments, even that of Joe Miller, clean razed!

A fragment of stone, here and there, gave note that I stood on a place of sepulture: one had inscribed, "*Sacred to the memory of*——," but the legend here broke off. Another, covered with the workman's *blouse*, revealed only the words "hic jacet," or hic Jacket.

It occurred to me, the sphere of *my* earthly migrations has been circumscribed to the distance of a gun-shot from this centre, where ultimately my mortal remains might find repose; but what hope is there now of any biding depository even in death. "Sacred to the memory"—is that but a figure of speech, or of cold mockery in marble? What has become of the gravestones? what of the tombs? what of the bones? Or is the freehold in the church an estate for barter, to be secularized whenever a tempting ground-rent offers? If so, a handsome profit may be realized from the crushing-mills at Lambeth, and a still heavier fund from animal guano, the accumulation of 500 years.

Many of the churches are, it appears, doomed to destruction; and where there are no suitable congregations, possibly it may be right to secularize them, for it is written, "My house is the house of prayer," but the churchyards were solemnly dedicated by our forefathers; and although cemeteries should be shut up for the public health and benefit, they at least ought to be guarded by the veneration of the existing race.

The suburban cemeteries are certainly an improvement in this respect, and connect a sentimental memorial with every native flower. No sentiment is fostered by the repulsive graveyard—but, oh, stir not a clod from the grave of our kindred dead.

NECRO SCRIBE.

On part of the graveyard an hospital is being erected—so far good; but what next?

Notices of Books.

Baths and Washhouses; the History of their rise and progress; with statistics, practical hints, and plans, &c. By GEORGE A. CAPE, Jun. Secretary to the Lambeth Baths and Washhouses Company. London: Simpkin, Marshall, and Co. 1854.

IT was well and truly said by Bishop Taylor that "there is a natural analogy between the ablution of the body and the purification of the soul." Baths and warehouses are, or rather would be, were they sufficiently numerous, most useful agents in promoting both the physical and the moral advancement of the people. There has been heretofore a want of collected information relative to all matters, whether statistical, financial, or otherwise, connected with them. The present little work aids in supplying this desideratum and gives historical details of the baths of the ancients, which will increase the interest of the subject to the general reader, and promote the end in view, which is the extension of such establishments, both in provincial towns and in the metropolis.

It is judiciously remarked by Mr. Cape, that it is important that all who would induce others to embark in a scheme of this nature should be in a position to show that baths and washhouses erected at a moderate outlay are not barely self-supporting, but that they yield an ample profit; and, arguing from the results attained at other establishments, that those proposed are likely to be satisfactory in their working. The metropolitan establishments already in use, he observes, would have been more remunerative than they have been, had the outlay on each (between 20,000*l.* and 30,000*l.*) been more moderate. A first-class metropolitan district establishment he finds could be erected at a cost of 14,000*l.* site inclusive, and probably yield a profit of 8½ per cent. on the capital expended. A second-sized establishment for a large provincial town he estimates at a cost of 5,600*l.* and to yield probably 7½ per cent. For smaller towns, such as Bilston, 2,200*l.* he considers ought to be sufficient, to yield a profit of 5 per cent. Plans for such establishments are suggested. The work also contains a plan of the Lambeth Baths and Washhouses, and a view of the swimming-bath at that establishment. Swimming-baths he properly regards as very important adjuncts. We may infer from this little book that Mr. Cape will prove a very useful secretary.

The Builders' Price-book for 1854. By W. and H. Laxton, Architects, and F. W. Laxton, of the Middle Temple. London: Weale, &c.

IN the new edition of this price-book many of the prices have been raised, in consequence of the increased price of materials, and in some cases of labour. The prime cost of Memel fir, for example, which was last year quoted at 3*l.* 15s. is this year called 4*l.* 15s. The book contains its usual amount of information.

Rudimentary Treatise on Cottage Building. By C. Bruce Allen. Second edition. London: Weale.

THE second edition of Mr. Allen's treatise, improved by omissions, has an appendix headed "Economy of Rural Dwellings, for tradesmen and persons of limited incomes," by Mr. Weale, which is addressed particularly "to persons resident in confined and ill-ventilated districts, consisting either of small tradesmen or of persons of small incomes, the latter of whom almost wholly from necessity live in lodgings." Plans and specification are given for a pair of cottages, costing for the double house 380*l.* It is to be regretted that the plans were not wedded to more tasteful elevations than those given.

THE EDINBURGH ARCHITECTURAL INSTITUTE.—An ordinary meeting of members was held on the 12th instant, in George Street Hall. After the transaction of some private business, a paper by Mr. A. Thomson, of Banchory, on the "Hills and Valleys, Walls and Gates of Rome," was read by the secretary. The contents of this communication were illustrated by maps and sketches of Rome. In the opinion of the writer of the paper, the populousness of ancient Rome had been much exaggerated.

Miscellanea.

SUNDERLAND BATHS AND WASHHOUSES.—The total number of bathers in the year ending the 31st of December last, was 14,170—washers, 15,319; the receipts from the former having been 179*l.* 18s., and from the latter 345*l.* 13s. 4½d.; in all, 525*l.* 11s. 4½d.

GUTTA PERCHA AND INDIA-RUBBER.—Peron, according to the *Compt. Rendus de l'Academie des Sciences*, has invented a kind of paper made from gutta percha, which is considered to be superior to all other kinds for lithographs and engravings. Might not a sort of artificial vellum or parchment be readily made of gutta percha for the use of lawyers? The surface would require to be roughened, and the thickness could be modified to any extent. Another use for this Protean substance has been suggested, namely, the formation of a matrix for deposit of stereotype plates by galvanic agency, the matrix being prepared by simply stamping a sheet of gutta percha with a heated form of types. In the Great Exhibition of 1851, we observed some decidedly good printing, said to have been taken from gutta-percha plates, themselves prepared at once from a matrix of its own. Gutta percha and india-rubber can readily be prepared, with sulphur, so as to be as hard as stone, and stereotype plates so made, we should think, might do as well as metal ones. Might not such compounds be made useful in connection with the etchings on soap lately spoken of?

ROAD FROM KENSINGTON TO BATTERSEA-BRIDGE.—Have the residents of Brompton and its vicinity, in their anxiety to get an opening through Brompton-square, entirely overlooked a plan which, to my mind, would greatly beautify, as well as be most convenient to, the whole neighbourhood,—I mean the continuation of the road about to be constructed by the Commissioners of the late Exhibition on their new estate; so that, instead of its stopping short at the Methwolds Almshouses, it went on a few hundred yards further south, so as to end by the side of the Swan Tavern, Old Brompton; thus ensuring an almost straight line of road from Kensington-gore down Swan-lane, and Church-street, Chelsea, to the Thames and Battersea-bridge, whence a railway is projected to the New Crystal Palace. The few intervening yards a year hence will probably be built upon, and a most convenient and beautiful road spoilt for want of forethought.—H. R.

VENTILATION OF GAS PRODUCTS.—Your remarks on this subject are, I think, very important, but will it not be difficult to unite elegance with utility in the improvement? As a modification applicable to desk or counter lights, I would propose a hollow standard containing the gas-pipe, and connected by pipes (tin would do) with the outer air, so as to supply the burners with the fresh air necessary for combustion; and in addition, a tube suspended from the ceiling, with a bell-mouth made of ground glass, to convey away the products of combustion. You would thus also prevent draughts, such as there are at present between the doors and windows and the lamps, while the air of the rooms remains pure for breathing. Touching gas-stoves, to which an Englishman has an objection because he likes to see an open fire,—could not the door of the stove be made of orange-coloured Bohemian glass with a coating of red glass, the latter being cut through to various depths, to have the effect of flames? Or the stoves themselves might be made of a framework of iron with panels of red glass cut to any pattern, which would have a more pleasant appearance, and smell sweeter than the black iron stoves used at present. These stoves should always be made on the ventilating principle of inlet and exit pipes.—G. H. L.

A CAUTION.—Allow me to warn persons taking houses without examination by a surveyor, by relating a providential escape of an intimate friend of mine now residing on Surbiton-Hill, Kingston, Surrey. A few weeks since, sitting in his dining-room with his wife, at ten o'clock at night, an unusual smell of fire was perceived, and on removing the carpet, hearth-rug, and a portion of the floor next to the hearth-stone, he found three joists in flames. These three joists entered the outer wall, and were simply covered with about an inch of mortar and blacked over, and the stove was set upon them without any trimmer, which is usual. After using many pails of water, the fire was extinguished. Had my friend and his family gone to bed without ascertaining the cause of the smell of fire, no doubt the house would have been burnt down; and being a detached building, no one could have escaped to tell the sad tale.—A. Z.

SMOKE PREVENTION.—An apparatus which can be fitted up behind an ordinary register-grate has been patented by Mr. M. M'Laren.——Mr. George Carter, of Lombard-street, has patented certain improvements applicable to furnaces for cylindrical boilers.——A patent for corrugated flues and other improvements adopted at the Haigh Foundry, Wigan, has also been taken out.

"TEN PER CENT. TO SURVEYORS."—I enclose a card from a decorator, soliciting my patronage, and proposing to allow me 10 per cent. on the amount of any work I may give him. The proposition is so offensive, and the practice so degrading, that a few timely lines of animadversion in your journal might arrest the growth of such an evil, and induce my correspondent and others of his class, if they will do dirty work, to do it as much as possible in the dark, and as if they were ashamed. But I wish they would rigidly abstain altogether from bribe-giving, which is doubly cursed,—it curseth "him who gives and him who takes," and the unlucky employer is cursed too when he gets into such hands, by having his work badly done, and at 10 per cent. or probably more above the fair price. Look at some of our wealthiest builders, of whom we may well be proud,—do they ever hint at such a thing as commission to the architect? No,—their honesty, which in this as in other cases is "the best policy," precludes the idea, and they thrive. How often, on the contrary, does the cheat, if a trader, end in the gazette,—and if, alas! an architect, finish his days a humble suppliant to our benevolent fund.—H. B.

LIVERPOOL ARCHITECTURAL SOCIETY.—At a meeting on the 11th, after a variety of matters had been disposed of, some designs of coloured ceilings, executed by two German artists, for Lords Harrington and Salisbury, were exhibited. Mr. Horner noticed in them a mixture of Gothic and Classic forms which they would not find in the works of English artists. The Chairman observed that it was always so in the works of foreign architects. Mr. Picton said it was a question for discussion, both whether they were right in the matter, and in what the incongruity or inconsistency in the blending of the two styles consisted? Mr. Howard thought it possible that there might be a reconciliation of the two forms, under certain conditions.—Mr. Horner: By taking away the distinctive characteristics of each. Mr. Howard, in reply, referred to the epigram which represented Nature as combining Homer and Virgil to form Milton. After a few remarks from Mr. Picton, the subject was adjourned till next meeting. Mr. Duncan, the engineer to the corporation, exhibited his plans for the new water-works at Kensington, Everton, &c., illustrating his descriptions by frequent reference to some account of the works now being executed for the public by the water committee. The old reservoir at Kensington was constructed under the orders of the highway board, and occupied two acres. When the waterworks came under the management of the corporation, three acres of land were also handed over to them by the old board, where the new reservoir, which might now be considered as completed, had been formed, and between them they would contain about 18,000,000 gallons of water. The roof would be constructed with iron girders supported on pillars of the same material, and covered over with earth on the top, so that about five acres would thus be made available for pleasure-grounds or any other purposes, for the ornament of the town or recreation of the inhabitants. The average depth of the water would be 15 feet. Having stated it would be necessary, on account of the difference in the levels, to make two separate and distinct water-works, but capable of being connected if required, which had been done by carrying two pipes from this reservoir, and showed the boundary of the levels, the upper one of which the Kensington reservoir was intended to supply, he passed on to the one at Everton. This he stated was intended to supply the crest of the hill, which could not be reached by the other. It was found necessary, in the case of the Everton works, to raise water by artificial means, for which purpose a tower had been projected, upon the top of which would be a tank ten feet deep, and 75 feet in diameter. There would be another reservoir underneath, to be ready for a future time, if necessary.

TELEGRAPHIC.—The Hamilton and Buffalo division of the Grand Trunk Telegraph Line, according to the *Hamilton Spectator*, is now in successful operation. "At the office of the company may be seen by the curious, that novelty, in Canadian telegraphing at least, House's Lightning Printing Press. This section of the line will be worked throughout with the printing instrument." The completion of this section gives a total distance now working to the Grand Trunk Company of 880 miles, while the completion of the Montreal and Quebec section, by the same contractors, on the 1st proximo, will make an aggregate of 1,080 miles, or the longest line, under one company, in America.

SOMERSET ARCHÆOLOGICAL SOCIETY.—The third conversazione of this society was held at the Museum, Taunton, according to the local *Courier*, when Mr. Cave, of Norton Manor, read a paper on leases at Poundisford, to be followed by one on its architecture, &c. The Rev. A. W. Jones read a paper on "Pentacruinites," illustrated by ink drawings. Several objects of interest were exhibited to the meeting.

SOUTHWARK-BRIDGE.—The Bridge House Estates Committee, to whom the negotiation for the purchase of this bridge was referred, and who had before reported that the bridge directors had named 300,000*l.* as the price, now again report to the Common Council that no reduction will be agreed to, and that the directors will not bind the proprietors to the sum named. The committee also report that within the last six weeks, Mr. George Rennie, C.E. had examined the bridge for the directors of the bridge company, and was said to have found it in a sound condition. The committee had therefore again reported without employing any professional authority on their part to examine it. After some discussion, in which very different opinions were expressed as to the sufficiency of the bridge, even though sound, for the traffic anticipated in opening it to the public, the report, by a majority of 30 to 26, was referred back to the committee, to ascertain by professional inquiry the state of the bridge with reference to its strength and durability.

RAILWAY MATTERS.—An experiment for the purpose of testing the efficiency of a self-acting break, invented by Major Robins, took place lately on the South-Western and Windsor line. The invention, it is reported, effects a stoppage of the train without manual labour, within fifteen to twenty yards, the break being self-acting and worked entirely by the engine-driver. His Royal Highness Prince Albert came from Windsor Castle on purpose to see the result of the experiment.——Some years since we proposed as a problem for solution by inventive minds, the realization of a system of self-acting signals, whereby trains could of themselves announce their whereabouts at various points during transit, and other useful purposes be served, such as signalling to drivers from the line, by mechanical appliance to the steam whistle or otherwise, the occurrence of accidents, or obstructions ahead of them. We were gratified to be able to state last week that the self-acting signal system was being adopted on French lines; and now we observe that more than one form of such signals have been patented in this country, and are being successfully tried. By an electro-magnetic invention recently patented by Mr. Tyers, as lately exhibited by models before the Lord Mayor of London and various other gentlemen, every train passing a station gives notice to the station last left that the line is clear: it at same instant transmits to the next station in advance a signal of its approach. Signals can also be transmitted from any intermediate point between stations to give alarm and obtain assistance; and any official at a station can communicate with the driver of a train at any distance as he is approaching fog and auxiliary signals being superseded. This latter signal is made by the apparatus being caused to sound the steam-whistle; and at the stations are self-acting registers, keeping an exact account of every signal made. The apparatus has been, it is said, successfully tested on the South-Eastern and Croydon lines.

THE RESTORATION OF ST. MARY'S CHURCH, YOUGHALL.—Since we first mentioned the proposed restoration of this church and urged its necessity, the north transept has been completed at the cost of 587*l.* 16*s.* without sittings. But the restoration of the choir is by far the greater, more important, and desirable portion of the work undertaken, and will cost at least 400*l.*; and for this the rector, the Rev. P. W. Drew, is now appealing to the public, "alike to those who know the importance of church accommodation, especially where there are large numbers of the humble classes, and to those who would grieve to see a *magnificent ancient structure*, which can be rendered so serviceable for the worship and glory of God, and highest interests of man, *falling rapidly into irretrievable decay.*" We mention his desire, in the hope that the appeal may thus reach the eyes of some willing to aid in a good work.

LEEDS MODEL LODGING-HOUSES.—Mr. W. B. Denison has issued a report of the result of his experiment at Leeds during the last year. During the first six months a lodging-house for women had been kept open but signally failed, and it was then converted into a mechanics' home for a better class of workmen at 4½*d.* a night instead of 3*d.* and has had fair success during the last six months. Notwithstanding the loss on the women's lodging house, the profit on the whole experiment is estimated at nearly 5½ per cent. which is 1 per cent. less than last year. The total receipts for the year were 456*l.* odd; expenses, 221*l.* odd.

THE FILE TRADE.—A general meeting of the file trade was held at Sheffield, on Monday in last week, when the workmen of fifty-four houses were represented. It was resolved that the file trade agree to postpone the demand for a new statement to 3rd April.

COUNTRY BLACKSMITHS.—At Dunse, in Scotland, according to the *Kelso Chronicle*, the country blacksmiths are moving for an advance of prices on account of the rise in coals and iron.

THE ENGLISH GLASS TRADE.—Mr. Jas. Hartley, the glass manufacturer, in the course of a lecture at Sunderland at the beginning of the week, stated the following interesting facts in reference to this trade:—"Previous to the repeal of the glass duty in 1845, there were 14 companies engaged in the manufacture of crown and sheet glass: they were increased during 1846 and 1847 to 24, and now are reduced to 10. In 1844, the last year of the duty, there were made by the 14 companies 6,700 tons of crown and sheet glass, paying 500,000*l.* duty: there are now 10 companies working 40 furnaces, with 284 pots, making 35,500,000 feet annually, equal to 15,000 tons, value 225,000*l.* being an increase of considerably more than cent. per cent. and at a charge to the public of less than one-half of the former duty. In polished plate there are six companies, being the same as existed in 1837, and consequently their number has remained stationary since the repeal of the duty, but their production is estimated to have doubled. They now make 3,000,000 feet polished plate annually, equal to 5,500 tons, valued at 450,000*l.* Of Hartley's patent rough plate, which has only been fairly in the market about two years, the quantity now manufactured annually is 2,240,000 feet of 2 lb. to the foot, valued at 30,000*l.* The produce of the little kingdom of Belgium, the greatest glass-producing country in the world, is 50,000,000 feet of sheet glass annually, equal to 22,300 tons, or 25 per cent. more than is made in England of both crown and sheet glass. They export of this quantity 85 per cent., of which 6 per cent. comes to England, and they retain 15 per cent. for home consumption: England retains 85 per cent. of its produce for home consumption, and exports 15 per cent., being about double what she imports. In Hartley and Co.'s glass tariff there are 7,329 figures; also 17 descriptions of glass with 51 thicknesses.

THE GLASGOW ARCHITECTURAL ASSOCIATION.—The second annual meeting of this association was held on the evening of Monday the 16th instant, the president in the chair, when the secretary's report for the past session was read and adopted. Office-bearers for the present were elected; and addresses, bearing upon the profession and art generally, spoken by several of the members.

THE SPHYNX.—According to the newspapers, a Frenchman named Mariette has at last succeeded in discovering the long-sought-for entrance into the Sphynx. "The entrance leads into beautiful marble rooms, which are supposed to be connected, by subterranean passages, with similar chambers in the adjacent pyramid."

THE ROYAL CHAPEL AT BERLIN, under the western façade of the palace, was consecrated on the 18th inst. with great pomp. The *Times* says,—"To judge by the luxuriant almost excessive—accumulation of works of art, of various styles and times, concentrated within an octagon space of 80 feet diameter, it would appear to have been his majesty's desire to lay all periods of Christian art under contribution for the decoration of this house of prayer. The chapel, which is 115 feet high, towers over the western wing of the palace, just over the Portal of Victory, the arch of which is of itself 62 feet high, so that the extremity of the cross above the cupola of the chapel rises to a height of 223 feet above the level of the roadway beneath. This excessive height of the building will probably be little felt as an inconvenience, since the royal apartments and state rooms all lie on the second and third floors of the palace. The noble staircase which leads from the Weisser Saal to the chapel, is entirely of marble, as are also the walls, plinth, and floor af the latter. The altar, which is situate in a commodious recess on the east side, consists of a slab of oriental alabaster, resting on six columns, and is surmounted by a ciborium, or vaulted canopy, supported on four columns, wrought out of the entire blocks which the king received as a present for this purpose from Abbas Pasha, viceroy of Egypt. All the artists, architects, and even the masons and other workmen engaged in the construction of the chapel, as well as their wives, were admitted to the ceremony, the first act of which consisted in laying the last stone in a cavity left under the altar for this purpose, in which were also placed a record of the event, a drawing of the building, &c. and *a list of all the artists and operatives engaged in the work*."

NEW HOUSES UNINHABITABLE.—In a case at the Birmingham County Court lately, in which rent was demanded from a tenant who had quitted a house because the windows were without fastenings, the doors unhung, nothing painted, and the well water muddy, a verdict was given for defendant.

MODERN EPITAPH.—The following epitaph, which for blunt prosaicism and "unadorned eloquence," is perhaps unrivalled, is about to be placed on a grave in a Norwich churchyard:—

"Nineteen years I was a maid,
Seven years I was a wife;
Seventeen days I was a mother;
And then it pleased the Almighty
To call me from this world to another."

IMPROVED ARTIFICIAL STONE.—M. Juste Giret, of Paris, has patented a process which consists in first calcining any sort of sand, earth, stone, or metallic ore, and while at a red heat pounding them in iron or granite mortars to an impalpable powder. This substance is then mixed with flux, and placed in a melting-pot, whence the products are precipitated in cold water, and instantly acquire the form of sand of various tints. They are again triturated, inclosed in fire-clay moulds and put into a furnace, where they become solidified.

VENTILATION OF SEWERS AND MINES.—We have often urged the economical use of the heat generated by ovens in preparing coke, which is but too often wasted. One useful purpose, suggested by Mr. Abraham Rogers, of Field-house, near Bradford, who has registered a modification of the coke oven for the purpose of ventilation, is the ventilation of sewers by their means. The mode of construction adopted by Mr. Rogers is said to have been first of all successfully used by him from 1835 to 1844, in ventilating a colliery near Rochdale, till the mining works were abandoned, and which it effectually did, not only at no expense, but with a profit on the coke manufacture besides. The smoke from the coke ovens opens into an archway, communicating downwards and upwards with a shaft, through which it is intended that the noxious gases of the sewers or other subterraneous excavations shall be drawn upwards, and probably decomposed as well as dissipated, as they ascend through the upper shaft or chimney.

LONDON RAILWAYS.—A correspondent writes,—"Now that the convenient and easily approachable station of the Blackwall Railway is opened, or about to be, directly, for the Woolwich traffic, it would be an immense convenience to the inhabitants of, and visitors to, Greenwich, if a branch were made (there can be no doubt of paying), from that railway over the Isle of Dogs to the ferry there, opposite Greenwich; as by this means people would avoid the unpleasantness of the passage of London-bridge and the offensive fellmongers' yards, &c."

[ADVERTISEMENT.]

GREAT FIRE IN BREAD-STREET.

61, Friday-street, Jan. 6th, 1854.

GENTLEMEN,—We have great satisfaction in informing you that the wrought-iron door made by you, and which was placed in the opening made by us some years since through the party-wall which divided our warehouses in this street from that which, previously to the late conflagration, we occupied at the rear of Messrs. Townend's premises in Bread-street, most effectually resisted the large mass of fire to which it was exposed for many hours; and we may also state, that so soon as the metal became sufficiently cool, the lock yielded readily to its key, and (excepting discoloration) the door does not appear to be in the least injured, or out of position.

We are, Gentlemen,
Yours very respectfully,
Messrs. Chubb & Son, LIDDIARD & CO.
St. Paul's Churchyard.

TENDERS

For new buildings at Erdington, near Birmingham, to be called "Retreat for the Aged, and Orphans' Home," to be built by and at the sole cost of Josiah Mason, esq. Mr. Isaac Newey, of Birmingham, architect. Quantities supplied.

Barnsley, Birmingham	£5,750	0	0
Allen, ditto	5,550	0	0
Creswell, ditto	5,400	7	5
Mountford, ditto	5,237	4	7
Johns, Moseley	5,154	0	0
Webb and Son, Birmingham	5,150	0	0
Buckler, ditto	5,000	0	0
Wilson, Handsworth	5,000	0	0
Grove, Birmingham	4,990	0	0
Hill, Sutton Coldfield	4,823	0	0
Greensall, Erdington, accepted	4,736	0	0

For the Australasian Bank, corner of Threadneedle-street and Finch-lane. Mr. Philip Hardwick, R.A. architect.

William Cubitt and Co.	£9,985
Holland	9,899
Piper	9,764
Grimsdell	9,734
Ashby and Horner	9,686
Locke and Nesham	9,553
Kelk	9,470
Lucas	8,983

For House, Threadneedle-street, for Mr. John Bannister (adjoining Australasian Bank). Mr. Henry Currey, architect. Quantities supplied by Messrs. Norris and Roberts.

	Gross.	Deduction.	Nett.
Holland	£3,489	£175	£3,314
Cubitt	3,490	250	3,240
Grimsdell	3,467	304	3,163
Ashby and Horner	3,420	300	3,120
Kelk	3,300	250	3,050
Locke and Nesham	3,291	285	3,006
E. O. Symons	3,286	327	2,968
Lucas	3,020	220	2,800

The deduction was for the upper part of the front, if finished in Portland cement instead of Portland stone.

TO CORRESPONDENTS.

"H. H." "C. B." "C H." "C. R. S." "C. D." "W. B." "A. P." "J. E. C." "T. H. H." "A. C." "E. W." "Paulatim." "W. H. T." "W. W." "R. and S." "T." "H. S. S." "Z." "Mr. L." "Messrs. R" "F. P. H." "W. S." (did not reach us in time). "F. P. McC." (we have no further information). "*Quæro Quare*" (state the real question). "J. K." (the chief commissioner could, of course assist, but has doubtless many more applicants than he knows). "J. S." (a summons could probably be obtained, but it would be difficult to prove nuisance). "A. M. H." (at the office of the "Association," Exeter Hall). "T. B." (we have reason to believe decision of the commissioners does not apply to the *object* of the Bills). "E. H." (such a course could not be taken with safety). "J. F." we are forced to decline answering: circumstances would have to be considered). "Fire Brigade" (will appear).

ADVERTISEMENTS.

ARCHITECTURAL DRAWING.—There is a VACANCY for Two Pupils in the Morning Class, and One in the Evening Class of the Architects', Builders', Civil Engineers', and Machinists' Drawing Classes, conducted by T. J. HILL, Architect. Offices, 19, Helmet-row, Old-street Prospectuses to be had on application at the Offices.

TO PARENTS AND GUARDIANS.

APPRENTICE WANTED (out-door), to the PAINTING and DECORATING BUSINESS. A respectable youth, having a knowledge of drawing and a taste for the fine arts, will have the advantage of learning, under the guidance of a practical man, all the various branches. Premium required.—Address, A. B. 3, Craven-place, Conduit-street West, Hyde-park.

ENGINE DRIVER.—WANTED, at a saw-mill, a competent and steady man to attend to an engine; a good reference indispensable.—Apply, personally to Mr. SAML. WORSSAM, Engineer, Hortulsn-place, King's road, Chelsea.

FOREMAN WANTED.—The Loughborough Local Board of Health are desirous of engaging the services of an efficient FOREMAN to superintend the execution of the town drainage works. a person having had experience in the construction of sewerage works will be preferred. Applications, enclosing references, and stating the amount of salary required, to be address d to Mr C. TEBBUTT, of Loughborough, Surveyor to the Board. By order of the Board,

Loughborough, Jan. 18 1854. W. J. WOOLLEY, Clerk.

WANTED, a PRACTICAL MANAGER for a BRICK, TILE and PIPE MANUFACTORY, the same being machinery. The duties required are, to superintend the whole, and to keep the accounts of sales, &c. For part culars, apply to RICHARD CAIL, Contractor, Newcastle-upon Tyne

TO STONE CARVERS.

WANTED, immediately, ONE or TWO FIRST-CLASS MEN, who thoroughly understand the Decorated Period.—Apply to O. Y. Post-office, Leicester.

WANTED, a good CABINETMAKER; and also a good hand in the Joinery.—Apply to Messrs. MARGETTS and LYLES, Carvers, &c. 127, High-street, Oxford.

TO DRAWING AND SURVEYING CLERKS

WANTED, a good ARCHITECTURAL DRAUGHTSMAN. Also, a practical SURVEYING CLERK.—Apply, between Ten and Twelve, to Mr. RICHARDSON, 4 Tress and Chambers, St Thomas Apostle chambers, 13, Cannon-street West, City.

TO ARCHITECTS, BUILDERS, &c.

WANTED, a SITUATION as CLERK of WORKS or GENERAL FOREMAN. The Advertiser can have good references.—Address, L. H. M., 5, Great Titchfield-street, St Marylebone.

WANTED, a SITUATION as FOREMAN of PLASTERING, by a person of good experience; he is also a modeller and draughtsman, and has been in a similar capacity for several years. References given.—Address, A. Y. X. Office of "The Builder."

TO CARPENTERS.

WANTED, to APPRENTICE a YOUTH, aged 16, INDOOR, to the above trade. A moderate premium will be paid.—Address, with all particulars, to M. M. 8, Upper Marylebone-street, Portland-place. Has been a few months at the trade.

TO BUILDERS, HOUSE PAINTERS, AND OTHERS.

WANTED, by a Young Man, a SITUATION as Painter, Grainer and Writer, &c. and who will make himself generally useful.—Address, O. Y. 22, Wilton terrace, Wilton road, Pimlico.

TO ARCHITECTS AND BUILDERS.

WANTED, a SITUATION as CLERK of WORKS, or FOREMAN. The Advertiser is fully competent to take the management of a church or extensive warehouse. Unexceptionable references.—Address to J. H. G. Office of "The Builder." No objection to the country.

TO MASTER PLUMBERS, PAINTERS, GLAZIERS, PAPER-HANGERS, BUILDERS, &c.

WANTED, a SITUATION in the above line, as GENERAL HAND, in country or town.—Apply by letter, to Y. Z. 6, Mount Vernon, Hampstead.

TO IRONMONGERS, GAS-FITTERS, &c.

WANTED, a confidential SITUATION, by a Young Man, who would aim to make himself of value to his employer. Can take an order, keep a ledger, or keep a set of books. Address, J. L. L. Mr. Gilbourn's, 44, Greek-street, Soho-square.

TO ARCHITECTS AND BUILDERS.

WANTED, a SITUATION in an Architect's or Builder's Office, by a person competent to fulfil the duties.—Address, A. A. Mr. Lovegy's library, Reading.

WANTED, by a Young Man who has had considerable experience in Ecclesiastical Architecture, a SITUATION as ASSISTANT in an Architect's office.—Address, F. R. 6 George street, Asylum road, Old Kent-road.

WANTED, by a practical Young Man, aged 26, a SITUATION in a Builder's Office; is a good draughtsman, writes a good hand, would make himself useful in any way. Town or country.—Address, G. T. P. 46, St. Paul-street, New North-road, Islington.

WANTED, a SITUATION as CLERK of WORKS. Has had considerable experience in construction, estimates, &c. Apply, G. P. Office of "The Builder."

TO BUILDERS AND CONTRACTORS.

WANTED, a SITUATION as SHOP or OUT-DOOR FOREMAN, by a respectable, steady, and experienced person, and well acquainted with the duty of a General Foreman. References satisfactory.—Address, P. P. to Y. Z. care of Mr. Elliott, tobacconist, 57, Alfred-road, Harrow-road, Paddington.

TO ARCHITECTS.

A GOOD DRAUGHTSMAN is desirous of a SITUATION in London.—Address, S. S. Office of "The Builder."

A DRAUGHTSMAN, Engineering, Architectural, Geological, or in Litho., who is also a practical SURVEYOR, of gentlemanly address, energetic and steady, is now OPEN to WORK, anywhere, for any period, for 36s. per week.—Address, E. S. Office of "The Builder."

TO ARCHITECTS AND SURVEYORS.

AN ASSISTANT is desirous of meeting with an ENGAGEMENT, in either of the above offices; is a good draughtsman, and can take out quantities. Unexceptionable references can be given. Address, free, to R. A. 61, Theobalds-road, Queen's square, Holborn.

AS WORKING FOREMAN of MASONS, a thorough practical mason. Can set out work, make working drawings, and carve; is well acquainted with the general routine of public works, or a jobbing business. Unexceptionable testimonials and reference.—Direct, G. F. Office of "The Builder."

A YOUNG MAN, who has been five years in the Plumbing trade, wishes to ARTICLE HIMSELF to a MASTER PLUMBER for TWO YEARS.—Direct to Y. Z. Office of "The Builder."

TO ARCHITECTS, CIVIL ENGINEERS, AND OTHERS.

A CLERK of WORKS, properly qualified to carry out and manage works of magnitude, is now disengaged, and will be happy to meet with a SITUATION. First-rate testimonials as to ability, integrity, &c. can be produced.—Direct, ALPHA Post office Battersea, Surrey.

TO ARCHITECTS, SURVEYORS, &c.

THE Advertiser, who has had considerable experience, and who is competent to undertake the management of an office, is desirous of obtaining an ENGAGEMENT.—Address R. A., Todd's Library, Warwick street, Pimlico

A PERSON, many years in a Builder's Office, having three or four days a week unemployed, or certain hours in each day, would be glad to meet with EMPLOYMENT, either temporarily or permanently. References given for ability and conduct in all respects.—Address, W. G. D. 55, Commercial-road, Lambeth.

TO ARCHITECTS, BUILDERS, AND OTHERS.

A YOUNG MAN, aged 25, who can make working drawings, write up spec fications, keep accounts, take out quantities, estimate, and measure, wishes for a permanent SITUATION. Can have a three and a half years' character Salary, 25s. per week.—Address, H. Y. 3, Arnold's place, Francis-street, Walworth.

TO CARPENTERS AND BUILDERS.

A YOUNG MAN, aged 21, who has had five years' experience as a joiner in a London shop, wishes to ARTICLE himself, for the term of one or two years, where he would have an opportunity of improving himself. Moderate wages required.—Address, to R. P. 10, Hoxton-square, Shoreditch.

TO BUILDERS.

A WORKING MAN has a son 17 years of age, whom he wishes to ARTICLE as a bricklayer to a building firm for a term of three or four years, at moderate wages.—Address to J. B. C. at Mr. Tucker's, Post-office, London-road, Southwark.

TO BUILDERS, &c.

A THOROUGHLY competent SURVEYOR, MEASURER, ESTIMATER, &c. offers his services to Builders requiring temporary assistance in measuring, estimating, &c. upon moderate terms. Address, M. A. Office of "The Builder."

TO ARCHITECTS, &c.

A DESIGNER, Draughtsman, and good Artistic Colourist, offers his SERVICES in the Preparation of Perspective Views, in Tinted Backgrounds, and the introduction of Landscape; also in General Drawing and Lithography. Terms moderate. Specimens of ability can be seen, by addressing A. Z. 29, Denbigh-place, Belgravia.

AN experienced Designer, Draughtsman, and Modeller in Silver and other Metals, also for Marble, Stone, &c. and capable of carving the same, is open to an ENGAGEMENT.—Address to S. H. Post-office, Park-terrace Regent's park.

TO BRICKMAKERS AND OTHERS.

A MAN, who practically understands Brick-making, having been in it twenty-eight years, and who is at present engaged, wishes to make an arrangement with some one for a contract, labour only, or otherwise.—Direct to J. B. Mr. Whiter's, the Victory, Stepney.

TO ENGINEERS.

A PRACTICAL ENGINEER and DRAUGHTSMAN is desirous of meeting with an ENGAGEMENT; would have no objection to make himself generally useful. Respectable reference given.—Address, O. Z. Office of "The Builder."

TO ARCHITECTS, ENGINEERS, AND SURVEYORS.

A FIRST-RATE DRAUGHTSMAN is in want of an ENGAGEMENT. He is an excellent designer, artistic colorist, and perspective draughtsman, thoroughly understands construction, and is a good leveller and surveyor.—Address, X. Y. Y. Post-office, Upper Sydenham, Kent.

TO MANUFACTURING IRONMONGERS, ENGINEERS, IRONFOUNDERS, &c.

A S CLERK or DRAUGHTSMAN, having a general knowledge of the iron trade, and disposed to make himself useful with the above.—Address, W. B. Mr. LOCK'S, News-agent, Gray's-inn-road.

ASSISTANCE.—The Advertiser, having two or three days in the week disengaged, would be happy to meet with an Architect requiring Assistance in the Preparation of Working or Perspective Drawings, either at the office or his own residence, the latter preferred.—Address, M. W. S. Office of "The Builder."

TO BUILDERS, &c.

AN experienced Man is in want of a Situation as GENERAL SHOP FOREMAN, or CLERK of WORKS. References to last employers undeniable.—Address, A. Z. 10, Isabella street, Gibson-street, Lambeth.

TO BUILDERS, &c.

PERMANENT or occasional EMPLOYMENT WANTED by a respectable experienced person as Measurer, Estimator, Builder's Book keeper, and Accountant; many years engaged in the offices of eminent builders. Terms moderate.—Apply by letter, prepaid, addressed BETA, Messrs. Miller and Fields, Stationers, 5, Bridge road, Lambeth.

TO GAS COMPANIES AND ENGINEERS.

THE Advertiser, who has for some time held the situation of Assistant Engineer at a large works, is desirous of a RE-ENGAGEMENT, either as Assistant at a Metropolitan, or Manager of a Provincial Works. Has a thorough knowledge of his profession, and gasfitting, and is a practical engineer and draughtsman.—Address, G. C. 18, Lambeth-terrace, Lambeth-road.

TO ARCHITECTS AND DRAUGHTSMEN.

ARCHITECTS requiring ASSISTANCE and DRAUGHTSMEN wanting EMPLOYMENT may be enrolled (free of any charge) on the Register of the Architectural Association, which may be consulted daily at the Office of the Registrar, Mr ARTHUR BILLING, No. 4, Beaufort-buildings, Strand, between the hours of TEN and FIVE

Architectural Association, Lyon's-inn hall, Strand.

TO GLASS-STAINERS AND DECORATIVE PAINTERS.

THE ADVERTISER, having lost a very valuable member of his family, is in WANT of a PARTNER to take one-half, or a less share, in an old established BUSINESS. The establishment is situate in the country, and commands a very extensive first-class trade, comprising glass staining, decorative painting, ornamental ceilings, gilding, paper-hanging, plumbing, &c. The establishment is well known; it commands a wide circle, and the trade may be considerably increased, if requisite. A prize medal was awarded to the proprietor at the Exhibition in 1851. The Advertiser requires an active business-like man, who thoroughly understands at least one branch of the business, or an architect and surveyor would be useful; but it must be some one who can take a prominent part: none others need apply. Good references will be given, and the same expected from applicants. For further particulars apply by letter, addressed A. B. Mr. Gundry's, 1, Soho-square, London.

LADDERS, BARROWS, &c. for SALE or HIRE. G. ELLIS invites the attention of builders, decorators, and the trade generally, to the Large Stock of Ladders; excavators', brickmakers', and other Barrows; Painters' Machines, Trestles, Steps, &c. he has always on hand, at a very low scale of charges.

Manufactory, 3, TOTTENHAM-COURT, NEW-ROAD, opposite Hampstead road.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors, with the joint and all staples complete for fixing, at one shilling the foot.

R. S. NEWALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.

OFFICES.—Gateshead-on-Tyne,
139, Strand, London.
67, Hyde-park-street, Glasgow.
27, Dale-street, Manchester.

GUTTA PERCHA TUBING.—May be buried for years, without injury, and it is therefore valuable for conveying water, chemicals, &c. It is peculiarly valuable for liquid manure, drain, and soil pipes. Being a non-conductor, it is not affected by the frost of winter or drought of summer. Like metal or leather. Its strength is extraordinary; the small half-inch diameter tubing having resisted a pressure of 250 lbs on the square inch, without bursting. The smaller sizes may be had in 100 feet, and the larger in 50 feet coils. The joints are easily made. As a conductor of sound it is most valuable for conveying messages in lieu of bells. ELECTRIC TELEGRAPH WIRES INSULATED WITH GUTTA PERCHA. The GUTTA PERCHA COMPANY, Patentees, 18, Wharf road, City-road London

TO ARCHITECTS AND OTHERS.

MR. EDWARD L. PARAIRE is desirous of Meeting Gentlemen who require COLOURED ARCHITECTURAL DRAWINGS External, Internal, Isometrical Perspectives got up; outlines of same neatly coloured, with background, to focus that will insure approval. Temporary assistance given in getting up Plans, Elevations, Sections, Detail, and Working Drawings.—Mr. E. L. P. makes a consideration in his charge where competition drawings prove unsuccessful.

Address, 8, Rathbone-place.

ISAAC'S PATENT COMPOSITION BOARDS.—TO EMIGRANTS, BUILDERS, RAILWAY CONTRACTORS, COACHMAKERS, &c. These boards are the most valuable article ever invented for the purposes intended; they never crack or split with the greatest heat or pressure, and are the strongest material known adapted for carriage panels, ship cabins, ship fittings, emigrants' houses, shingles, &c. Specimens may be seen, and orders given, at Sweets and Co.'s, 52, Piccadilly, London; Mr. S. E. Richard, 86, St. Martin's court; Mr. W. James, 11, Sherborne-lane, City; Messrs. Davis & Co. Swanland; and at the Manufactory of John S. Isaac, Maidstone, Kent. N.B. It is especially recommended to emigrants, being lighter than any other material of the same strength, and perfectly waterproof.

OUTSIDE DRAWING-PAPERS.

WINSOR and NEWTON have on hand a large and varied stock of WHATMAN'S TURKEY MILL, string marked or outsides DRAWING PAPERS, of all sizes, surfaces, and thicknesses, from demy, size 20 inches by 15, to IMPERIAL, 30 inches by 22, well adapted for first plans, specifications, or general office purposes, and much cheaper than the ordinary cartridge papers.

PRICE less FOR 14 POUNDS, or 4d. THE CWT.

WINSOR and NEWTON, Artists' Colourmen, 38, Rathbone-place, London.

LOANS.—Persons desirous of obtaining ADVANCES from 50*l* to 250*l*. upon approved personal security, repayable by easy instalments, extending over a long period, are invited to examine the principles of the BRITISH MUTUAL SUBSCRIPTION LOAN ASSURANCE CLASSES. Prospectuses, reports, and every information may be obtained on application at the British Mutual Life Office, 17, New Bridge-street, Blackfriars. Rules 6d. each copy, or 1s. per post. Note. Four new classes are now in course of formation for London, and will immediately commence operations.

PAPER-HANGINGS, the cheapest in London, at CROSS'S Wholesale and Retail Warehouse, 23, Great Portland street, Oxford-street, where builders and the trade can select from a stock of 50,000 pieces, at the following reduced prices:—

Good Bed-room Papers	from 6d. per yard.
Painted Marble, Granite, and Oak Papers	from 9d. do.
Superior Dining and Drawing room Papers from	1s. do.
Satins and Flock	from 2s. do.

WELLINGTON DOCKS.—The Provisional Directors have to inform their shareholders and the public that, justified by the support they have received, they have, in accordance with the Standing Orders of Parliament, LODGED their BILL and CONTRACT, and made the requisite preliminary deposit; compulsory by taking the necessary steps for procuring an Act in the ensuing session. As already announced, they have entered into a provisional agreement with an eminent contractor for the execution of the works on terms satisfactory to them, corroborative of the estimates, and with security for their due completion. The Directors can have no doubt of the success of their application for powers to carry out an undertaking so urgently required by the trade of this port, and at such small comparative cost; but, in the event of unexpected failure, they undertake that the expense to them shareholders shall be limited to 5s. per share. The Act being obtained, the liability of each shareholder as a member of a corporate body will be limited to the amount of his shares.

LECTURES to WORKING MEN.—The following COURSES of LECTURES will be delivered in the Evenings during the present Session, in the Theatre of the Museum of Practical Geology, Jermyn-street:—

1. On MINERALS. By W. Sanders, F.G.S.
2. On the FIRST PRINCIPLES of CHEMISTRY. By A. W. Hofmann, Ph. D. F.R.S.
3. On METALS. By John Percy, M.D. F.R.S.
4. On MECHANISM. By R. Willis, M.A. F.R.S.

The first COURSE of SIX LECTURES on MINERALS will be commenced at Eight o'clock p.m. on Monday, 6th February, 1854.

Tickets may be obtained, by working men only, on and after Monday, the 30th, from Ten to Four o'clock, and on the following Thursday and Friday evenings from Six to Eight, on payment of a registration fee of Sixpence.

H. T. De la BECHE, Director.

TODD'S PATENT METALLIC PROTOXIDE PAINT.

The PATENT METALLIC PROTOXIDE PAINT now offered, has been found, after the most severe trials, to be peculiarly efficacious in preserving Iron from Oxidation, Wood from Decay, and Masonry and Brickwork from dampness.

Applied to Iron it unites with it most intimately, forming a complete coating; so that thus protected, it will be found equal to the best galvanized Iron. Hence its great value to all Engineers and Iron Founders as an application to Iron Vessels, Iron Roofs, Steam and Water Pipes, &c. &c. It adheres firmly to Iron even at a red heat.

Many attempts have been made to discover a substitute for White Lead, that should possess all its virtues, without partaking of its offensive character. This Paint is not affected by sulphuretted or carburetted hydrogen gas, bilge water, or indeed foul air of any kind: hence it is well adapted for the interior of Ships, Warehouses, Offices, Stabling, &c.; and from its total freedom from deleterious properties, it will be found of great value for painting the interior of Hospitals, Asylums, Unions, Gaols, and other Buildings which may require to be painted during occupation.

This Paint resists the action of the sun's rays, and also that of the sea air: it is therefore well suited for the Colonies and all tropical climates.

For Stuccoed Buildings it will be found to be effectual in preventing the discolourations formed by vegetation, and keeping out all dampness.

The Protoxide Paint, as at present produced, is a Pale Stone Colour; but it may be tinted with any other colour to suit the taste and purpose for which it may be required.

TESTIMONIALS.

"Brighton, Croydon, and Dover Railways,
Locomotive Department, New Cross, Sept. 25, 1845.

"Sir,—In reply to yours respecting the 'Patent Protoxide Paint,' I have much pleasure in stating that what has been used in this establishment has been highly approved of, and I consider it the best description of paint yet used, particularly for Iron-work, for which purpose I can strongly recommend it.

"I am, Sir, your obedient servant.
"BENJ. CUBITT."

"Regent's Canal Iron Works, Eagle-wharf-road, Dec. 5, 1845.

"Sir,—As it is always my wish to render justice to every one, as far as it is in my power to do, I have great pleasure in informing you, that I have very severely tested your 'Patent Protoxide Paint;' that the results are most satisfactory; and that it con sider it a very valuable article for an Iron-founder. I have ordered it to be used with us wherever circumstances will allow us to do so. I will, moreover, use it for all my own work, and wish I had known it somewhat earlier.

"I am, Sir, yours respectfully,
"HENRY GRISSELL,
"Pro H. and M. D. Grissell.

"P.S.—It must be good for Boilers."

"St. Kitts, August 29th, 1843.

"Gentlemen,—Having had some experience with Todd's Patent Paint (for which your firm are Agents), I beg to state my unqualified approval of it. I have tried it against White Lead of the first quality, and at the end of seven or eight months find Todd's Paint fresh as when laid on, while the White Lead, owing to the excessive heat, may be rubbed off like chalk. It answers equally well on wood or iron, effectually preserving the latter from rust. I feel obliged by your quick attention to my further order by the 'Parrack Hall,' which ship we are daily expecting.

"I am, gentlemen, your obedient servant.
"(Signed) GEO. G. MOFFATT.

"Messrs. Davidson and Peter, Bishopsgate-street, London."

For terms, application to be made at the Offices of the Company, 12, Bishopsgate-street Within; or to the following Agents:—

Messrs. PITCHFORD, ISLAND LEAD WORKS, LIMEHOUSE ... } LONDON.
Messrs. G. and T. WALLIS, 64, LONG-ACRE ... }
Messrs. D. and G. BRYMNER ... GREENOCK.

JOHNS'S PATENT PERMANENT STUCCO WASH. STUCCO CEMENT, AND STUCCO PAINT.

JOHNS'S PERMANENT WASH, WITHOUT SIZE OR OTHER CORRUPTIBLE INGREDIENT, is now fully established. It has been adopted EXTERNALLY and INTERNALLY at some of the largest Hospitals and Asylums, and is acknowledged to be the most useful Colouring Material in the trade, for its ADHESIVENESS to the Substrata, UNIFORMITY OF COLOUR, and APPLICABILITY to small or large surfaces. IT MAY BE EXPORTED TO ANY CLIMATE.

JOHNS'S STUCCO CEMENT.—This Cement, which has been established many years, is now manufactured on such improved principles that its acknowledged advantages and its unobjectionable, if not positively beneficial, properties for INTERNAL as well as EXTERNAL purposes are unquestionable. IT NEVER CRACKS, BLISTERS, or VEGETATES; has no Caustic quality, becomes as hard as stone in a few days, when it may be painted or papered; may be cleaned with a brush and water, and will STAND THE TEST OF ANY CLIMATE.

JOHNS'S STUCCO PAINT.—The merits of this Paint are so justly appreciated by the trade for its ready affinity to Stucco, Brick, or other Rough Surfaces; its durability, comparative cheapness (two coats being equal to three of lead paint, that it is of the first importance to the public generally, AND WELL WORTH THE ATTENTION OF SHIPPERS AND EMIGRANTS.

Each Material in Casks of 1 to 5 cwt.
MANUFACTURERS,
PHILIP HARE and CO. 22, STEEL-YARD, UPPER THAMES-STREET.

HUBBUCK'S PATENT WHITE ZINC PAINT. The PERMANENT WHITE of the Ancients, previously confined by its cost to the use of the artist, is now, by Hubbuck's Patent, reduced to the price of White Lead.

The principal characteristics of HUBBUCK'S ZINC PAINT are—Economy, Health, Beauty, and Durability.

Builders and Contractors find Hubbuck's Paint the only one adapted to all their purposes; possessing the great desideratum of economy, combined with its high excellence as a paint, it ranks alone. Contractors effect a saving of 25 per cent. by using HUBBUCK'S ZINC PAINT.

HUBBUCK and SON feel it necessary a caution should be circulated against imitations of their Paint. These manufactures, containing frequently pernicious ingredients are baneful to health and worthless in use, whilst the inexperience of these imitators in the production of pigments is evidenced, not alone by the coarse grainy appearance, but also by a deficiency of fineness in their produce, which is known to the painter to be all-essential. That an imposition be not practised, therefore, notice that the cask is marked with the name of the original manufacturer, thus—

HUBBUCK LONDON PATENT.

not so marked, the reason may be inferred.

Every information in the circular to be had of THOMAS HUBBUCK and SON, Paint and Varnish Manufacturers, Upper East Smithfield, opposite the London Docks, London.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphurous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily used, or of a careless mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realized by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the V.M. mark—in Hull, by Messrs. RUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. H. MORLEY and CO., and by the Company's Grinding Agents. In London, Messrs CHARLES DEVAUX and CO., wholesale agents, 83, King William-street, City; Mr. CHARLES JACK, wholesale and retail agent, 8, Tottenham-court New-road, and 80, Upper Thames-street, City. In Manchester and Liverpool, by Messrs. LAWFORD and CO. of 49, Norfolk-street, Liverpool, who are also acknowledged Painters to the Company for Zinc Paints, and undertake painting ships, warehouses, dwelling houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-bush. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 13, Manchester-buildings, Westminster.

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs. T. and S. KNIGHT, of Great Suffolk-street, Southwark, as their painters, who will be ready to execute any description of painting and decorating with the Pure Patent White Zinc Paint.

PATENT LIQUID CEMENT for Fronts of Houses, &c.—This valuable and economic material is always ready for use, simple in application, and only one-eighth the cost of oil paint. It will not decomposer or wash off. For beauty it stands pre-eminent, giving the appearance of fine cut stone, and 1 cwt. will cover 400 to 500 square feet. Sold in casks of 1, 2, and 3 cwt. at 8s. 6d. and 21s. each, casks exclusive.

PATENT PERMANENT COLOUR is particularly suited for halls, kitchens, school-rooms, railway stations, &c. as a substitute for oil paint; is without smell, dries in an hour, and may be applied over wood, oil paint, stucco, or any other surface. Sold in casks of 1 cwt. at 15s. 6d. each.

PATENT ZINC PAINTS. These paints are ready mixed for use, economical, unchangeable in colour, greatly superior to, and will last much longer than common oil paints, and will cover much larger surface than the same quantity of white lead paint. Price 6s. per gallon, ordinary colours; Mineral chocolate brown, 5s.

Permanent Brilliant Black, for all kinds of outside work, barges, park railing, &c. 2s. per gallon

PATENT INDIA-RUBBER PUTTY, which never shrinks, but remains in a tough plastic state, and is permanently waterproof. Price 4s. per stone.

DAMP WALLS. PATENT ELASTIC PAINT, an effectual remedy, by which they are rendered fit for papering or finished in oil colours. Price 10s. per gallon, which will cover and finish about 150 square feet.

PATENTEES, GEORGE BELL and CO. Steam Mills, 2, Wellington-street, Goswell street, London.

PERMANENT ZINC COLOURS and WHITE.—Emerald and Brunswick Greens, Chromes, Blues, Reds, and all other Colours, are now produced from Zinc, at prices which render them an advantageous substitute to the Lead Arsenic, and Copper Colours. These Zinc Colours are most brilliant, and never change by exposure to any Gases, Salt Water &c. For Ships and Machinery, also for all kinds of House Painting, no other but Zinc Colours ought to be used to insure durability and economy. Sole Prices, patentees, The Patentees, Messrs. GEO. K. GEYELIN and CO. White Zinc and Permanent Colour Works, Victoria-wharf, Regent's-park-basin, London.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementious properties: that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs ROBINS and CO. Manufacturers of the very best PORTLAND CEMENT for all purposes Cement supplied, solicit a continuance of that patronage with which they have so long been favoured.—Orders received at Great Scotland-yard, and at the Works.

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs. ASPDIN, ORD, and CO. have much pleasure in informing customers of this valuable Cement, that they have, by means of a recent discovery (patented by Mr. ASPDIN) much improved the quality of this Cement without any increase in price.

Engineers and architects are recommended to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cement, resembling it only in colour.

ASPDIN, ORD, and CO. beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office, New Wharf, Westminster, London, at their Works, Gateshead-on-Tyne; or from their Agent, Mr. HENRY ROBINSON, 31, King-street, Liverpool.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Fair-street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality (a desideratum never before attained in Portland Cements). It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, burn green, or crack; combine I with which its eminent hydraulic properties stamp it at once as the first cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be and contrary to the statements put forth by those who have no merit, I at the monop ly. Manufactured by R. CREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses. These well known hard stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and dealers in Plaster, Paris White, Mastic, Hair, Lime, Rabbin, Slates, and Slate Slabs, Fire bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Portzolano

PARIAN CEMENT, for internal use, to be painted in a few hours, and papered within a couple of days.—CHARLES FRANCIS and SONS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes, Stone Elms, London.

ATKINSON'S CEMENT, so long known and esteemed in London, for plastering purposes, is a quick-setting Cement, that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster; and Seel-street, Liverpool.

ROMAN and OTHER CEMENTS. Manufactured by J. M. BLASHFIELD, successor to the Patentees, PARKER and WYATT, who, in 1796, first introduced PARKER'S ROMAN CEMENT; also Terras and Portland Cements, English and French Plaster, Terra Cotta Chimney Pots, Trusses, &c.

Manufactory, Mill Wall, Poplar; Depôts, Commercial-road, Lambeth; and Paddington-basin.

BLUE LIAS LIME.—NELSON and CO. beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders, and others connected with the building trade, to the superior quality of their BLUE LIAS LIME, the natural hydraulic properties of which, and the great estimation in which this kind of Lime is held for buildings in wet and damp situations, such as wharf walls, docks &c and for concrete foundations, is a sufficient recommendation for the adoption of it in all works of the above description. It is also peculiarly adapted for stucco. Orders received by—London Agents, BLYTH, BROTHERS, 24, South Wharf, Paddington, and at the Works, Stockton-fields, near Southam, Warwickshire.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Traps.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS Cements of the best quality

RICORD ST. LAWRENCE STOCKS, and other fine clays.
CHARLES RICHARDSON, 6, South Wharf, Paddington.

INSTITUTED 1831.

SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY.—Incorporated by Royal Charters and Special Act of Parliament

Head Office—No. 28, St Andrew-square.
Manager—Robert Christie, Esq.
London—126, Bishopsgate-street, Cornhill.
Glasgow—163, St Vincent-street.

The Scottish Equitable Life Assurance Society is an institution peculiarly adapted to afford Provision for Families. It was established in 1831, upon the system of Mutual Contribution, the surplus or profits being wholly divisible among the members; and the additions which have been made to policies at the periodical investigations of the Society afford satisfactory evidence of the prosperity of the institution, and the great advantages derived by its members. The following examples exhibit the additions already made:—

A policy for 1,000l. opened in 1832, is now increased to £1583 9 4
A policy for 1,000l. opened in 1836, is now increased to 1407 18 1
A policy for 1,000l. opened in 1840, is now increased to 1297 15 7

The profits are ascertained and divided triennially amongst policies of more than five years' duration.

The annual revenue is upwards of 140,000l.

The amount of assurances in force is upwards of 4,000,000l. sterling.

The amount paid to the representatives of deceased members exceeds 500,000l. sterling.

The total amount of vested additions allocated to policies exceeds 300,000l.

The accumulated fund is upwards of 700,000l.

It is proposed to meet claims to the extent of the Office value of their policies.

Copies of the annual report, forms of proposal, and all information may be had on application at any of the Society's Offices, in town or country.

ROBERT CHRISTIE, Manager.
WILLIAM FINLAY, Secretary.
Dec. 1853. W. COOK, Agent,
126, Bishopsgate-street, London

SOLICITORS' and GENERAL LIFE ASSURANCE SOCIETY, 22, Chancery lane, London.

Subscribed Capital, One Million.

This Society presents the following Advantages:

The security of a subscribed Capital of One Million.

Exemption of the Assured from all liability.

Premiums affording particular advantages to young lives.

Participation in the Profits, without Partnership liability.

In the former of which per cent. or four fifths of the profits are divided amongst the Assured triennially, either by way of addition to the sum assured or diminution of Premium, at their option.

No deduction is made from the four fifths of the profits for interest on Capital, for a Guarantee Fund, or on any other account.

Policies Free of Stamp Duty and Indisputable, except in case of fraud.

At the General Meeting, on the 31st of May last, a Bonus was declared of nearly Five per cent. per annum on the amount assured, or at the rate of from Thirty to upwards of Sixty per cent. on the Premiums paid.

Where a share of the Profits, even if One Premium only has been paid,

Next Division of Profits in 1856.

The Directors meet on Thursdays, at Two o'clock. Assurances may be effected by applying on any other day, between the hours of Ten and Four, at the Office of the Society, where prospectuses and all other requisite information can be obtained.

CHARLES JOHN GILL, Secretary.

ALL POLICIES INDISPUTABLE.

SOVEREIGN LIFE ASSURANCE COMPANY, 26, St James's street, London

No charge for policy stamps in future. Sums may be assured payable on attaining the age of 50, 55, 60, or at death, should that event occur previously.

Advances made on real and on unexceptionable personal security, where the sureties are resident in London, or on its immediate vicinity.

H. D. DAVENPORT, Secretary.

SEYSSEL ASPHALTE COMPANY,

STANGATE, NEAR WESTMINSTER-BRIDGE, LONDON.

ESTABLISHED 1838.

CLARIDGE'S PATENT.—Frequent complaints having been made by ARCHITECTS and others of the failure of certain works supposed to have been done by this Company (but which in fact were executed with spurious materials), a list of works executed with the

GENUINE SEYSSEL ASPHALTE

is kept at the Office, that it may be at any time ascertained whether any work in which a failure has taken place was executed with the Company.

J. FARRELL, Secretary.

N.B. THE EXCLUSIVE SUPPLY OF ASPHALTE from the Mines of Pyrimont Seyssel being conceded to this Company, the Directors particularly recommend Architects, Builders, and others (for the purpose of securing the use of the genuine article) to insert in their specifications

"PYRIMONT SEYSSEL ASPHALTE, CLARIDGE'S PATENT,"

and not merely "Asphalte," or "Bitumen," as in many cases where these terms have been used, gas tar, and other worthless and offensive compositions have been introduced.

1853.

GENUINE SEYSSEL ASPHALTE.

ORSI AND ARMANI.

THE EXCLUSIVE SUPPLY OF SEYSSEL ASPHALTE (FRANGY)

DIRECT FROM THE MINES.

REDUCTION IN THE PRICE FOR VARIOUS WORKS FIFTEEN PER CENT.

AND THE

WORK GUARANTEED FOR THREE YEARS.

Offices, No. 6, Guildhall Chambers, Basinghall-street, City.

PATENT METALLIC LAVA.

A printed List of the important Works for Flooring, Roofing, Covering of Arches, &c. &c. executed from 1848 to 1852, with this Material, may be obtained at the Office of

ORSI AND ARMANI.

THEIR PATENT METALLIC LAVA IS FIFTEEN PER CENT. CHEAPER

THAN THE GENUINE SEYSSEL ASPHALTE OF MESSRS. O. AND A.

OR THIRTY PER CENT. LOWER THAN ANY OTHER MATERIAL CALLED BITUMEN OR ASPHALTE.

Offices, No. 6, Guildhall Chambers, Basinghall-street, City.

CHEAP AND DURABLE ROOFING.

By Her Majesty's Royal Letters Patent.

F. McNEILL and CO. of LAMB'S-BUILDINGS, BUNHILL-ROW, LONDON, Manufacturers and only Patentees of

THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.

Patronized by

HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSION OF CUSTOMS,
HONOURABLE EAST INDIA COMPANY,
HONOURABLE BOARD OF ORDNANCE
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK,

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland; at whose great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing, also used for under slates at the Royal Agricultural Society's Exhibition, in Hanover square. Its substances are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non-conductor of heat and sound. The Felt can be cut to any length, by 22 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its use and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen who have extensively used it, sent free to any part of the town or country. A Dry-hair Felt, for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent in fuel is effected. The TRADE are respectfully enjoined to send their orders DIRECT to the FACTORY, as the surest means of being supplied with the genuine article, and in length best suited to their roofs. They are likewise CAUTIONED AGAINST MISREPRESENTATION as the only woman in Great Britain where the above roofing is made are F. McNEILL and CO.'s Manufactories, LAMB'S-BUILDINGS, BUNHILL-ROW. Roofs covered with the Felt to be seen at the Factory, also the new Vice-Chancellor's Courts the passages and offices leading to Westminster Hall, and other buildings at the New Houses of Parliament.—A liberal Discount allowed to the Trade.

THE ARTIFICIAL STONE,

Invented by Mr. AUSTIN about the year 1830, being now generally allowed to be the best material in use for ornaments in gardens, the attention of Provincial Architects is hereby drawn to the extensive STOCK, which has been accumulating through so many years. Several thousands of pounds have been expended in preparing the Models; and it may be confidently asserted that there are now spread over the kingdom, among the seats of the Nobility, a profusion of

VASES, FOUNTAINS, AND STATUES,

which, except for Mr. AUSTIN'S invention, would never have existed. They are not, however, known to country Architects as the work of this business, and, consequently, soft stone or cement is used where "AUSTIN'S STONE" would be the most economical and durable.

The Stock which AUSTIN and SEELEY have accumulated during more than twenty years' engagement in the manufacture, is generally allowed to have been tastefully modelled, and consists of the following works:—

One Hundred and Ninety-three different designs of Vases and Tazzas.
Seventy-four Statues, from a colossal size down to 2 feet in height.
A COLLECTION of FOUNTAINS (perhaps unprecedented), at prices ranging from 14 to 1 of.
Fifteen baskets for Flowers, at from One to Seven Guineas each.
Thirty-eight Figures of Animals, including some Lions of large dimensions.
Fifteen Figures of Eagles and other Birds.
Twenty-two Sun dial Pedestals.
Thirty-four Baptismal Fonts, including the design executed for the late Archbishop of York, the Bishop of London, and Dr. Pusey.
Twenty-one Shells, at from 8s. to twelve guineas each.
Ornamental Rims to Water-basins and Flower beds.
Flower-boxes for Court-yards, Terraces, and windows.
Jardinieres, or large Bowls for grasses of flowers, similar to those supplied to the Duke of Norfolk and the Royal Botanic Gardens. These bowls have a noble effect in large grounds, and can be made for halls of more moderate dimensions.
Balustrading for Terraces, and Ornaments for Entrance-gates.
Capitals, Consoles, and Architectural Work of every description.
About 100 varieties of Ornamental Chimney tops.

References to work can be given in almost any county of England, and to much in Scotland.

Manufactory, Nos. 1 to 4, Keppel-row, New-road.

REVOLUTION in LITHOGRAPHY.—TO PUBLISHERS, PUBLIC COMPANIES, THE TRADE, AND THE PUBLIC AT LARGE.—MACQUAID and MACGREGOR, solicitors of the GREAT SELF-ACTING LITHOGRAPHIC MACHINES by steam power. By means of these perfect machines, the range of lithography is boundlessly extended, for long literary printing, despatch and cheapness. Each machine being equal to 50 or more printers, exhibits the great power possessed by the patentees. 57, Wardrobe, Mansion-house.

HEAL and SON'S ILLUSTRATED CATALOGUE of BEDSTEADS, sent free by post, contains designs and prices of upwards of ONE HUNDRED different bedsteads, also of every description of bedding, bed-hangings, and quilts. Also their new warerooms contain an extensive assortment of bedroom furniture, furniture chintzes, damasks, and cornices, so that in order to establishment complete for the general furnishing of apartments.

HEAL and SON, Bedstead and Bedding Manufacturers, 196, Tottenham court road.

ASPHALTE.—GERVASE FOOTTIT, Trinidad Asphalte Works, Rotherhithe; established 1834. Every description of Flooring laid with the above durable material in the best manner. Asphalte for Railway Arches, 35s per ton. Importer of Trinidad Asphalte.

Shipping Depôt, Devon Haytor Wharf, Rotherhithe.

G. H. CLARK, Agent.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed.—Apply to JOHN PILKINGTON, PULCONEAU'S BITUMEN PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL. N.B. Country Agents, and Railway Engineers and Contractors, supplied with the best Bitumen for covering Bridges and Arches.

SEASONED FLOORING.—A large stock of dry WHITE and YELLOW FLOORING, prepared by machinery, always on sale, at reduced prices, as under, for cash.

1-inch Yellow, 17s. per square.		1-inch White, 16s. per square.	
1½-inch " 18s.	"	1½-inch " 17s.	"
1-inch " 21s.	"	1-inch " 19s.	"

Baltic Timber, 30s. per load.
Mouldings by machinery in very great variety.

ARCHBUTT and ATKINSON, St Pancras Saw Mills, Old St. Pancras-road.

MUIR'S PATENT PLANING MACHINE.

SAW MILLS, GILLINGHAM-STREET, PIMLICO.

TIMBER of any size, PLANKS, DEALS, and BATTENS, &c sawn on the most approved principle; Boards, &c. prepared, matched, and grooved, by Muir's Patent Machinery. The Mills have all the advantages of navigation and water-carriage, being connected with the Thames by the Grosvenor Canal. Goods fetched from the docks, and carted home free of charge. Address to HENRY SOUTHAM,

Saw Mills, Gillingham-street, Pimlico.

N.B. Estimates given for Sawing and Planing.

A LARGE ASSORTMENT of WELL-SEASONED, DRY, PREPARED WHITE and YELLOW BATTEN FLOORING, also a large quantity of SCAFFOLD POLES, FOR SALE, at a low price, at DRUCE'S, No 3 Wharf, Queen's road West, Chelsea. Bricks, Lime, Cement, Sand, Plaster, Slates, and Slate Slab, Tiles, &c. on Sale at the lowest remunerative prices. Goods landed and carted. Ladders for sale. Apply to H. P. DIXON and CO. as above. Great facilities for the prompt execution of country orders.

REDUCED PRICES.—EDWARD SIMMS (late William Cleave), of Wilton-road, Pimlico Basin, beg to acquaint Builders and the Trade that he has now on hand, at his Manufactory (the first of its kind ever established), a very large Assortment of Dry and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from ¾ inch to 1¼ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber, Deals, Oak Planks, Scantlings, Sash Sills, Mouldings prepared by Machinery, Laths, &c.—Apply at E. SIMMS'S (late W. Cleave's) Flooring Manufactory, Wilton-road, Pimlico Basin.

PREPARED FLOORING, &c.—ALFRED ROSLING begs to inform parties shipping wood goods to the colonies that he can supply any quality or description at the lowest prices of the day, and with the greatest possible despatch. Also mouldings in great variety. A large stock of Baltic deals kept in bond for export.—Southwark-bridge Wharf, Bankside.

TIMBER WHARF, SAWING, PLANING, and MOULDING MILLS, Belvidere road, Lambeth.—The General Wood-cutting Company beg leave to inform their customers that the temporary additional charge of 20 per cent. on their mouldings (as advertised on the 8th of November last) is removed, from this date, consequently, the prices will be those inserted in their Moulding List, as heretofore.

1st January, 1854.

TIMBER, DEALS, and FLOORING.—Builders and other consumers may effect a considerable saving by purchasing of Mr. GEORGE WALLEN, Timber Merchant, of Adelaide chambers, 2, Gracechurch-street, City, who has a large well selected stock in the docks, which he is determined to sell at the lowest remunerative prices for cash.

FOREIGN TIMBER and DEALS of every description, at the lowest prices, for cash, and also Prepared Floors at the following prices, for the present month:—

2in.	1¾in.	1¼in.	1in.	
17s 6d	16s. 6d.	21s	26s	Yellow, per square.
16s 6d.	17s 9d.	19s 6d.	24s	White, do.

Battens, 2s. 6d.; Deals, 4s. 6d.; and Plank, from 8s. 3d. per 12 feet. Pantile Timber, 35s. per load, and every kind of English and Foreign Wood direct from the docks.—Apply to Mr. MAY, 90, Leadenhall street.

By her Majesty's Letters Patent.

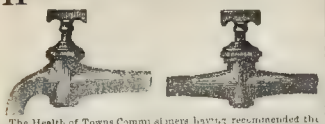
TO BUILDERS &c.

FOR SALE, at REDUCED PRICES, No 27, WHARF-ROAD, CITY BASIN, the Proprietor retiring from the Timber Trade, a Large Quantity of PREPARED FLOORING, in Boards and Battens, from ¾ to 1¼ inch, and seasoned by the patent desiccating process. Also Matched Boards, Pine and Deals, Wainscot, Mahogany, and Hornbeam. The Premises to Let, and immediate possession given.

ENGLISH TIMBER for SALE, by private contract. About 200 loads of OAK, ASH, and ELM, of large dimensions and good quality, close to railway station and water carriage, about twenty-one miles from London. Will be sold together or separately.—For further particulars apply to THOMAS WEBB, Timber Dealer, Ware, Herts.

STAINING DEAL TO IMITATE ALL KINDS of WOODS. It requires NO SIZING, and will stand the exposure to the weather. Price 6s. per gallon. Varnishes for W. NAYLOR'S Stains may be had at the Factory, 44, and 56, James-street, Oxford-street.

PADDINGTON TIMBER-YARD SAWING, PLANING, and MOULDING MILLS, 3, Irongate Wharf, Praed-street, Edgware-road, near the Great Western Railway Station, and abutting on the Grand Junction and Regent's Canals, affording the advantage of railway and water carriage.



GEORGE W. FRY, in returning thanks for the liberal support recently by the late firm of W. R. Fry and Son, begs respectfully to solicit a continuance of the same, and calls attention to his large and well-seasoned stock of Flooring Boards, Matched Boarding, and Mouldings, of every description, prepared in a superior manner by the best machinery, at the lowest remunerative prices.

GEORGE W. FRY can also supply carcase timber to purchasers of any description of Timber and Deals. The extensive Mills afford every convenience for manufacturing to the most accurate terms. All sawn and prepared goods delivered free to any part of London, or carefully packed and delivered at any railway station in town.

G. W. F. has published an enlarged and improved sheet of Moulding Designs, which will be forwarded, with prices of flooring, &c. post-free, on application.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners have recommended the adoption of high-pressure principle in all towns. WILKINS'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

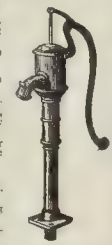
JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London

FOWLER'S IMPROVED FARM and COTTAGE PUMPS.

To be had of any Ironmonger or Plumber, at 15s.

The usual allowance to the trade

PUMPS of SUPERIOR CONSTRUCTION bored perfectly true by improved machinery, in various plain and ornamental patterns, for coaches and market-places, ponds, conservatories, liquid manure, ship, barge, brickmakers, contractors, gold diggers, brewers, chemical works, and in wrought and cast-iron, copper and brass, for hot or cold liquors, &c. &c. Long barrel and hydraulic lift-pumps, with handles on planks, and engines of various powers, for wells of any depth.



PUMPS on HIRE! The largest stock in England of single and double pumps, from 4 in. to double 12 in. barrels, prepared for hand or steam power, ready for use on reasonable terms, at

BENJ. FOWLER'S, Hydraulic Engineer, Hot-water, Steam and Gas Apparatus Manufacturer, New Factory, Whitefriars-street, Fleet-street.

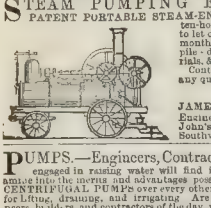
FARM AND COTTAGE PUMPS.

WARNER'S PATENT CAST-IRON PUMPS,

for the use of FARMS, COTTAGES, MANURE TANKS, AND SHALLOW WELLS

Patent Pump £1 15 0
Patent Pump, with 15 feet of lead pipe attached, and bolts and nuts ready for fixing 3 0 0
Larger sizes if required.

The smaller sizes are also much used for supplying Hot, Forcing, and Plant Houses, from underground Water Tanks, and can be readily fixed in any situation.



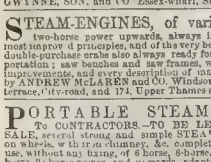
May be obtained of any Ironmonger or Plumber in town or country, or of the Patentees and Manufacturers,

JOHN WARNER AND SONS, 8, CRESCENT, JEWIN-STREET, LONDON

Every description of Machinery for raising Water, Fire Engines, &c

The usual allowance to the Trade An Illustrated Book sent on application post-free.

CENTRIFUGAL PUMPS.



Contractors, Builders, Engineers, Paper-makers, Brewers, Manufacturers, and all who may have water, or other liquids (hot or cold to raise, will find it their interest to use these Pumps. For ECONOMY, EFFICIENCY SIMPLICITY, DURABILITY, & POWER, they have no equal. Every information can be had on application to

GWYNNE and CO Essex Wharf, Essex street, Strand.

STEAM PUMPING ENGINES.—

PATENT PORTABLE STEAM-ENGINES, from four to ten-horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile-driving, raising materials, &c. &c.

Contracts taken for pumping any quantity of water.

JAMES BURTON & SONS, Engineers and Contractors, John's-place, Holland-street, Southwark, London

PUMPS.—Engineers, Contractors, and Parties

engaged in raising water will find it their interest to examine into the merits and advantages possessed by the PATENT CENTRIFUGAL PUMPS over every other They are applicable for Lifting, draining, and irrigating Are used by the first engineers, builders, and contractors of the day, who may be referred to. Contracts entered into for the supply of all sizes, varying from 25,000 to 30,000 gallons per minute. Can be seen daily at work, and all information obtained respecting them, by application to GWYNNE, SON, and CO Essex-wharf, Strand.

STEAM-ENGINES, of various sizes, from

two-horse power upwards, always in stock, made on the most improved principles, and of the very best quality; single and double-purchase crabs also always ready for immediate use or exportation; saw benches and saw frames, with all the most recent improvements, and every description of machinery made to order by ANDREW McLAREN and CO. Windsor Iron Works, Windsor-terrace, City-road, and 174, Upper Thames street.

PORTABLE STEAM-ENGINES.—

To CONTRACTORS.—TO BE LET on HIRE, or for SALE, several strong and simple STEAM-ENGINES, mounted on wheels, with iron chimney, &c. complete, ready for immediate use, without any risk of horse, 6-horse, 10-horse, 12-horse, 16-horse, 20-horse power, and upwards, adapted for pumping, winding, sawing, and general contractors' purposes.—Apply to MEDWIN and HALL, Engineers and Portable Engine-makers, 92, Blackfriars-road.

STEAM SAW-MILL.—TO BE SOLD, the

STEAM-ENGINE and MACHINERY, complete for a Steam Saw-Mill, consisting of an excellent High-pressure Steam-Engine, with Boiler and Fittings complete; a Saw-mill to cut Logs of 2 feet 6 in. Vertical double deal saw, Pit-sawing machine, Circular saw Tables, Shafts, Drums, Saws, Bands, &c. any part of which may be purchased separately, and may be seen at Messrs MEDWIN and HALL, Engineers, 92, Blackfriars-road.

STEAM-ENGINE for SALE.—A Four-Horse

Power Oscillating Steam Engine, Boiler and fittings complete, quite new. May be seen in full working order at Messrs McCOLLEY and HOCKING, Manor Ironworks, Manor-street, Chelsea.

TO GENTLEMEN, AMATEUR TURNERS, &c.

FOR SALE, a very handsome, highly-

finished, one-horse power STEAM ENGINE, with tubular boiler.—For particulars, apply by letter, pre-paid, to R. C. Emigration Office, 36, Bedford-street, Holborn

WANTED, a HIGH-PRESSURE portable

ENGINE, from 10- to 25-horse power, with force-pumps, capable of lifting 800 gallons of water 10 feet high in twelve hours, with one or two boilers, complete Apply to the Secretary of the Amster and Rill Water Company, 18, Cannon-street, London.

SUCCESSFUL VENTILATION.—

WATSON'S PATENT SELF-ACTING DOUBLE CURRENT VENTILATOR has been successfully applied to Churches, Chapels, Public Halls, Stables, and almost every kind of building, as well as to withdraw Steam, Smoke, Dust, and Heat, Thermometers and other information forwarded on receipt of a postage stamp The Ventilators delivered Carriage free in London and Bristol Instructions sent for fixing An Inspection of the Manufactory to CHARLES WATSON, King Cross-lane, Halifax, Yorkshire, who is the patentee and sole maker.

VENTILATION.—PURE AIR.

Sheringham's Ventilator for the Admission of pure air through an EXTERNAL WALL

With single pulley, from 6s each, with leading pulley, from 8s 6d This Ventilator is arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants, and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required HAYWARD, BROTHERS, sole Manufacturers, 196, Blackfriars road, and 117, Union-street, Borough; and of all respectable Ironmongers, builders, &c.

WHITE SUFFOLK and RED FACING BRICKS.

COWLEY, KENT, and ESSEX BRICKS, YELLOW and PALE MALM SECONDS, CUTTERS, PAVIORS, SHIPPERS, &c. &c.

KENTISH RAGSTONE at a considerable reduction in price. Apply to Mr BENJ GOUGH, 3, Newington crescent, Newington Butts.

BASIN AND SELF-ACTING CLOSET CONNECTIONS.

IMPORTANT TESTIMONIALS.

Oxford, November, 1849.

GENTLEMEN, Sixteen of your Closets having been put into operation at Christ Church College I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
R. S. HOGGAR, Town Hall-yard, Engineer

Oxford, January, 1850.

GENTLEMEN,—I have fitted up several of your Closets at various Colleges in Oxford, and gentlemen's houses near, and have much pleasure in giving you my testimony as to their great efficiency; I have not yet found one out of order.

R. S. HOGGAR, Town Hall-yard, Engineer.

Oxford January, 1850

GENTLEMEN,—I have fitted up nine of your Closets at Corpus College, and I can without hesitation give you my testimony as to their great efficiency; and the simplicity of their action is much admired by all who have seen them.

I am, Sir, yours, JOHN CASTLE, Builder

They are in use at the Royal Arsenal, and Royal Military Academy, Woolwich; Tower of London; Christ Church, St. John's, Corpus Christi, and Merton Colleges, Oxford Rolls Court, Chancery-lane, &c. &c. &c.

And may be seen in operation at Messrs. Stephen Green and Co.'s Manufactory, Lambeth.

MANUFACTURERS OF SUPERIOR GLASS-LINED STONEWARE DRAIN PIPES AND CLOSET BASINS OF EVERY DESCRIPTION.

CLOSET-PANS ARE NOT WATER-CLOSETS, UNLESS THE BASINS CONTAIN WATER,

AND THE DAY IS FAST APPROACHING WHEN PANS, SHAPED LIKE INVERTED EXTINGUISHERS, WITHOUT A WATER SURFACE, WILL CEASE TO BE USED.

JENNINGS'S IMPERISHABLE WATER-CLOSETS

HAVE A

LARGE WATER SURFACE, TO PREVENT ADHESION AND CONDENSE EFFLUVIA.

The backs are so formed, that they cannot be soiled. They are free from all machinery, imperishable in their material, displace no impure air, and save the usually expensive lead-trap. In their different varieties of ware, they are fit for the Palace of the Queen, or the Cottage of the Poor Man.

Immediately after the publication was given to this Closet, the Patentee received orders to fix Thirty three in the Great Industrial Exhibition, Dublin; Thirty six in Guy's Hospital; Ninety-eight at the New Westminster Work-houses, and their Weekly sale now exceeds 400.

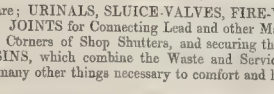
ARCHITECTS, BUILDERS, AND PLUMBERS ARE INVITED TO SEE THIS CLOSET IN ALL ITS VARIETIES OF WARE, IN ACTION ON THE PREMISES.

Where also may be seen,

JENNINGS'S STREET GULLY-TRAPS, SINK, AREA, AND STABLE-TRAPS,

LAVATORIES, Angular or Square; URINALS, SLUICE-VALVES, FIRE-VALVES, HIGH-PRESSURE BALL, and other COCKS; JOINTS for Connecting Lead and other Malleable Pipes, without Solder; SHOES for Preserving the Corners of Shop Shutters, and securing them without a Bar; SUPPLY-VALVES to CLOSET BASINS, which combine the Waste and Service in one, and require neither Ball, Lever, nor Wire; and many other things necessary to comfort and health.

A BOOK, containing ILLUSTRATIONS, DESCRIPTIONS, and PRICES, can be had free, on application, or by post, if two stamps are sent, to



GEORGE JENNINGS,

ENGINEER AND BRASSFOUNDER,

No. 29, Great Charlotte-street, Blackfriars-road.

JOHN DOULTON, BROTHERS, AND CO. LIVERPOOL POTTERY, ST. HELEN'S

DOULTON AND WATTS'S

REGISTERED CLOSET PANS IN

ENAMELLED STONE WARE,

LAMBETH POTTERY, LONDON.

These Closet Pans are manufactured in a new kind of stone-ware, HIGHLY GLAZED, vitreous, of a white colour, are much improved in form, and are used and recommended by the engineers connected with the General Board of Health.

The Traps are smaller at the inlet, gradually enlarging towards the outlet, as a security against the introduction of improper substances into the drain.

They may also be had turned down.

PRICE 7s. 6d. each,

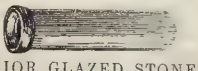
The same as for ordinary stone-ware, and may be had fitted with copper fans of the best construction at 1s. 3d. each extra.

JAMES STIFF, MANUFACTURER of GLAZED STONE-WARE DRAIN PIPES,

BENDS, JUNCTIONS, TRAPS, &c. 39, HIGH-STREET, LAMBETH, LONDON. Established 1751.

Water-Closet Pans, with Syphon Traps, 7s. 6d. each.

STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths.



The great advantages attending the use of these articles are now so generally understood, as to render any enumeration of them almost superfluous. Their cheapness, efficiency, and durability, are universally admitted; while the rapidly increasing demand for them proves their estimated superiority over every other kind hitherto before the public for similar purposes.

Inspection is invited to an assorted Stock of Drain Tubes of every form and size, adapted to the various situations for which they may be required; as also to the WATER-CLOSET PANS OF IMPROVED CONSTRUCTION, and to terra vitæ, far surpassing any other manufactured of Brown Stone Ware.

N.B. These are made without the disagreeable debouching turned downwards.

May be had also at Messrs. GLADDISH'S LIME WHARFS, Parliament-street, Westminster-bridge, City-road Wharf, City Basin; Dock-head, Bermondsey; Danvers Wharf, foot of Battersea-bridge, Chelsea. Pratt Wharf, Kentish-town. Caledonian New Town J. TURNER'S, South Wharf, Praed-street, Paddington; and at COLWILL Brothers, 33, Brydges-street Covent Garden.

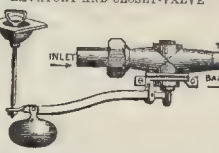
Drawings and List of Prices will be forwarded free, on application.

SUPERIOR GLAZED STONEWARE

DRAIN PIPES, invented and manufactured by

WILLIAM NORTHEN, UNION POTTERY, No. 14, VAUXHALL-WALK, LAMBETH.

W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipe and sockets, the fine being of a different and better construction than any others now in use, and the pipes and sockets being made by one process are secure from separation.



W. N. invites particular attention to the superior quality of the glaze used in his manufacture, which is equal to glass, and renders stoppage in the drains impossible.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—

Roeber and Co.'s Wharfs: Kingsland, Blackfriars, and Mill-bank.—Martin and Wood's Market Wharf, Regent's-park Basin.—J. G. Hilton's, Crown and Horseshoe Wharf, No. 8, Upper Thames-street.—W. Peters's, North Wharf, Paddington.—C. Richardson's, South Wharf, Bridge-road.—Erotis, Cambridge Heath Wharf, Hackney.—Millwood and Co.'s Wharfs, Kensington Basin, and Creek Wharf, Hammersmith.—J. Corbett's Depôt, Britten-street, Chelsea: and at the Pottery.

LAMBERT'S SELF-CLOSING

LAVATORY AND CLOSET-VALVE

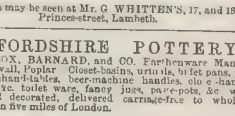
Is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under continuous pressure of 50 to 300 feet; they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured solely by the Patentees,

THOS. LAMBERT and SON,

Brass Founders and Engineers,

Corner of Short-street, New Cut, Lambeth.

VICTORIA POTTERY, LEIGH,



NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE.

MANUFACTURER of superior GLAZED STONE WARE PIPES (in accordance with the rules established by the Commissioners of Sewers), Bends, Traps, Closet-pans, Jars, Bottles, and every article of superior Roman Cement and Plaster of Paris for home House, Blackwall. Orders executed from the above place, from Falcon-wharf, 80, Bankside, Blackfriars, and from Harrow-bridge-wharf, Stratford, Essex.

Samples may be seen at Mr. G. WHITTEN'S, 17, and 18, Princes-street, Lambeth.

STAFFORDSHIRE POTTERY.—

WILCOX, BARNARD, and CO. Earthenware Manufacturers, Bell-wall, Poplar. Closet-basins, urinals, bidet pans, plug-basins, washhand-tables, beer-machine handles, close-handles, pan-knobs, &c. toilet ware, fancy jugs, puree-pots, &c. white, printed, and decorated, delivered carriage-free to wholesale dealers within five miles of London.

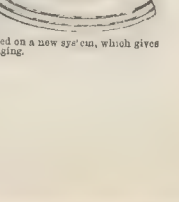
TO LOCAL BOARDS OF HEALTH, WATER COMPANIES, &c.

A DESIDERATUM in SLUICE-VALVES,

FREEMAN ROE'S Patent Sluice-valve, can be repaired without being removed from the main. All sizes, from 2 inch to 36 inch. Patent Hydrants, self-closing Cocks, fire and other Pumps, Hot-water Apparatus, Baths, &c. Surveys made, and estimates given by FREEMAN ROE, Hydraulic, Sanitary, and Gas Engineer, 70, Strand, and Upper Marsh, Lambeth.

JOHN WARNER and SONS, Patentees of

IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.



J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has hereto fore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

TUNED BY MACHINERY

Stocked and wheels ready for hxing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.

SALES BY AUCTION.

STOCK ORCHARD VILLAS, CALEDONIAN-ROAD. A very improving neighbourhood

MR. A. BOOTH will SELL by AUCTION, on THURSDAY, 23rd FEBRUARY, 1854, at TWELVE o'clock, by order of the mortgagee, at the MART, opposite the Bank of England, the undermentioned valuable FREEHOLD FREE CASES, each containing ten rooms, stucco-fronted, with Italian Stone Steps, Kitchen Yards, Cast-iron Area Railings, and the other Usuals of the Camden-road Villas, held on leases for 99 years, at a ground rent of £6 per annum each, and producing £80 per annum. May be viewed with the Keys on the Premises, and particulars had at the Rooms of Messrs. Hanslip, Manning, and Cosworth, Solicitors, 12, Hatton-garden; at the Mart; and of Mr. Abraham Booth, Auctioneer, No. 1, Carlton-hill Villas, Camden-road, opposite the Breakneck Arms.

Leasehold Villa Residence and five Cottages, Kentish-town.

MR. A. BOOTH will SELL by AUCTION, at the MART, on THURSDAY, 9th of MARCH, at TWELVE for ONE o'clock, by order of the Mortgagee, without reserve, the FASHIONABLE VILLA RESIDENCE, No. 2, Cantelo-road, being No. 5, Terrace Villas, and the Ground Rent of £9 per annum; also FIVE CARCASSES, situate in Torriano-avenue, Kentish-town, held on leases for 3 years, at a ground rent of £9 per annum. May be viewed, and particulars had at the Fleur-de-Lis Arms; of Messrs. Hanslip, Manning, and Cosworth, Solicitors, 12, Hatton-garden; at the Mart; and of Mr. Abraham Booth, Auctioneer, No. 1, Carlton-hill Villas, Camden-road, opposite the Breakneck Arms.

TO TIMBER MERCHANTS, SAW MILL PROPRIETORS, and Others, requiring Extensive Premises.

MR. WARD will SELL by AUCTION, on the PREMISES, on THURSDAY, FEBRUARY 9th, at TWO o'clock precisely, the LEASE of the capital TIMBER-YARD, situate in the Bermondsey New-road, Saw Mark, near the Brick-lane Arms, Railway Station, and within ten minutes' walk of London-bridge. These premises comprise a large yard, with enclosed brick-built sheds, counting-house, lofts, stabling for seven horses, &c.; the whole containing nearly an acre of ground. The rent is exceedingly moderate. The business of a timber-merchant has been carried on in the above premises for the last fifty years with great success. From their advantageous situation in the City and Docks, cannot fail to make it a very advantageous undertaking either in the present trade or as a saw mill. For further particulars apply to the Auctioneer, No. 8, Oxford-street.

TO TIMBER-MERCHANTS, BUILDERS, CARPENTERS, Cabinet, Couch, and Pianoforte Makers, Shipbuilders, Wheelwrights, and Others

MR. WARD will SELL by AUCTION, on the PREMISES, Bermondsey New-road, Southwark, on THURSDAY and FRIDAY, the 16th and 17th of FEBRUARY, at ELEVEN o'clock each day, the entire and well-assorted Stock of a timber-yard and saw-mill (Hewes and Spanish mahogany, Honduras, and various), Arch and straight boards and planks, 2 and 3 inch pine planks and scales, 3 inch and 4 inch yellow deals and battens, 1 inch and 1½ inch prepared flooring boards, 6 inch tongue and grooved pine planks and scales, 3 inch and 4 inch planks, best pitch pine posts and rails, 6 inch and 9 inch scantling and balks, 3 inch and 4 inch planks, Memel and Dantzic timber, 2 inch and 3 inch Memel and Riga planks, 1 inch and 1½ inch Memel and Riga boards, 1 inch and 1½ inch Spanish mahogany boards, 1 inch and 1½ inch Honduras mahogany boards, 1 inch and 1½ inch Cuba mahogany

COMPETITIONS.

TO BUILDERS AND OTHERS.

NOTICE is hereby given, that Plans and Specifications for BUILDING a NEW CHURCH, on Hyde Common, within the parish of Fordingbridge, and county of Southampton, will lie at the Office of Mr. JOHN HANNEN, Jun. Auctioneer, Fordingbridge, from the 4th until the 18th FEBRUARY next inclusive, between the hours of NINE and FIVE o'clock. All persons willing to CONTRACT for the execution of the works, are to send in sealed Tenders (addressed "Tenders for Works, Hyde Church,") directed to the Rev. C. H. POPE, Vicarage, Fordingbridge, on or before the 20th of FEBRUARY, 1854. The Building Committee do not bind themselves to accept the lowest tender.—Fordingbridge, January 29, 1854.

TO ARCHITECTS AND OTHERS.

THE Burial Board for the Parish of St. Marylebone will meet at the Court house, St. Marylebone, on WEDNESDAY, the 1st day of MARCH, 1854, for the purpose of receiving DESIGNS for laying out the Newmarket Farm at East End, Finchley, consisting of about twenty-five acres, as a CEMETERY, and for the erection of Two Chapels, Lodges, and other buildings thereon. Each design to be accompanied with an estimate of the cost of the execution of the several works. A premium of 30 guineas will be given for the selected design, which is to become the property of the Board, provided the author of such design is not appointed to carry out the works. Full particulars and instructions may be obtained on application to Mr. GREENWELL, Clerk to the Board, at the Court house, St. Marylebone. By order, W. E. GREENWELL, Clerk.

TO ENGINEERS, SURVEYORS, AND OTHERS.

THE Local Board of Health for the District of Llanelly are prepared to enter into arrangements with an Engineer for DESIGNING and LAYING DOWN on the Plan already prepared of the said District a complete system of SEWERAGE and DRAINAGE, with the necessary Drawings, Sections, and Specifications thereof, in conformity with the provisions of the Public Health Act, 1848, and subject to the approval of the Inspector-General of the Board of Health. The plans of the said district may be inspected at the Office of the said Board. Sealed Tenders to be sent on or before the 10th of FEBRUARY, 1854, to the Clerk, Mr. E. L. BROWN, Solicitor, Llanelly, of whom further information may be obtained.

COMPETITIONS.

TO GAS-ENGINEERS AND OTHERS.

THE Malvern Improvement Commissioners having determined to LIGHT the TOWN with GAS, parties desirous of treating with them on the subject can be informed of every particular upon application at the Commissioners' Office in Great Malvern, between the hours of TWELVE and TWO, on TUESDAY, the 7th of FEBRUARY next.

JOHN SKEY, Clerk to the Commissioners.
Great Malvern, 27th January, 1854.

CONTRACTS.

TO BUILDERS

PARTIES willing to CONTRACT for the several works to be performed on the ERECTION of a CONGREGATIONAL CHAPEL, in Chad street, Queen's square, Bath, may inspect the drawings and specification at the Offices of Messrs GOODRIDGE, Architects, 7, Henrietta street, Bath, on and after TUESDAY, the 24th instant, between the hours of TEN a.m. and FOUR p.m. The Tenders must be delivered sealed, on or before the 13th day of FEBRUARY, directed to the Building Committee. The lowest Tender will not necessarily be accepted. Bath, January 19, 1854.

TO CONTRACTORS FOR PUBLIC WORKS.

CARDIFF SEWERS.—The Cardiff Local Board of Health are prepared to receive TENDERS for the EXECUTION of the WORKS connected with the GENERAL DRAINAGE of the Town of CARDIFF, comprising Brick Culverting, with Manholes, Side Entrances, Junctions, &c &c.

Plans, sections, specifications, and form of Tender will be open to the inspection of Contractors at the New Guildhall, in the said town, between the hours of TEN a.m. and FIVE p.m. from the 13th to the 23rd day of FEBRUARY, 1854, both inclusive.

Printed forms of Tender may be had at my Office, and none others will be received.

Sealed Tenders, endorsed "Tender for Sewers," must be sent in to me on or before the 23 d of FEBRUARY, 1854.

The Local Board do not pledge themselves to accept the lowest or any Tender.

By order, T. WATKINS, Clerk
Offices of Local Board of Health, Cardiff.

BRISTOL LOCAL BOARD of HEALTH.

TO MASONS.—The Committee of the Bristol Local Board of Health hereby give Notice, that they are ready to receive TENDERS for the performance of the following Works for Three Years, from the 25th day of MARCH next, viz.:—

FOOTWAYS

For the supply of Curb, Edging, Paving, and Pennanting of the best Hanham Stone, Frenchay, Welsh, or other Stone fit of equal quality, and for Setting and Laying the same in the Footpaths of the streets, Squares Courts, Yards, Lanes, Passages, and Places within the city and county of Bristol, at such times as the said Local Board of Health and their Surveyor may direct. The Committee have divided the said city and county into Four Districts, and any person or persons willing to Contract for doing the above mentioned Works in all, or any, or either of the said districts, are required to deliver sealed Tenders for doing the same on or before TEN o'clock on THURSDAY morning, the 2d day of MARCH next, indorsed "Tender for Paving in District No. 1, 2, 3, or 4," and addressed, "To the Committee of the Local Board of Health, No. 13, Prince-street, Bristol," where a specification of the works, the terms of the contract, and a form of the Tender, and any other information may be obtained. Each contractor will be required to find two good and sufficient securities for the performance of his contract. The committee will not bind themselves to recommend the acceptance by the Local Board of the lowest or any Tender, nor until inquiry and approval of the proposed sureties.

By order of the Committee,
JAMES HARRIS, Clerk.
Offices, 13, Prince-street, Jan. 19, 1854.

TO BUILDERS.

PERSONS desirous of giving TENDERS for the ERECTION of a NEW CHURCH in the parish of Leyland, under the Preston Local Act, are informed that the drawings and specification may be seen on and after WEDNESDAY, FEBRUARY 1st, by application to Mr. MORRELL, Clough House, Leyland; and that all necessary further information may be obtained at the Office of the Architect, Mr. CHRISTIAN, 10, Whitehall-place, London, to whom Tenders are to be sent on or before WEDNESDAY, FEBRUARY 22nd.—The parties do not bind themselves to accept the lowest Tender.

TO BUILDERS

PERSONS desirous of CONTRACTING for the ERECTION of a VILLA RESIDENCE at Newcastle-under-Lyme, in the county of Stafford, for T. S. Wilkinson, Esq. may see the plans and specification at my Office, Cheapside, Newcastle-under-Lyme, on TUESDAY, the 24th, and SATURDAY, the 28th of FEBRUARY next. Tenders to be sent in on the day last named.

JAMES TRUBSHAWE, Architect.
Stoke Ville, Stoke upon Trent, 1st Feb. 1854.

CAMBRIDGE UNIVERSITY and TOWN WATERWORKS.—CONTRACT FOR WORKS.—The Directors are prepared to receive TENDERS for the ENGINES, PUMPS, RESERVOIRS, BUILDINGS, and the Several necessary Connexions of the Waterworks, according to Plans and specification which, with form of Tender, may be inspected, and the quantities taken out, at the offices of Mr. SAMUEL PEED, Solicitor, Bene't-street, Cambridge, and at the Offices of JAMES SIMPSON, Esq. Civil Engineer, 24, Great George-street, Westminster, on and after SATURDAY, the 28th day of JANUARY inst. Sealed Tenders, addressed "Tender for Waterworks," are to be delivered at the offices of Mr. PEED, in Cambridge, on or before the 22nd day of FEBRUARY next, addressed to the Directors of the Cambridge University and Town Waterworks. The Directors do not pledge themselves to accept the lowest or any other Tender, nor to order Tender until the securities are approved. By order of the Board,

SAMUEL PEED, Secretary to the Company.
Cambridge, 27th January, 1854.

CONTRACTS.

TO BUILDERS.

NOTICE is hereby given, that TENDERS for the performance of the branches of ARTIFICERS' WORK, hereafter mentioned, for the Ordnance Department, at the following stations, will be received at the Ordnance Office, Pall mall, London, on or before the 16th FEBRUARY next, viz.—at Plymouth, Devonport, and Dependencies: masons, bricklayers, and pavors' work; carpenters' work and ironmongery; plasterers and slaters' work; plumbers, painters, glaziers, and paperhangers' work; ironfounders, smiths, and coppersmiths' work. Pendennis and St. Mawes Castles; masons, bricklayers, and pavors' work; carpenters' work and ironmongery; plasterers and slaters' work; plumbers, painters, glaziers, and paperhangers' work; ironfounders, smiths, and coppersmiths' work. Tenders will be received for all the above trades for each station, either at the schedule prices, or at one uniform rate, above or below those prices. Tenders will also be received for one or more of the above trades for each station, either at the respective schedule prices, or at uniform rates above or below those prices.—Conditions and schedules of the contracts may be seen, and forms of Tender received, at the Royal Engineers' Office, Devonport, and Barrackmaster's Office, Pendennis Castle, on weekdays, between the hours of TEN and FOUR o'clock, after the 4th proximo, until the 14th proximo.

Royal Engineers' Office, Devonport, 24th January, 1854.

TO GARDENERS, NURSERYMEN, ROAD-MAKERS, AND OTHERS

THE Burial Board of the Parish of St. George, Hanover-square, hereby give Notice, that they are prepared to receive TENDERS for LEVELLING and MAKING the ROADS, and for LAYING OUT and MAKING the BORDERS and PLANTATIONS in their Burial-ground at Hanwell, in the county of Middlesex. The working plans, specifications, and conditions may be seen on the Premises, by application to Mr. JAMES ABBOTT, at the Clerk of the Works, between the hours of EIGHT o'clock in the Morning and SIX in the Afternoon (Sunday excepted), until SATURDAY, the 11th day of FEBRUARY next. Tenders are to be sent addressed to Mr. T. B. CHAPPELL, Board-room, Mount-street, Grosvenor-square, on or before TEN o'clock on WEDNESDAY morning, the 15th day of FEBRUARY next, and sealed and endorsed, "Tender for Roadmaking, Planting, &c. at the Burial-ground at Hanwell." The Board do not pledge themselves to accept the lowest Tender.

ROBERT WM. JEARRAD, Arch tect,
No. 17, Upper Eccleston-place, Pimlico.
Dated this 30th day of January, 1854.

TO BUILDERS AND OTHERS.

THE Burial Board of the Parish of St. George, Hanover-square, hereby give notice that they are prepared to receive TENDERS for the EXCAVATIONS and BUILDING the BRAINY CESSPOOLS, and SHAFTS; as also, for preparing the new CATACOMBS and TRENCH GRAVES, in their Burial-Ground at Hanwell, in the county of Middlesex. The working plans, specifications, and conditions, may be seen on the Premises, by application to Mr. JAMES ABBOTT, junior, Clerk of the Works, between the hours of EIGHT o'clock in the morning, and SIX in the afternoon (Sunday excepted), until SATURDAY, the 11th day of FEBRUARY next. Tenders are to be sent addressed to Mr. T. B. CHAPPALL, Board-room, Mount-street, Grosvenor-square, on or before TEN o'clock on WEDNESDAY morning, the 15th day of FEBRUARY next, and sealed and endorsed, "Tender for the drainage at the Burial Ground at Hanwell." The Board do not pledge themselves to accept the lowest Tender.

ROBERT WM. JEARRAD, Architect,
No. 17, Upper Eccleston-place, Pimlico.
Dated this 30th day of January, 1854.

TO GASFITTERS

THE Commissioners for Public Baths and Washhouses of Bermondsey, Surrey, hereby give Notice that they intend to enter into a CONTRACT for PROVIDING and FIXING the GAS-FITTINGS at the Buildings now being erected at the corner of the Neckinger-road, Spa-road, in the said parish; and that the said Commissioners will meet at the Workhouse in Bermondsey-new-road, on THURSDAY, the 16th day of FEBRUARY next, at the hour of FOUR o'clock in the afternoon precisely, in order to consider the Tenders of any persons who may be desirous of contracting for the same. Tenders to be in writing, sealed up, and delivered at the office of the Clerk of the Commissioners, 185, Bermondsey-street, endorsed "Tender for Gasfitting Baths and Washhouses," on or before twelve o'clock of the morning of the day of meeting. Further particulars and the conditions of the contract may be known by application at the Office of Mr. WILL, Esq. Architect, 185, Bermondsey-street, Bermondsey, any day after the 8th FEBRUARY, between TEN and FIVE o'clock. The Commissioners do not bind themselves to contract with the person offering the lowest price.—By order,

Bermondsey, January, 1854. R. DREW, Clerk.

THE BURIAL BOARD for the parish of St. Pancras, in the County of Middlesex, are ready to receive TENDERS for the erection of ENTRANCE LODGES and other BUILDINGS, for their new Cemetery at Finchley. The plans and specific tions may be seen, and estimates obtained, upon application at the Offices of the Architects, Messrs. BARNETT and BIRCH, 3, Verulam Buildings, Gray's Inn, on and after MONDAY, the 6th FEBRUARY, and sealed Tenders, endorsed "Tender for Cemetery Buildings," to be delivered at the Vestry Hall, St. Pancras Road, on or before TWELVE o'clock on MONDAY, the 13th FEBRUARY next. The Board do not bind themselves to accept the lowest Tender.

THE BURIAL BOARD for the parish of St. Luke's, in the County of Middlesex, are ready to receive TENDERS for a FENCE FOR PARK PENCING, five feet high, to be fixed at their new Cemetery, at Finchley. Further particulars may be obtained upon application at the Office of the Architects, Messrs. BARNETT and BIRCH, 3, Verulam Buildings, Gray's Inn, between the hours of TEN and FOUR; and sealed estimate, endorsed "Tender for Park Fencing," to be delivered at the Vestry Hall, St. Pancras Road, on or before TWELVE o'clock on MONDAY, the 13th day of FEBRUARY next. The Board do not bind themselves to accept the lowest or any Tender.

[For remainder of Contracts see next page.

CONTRACTS.

Builders, Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the

LOWEST BIRMINGHAM PRICES,

a complete LIST of which will be forwarded upon application.

FREDERICK HEATH,
Nail Manufacturer and General Factor,
Regent-parade, BIRMINGHAM;
or at 19, Dragoon-street, LONDON.

TO GAS AND WATER COMPANIES, CONTRACTORS, AND SHIPPERS.

CAST-IRON SOCKET-PIPES and Patent TUBING, with Connections of all sorts;
RETORTS of IRON and CLAY, FIRE BRICKS AND FIRE CLAY

Always in stock and sold at wholesale prices.

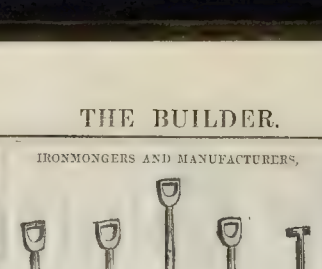
Tanks, Furnaces & Retorts complete, in London, the country, or any foreign port.

JOHN HUNT and CO. 6, BANKSIDE, SOUTHWARK.

G. C. ADKINS and COMPANY, LEAD MERCHANTS,

HEATH LEAD WORKS, BIRMINGHAM,

Manufacturers of Sheet and Scroll Lead, Improved Patent Compression, and Lead Pipe.



THE attention of Builders is directed to the important improvement in WEBB and GREENWAY'S PATENT IRON BARRELLED BOLT, which is perfectly true in the back, consequently can be fixed in much less time than the old tower or barrel bolt.

WEBB and GREENWAY also draw attention to their
Patent Brass Barrel Bolt,
Patent Brass and Iron Easement Stay and Fastener,
Patent Double Action Door Springs,
Patent Brass and Wood Knob Cupboard Turns, with revolving Spindle Brass Rosette Door Knobs, China and Glass Knob ditto,
Patent Warwick Piston Latch; Brass Eyes for Corn or Pole Rings; Copper, Brass, and Steel Weaver's Needles.

The above can be had from all Ironmongers throughout the United Kingdom, or from the Manufacturers, WEBB and GREENWAY, Brassfounders and Locksmiths, Steelhouse-lane, Birmingham.

HIGGS and GEORGE, Wholesale and Export Ironmongers, Agents for the sale of the Patent Wrought Nails, so much recommended by Mr. Barlow, Mr. Hosking, and other Engineers and Architects, have removed to the premises formerly occupied by Messrs. Cope and Sons, 3, Bridge-street, Blackfriars, where they have a large and extensive stock of Iron, Metal, Ironmongery, and the Patent Wrought Nails, for the supply both of the home and export demand.

IRONMONGERS AND MANUFACTURERS.

TO BUILDERS, CARPENTERS, AGRICULTURISTS, AND GARDENERS.

BENNETT and NAYLOR, GENERAL IRONMONGERS and FACTORS, Sole West End Agents for PARKES' slate Winton Parkes celebrated SHOVEL, DIGGING FORKS and HOODS, also for the only efficient STOVE, with or without a Flue, suited for Greenhouses and Conservatories, patronised by her Majesty, price from 12s upwards, at the Great Western General Ironmongery Warehouse, 255, Oxford-street, between Park-street and Soho. N.B. Andle-street, established for the sale of all descriptions of Ironmongery at wholesale prices. Sheet, Hoop, Rod and Bolt Iron. Locksmiths and Bell Hangers.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron, with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the whole thus possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary floor-boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is the more remarkable as the public at large, who are interested in building, both as superseding the present forms of timber and brick arches, and as bringing the great desideratum of fire proof construction, within the reach of humble dwelling-houses and domestic cottages, with a view to their general use.

Further information may be obtained of the Proprietor of the patent, Mr. BARRETT, 12, York-buildings, Adelphi.

FOUNDRY AND IRON WORKS,

68, DRURY-LANE, and CHARLES-STREET, DRURY-LANE.

GLOVER, BROS.,

Solicit the attention of the Trade to their extensive Stock of PATTERNS for CASTINGS of EVERY DESCRIPTION, either structural or ornamental.

Patterns of Hurdles, Chimney, Balconies, Railing, Ornamental Carriage and Park Gates, Lamp and Street Posts, Tanks, Pipes, Wheels, Pinions, Lathes, and Steam-engines; Rangeand Hot-plate Stoves. An improved Boot Hook, adapted for internal work.

A large stock of Rain-water Pipes, Plain and O G Gutters, Air bricks, Sash Weights, Air-tight Sewer Grates, Stable Fittings, Hurdles, &c.

Plain and Ornamental Vases 20 per cent. cheaper than Terra-cotta.

Estimates given for Iron Buildings, Wrought-iron Roofing, Greenhouses, Staircases, Wrought-iron Girders, Fireproof Doors, Shop-sashes and Strong Rooms, Tanks and Boilers, and every description of ironwork to specification, and the work executed with every attention to quality and despatch.

GLOVER BROS' IRONWORKS,
168, DRURY-LANE, and CHARLES STREET.

VALUABLE INVENTION

FOR SALE, the PATENT RIGHT for GREAT BRITAIN and IRELAND of MOORWICK'S

PATENT SCREWING MACHINE.

This Machine, recently invented and patented, is for forming Screw Threads on Screw Bolts and Wood Screws, &c.; also for forming Mouldings and Ornaments on circular pieces of steel, iron, copper, or other metals; and can be made to form screws from three inches to one-eighth of an inch in diameter. The advantages of this over the usual method of making screws are;

1st. An additional strength imparted to the material by the compression employed in the operation, and the bolt not being cut through;

2nd. The saving of waste, the whole quantity usually cut away being compressed into the bolt;

3rd. The great rapidity and facility of production;

4th. Saving of all antifrictional material, such as oil; and

5th. Your present dissipated labour, boys only being required in the manufacture.

The Machines at present constructed for screwing half an inch and under, turn out, easily, from twelve to fourteen per minute, and the Machines for larger bolts in like manner from eight to twelve per minute according to length of screw, each Machine requiring the attendance of only one boy to feed it.

Two trained boys can thus attend to three, with one of the Machines and a conveniently placed furnace, will screw 6 000 wood screws per day, each screw requiring to be headed. This number of small screws cwt. of inches cut will weigh about two tons, and the cost for screwing will stand as follows.

Cost of heating	..	..	£0 5 0
Two boys at 1s 6d. per day	..	..	0 3 0
Cost of the ..	..	..	0 1 0
Do. of power, &c	..	..	0 0 6
			0 14 0

Say 15s for making two tons of wood screws of 6 inches in length. But in this operation there is no waste, which in the usual method amounts to one-third of such screws. Taking the iron at two tons, and at 12l per ton, the saving in material alone, on one day's work of one machine, amounts to 4l as compared with the ordinary process.

Now if we who have only seen the usual method of making screws by blows with an eye-piece in a vice, but the statement is a simple one, can be understood by any interested party. The machine, for of which I have seen, can now be seen in work, and the matter is material from their performance. They need no engineering assistance, are not liable to get out of order, not subject to accidents, and they can be made at a very moderate price. The services of a skilful workman are only necessary to change and adjust the dies when worn out. For further particulars, apply to GUNN, CAMERON, and MCORMICK, 14, Fleet-street, London.

COLLINGE'S PATENT HINGES.—Sole Manufacturers, CHARLES COLLINGE and Co. 55 and 56, Lancelot-hill, where a great variety are always on view for church, park, railroad, coach-house, and other gates and doors of large and small dimensions, a gate of 8 lbs. weight moving with these hinges as easily as a wicket. Ornamental Hinges, suited for drawing-rooms, &c., doors fitted with them may be removed and replaced in an instant. Rising and bolt locking spring hinges, also superior cabe fastenings, at moderate prices. None genuine unless marked "Charles Collinge, cabe-nail, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axle-trees, sugar-mills, &c.

FENDERS, STOVES, and FIRE-IRONS.

Buyers of the above are requested, before finally deciding, to visit WILLIAM S. BURTON'S SHOW-ROOMS, 39, Oxford-street (corner of Newman-street), Nos. 1 and 2, Newman-street, and Perry's-place. They are the largest in the world, and contain such an assortment of FENDERS, STOVES, RANGES, FIRE IRONS, and GENERAL IRONMONGERY, as cannot be equalled elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright steel fenders, with bronzed ornamental two sets of bars, 5l 15s to 12l 12s; Bronze Fenders complete, with standards, from 7s. to 3l.; Steel Fenders from 2l 15s to 8l.; ditto, with rich ormolu ornaments, from 7l 15s to 21 7s; Fire-irons, from 1s 9d. the set to 4l 4s. Sylvester and all other Patent Stoves, with radiating hearth-plates. All which he is enabled to sell at these very reduced charge.

First—From the frequency and extent of his purchases: and Secondly—From those purchases being made exclusively for cash

THE PERFECT SUBSTITUTE for SILVER.—The Real NICKEL SILVER, introduced 20 years ago by WILLIAM S. BURTON, when PLATED by the patent process of Messrs. Elkington and Co., is beyond all comparison the very best article next to sterling silver that can be employed as such, either useful or ornamental, as by no possible test can it be distinguished from real silver.

CUTLERY WARRANTED.—The most varied assortment of TABLE CUTLERY in the world, all warranted, on SALE at WILLIAM S. BURTON'S, at prices that are remunerative only because of the largeness of the sales. 34-inch ivory-handled table knives, with high shoulders, 11s. per dozen; deserts to match, 10s.; if to balance, 1s. per dozen extra; carvers, 4s. per pair; larger sizes, from 14s. 6d. to 28s. per dozen; extra fine ivory, 32s.; if with silver ferrules, 37s. to 50s.; white bone table knives, 7s. 6d. per dozen; deserts, 6s. 6d.; carvers, 2s. 3d. per pair; black horn table knives, 7s. 6d. per dozen; deserts, 6s.; carvers, 2s. 3d. black wood-handled table knives and forks, 8s. per dozen; table steels, from 1s. each. The largest stock in existence of plated dessert knives and forks, in cases and otherwise, and of the new plated fish carvers. A handsome assortment of Razors, Penknives, Scissors, &c. of the best quality.

THE BEST SHOW of IRON BEDSTEADS in the KINGDOM is WILLIAM S. BURTON'S.—He has TWO VERY LARGE ROOMS, which are devoted to the exclusive show of Iron and Brass Bedsteads and Children's Cots, with appropriate Bedding and Mattresses. Common Iron Bedsteads from 15s. 6d.; Portable Folding Bedsteads from 12s. 6d.; Patent Iron Bedsteads fitted with dovetail joints to extend sacking, from 21s.; and Cots from 21s. each; handsome Ornamental Iron and Brass Bedsteads, in great variety, from 2l 2s. to 14l 14s.

GAS CHANDELIERS and BRACKETS.—The increased and increasing use of gas in private houses has induced WILLIAM S. BURTON to collect from the various manufacturers all that is new and choice in Brackets, Pendants, and Chandeliers adapted to offices, passages, and dwelling-rooms, as well as to have some designed expressly for him; these are now ON SHOW in one of his TEN LARGE ROOMS, and present, for novelty, variety, and purity of taste, an unequalled assortment. They are made by the best makers, at prices proportionate with those which have tended to make his Ironmongery Establishment the largest and most remarkable in the kingdom, viz. from 12s. 6d. for a single light to 16l 16s.

WILLIAM S. BURTON has TEN LARGE SHOW-ROOMS all communicating, exclusive of the shop, devoted solely to the show of GENERAL IRONMONGERY and DOMESTIC ECONOMY, including cutlery, nickel silver, plated and japanned wares, iron and brass bedsteads, all arranged and classified that purchasers may easily and at once make their selections.

Catalogues, with engravings sent (per post) free. The money returned for every article not approved of.

FIRE-PROOF FLOORING.

The earnest attention of ARCHITECTS, ENGINEERS, &c. &c. is called to a particularly economical mode of erecting Fire-proof Floors capable of sustaining great weights, without any thrust against the walls. Any information, with Estimates, Drawings, &c. may be obtained at the Offices.

JOHN WALKER, Manufacturer of IRON and WOOD HOUSES, Stores, &c. calls the attention of merchants, shippers, and others to the following testimonial, which he publishes by consent of the writer:—Copy.—"16, New Broad-street, July 11, 1853.—John Walker, Esq.—Dear Sir,—I have much pleasure in sending you the following extract from a letter received from my friends, Messrs. M'Kellar and Wood, dated Geelong, April 1, 1853:—'We are just rivetting the back of the store. You can tell Mr. Walker that it is admired by every one; and we are only saying what he deserves, that he has done us every justice and given us complete satisfaction. I would give something to take you over the premises; I am sure you would approve of all that has been done.' I remain, dear Sir, Yours truly, (signed) Alexander Morrison." The original may be seen at John Walker's Offices, and cards may be obtained to view the works, where some scores are in progress.

Offices: Corner of Arthur-street West, London-bridge; and 3, India-buildings, Liverpool.

IRONMONGERY, NAILS, STOVES, RANGES, &c.

AT WALMSLEY'S,

126, 127, and 128, LONDON-ROAD, SOUTHWARK.

FOR THE SUPPLY OF BUILDERS, CARPENTERS, UPHOLDERS, CABINET MAKERS, SMITHS, WHEELWRIGHTS, AND OTHERS, AT WHOLESALE PRICES.

Best Sheet Floor-brads.

Best fine Cut Clasp and Rose, 1½ 1¾, 2, 2½, and 3 inch.

Sash Weights. Air Bricks, 2s per doz. Hooping for bond 12s. per cwt. Cast Lark, 11s per cwt. Sash Pulleys, 8s. 6d. per gross. Arnott's Ventilators, 4s. each. Ellipse Stoves, with double backs, 2d. per inch. Register Stoves from 4½d. per inch.

Improved Self-acting Ranges with oven and boiler { 28s. 32s. 36s. 32s. 36s. each. } 15 inch.

Bes Self-acting Ranges, with oven and boiler, wrought bars and bright fittings { 56s. 58s. 60s. each. } 18 inch.

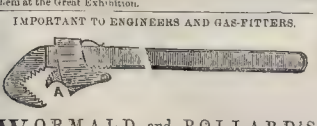
An extensive stock of bright and black Register Stoves in every variety of design, at remarkably low prices. A large assortment of Rim, Drawback, Mortise, Iron Gate, and every other kind of Locks and Latches. Finger-plates, Levers, and Bell-pulls, en suite.

BAR, HOOP, SHEET, AND ROD IRON. RAIN-WATER PIPES AND GUTTERS, ALL SIZES.

The Stock of this Establishment is too extensive to be described in the limits of an advertisement, and the most correct idea that can be given of it is by saying that every trade consuming ironmongery can here select whatever they require at WHOLESALE PRICES

WALMSLEY'S, 126, 127, 128, LONDON-ROAD, SOUTHWARK (Six Doors from the Obelisk).

AUSTIN'S IMPERIAL



PATENT SASH and BLIND LINE,

can be obtained of all

COPEMAKERS, IRONMONGERS, FACTORS, AND WHOLESALE HOUSES IN TOWN OR COUNTRY.

THOS. B. LAWRENCE and CO. Zinc Dealers and Manufacturers, 10, York-place, Lamb's Conduit-street, having removed to their new premises, are selling SHEET ZINC at 32s. per cwt.; Perforated Zinc, at 4d. per foot; Rain-pipes, 3 in. 4d. per foot; Gutters, 4 in. 4d. per foot, and in proportion. All nine-shafts, Cowls, &c. equally cheap. Plumbic Zinc, as fine Paint and Galvanized-iron Plates. A prize medal was awarded them at the Great Exhibition.

IMPORTANT TO ENGINEERS AND GAS-FITTERS.

WORMALD and POLLARD'S UNIVERSAL PIPE-WRENCH.—This patent Wrench is adjusted at pleasure to take and retake firmly all piping, from ½ to 2 inch, the same coupling, doing simply the work of a dozen rings, which no other tools can do, for strength and durability. Price, 21s. 3s. 6d. half price of set of tongs. Also a new Patent spanner, for nuts of all sizes and forms, price 18s.—W. LEGG, Tinman, SIDSBALE, Sole Maker, at the Office and Manufactory of the Imperial Consumers' Gas Company of Birmingham.

N.B. Town travellers and country agents wanted.

THE PATENT GALVANIZED IRON.

TUPPER and CARR,
Owners of Crawford's Patents, and Successors to
THE GALVANIZED IRON COMPANY,
Supply Patented Galvanized Sheets ready for roofing, &c. Water or Gas Pipes, Castings, Wire of all gauges, Guttering, Hooping, &c. Wholesale, retail, and for export.
As all who use the Trade
GALVANIZING WORKS,
REGENT'S CANAL DOCK, LIMEHOUSE;
BROAD-STREET and CHARLEY-STREET, BIRMINGHAM.
LONDON OFFICE, 3, MANSION-HOUSE PLACE.

IRON BUILDING AND ROOFING

WORKS, BIRMINGHAM.
PORTER (BROTHERS) AND STUART,
(LATE JOHN H. PORTER),
IRON FOUNDERS, SMITHS, AND MANUFACTURERS OF CORRUGATED IRON.

PATENT GALVANIZED IRON.

(IMPROVED PROCESS)
JOHN SYMONDS and CO.
WORKS.—GLASS-HOUSE YARD, opposite the principal Entrance to the London Docks.
GALVANIZED SHEET-IRON and WIRE of every description, superior in all respects to that produced by any other process. THE TOUGHNESS AND MALLEABILITY of the Iron being preserved.
Estimates given for IRON ROOFS, Corrugated Sheds, Houses, Telegraph-Wire, Submarine Cables, WIRE-ROPE, Fencing, &c.
Roofs fixed complete.

GALVANIZING WORKS.—SKAIFE'S

PATENT GALVANIZED IRON (Superior Process).—Works at the Regent's canal-basin, Commercial-road, Limehouse, London. J. SKAIFE supplies this Metal in every form, viz. Sheets, plain and corrugated, of all sizes and gauges. Wire of every gauge, and Wire Netting of all meshes and gauges. Guttering, Rain water, Screwed Gas and Water pipes, Hooping, Castings, Furnace-pans, Baths, Buckets, &c. wholesale retail and for export. Every description of Skaife's Ironwork Galvanized. Clasp nails, &c. kept ready Galvanized. Estimates and drawings given for roofs and buildings fixed complete. J. SKAIFE is also Agent for Morewood and Rogers's Patent Galvanized Tinned Iron, both flat and corrugated; also for Morewood and Rogers's Patent Galvanized Tinned Iron Tiles, for exportation; and Plumbic Zinc. Portable Emigrants' Houses and Substantial Stores supplied at moderate prices, and on the shortest notice. An allowance to the Trade.

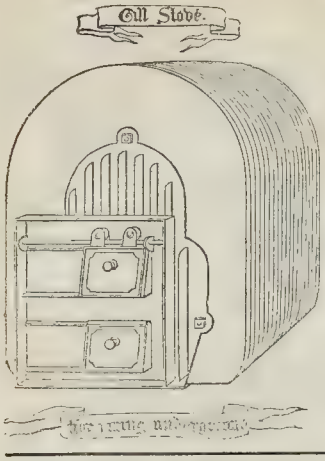
212 SAFES.—MILNER'S HOLDFASTS,

fire-resisting by means of the only perfect non-conductor, vaporisation, are the strongest, best, and cheapest, because the only effectual safeguards against fire, robbery, or violence, for iron or deeds, cash or valuables. Lord Chief Justice Campbell, in summing up on the late trials for infringement of MILNER'S SAFES, was pleased to observe: "He must say he had been astonished to find such strong evidence of their usefulness; up to this hour he had no idea that there were any human means of so effectually preserving papers from the action of fire. It was a comfort for one to know that there was such an invention, by which valuable documents might be rendered secure, notwithstanding the calamity of fire." As to whether it is useful, it appears to be all-wise on all hands; IT SEEMS TO BE A MOST MARVELLOUS PRESERVATIVE AGAINST FIRE—for the water remains permanently held in artificial or natural vessels, AND THE VERY CALAMITY IS MADE THE CURE—for the heat releases the water or moisture, and then it is turned into steam, and the steam moistens the substance that is to be preserved, AND SO IT IS AN EFFECTUAL GUARD AGAINST FIRE.—Milners' Phœnix Safe Works, Liverpool. London Depot, 47A, MOORGATE-STREET, CITY, London.

GEORGE and SAMUEL CUTLER,

WENLOCK IRON WORKS, 8, Wharf, Wenlock-road, City-road, London.—Contracts for Cast-iron Tanks, Gasholders, Purifiers, and all descriptions of Gas Apparatus (Gas-works erected complete). And manufacturers of Corrugated and all kinds of Iron Roofing for Railway Stations, Sheds, Warehouses, &c. &c. executed on the most reasonable terms. Ship Tanks, Steam and Range Boilers, and every description of Smith's Work of the best materials and workmanship.—N.B. Improved Slide Valves, Cross Bars, and Screws, and Bolts, and Nuts, of all sizes, kept in stock.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.



ANDREW CLARK and COMPANY,

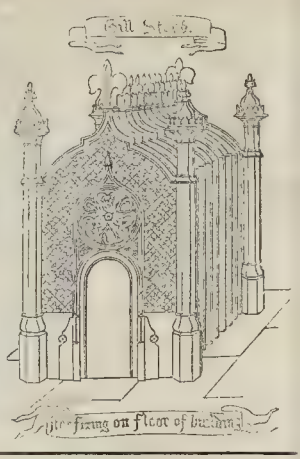
PLUMBERS,
THE LEAR GARDEN LEAD WORKS, SOUTHWARK,
Invite the attention of Manufacturing Chemists to their Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER.

Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

STUART AND SMITH'S
PATENT GILL STOVE,
FOR
HEATING CHURCHES AND OTHER PUBLIC AND PRIVATE BUILDINGS.



The constant failures, and enormous expense, consequent upon the endless variety of experiments to warm buildings has left the public in no doubt as to whether there exists any certain, economical, and safe mode of effecting that object or not.

STUART AND SMITH,
ROSCOE-PLACE, SHEFFIELD,

confidently assert, that the Air-Warmer they recommend, possesses the desired qualifications, and respectfully request Gentlemen interested in the question, to ascertain the fact from the actual working of the invention.

It has been fixed in the following, besides a great many other private and public buildings:—St. Stephen's, Longsight, Manchester: Grassendale Church, Aigburth, Liverpool; St. Ann's, Aigburth, Liverpool; North Wootton, near Lynn, Norfolk; St. Paul's, Alnwick, Northumberland; Bettesanger Church, Sandwich, Kent; St. Mary's, Pitsmoor, and Grimesthorpe, Sheffield; County Lunatic Asylum, Derby, &c. &c. &c.

Prospectuses, and every information, sent on application.

PARNELL'S PATENT DEFIANCE LOCKS.
DEPOT, 52, STRAND, LONDON.

Messrs. PARNELL and PUCKRIDGE respectfully inform the public, that they have a stock of these Locks ready for inspection. To give a detailed description of this Lock within the limits of an advertisement is impossible; Messrs. P. and P. must therefore content themselves with saying, that it is not one lock, but several locks in one; that no instrument but its own key can possibly open it; that it cannot, by any art or ingenuity, be picked; that the principles of it are simple, and applicable to locks of all sizes; that it cannot be put out of order; and, notwithstanding, that it is moderate in price.

Messrs. P. and P. satisfied of the peculiar excellence of this Lock, respectfully, yet with great confidence, place it before the public as being what they have called it THE DEFIANCE LOCK THAT CANNOT BE PICKED.

Messrs. PARNELL and PUCKRIDGE have also a stock of Fire-proof Safes of the best make, Deed and Cash Boxes, Copying and Lever Presses.

PARNELL'S
PATENT NOISELESS BOX STAPLE & STRIKING PLATES,
52, STRAND, LONDON.

This very simple and efficient invention entirely obviates the jamming of doors, and the consequent irritating disturbance caused by it on every house. Indeed, it may truly and fearlessly claim to the title of "one of the wants of the age," for it has been wanted for a very long period; and in looking at it one involuntarily exclaims with surprise, that it has never been discovered before. The Patent Noiseless Box Staple is made of strong malleable iron of the best quality, and is adapted for use in all situations and for every purpose for which the present Box Staple is used: for dead-locking, it possesses double security to the present article, and at very little more cost.

Sold by M. L. PARNELL, Inventor and Patentee of "Parnell's Patent Defiance Lock," and may be had of every Ironmonger in Great Britain.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBYER at the Great Exhibition of 1851, which invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails wrought and cut, Copper and Zinc, Patent Locks of all descriptions; Chain, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles, Dr. Arnott's Ventilator, 4a; and the new registered Venetian Ventilator, somewhat admired, 3s 6s 6d. each.

Best Patent Sash Line.				
4s.	4s 6d.	5s. 6d.	7s.	8s. 10s. per gross.
1	2	4	5	6

6 in. Mortise, white China Furniture, 3s 6d each.

J. H. BOOBYER (late STURCH and BOOBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.
14, Stanhope-street, Clare-market, London.

RECENT TESTIMONIALS
of the practical worth and efficient security of
CHUBB'S LOCKS AND STRONG-ROOM DOORS.

CHUBB and SON beg to lay before the public the two following Letters, which they have lately received, as affording further proof of the security of their Manufactures:—

Ineffectual Attempt upon the Strong Room of the London and North-Western Railway, Liverpool

"London and North-Western Railway Company,
Liverp ol, 17th May, 1853.

"Gentlemen,—I have much pleasure in bearing testimony to the efficiency of the Iron Door and Locks of your make, which secure the Strong Room at this office, and which completely baffled the efforts of some burglars to force an entry at the money chest on the night of Thursday last, although it is evident that considerable force was used to break open the door.

"I am, Gentlemen, your obedient servant,
"MESSRS. CHUBB and SON." "GEO. PALMER.

From Mr. Otway, Superintendent of Police, C Division.

"8, Great Vine-street, May 3, 1853.

"Gentlemen,—I have the pleasure to inform you, that having one of your Locks on the street door of my house prevented my being robbed last night. The thief tried to open it, but not succeeding, has damaged it that I have sent it to you for inspection, and shall feel obliged if you will have it repaired.

"I am, gentlemen, your obedient servant,
C. OTWAY, Superintendent C Division of Police.

"MESSRS. Chubb and Son."

CHUBB'S LOCKS, with all the recent Improvements; Cash, Deed, and Paper Boxes of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock. Complete Illustrated Lists, with Prices and Sizes, will be sent on application to

CHUBB and SON, 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley-fields, Wolverhampton.

BUILDERS, Contractors, Carpenters, and others are invited to inspect the stock of NAILS, TOOLS, BRASS, AND GENERAL IRONMONGERY, at PEELE and STEDALL'S, Nos. 5 and 6, BROAD-STREET, BLOOMSBURY.

The rates will be found the lowest, and the stock one of the largest in the trade. A price list sent on application.

B. C. CROWN IRON.—82, Upper Thames-street.—W. BOWMAN begs to inform engineers, smiths, wheelwrights, and coopers, he is now SELLING BAR, HOOP, and SHEET IRON, of the above brand, at prices greatly under the present rates. Price lists may be had on application at the warehouse as above.—N.B. Contracts taken for iron supplied direct from the works at 10s. per ton reduction on town prices.

WARMING by HOT WATER.—Churches, Chapels, Public and Private Buildings, heated with hot water from 60 to 140 degrees, upon the most approved principle, by C. WILLIAMSON, Engineer, Coventry. N.B.—A guarantee given with each apparatus.

WARMING CHURCHES, &c. by HOT WATER.—JOHN WEEKS and CO. King's-road, Chelsea, Hot Water Apparatus Manufacturers, whilst respectfully soliciting the attention of architects, builders, &c. to their superior apparatus for warming churches, mansions, halls, offices, and public buildings, by the circulation of hot water in pipes, beg to call particular attention to the accurate statement in the "Builder" of Jan. 14, 1854, which fully bears out the able address of the Rev. H. J. Rogers, delivered at a meeting of the Architectural Society, wherein Mr. Price shows that, treating by hot water is truly the only effect to sustain applicable to warming churches and other large buildings. It is free from all objections, secure, equal in its working, and produces perfect ventilation and a uniform comfortable warmth throughout the largest buildings.—Messrs. JOHN WEEKS and CO. will guarantee their Hot Water Apparatus for thirty years at 5 per cent.

NEW HOUSES OF PARLIAMENT.—DEFRIES'S GAS STOVES, RANGES, and BATHS, just completed for two kitchens in the above building. A great variety in stock upon the same principle. Gas Rolls from 7s. by which a warm bath may be obtained for three halfpence. Gas Cooking and Heating Stoves for all classes, from 1l. Defries's celebrated Dry Gas-Meters.—60,000 in use. Testimonials at the office, 143, Regent-street. Manufactory removed from Hammond-road and St. Mart n's-lane to more extensive premises, New-road, near Albany-street.

HEATING by HOT WATER.—J. JONES, Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK: also fire and furnace bars, ornamental and plain supply cocks, flue doors and frames, furnace grates, soot doors for the same, hot-water pipes, elbows, tees, syphons, the little valves, stop cocks, flange and check elbows, &c.; also, trough pipes. Drawings and prices of the above, on application to J. JONES, Iron-bridge-wharf, No. 6, Backside, London, near the Southwark-iron-bridge.

TO ARCHITECTS, TIMBER MERCHANTS, AND BRICK MANUFACTURERS.

THE best and quickest drying of the wood, bricks, and houses, is obtained by the BOULEVE'S PATENT CALORIFERE, evaporating in twenty-four hours about 6,000 lb. of water, without altering the fine texture or injuring the quality of the most precious articles. The Calorifere works by hot air only, without any machinery or power. Small room is required; no repair necessary for many years. A great deal of fuel, large stores, or wharf-room, and rent thereby considerably reduced by the use of the above valuable stove. It is in operation at Wood-paving Company's Works, Pimlico; at Mr. Mackenzie's, Architect, of Victoria-street, Westminster; Vogan, Son, and Raymond, Hackney, and several malsters, millers, and manufacturers in London and country.—Apply or post to T. BOULEVE, Engineer for French Flour Mills, Turbines, &c. 55, King William-street, City.

THOMAS EDINGTON,
IRON MERCHANT AND CONTRACTOR,
Inspector of Railway Iron and Ostlers,
17, GORDON-STREET, GLASGOW.

FRANCIS ARDING, Engineer and Iron Founder, Albert Iron Works, Uxbridge, Middlesex, begs to draw the attention of Builders, Contractors, and others to the above useful Machine, manufactured by him, for sifting sand, gravel, lime, ashes, &c. by the use of which one man and a boy can do the same amount of work as is shown by the common sieve.

Price, delivered in London.—	
No. 1.—3 feet cylinder	£8 6 0
No. 2.—3 feet 6 inches cylinder	7 7 0
No. 3.—4 feet cylinder	8 8 0

Architectural, structural, engine, and mill castings of every description.

TO GAS-FITTERS, ENGINEERS, BUILDERS, DECORATORS, &c.

F. P. M'CARTHY, 7, Beech-street, Barbican, begs to inform the above and other trades, that he is now SELLING, wholesale, all requisite FITTINGS for GASWORK—pendants, brackets, chandeliers, &c.; compo, tin, and iron gas piping, and fittings in general; sheet iron, galvanised iron, tin plates, iron wire, &c.; best lacquer, 1s. per gill. Old metals bought or taken in exchange. List of prices sent on receipt of stamp. Observe, 7, Beech-street, Barbican.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Zinc, Tube, and Copper Wire, Gas Pendants, Brackets, and Joints of all descriptions for Gas-fitting, in Brass and Iron, Tin, Composition, Iron and Brass Tubing, Cornice-poles, Rings and Lacquered Case Tube for Picture Rods, Desk Rods, &c. &c.

Superior Tooled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. &c.

RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 12, Charles-street, Long-acre, London.

SAW-MILL MANUFACTORY, Chelsea, London.—WORSAAM and CO. invite the attention of all concerned in sawing, planing, and moulding wood to the simplicity and completeness of their machines over those now in use, which are both economical and expensive. Drawings and prices sent on application. Estimates given for complete saw-mills for exportation or otherwise.

TO BUILDERS, CARPENTERS, &c.

THE following are the present prices of IRONMONGERY, at YOUNG and CO'S. 29, Duke-street, Grosvenor-square, all other articles in the same proportion for cash.

Cut Casp. 1d. 6d.; 7½d. 9d.; 10d.—1s 7d.; 2od. 2s 4d. per 1,000.
Patent Lock, No. 1 6d., No. 1.7s., No. 0.8s. per gross.
6 in. Mortise Locks, Brass Furniture, 3s. 3d. each.
6 in. ditto ditto, China Furniture, 3s. 8d. each.
Bolton's Springs for Sash Cords, 2s. in 3lb. each.
Cast Butts, 2 in. 1s 0½d.; 2½ in. 1s 4d.; 3 in. 2s. per dozen.

WIRE STRAND FENCING, as furnished with all its fittings, by R. S. NEWALL and CO., having received the unanimous approval of practical men, is confidently recommended as the best fencing for park and farm inclosures, or subdivisions, for temporary agricultural inclosures instead of any kind of hurdles, for road-side and all other fencing.

The PATENT WIRE STRAND FENCE possesses an economy, security, and durability not to be found in combination in any other fence hitherto introduced. This fence, as fitted by R. S. Newall and Co. after the model of the fences of this material in the Regent's and Hornsey Parks, at Windsor, has the inherent property of remaining equally tight and rigid, under any variations of temperature.

N.B. Estimates given at so much per running yard, for fencing, fixed complete. Specimens, sketches, or any other particulars, will be forwarded on application.

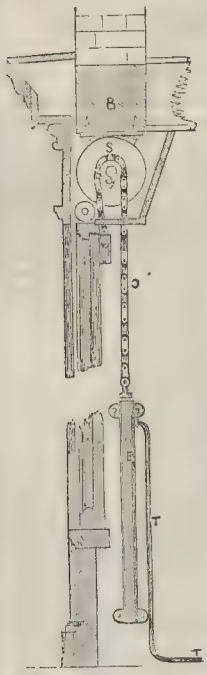
OFFICES, Gateshead-on-Tyne.
190, Strand, London.
67, Hyde-park-street, Glasgow.
27, Dale-street, Manchester.

GUTTA PERCHA TUBING.—Many inquiries having been made as to the durability of this tubing, the Gutta Percha Company have pleasure in drawing attention to the following letter received from Mr. C. Hacker, surveyor to the Duke of Bedford:—"Office of Works, Woburn-park, Jan. 10, 1853.

In answer to your inquiries respecting the gutta percha tubing for pump suctions, I find that the water has not affected it in the least, although it will rot hemp in two years, we have adopted it largely, both on account of being cheaper than lead, much easier fixed and a more perfect job. Yours &c. C. Hacker."

N.B. The Company's Illustrated Circulars, containing instructions to plumbers for joining tubes, lining tanks, &c. will be forwarded on the receipt of three postage stamps. The Gutta Percha Company, Patentees, 18, Wharf-road, City-road, London.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing, at one shilling the foot.



R. S. NEWALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.

OFFICES.—Gateshead-on-Tyne.
190, Strand, London.
67, Hyde-park-street, Glasgow.
27, Dale-street, Manchester.

LATHS.—A large stock of PETERSBURGH LATHS of best quality ready for delivery at J. EASTWOOD and SONS', Wellington Wharf, Belvedere-road, Lambeth.

HAREWOOD GRINDSTONES.—S. THICKETT begs to inform Engineers, Machinists, Gunbarrel makers, Cutlers, &c. that he can supply, direct to order, of any size of the above very superior-grained stone. The cementing parts (out of which being very tender ones, they are unsuitable for steam-power. Sample Grindstones sent to order.—Address, Victoria Wharf, Isle of Dogs, where a Stock will be kept. Cuts like a Harewood stone.—*Old Proverb.*

Grindstones for exportation. Westward, Bramley Fall, and Potternewton direct to order.

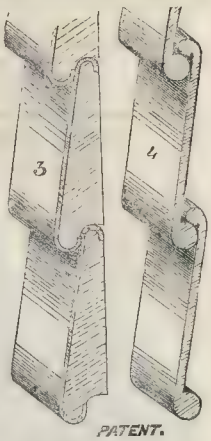
PATENTS DATED 9TH DAY OF OCTOBER, 1852, AND 12TH DAY OF OCTOBER, 1853.

CLARK & CO.'S

NEW

PATENT HYDRAULIC APPARATUS,

FOR



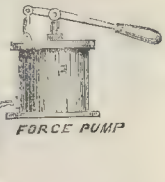
OPENING AND CLOSING

THEIR

PATENT RECTILINEAR REVOLVING SHUTTERS,

AND

PATENT COMBINED IRON AND WOOD REVOLVING SHUTTERS.



PATENT.

THE advantages of the Hydraulic Apparatus are,—great facility of application; a saving of seventy-five per cent. of friction in the working parts over the old plan of worm and wheel; cannot get out of repair, and it is impossible for the shutter to run down; are more easily opened; require no labour whatever to close them; the cost is reduced; and does not affect the architectural or other arrangement of the building, as the pump can be placed at any distance from the shutter, and in any position.

The annexed cuts show the arrangement: fig. 4 is a section of the rectilinear, and fig. 3 a section of combined iron and wood revolving shutters.

SELF ACTING APPARATUS. Where water can be obtained from the Water Companies' main or from a cistern at the summit of the building (say 40 feet), the pump is dispensed with by applying the cylinder E of rather larger dimensions; the pressure is sufficient to raise the heaviest shutter. By means of a stop-cock the water is admitted into the cylinder and raises the shutter, and by allowing it to escape the shutter descends with its own gravity, without trouble or labour. The amount of water required to work the largest shutter is only six gallons per day. Any number of shops or windows can be supplied by one cistern.

This apparatus is so simple that derangement is impossible.

FORCE PUMP

PROSPECTUSES, ENGRAVINGS, AND DESCRIPTIONS FORWARDED.

CLARK AND CO.

15, GATE-STREET, LINCOLN'S-INN-FIELDS, LONDON.

BUNNETT AND CO.

ENGINEERS, FOUNDERS, AND MACHINISTS,

No. 26, LOMBARD-STREET, LONDON, AND DEPTFORD, KENT,

ORIGINAL PATENTEES OF REVOLVING IRON SHUTTERS,

AND OF THE

NEW PATENT CURVILINEAR REVOLVING IRON SHUTTER,

Which obtained the PRIZE MEDAL in the Great Exhibition of 1851.

The greatly increased demand, with additions to and improvements in their extensive plant and machinery, command of the best markets for material, and employment of experienced workmen, enable B. and Co. to supply this very superior Shutter at a price fast effectually supersedes any of the crude and imperfect expedients its extensive adoption has called forth.

REVOLVING WOOD SHUTTERS, of a superior description, fitted with Metallic Hinges, and adapted to work in any required direction.

BUNNETT AND CO.

ARE ALSO THE ORIGINAL PATENTEES AND MANUFACTURERS OF

METALLIC SASH BARS AND MOULDINGS FOR SHOP-FRONTS, SKYLIGHTS, &c.

All works are guaranteed of the very best description, and architects may depend on their designs being faithfully carried out. They are respectfully requested, when intending to adopt any of BUNNETT and CO.'S works, to see that the name is properly inserted in the specification, much inconvenience having occasionally occurred from the omission.

Estimates, with all necessary information, and explanatory and detail drawings promptly furnished.

JAMES MILES,

CHEAP ENGLISH AND FOREIGN WINDOW GLASS WAREHOUSE,

18, CHURCH-STREET, SHOREDITCH, NEAR EASTERN COUNTIES TERMINUS.

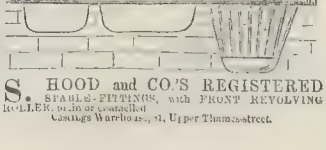
Well seasoned materials and every workman-ship at the lowest possible prices. A quantity of doors and sashes always in stock.—By enclosing a postage-stamp, a full list of prices will be returned.

REVOLVING SAFETY WOOD and IRON SHUTTERS SNOXELL, Patentee, 96, Regent-street, and at his Steam works, 16, Old-street. These Shutters have fully borne out their superiority over other revolving shutters for security, durability, and simplicity. References can be given to noblemen whose mansions are fitted therewith, and numerous large establishments where some are fixed measuring upwards of 500 square feet in one shutter, and which are opened and closed in a few moments with the greatest possible ease, without the use of machinery. The Patentee manufactures Brass Sash Bars, Stall Board Plates, &c.

DISSOLUTION of PARTNERSHIP.—HENRY PASK (late Johnson and Pask), Baker-street, Cheapside, Sash, Shop Front, and Door Maker to the Trade, begs to inform his customers and the public he intends that the internal arrangements, business as usual, and solicits a continuance of their favours, which shall meet with his prompt attention.

N.B. By inclosing a postage stamp a full list of prices may be had by return of post



ASPHALTE.—GERVASE FOOTTIT, Trinidad Asphalte Works, Rother-ithe, established 1834. Every description of Footways and works in the above-named Material in the best manner. Asphalte for Railway Arches, 30s per ton. Importer of Trinidad Asphalte.

Shipping Depôt, Devon Haytor Wharf, Rotherithe.

G. H. CLARK, Agent.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price and the work warranted. Apply to JOHN PIKINGTON, PRINCIPAL ASPHALTIC CEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL, & 8 Country Agents, and Railway Engineers and Contractors, supplied with the best Bitumen for covering Bridges and Arches.

PATRONISED BY H. R. H. PRINCE ALBERT.

S. HOOD and CO.'S REGISTERED STABLE-FITTINGS, with FRONT REVOLVING ROLLER, in or controlled Castings Warehouse, 31, Upper Thames-street.

M. AND N. HANHART, LITHOGRAPHERS,

64, CHARLOTTE-STREET, RATHBONE-PLACE, LONDON,

Beg to announce that they continue to execute orders in every branch connected with their Art, and being in daily intercourse with the most eminent Artists in London, any Drawings entrusted to them will meet with that careful attention which is necessary for success.

PORTRAITS FROM LIFE TAKEN UPON STONE, OR COPIED FROM OIL, WATER COLOUR, AND OTHER DRAWINGS.

Copies from Daguerreotypes, and all other Photographic Productions, executed upon Stone the size of the Originals, or enlarged.

OIL PAINTINGS AND WATER-COLOUR DRAWINGS ACCURATELY IMITATED.

PORTABLE HOUSES—ADAPTED TO ALL CLIMATES.

SOLE MANUFACTORY, CLIFT-HOUSE, BRISTOL.

SAMUEL HEMMING'S PATENT IMPROVED PORTABLE BUILDINGS.

A great variety may be seen at the Works, consisting of Churches, Chapels, Two-storied Hotels, handsome Row of Two-storied Shops and Dwellings, with Balconies and Verandahs; and many Ornamental Villas. Also, an Emigrant's Home, fitted up complete, with accommodation for Seventy-two Persons; and many other Buildings, covering an area of Ten Acres of Ground.

Every Building may be seen perfectly erected previously to its being taken down for shipment. All the Timber-work is dried in extensive Drying-sheds.

MARBLE.—Mr. J. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom having Path in Marble of the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established in London the most extensive Depôt of Statuary, Ornamental Sculpture, Dover, and Block and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall Bridge. Office, 8 Crescent-terrace, Millbank, Mr THOS. THOMPSON, Agent.

MARKET-WHARF, REGENT'S-PARK-BASIN WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. MARTIN and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Hall-stones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

Medieval Works, Memorials, Fonts, Screens, etc.

AT A VERY ECONOMICAL RATE.

SAMUEL CUNDY, Mason and Builder, PIMLICO MARBLE and STONE WORKS, Bessrave Wharf, Lower Belgrave place, Pimlico.

MARBLE CHIMNEY-PIECES manufactured by improved machinery. The public are invited to view the stock, unequalled for quality and price.

A GOOD MARBLE CHIMNEY-PIECE FOR FORTY SHILLINGS.

A liberal discount to the Trade.

MARBLE WORK in all its branches, at a remarkably cheap rate, for HALLS, BARRIES, LARDERS, &c. &c.

Circulars sent on application.

N.B. The "Royal Blue" Omnibuses pass the Works every ten minutes from the Bank.

TO BUILDERS, MASONS, AND OTHERS.

THE largest STOCK in England of MARBLE in Blocks and Slabs, viz. Sienna, Antique, Portland, Hareford, Purbeck, Dove, black, black and gold, Sienna, St Anne's, Statuary, serpentine, and Antique &c. Portland, Hareford, Purbeck, and other stone, in blocks and slabs, landings, and hearthstones. York paving, granite curb, &c. All goods carefully packed and forwarded to any part of England.—THOMAS JACKSON, Marble and Stone Sawing-Mills, Commercial road, Pimlico, London.

SLATES, Slabs, Cisterns, Enamelled Chimney-pieces, Patent Roofing Materials for Covering, Roofing, Malting Purposes, Fancy Roofing Slates, Welsh Slates, Portland Stone, Bricks, Lime, Cement, Plaster, &c. Orders executed with dispatch on the most reasonable terms. Specifications and estimates of slates and materials for roofing, &c. forwarded by return of post. Address, JOSEPH BRAMWELL, Slate Merchant, Steam Slate-works, Bermondsey, Surrey.

N.B. Wharf opposite the Western Entrance of London Docks.

VALENTIA SLATE SLABS.—The Valentia Slate Company have extensive and excellent Slate Quarries, of very large dimensions, of a superior quality. They have been used at the British Museum, National Gallery, Berkeley Castle, and various Junior Asylums, the ordnance Works, Model Prisons, Pentonville, and other Penitentiaries; Malting Prisons in Bedfordshire and Hertfordshire Breweries, the Royal Stables at Windsor, Perimeter Barracks, and are kept in stock in large quantities, by Messrs. FREEMAN, Millbank street; also by Messrs. Sharpe, Tooley street; and Messrs. Braby's, Belvidere-road, where terms may be obtained.

THE PIMLICO SLATE-WORKS, Patronized by Royalty, the Heads of the Nobility, the Clergy, Architects of Public Buildings, Railway Contractors, and the Public generally.—MAGNUS'S ENAMELLED SLATE, to prevent staining of the same in buildings and infringements of his patent (as are attempted), continues to meet with favour with the public, being handsome, more durable, and very much cheaper than marbles. Price lists and a sheet of drawings, sent to any part of the kingdom, gratis. Cisterns, Filters, Dairy and Larder Shelves, Wine Cellar Fittings, Slabs, and every variety of plain Slate work, at prices that defy competition. 48 and 46, Upper Belgrave-place.

TO BUILDERS, MASONS, AND CONTRACTORS.

OBSERVE!!! the cheapest Depôt in England for MARBLE CHIMNEY-PIECES of superior quality and workmanship is at the Westminster Marble Company's Patent Works, Eaton-street, Pimlico, near Chelsea Bridge. An inspection of their superior Stock of Statuary, Sienna, Black and Gold, Veined, and other Chimney pieces, Tombs, Monuments, Tablets, &c. is earnestly solicited.

PAVING, in great varieties.—Sinks, sills, steps, &c.; rubbed coping; tooled ditto; rubbed and tooled sills; Hareshill and self-faced slabs; rubbed York paving; pipes, pots, &c. at low prices. Buyers and masons are invited to inspect a list sent free on application to E. and W. STURGE, Bridge wharf, City road. Established 1821.

BANGOR WHARF, King's-road-bridge, Caledonian Road, NORTH-ROAD, near the Western Entrance of the Regent's Canal, to call the attention of Builders and others to their Stock of Large Slates, Slabs, Landings, Paving, Portland, and Keene's cement, blue lias, Dorking and chalk lime, plasterers' hair, fireplaces, chimney-pots, and other tiles, glazed sewer pipes, close pans, and traps, Welsh fire-bricks, gravel and sheds for garden paths, balast, sand, &c. Materials landed, wharfed, and carted.

GRANITE.—The Cheesewring Granite Company, of Liskeard, Cornwall, are now prepared to supply Granite of any quality, and the largest Blocks. Prices may be ascertained on application to N. TREGELLES, 3, Painter's court, Old Broad-street, City; or to JAS. J. TRATHAN, Liskeard.

BATH STONE DEPOT, Great Western Railway, Paddington.—EDWARD HUSTLER respectfully informs Builders, Masons, and others, that he continues to supply the Bath Ground Stone, Combe-down, Corsham-down, and Farleigh-down Stone, of the best quality, and at the lowest prices. Parties may have their orders executed in the most expeditious manner, and with punctuality, by addressing to the Depôt, Great Western Railway, Paddington, or at the Quarries, Bath.

CORSHAM-DOWN and other BATH STONE.—Prices for the above, delivered on board in Town or Country, may be had on application to MARTIN and WOOD, Marchetshoff, Reigate, Surrey.

CAEN and AUBIGNY STONE.—F. FOUCARD, Stone Merchant and Quarry Proprietor, Quai des Matiers, Caen, and at 6, Red Lion-street, Boroughmarket. Contracts taken for any quantities. Cargoes shipped to order from Caen to any port.

GATES and GEORGE, late LUARD, BEEDHAM, and Co., Caen, Aubigny, and General Stone Merchants, Caen Wharf, Rotherhithe, London. Goods delivered to order by land or water conveyance, and by ship to any part of the United Kingdom.

BANGOR SLATES.

J. EASTWOOD AND SONS,

KENT ROAD BRIDGE.

By Her Majesty's / Royal Letters Patent.

THE SILICEOUS STONE COMPANY are now prepared to UNDERTAKE CONTRACTS for the EXECUTION of WORKS of an Architectural or Ornamental character. This stone is composed of sand-stone grit and other siliceous material combined by means of flint dissolved by the patent process), the result being a material most indestructible in its nature, and by its freedom from stratification, protected from those injuries to which natural stone is liable.

Specimens may be seen on application at the Offices, and a variety of designs in open Terrace-work, Balustrades, Copings, Fountains, Tombs, Chimney-pieces, Pavements, Ecclesiastical and other decorative work.

Attention is also particularly requested to the Ashlar for facing buildings, and to Austin's Patent Hollowed and Dovetailed Building Blocks, manufactured in the above stone, which combine great strength with economy and speed in erection, are perfect a fireproof, and other peculiar facilities for ventilation and the circulation of warm and dry air.

8, John-street, Adelphi. E. MENDHAM, Secretary

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.

DEPOTS.

Great Western Railway Station....	PADDINGTON.
Great Western Railway Station.....	BRISTOL.
Hope-street, Mount-pleasant	LIVERPOOL.
Castle-fields	MANCHESTER.

List of prices at the quarries and depôts, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

The Builder.

SATURDAY, FEBRUARY 4, 1854.

On another page (59) will be found a representation of the interior of the London Stock Exchange, recently erected by Messrs. W. Cubitt and Co. from the designs of Mr. Thomas Allason. We give an *interior* view, because in no proper sense is there an exterior elevation, the site being an area inclosed by other buildings, between which means of ingress and egress are obtained from four or five courts or passages. Before the present structure was erected, very considerable sums had been expended on the old buildings, in continual alterations, with a view to adapt them to the extended and varying business which has accrued to the greatest money-market in the world.

The Hall of Commerce, in Threadneedle-street, was hired for the members to assemble in during the reconstruction, so that the builders have had a clear stage for their operations. The managers expended about 6,000*l.* in securing additional space prior to the commencement of the works, and the contract was taken at 10,400*l.*: some subsequent alterations respecting ventilation, have caused the amount to be already exceeded. The nature of the Stock Exchange is so little understood that we are disposed to go somewhat minutely into particulars.

The fabric belongs to a private company, consisting of 400 shareholders; and the shares were originally of 50*l.* each, but are now of uncertain amount, the last addition being a call of 25*l.* per share, made for the construction of the new edifice. The affairs of this company are conducted, under a cumbersome and restrictive deed of settlement, by nine "managers," elected for life by the shareholders; no election taking place till there are four vacancies. The members or subscribers, however, entirely conduct their own affairs by a committee of thirty of their own body. Neither members nor committee are elected for more than one year. The committee re-elect the members in March annually, and then retire from office; and on the 25th of the same month a ballot takes place for a committee for the year ensuing, a very large proportion of the late committee being usually again elected. Previously to being elected or re-elected, every member has to sign a declaration that he will abide by the regulations already in force, *or that may be made*, by the committee. The subscription of a member is 10*l.* 10s. yearly; and new members have, in addition, to find securities for two or three years. If the applicant has been an admitted clerk to a member for four years, the securities required are two of 250*l.* each for two years: all other candidates have to find three securities of 300*l.* each for two years, or if they are indemnified for three years. The sponsors in all cases must themselves be members. The names of the candidates are exhibited in a conspicuous place for some time prior to being balloted for by the committee.

The number of members at present just exceeds 850. The subscription is paid to the "managers," who liquidate all expenses, and adopt alterations in the building, upon the representations of the committee of the members, or even on the application of the subscribers. Of the 400 shares mentioned above, the whole, with scarcely an exception, are held by the members themselves. No one person is allowed to hold, directly or indirectly, more than four.

Originally the dealing in stocks took place at Jonathan's Coffee-house, in Change-alley; but by the rapid accumulation of the national debt, together with the introduction of other investments—particularly the South-Sea Stock—it quickly extended into the "Alley" itself, and led to scenes which have been frequently described and commented on by our old writers. After repeated attempts to control or mitigate the scandalous spirit of gambling, always incidental to extensive dealings of this character, it was found impossible to impose an effectual check so long as any adventurer could enter the market and entrap the unwary. A committee was therefore formed, which carried the business to the Exchange Coffee-house (since burnt down), and imposed the very moderate charge of 6d. for admission on all who entered during business hours. It soon, however, became apparent, that this loose mode of proceeding was but a small remove from the doings of the "Alley;" and by this time the public were becoming aware that it was safer to employ a broker or agent to transact their business, than to run the risk of being victimised in doing it themselves.

Certain of the legitimate dealers and brokers, therefore, formed themselves into a Stock Exchange, on the principle of admitting only those who could give assurance of their respectability, and of dismissing summarily any of their own body who should be guilty of irregularity. On the whole, the scheme has worked greatly to the public advantage, and has rendered the London money-market the resort of all the world. Notwithstanding the transactions are so enormous, the amounts so large, and the confidence reposed so unlimited, the instances of delinquency in the members are surprisingly few.

It has been the object of the committee to prevent the suspicion, that while they hold a large control over the members, they render their body exclusive: they, therefore, impose no very onerous terms on new members, and readily receive those who can produce sound guarantees for character and responsibility; leaving of course to the public the necessity for a certain measure of caution to protect themselves in selecting the members they employ to transact their business.

However all this may be, it is a well-known fact, that, abroad and at home, all parties having large financial operations approach the London Stock-Exchange with more confidence than any other money-market in the world. The result has been, that the first building was found too small so soon as foreign loans were introduced: space was therefore secured adjoining the old premises, and the "Foreign Stock Exchange" erected. Here the canal shares were dealt in, held in such high repute before the introduction of railways, and shares in other joint-stock companies. The affairs of the members of this "new house," who paid 5*l.* 5s. annually, were also managed by a committee; and they had their own by-laws, among which was one that admitted merchants, traders, and parties engaged in other pursuits; whereas none such were nor are admitted into the "English house," or Stock Exchange proper. The object of excluding all but those exclusively engaged in Stock-Exchange business, is to prevent any of their members becoming amenable to the bankrupt laws, it having been found that the "Stock-Jobbing Act," like most other restrictive regulations, favoured only the rogue, and victimised the honest agent or dealer.

At a later period, both establishments were united, one committee of members regulating all the transactions, as well domestic as foreign, and one subscription of 10*l.* 10s. covering the right of transacting all description of Stock-Exchange business.

The introduction of railways produced an amount of business that rendered both buildings, now united, totally inadequate to the wants of the members, notwithstanding the alterations, patchings, and enlargings to which we before alluded; hence the resolve of the managers to erect the building of which we give a view.

A perfect system of free-trade prevails in the business transacted within the walls, there being no restriction whatever as to in what, or with whom, a member shall deal. The extent of individual operations is of course limited by the credit the operator may enjoy. The members have insensibly fallen into two orders, *dealers* (called jobbers) and *brokers*. The latter are the commission agents of the public, and buy and sell for them; dealing with jobber or broker as may be most desirable for their client's interest.

A peculiarity prevails as to the locality of the different markets: there is nothing to separate or distinguish where a particular stock is dealt in, yet the dealers habitually assemble in the same spot, and there the brokers know they are to be found. If a broker were to receive orders in Consols, Peruvian stock, and Great Western Railway shares, he would go to the locality where certain dealers in Consols alone assemble, and after a warm competition among them, each offering stock at a price, or bidding a price for stock, would finally complete his instructions. He would then walk off to the Peruvian market, where the same process would be gone through; and so on with the Great Western. Where there is business frequently doing, as in Consols, it is surprising how "close" it is possible to deal. If we look in the "Price Current" we shall find "3 per Cent. Consols, 91 @ $\frac{1}{8}$," so that the public could sell (say) from 5*l.* to 20,000*l.* Consols at 91*l.* per cent. or buy to the same extent at 91*l.* 2s. 6d. per cent. Where but little business is doing, the competition is, of course, not so keen, and the margin is wider; while in other cases some shares are so seldom dealt in that there are no regular dealers, and the transactions become a matter of long negociation amongst the brokers.

Of the English Funds, Exchequer Bills, and other things on special mention, all bargains take place for a prompt or settling-day. This is naturally the most convenient course, for otherwise each transaction would require an additional negociation as to the day the buyer would have his money ready, and the seller his stock. As it is, the parties agree on the amount and price only, and on the ensuing settling-day, all parties being prepared, the whole is readily adjusted. Where stamped transfers are required—as in railway and other stocks and shares,—the sellers have ten days' grace for the completion of the necessary documents, and for delivery,—the buyer of course not paying till he gets his stock.

The dealings being thus arranged for a settling-day—in Consols about once a month and in foreign stock and shares twice,—there are, no doubt, considerable transactions undertaken on speculation. Thus, if a client gives an order to buy 10,000*l.* of a particular stock costing 7,000*l.* for the settlement, which is ten days forward, and the broker buys it of the dealer A. there is nothing to prevent the client giving the broker an order to sell the same stock prior to the settling-day, say at 7,100*l.* which the broker does to B. The only account the broker has now with the client is, the payment to him of 100*l.* (less his commission) while the broker has to pay A. for his stock at the price at which he bought it, and deliver it to B. being paid the price at which he sold it. The fluctuations in the markets are sometimes very considerable, and the losses and gains are in proportion. There is scarcely a club in London in which there is not a member who has carried on these operations so long as they have been favourable,

receiving the balances as they have become due to him, but leaving the broker in the lurch when a considerable loss has accrued, and there were balances to *pay*. The broker is responsible to the dealer, the principals' names being always concealed, except, of course, in the case of actual transfer of stock by deed or writing. Foreign stocks and many other securities are, however, in scrip to bearer, and deliverable by hand.

The admission of strangers is absolutely forbidden: notice to that effect is exhibited at the doors, and the waiters have the most positive orders to be vigilant in preventing intrusion, yet occasionally a stupid or wanton guest is found who, neglecting the warning either of the waiters or a quiet member to depart, becomes the butt of the frolicsome juniors. In the frequent intervals of business certain of the members also indulge in a considerable measure of practical joking, but as it is confined to themselves and it lets off the steam which might explode in a less satisfactory manner where there is so much active competition in business, the public have no reason to concern themselves with it.

Notwithstanding some few odd and eccentric persons may—from the causes to which we before alluded—obtain membership, still it must be admitted that the 800 and upwards of respectable and wealthy members, constitute a powerful and important body. Nevertheless, the reminiscences of the "Alley," together with the equivocal conduct of the "stags" who haunt its purlieus, still attach, though unjustly, to the Stock-Exchange itself. But while the threshold of justice is polluted by spurious members of the profession, and every other pursuit soiled by questionable followers, the members of the Stock Exchange cannot hope to escape, and must abide the prejudice common to similar associations. It is but right to say, that the Government always communicates to the members its financial schemes, and invites their co-operation: in return it receives from them at all times the fullest support.

Justice would not be done without also mentioning the benevolence and charity of the members of the Stock Exchange. It is impossible to open a page of the lists of subscribers to our public charities without finding the name of one or more of its members therein; and in any sudden calamity, the Stock Exchange men are always amongst the first to succour the afflicted. There is, moreover, a fund subscribed by the members for their decayed associates, the invested capital of which, exclusive of annual contributions, amounts to upwards of 50,000*l*.

The amount of trash written about the Stock Exchange exceeds all belief. In a recent publication of large circulation, as a specimen, Rothschild and Baring are treated as members, whereas the laws expressly prohibit any of their body from engaging in any other pursuit; and these being general merchants, we need hardly say they never were directly connected with it: of course, like wise and influential operators, they transacted their business through secret and discreet brokers. In the same not wholly reliable attempt to combine fun and facts, the writer enumerates as "amongst the devices resorted to," a trick that was only *suspected once*, thirty or forty years ago, but which certainly never did occur either before or since.

The Stock Exchange has reckoned amongst its subscribers some valuable members of society, including David Ricardo and several of his descendants, Francis Bailey, the astronomer, and many others, down to Charles Stokes, F.R.S. recently deceased. Horace Smith, and the author of the "Last of the Plantagenets"—himself, in his prosperity, a munificent patron of literature,—also for a long time enlivened its precincts. The writer of the successful play of "The Templar," and other elegant productions, is still one of the body.

Having said thus much of the association, let us give a few particulars of the new building. It stands in the centre of the block of buildings fronting Bartholomew-lane, Threadneedle-street, Old Broad-street, and Throgmorton-street. The principal entrance is from Bartholomew-lane, through Capel-court: there are also three entrances from Throgmorton-street and one from Threadneedle-street. The area of the new house is about 75 squares, and it would contain 1,100 or 1,200 members: there are, however, seldom more than half that number present. The site is very irregular, and has enforced some peculiar construction in covering it, into which iron enters largely. For the cupola, of which we give the details, laminated ribs are used. The diagrams will speak for themselves. The vault which covers the centre of the building, 39 feet in span, is of timber and iron. The whole of this, together with the dome, &c. is covered with lead to the extent of about 80 tons; and, besides being a very large, is a very excellent piece of plumber's work.

Besides the "house," or large room, there are strong rooms, committee-rooms, reading and refreshment rooms, &c.

To ventilate the building, fresh air is admitted at the basement into two large chambers, filled with coils of warm water-pipe (by Jeakes), heated at a very low degree of temperature for the purpose of tempering, but not warming, the air. A communication is formed between these chambers and the house, behind the wall-framing; and the tempered air is admitted into the house at a height of about 6 feet from the floor.

The vitiated air is got rid of by an extracting-chamber on the apex of the dome, heated by a a sunburner with 500 jets: during the day the sunburner is concealed from view by a perforated sliding metal screen; but, when required, sufficient illuminating power is to be obtained, we are told, by withdrawing the screen, to light up the house without further burners.

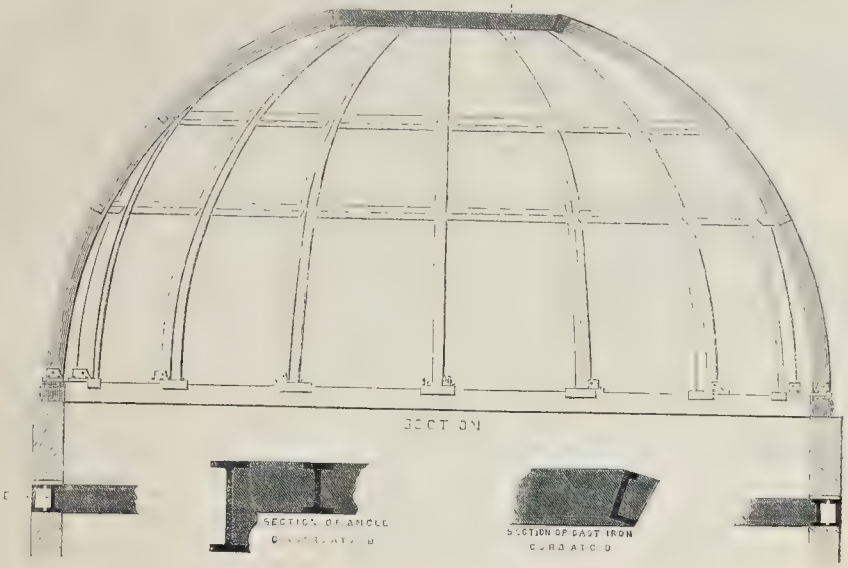
The building is warmed by large open fires. Over one of these in the view is shown a looking-glass; but this will not be introduced: the "black board" will occupy its place. The floor, ceiling, and sides of the new strong room are formed of inch metal iron girders, 10 inches from centre to centre, with flanges 5 inches wide, having transverse wrought-iron bars 5 by $\frac{3}{8}$ every 9 inches, the whole filled in with blue Staffordshire bricks in pure cement. The walls will be lined with case-hardened steel, and fitted up with wrought-iron boxes. There is an external wall 2 feet thick round the strong room to prevent fire from coming in contact with the metal girders. The floor between the refreshment-room in the basement and the house over is formed by rolled T iron joists, 2 feet 6 inches apart, having the lower flange placed downwards, and three courses of plain tiles in cement resting on it: the whole is covered with 12 inches of concrete and a wood floor over.

The works were commenced by Messrs. Cubitt on the 1st of June, 1853, and the House will be opened for business, we are told, on the 2nd of March next. We congratulate Mr. Allason on his *début*, and the best wish we can give the members of the Stock Exchange on entering their new House is—Peace.

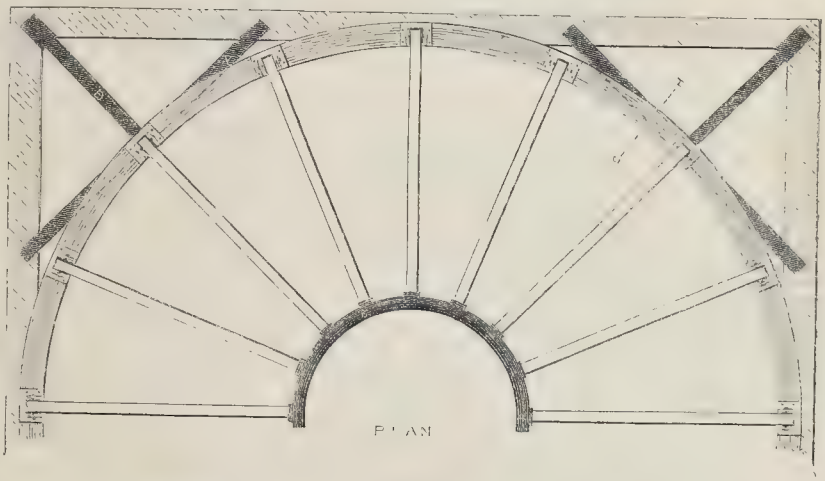
Putnly Church.—You tell us of the dark age of English taste, but I am surprised to see how near we are to it at the present day. Last Sunday I went to the parish church of Putney, and was astonished to see ten lights of the chancel window patched over with what appeared to be common cottage paper at a 1d. per yard. Whether placed there for architectural decoration or to cover broken glass, I am unable to say.—D. F.

CONTEMPORARY ARCHITECTURE.

That "the science of architecture is the same in 1853 as in 1829-30" is undeniable, yet in that interval—nearly a quarter of a century—considerable changes have taken place both in theory and practice. Since the article "Architecture," in the "Encyclopædia Britannica," was first written very much has been done of which some notice ought to have been taken in the "Supplement" now added to the original treatise. Nevertheless, most strange to say—nay, almost incredible—no mention is made of that most important work, the New Palace of Westminster; none of the new Royal Exchange, the British Museum, the Fitzwilliam Museum at Cambridge, or St. George's Hall, Liverpool. Neither is the slightest allusion made to what has been done on the continent, the Bavarian Walhalla alone excepted, the interior of which, however, is pronounced a failure, as would be, no doubt, the charming and artistically treated interior of the Madéleine at Paris also, had that structure been spoken of, and for the same reason, viz. that it is no reproduction of the interior of a Greek temple.



Such omissions as those just pointed out are surely very little in accordance with the general promise made of "bringing information down to the present time." Nor do they impart aught of popular interest to the new matter; on the contrary, rather bespeak indifference to contemporary productions of the art. The writer himself appears to have felt that much more would be expected from him, for he says, "The works of living men may not be dealt with unless it be to praise them; and thus there are but few recent works in London or elsewhere within the personal knowledge of the present writer, which can be referred to in illustration of the practice of the day;"—which apology for silence will hardly be accepted as a conciliatory one by the profession, it being tantamount to saying that if several structures of importance and architectural pretension are not referred to it is because they are not fairly entitled to be so distinguished, one among them being the New Palace of Westminster. The fortunate few which are selected for special mention are Sir C. Barry's two club-houses; Cockerell's Sun Fire-office; a church at East Chorlton, in the Italian style, by Gwilt; the Roman Catholic Cathedral by Pugin in St. George's-fields; and the Panopticon in Leicester-square. Either the writer's personal knowledge of what has been done of late years in the metropolis alone must be limited, or so very little has been done that we have any reason to boast of, that delicacy and discretion have been made to draw the veil of silence over almost all that has been done in the course of the last five-and-twenty years.



That direct criticism on contemporaries and their productions does not at all come within the province of a treatise in an encyclopædia is admitted; yet much matter-of-fact information might have been supplied without the expression of opinion, and without danger of giving umbrage to living individuals. Even a mere chronological table of the chief buildings erected since the former edition of the "Encyclopædia" would have been a very useful and acceptable addition, very convenient for reference, and not a little useful,—if to no one else, to the writer himself, because he would then have been reminded of the destruction of the late Houses of Parliament, and the *feu* Royal Exchange, consequently of the structures that have risen on their sites.

At present we have nothing like a connected history of English architecture from the time of Chambers and his contemporaries. The fact is—and a most melancholy and disheartening one it is to those (and they, it appears, are very few) who take a real interest in it,—architecture, that of our own time, is slighted as if unworthy of notice, or if noticed at all, it is so hurriedly and in such manner that even what is meant as praise betrays chilling indifference. Z.

The Zinc Ship.—The *Comte Lehon* has just returned from her voyage to Rio Janeiro, and from the report of the captain, according to *Galignani*, the experiment has been satisfactory, the vessel having proved an excellent sea-boat in repeated gales. Her compasses had never been affected as in iron vessels.

LONDON STOCK EXCHANGE. CONSTRUCTION OF CUPOLA.

PLUMBERS AND PLUMBING.*

"A plumber I am, and I work for my bread;
Not ashamed of my craft, though a dealer in lead;
And men of my calling, tho' that they'll not own—
May always be found from the cot to the throne.

The soldier perhaps may despise the poor glazier,
Because his bluff countenance comes from the brazier,
Though he struts in his lace and swaggers in red—
Yet his brains, like his bullets, are nothing but lead!"
The Plumber.†

There are periods in the history of nations when the germs of civilization have sprung up and blossomed, which are characterised by an onward progress in every department of science, religion, and art. There are periods when the blossom expands into the full delicious fruit, which distinguishes the meridian splendour of civilization. There are periods of decay when all progress is stayed, when civilization declines, when science becomes a retrogression, when art is lost, when religion is forgotten; and there must elapse a long decade of ignorance and barbarism before the dawning of the next cycle of civilization and progress. It is the same in the history of trades. There are periods when they reach a height of excellence which cannot be surpassed by that generation; there are periods of the long relapse into ignorance; and there is the dawning of another era; as regularly marked in their successive gradations as the history of the people by whom they are cultivated.

No trade with which we are acquainted is more remarkable for this character than the trade of the plumber. In its connection with sanitary economy, it reached to a higher position in ancient Rome than it has reached to, for example, in modern London. In its connection with art it reached to a far higher position during the periods of Gothic architecture than it has reached to in these days of railway stations. In its purely mechanical progress even, a thing that is less subject to mutation and retrogression than artistic progress, we are not sure that the plumbers of our day have much to boast of. The trefoil ornaments on Exeter Cathedral, or the alto-relievo ornaments on the knight templar's coffin, are unsurpassed by the modern plumber's work of a similar description. Indeed, if we except a much greater share of scientific knowledge, which, however, is hardly yet become domesticated in the plumber's shop, we are at a loss to perceive where the modern plumbers have greatly exceeded their early progenitors. The artizans of last century were in every respect contemptibly inferior to them. And how is this? we shall be asked. Have we not zinc, and galvanized iron, and hydraulic pipes, and patent self-acting water-closets? Yes, that is true; we have of such things enough and to spare. But their invention or introduction has scarcely been the work of the plumber. On the contrary, the orthodox plumber makes a point of steadily resisting their introduction; he has always resisted, and will continue to resist, until the next period of his history, which we believe is rapidly drawing near.

The great defect of the trade as at present constituted in London, is that of the ridiculous assemblage of different trades, which are conventionally held to be comprehended under the plumber's signboard. A plumber, we have seen, means a worker in lead. Such was its meaning among the Romans, and among ourselves until within a comparatively recent period. But the meaning of the word, in nine cases out of ten to a modern Londoner, will be after the following definition, which, however, he will look for in vain in the Lexicon of Dr. Johnson: "*Plumber:* a man who fixes water-pipes, mends water-closets; also repairs bells; who paints the doors, papers the rooms, whitewashes the kitchen; puts in whole panes of glass in the drawing-room window and half-panes of glass in the back kitchen window; fits up zinc chimney-cowls; makes watering-pans; solders the ball-cock, also the teapot, also the coal-scuttle; sells oil, furniture polish, and black lead."

The cause of this heterogeneous combination may puzzle a modern observer; but to one tolerably well read in architectural history, it is no such mystery.

Plumbers became glaziers during the twelfth or thirteenth centuries, during the time, in fact, when stained glass was at the height of its splendour. And the reason for this is perfectly plain and comprehensible. The stained-glass pictures on an ancient window were constructed not as they are now by surface painting, but by building, or indenting different pieces of different coloured glass into small sashes of lead, which formed the outline, and very often the shadow of each separate piece. These leaden sashes required great skill in their treatment. In the bending of them, in the soldering of them, the utmost care was necessary; for it would have been easy to destroy them with the hot soldering-bolt. Accordingly, nothing was more proper than that the artist who covered the roof, and cast the leaden ornaments of a cathedral, should also exercise his skill on preserving its stained-glass windows. But there was less reason why, after the Reformation, the two trades should hang together, when there was absolutely no connecting link. Stained glass there was none. Even that which was ancient was destroyed and broken down. There was scarcely to be seen a piece of scientific roof-work in England; and as for water supply, it was in its infancy. Hence it is easy to understand how the "poor glazier" we have raked up from his tomb of oblivion, was despised among contemporary tradesmen. In truth, at this moment, we know of no more miserable lot of artizans than wandering glaziers. These men are the true tinkers the true *proletarat* of the trades connected with building.

It is not so easy to understand how they became painters. Yet we shall offer a few conjectures on the subject. During the sixteenth and seventeenth centuries, the only pigment employed in building was white lead. This pigment, as most of our readers are aware, is a carbonate of lead, prepared by dissolving lead in acetic acid, or exposing it to the fumes of of that acid. Formerly, it was chiefly prepared by the process of solution; and as all process relating to lead, the manufacture of sheets of pipes, of window astragals; and, more than that, the preparation of its oxides (litharge and red lead) were confined to the plumber's shop, there can be no doubt but it was from this cause the application of the pigment followed as a natural consequence. And there it has continued. When other pigments were discovered out of the range of lead, they fell also into the hands of the plumber. When oil-painting was in fashion, it was he who executed it; when flat painting was introduced, he did that too. And now he is a paperhanger! In the name of everything that is good, what will he turn to next?

A high degree of skill in all of these departments is next to an impossibility for one individual. The man who is noted for making the best joints is certainly not the man to use the paste-brush with the greatest effect. He who understands correctly the theories of water-supply, is likely to pay the least attention to the æsthetic properties of paperhangings. The shopkeeper, too, is an entirely different department of trade from the skilled mechanic. For these and similar reasons, we have ceased to wonder that so little progress is made by the London plumber. It is proper to state, however, before we go further, that in the establishments of some of our large contractors, the business of the plumber is carried on as it should be, in all its different branches. For the information of those who are unacquainted with the working of a plumber's business, we shall briefly glance at the processes as conducted in one of these.

The first and most important process connected with the trade is the casting of sheet-lead. This process, we have previously stated, is of immense antiquity. It was known to the ancient Romans, and to the Babylonians. It was brought to perfection by the French plumbers of the Middle Ages, and has continued down to our own time nearly to be the only method of casting sheet-lead. But it has now become extinct in Scotland; and we doubt much whether its existence can be prolonged in London, which, of all places in the kingdom, is the last to part with an old custom, as it is the first to adopt a new one. We presume that the general principles of casting lead require no elaborate description, and we shall content ourselves with a glance at the manufacture.

In the works we have in our eye, there is a casting shop appropriated for this purpose. At the one end is a large iron pot built in on a furnace for the purpose of melting the bar lead. A large table, measuring about 25 feet in length and 6 feet in breadth, extends from this boiler along the whole length of the shop. When the operation of casting begins this table is covered with sand, which is dressed until it becomes perfectly smooth and level. In order to cover this bed with metal is the next great attempt, and its method of performance is curious. The melted lead is ladled out of the large cast-iron pot in which the pigs have been melted into a triangular trough of malleable iron at the head of the frame; which is then upset by means of levers and tackle, so that its whole contents are discharged on the sand. Two men are then prepared at each side of the frame to pass a wooden instrument across the surface and to follow the fluid metal in its progress, which by that means is spread out to a uniform thickness and a consistent surface. When the surplus of metal arrives at the extremity of the frame it falls into a spout prepared for its reception, from whence it flows into a little iron carriage, which is dragged back to the boiler and there it is remelted. After this is effected the selveges are cut off and the sheet rolled up and removed for use. It may be remarked that the whole success of this beautiful process depends altogether on the skill of the workmen. The slightest inattention or the smallest difference in time would destroy the whole sheet.

Although not strictly within the scope of our remarks, we may here allude to the process of making milled lead, just to illustrate a little argument we wish to bring under the notice of our professional friends. The process we may mention was invented by a Mr. Thomas Hale, in 1670, about which time the first rolling-mill was erected in Deptford. The inventor met with violent opposition from shipwrights, because the lead, from its smooth surface, uniformity of thickness, and low price, began to be generally adopted as sheathing for vessels in place of the old wooden and leather sheathing. And as it was also used for gutters and roofs of houses, the plumbers were as industrious as the shipwrights to decry the lead; but finding their opposition in a great measure fruitless, some of them now began to cry it up and set up engines to mill it themselves. It did not, however, remain long with the plumbers. Such houses as Walkers, Parkers, and Co.; Newton, Keates, and Co., took up the business, and they have since carried it to an amazing pitch of perfection. The lead in such manufactories is first moulded in a cast-iron frame into a plate 6 or 7 feet square and 6 inches thick. This plate is then placed on an immense rolling frame and passed to and fro between heavy cast-iron rollers until it acquires the requisite thickness. In order to accomplish this it is sometimes passed between the rollers 200 or 300 times before it is finished, and the usual form of the sheet is about 40 feet in length. This constitutes the second and most important description of sheet lead, and is by far the most extensively used in our day.

There is still a prejudice which lingers among architects and builders with respect to the relative qualities of these two kinds of lead. We will quote an illustration from Mr. Hosking's treatise:—"Cast lead is to be preferred for the former purposes [*i.e.* roofing purposes], because its surface is harder, and it is somewhat less susceptible of meteoric influences than milled lead." (Ency. Brit.) We may take another illustration from Mr. Gwilt: — "Round the extreme edges of flats and gutters where *lead* is used are fixed pieces of *milled* lead, which are called flashings." (Ency. of Architecture.) This last authority, it will be seen, nearly extinguishes the claim of milled lead as a material for such purposes at all. Now, is it certain that the objection is founded on good reasons? The meteoric influences to be understood from our first authority are those, we presume, of expansion by heat and contraction by cold,—surely not the chemical influences of the atmosphere, which, as we could easily prove, are much more perceptible on cast lead than upon milled lead. If, then, it is held that cast-lead is less suscep-

* See p. 27, *ante*.

† The curious ballad from which we extract these stanzas is to be found in Dr. Rimbault's collection, where it is set to music, and marked as sung by Mr. Atkins at Sadler's Wells. It has no date; but it bears internal evidence of having been composed about the beginning of last century.

tible of such influences from its harder surface, we have only to refer to the action on zinc or galvanized iron, which are possessed of a harder surface still, to see that this argument is not strong. And if we examine the physical properties of the metal, we shall find that the action of rollers or the percussion of the hammer, produces not the slightest effect on its particles. In other words, the specific gravity of cast lead and of milled lead are the same. Again, if it is believed that the harder skin of cast lead gives a greater degree of strength to the material, or affords a greater facility of working, we beg to refer to the experiences of any good practical plumber for the best argument against this belief. The truth is, for certain purposes cast lead is much better adapted than milled lead but these are not connected with roof-work. In interior fittings, in the construction of air-vessels, of traps, of supply-boxes, and the like, will be found a much more suitable mode of application than to the flats and the gutters of any roof whatsoever. We have thought it worth while to mention this little circumstance, which, we hope, will be found worth the consideration of architects and surveyors. We are inclined to lay it down as an axiom, that for nearly every purpose of the plumber, milled lead is *ceteris paribus* superior to cast lead. It is certainly much superior in point of beauty of workmanship; and last, though not least, it is by far the best description of lead. It is likewise much easier to detect its weight,—a circumstance, as Mr. Gwilt has pointed out, of great importance to architects in these days of low contracts. A plumber will cut you from the corner of a cast sheet a piece weighing nine or ten pounds per superficial foot, while the average of the whole may be only six or seven pounds. But milled lead is of a uniform thickness and weight throughout. If this is a professional secret, we hope that the plumbers will forgive its exposure; for really we are of opinion that the sooner such secrets are exploded the better for all parties concerned. Our object in writing down cast lead will be better understood when we say it is the only process still connected with the trade which exercises an injurious influence on the workmen's health.

We now come to lead pipes. The lead pipes employed by *all* plumbers consist now of only two kinds, soldered pipes and drawn pipes. There was formerly a third description, which we have mentioned as common during the Roman era, which were constructed by fusing the edges together with red-hot metal. The method of soldering the seam was that which succeeded this. Part of the old leaden pipes which had been laid down by the Corporation of London, in 1276, to bring water from Tyburn to the City, were accidentally discovered about a century ago, and the seams of those pipes were soldered together. This pipe, we may add, was about the earliest attempt made in England to supply water in that fashion. It is scarcely necessary to say that the expenditure of material was very great in such cases. The leaden pipes laid down by Cardinal Wolsey, for the purpose of supplying his palace at Hampton Court, weighed upwards of one million pounds, within a distance, according to Mr. Jesse, of two miles in a direct line. The first improvement on the ancient method of making lead pipes was matured in England in 1539. It consisted in casting them in short lengths in iron moulds placed in a perpendicular position. After a number of such lengths were cast, they were united to each other in a separate mould by pouring hot metal over the ends until they became united. Respecting this invention, Baker, in his Chronicles, has the following passage:—"The manner of casting pipes of lead for conveying of water under ground, without using of solder, was first invented by Robert Brocke, clerk, one of the king's chaplains,—a profitable invention, for by his two men and a boy will do more work in one day than could have been done before by many men in many days." The plan of drawing leaden pipes through dies was first proposed by M. Dalesure, in the Transactions of the French Academy of Sciences. But it was not until 1790 that such pipes were made. In that year Mr. Wilkinson, the celebrated English ironmaster, took out a patent for drawing them, since which period they have become general in England, France, and the United States. Last of all came the great application of the hydraulic press. This mode was patented in England in 1820; and within ten years it uprooted for ever the old system. To describe its principles would take us too long here; but we hope to have another opportunity of returning to the subject, and then we may declare at more length the nature of the subsequent improvements.

The only pipes which are soldered at the seams now are large pipes used for soil and waste pipes. The joint in London upon a 4-inch soil pipe is about ⅜ of an inch broad. In the country it is sometimes less than the eighth part of an inch. The method of making the old joint on small pipes with hot irons, and a cloth has been superseded by the blow-pipe. But the corners of cisterns, supply boxes, and D traps are still soldered after the old fashion denominated wiping. We need not enlarge further on the *mécanique* of plumber work. Closets, pumps, cocks, and such like implements or apparatus belong to the province of the brass-founder.

We have dwelt a little longer on these things than we intended, with the view of illustrating a curious fact, but one unfortunately which occurs too frequently in every trade. In the improvements which have taken place in plumber work, plumbers have had little hand. We think our previous remarks have in some degree shown the cause of this. Still it is by no means creditable to the trade. We have, it is true, numbers of most intelligent plumbers scattered throughout England; but for the most part they content themselves with frittering their time away on puerile details instead of grappling with the principles of their trade. The whole system of plumbers' work in London stands sadly in need of revision. It consists of two great divisions—very good plumbers' work and very bad plumbers' work: there is no intermediate stage. In such a building as the Stock Exchange of which we have been speaking, the plumber's work appears like a piece of intricate and costly engineering. In the ordinary small dwellings of the suburbs it is little better than contemptible.

Some of our readers may perhaps think that such things lie beyond the boundary of our inquiry; but in that opinion we do not concur. Nearly the whole of the master plumbers in London have sprung from the ranks of the working classes. What is good for the masters is surely good for the men. The same want of sound scientific knowledge distinguishes the majority of them. We say this with regret. There are some plumbers in London who are surely better fitted for enlarged and comprehensive researches into the principles of sanitary economy than to be dabbling all their lives with a paint-brush and a putty-knife! We could say more, but we have done enough, we hope, to awaken inquiry and to promote truth.

We are told there are from 600 to 700 plumbers in London: we mean only such men as are considered by their contemporaries to be worthy of the name. The straggling "three-branch men" (*i. e.* plumbers, painters, and glaziers), who possess no abiding city in this country, who are wanderers on the face of the earth, who are known to all village schoolboys by their wooden basket and their glass yokes, may number even more than this; but these we do not include, for obvious reasons, in our enumeration. It is reported that while the great majority of plumbers are steady respectable men, there are yet a few strange characters among them; men who are noted for extreme political opinions and for their devotion to Bacchus. We make it, however, a point not to inquire too minutely into these things, and we shall not dilate upon this. We have all our faults. Every trade has its idiosyncrasy. Few people are without the sin which doth most easily beset them. Perhaps it may be the circumstance of the plumbers' intimate familiarity with the laws of fluids which leads them to test it so often in a practical fashion. But of this we are not sure. *They* say it is the poisonous action of the lead; but that is a question we must for the present allow to remain unopened. There are five benefit clubs in connection with the plumbers; and two of these seem to partake of the character of trades' unions. But the plumbers' history is undistinguished by any great strike like that of the masons. They have, it is true, had their squabbles. But the last time they came into violent contact with their employers—on the subject of a rise of wages and a demand for shorter hours—they managed the thing in so skilful and honourable a manner, that we cannot help admiring them for it. They made friends of their foremen: they then held a meeting and addressed *to the foremen* a circular letter containing their demands. The foremen laid the subject before the employers, and the employers agreed to it.

The wages of plumbers are at present 5s. 6d. per day.

FOX AND BARRETT'S SYSTEM OF FIRE-PROOF CONSTRUCTION.

THE consideration of the method of constructing iron floors (see p. 28), was resumed at the ordinary general meeting of the Royal Institute of British Architects, on January 23rd, and as the proceedings bear practically on a most important subject, we shall report them at some length. Mr. Barrett read a paper containing some further explanation of the system of fire-proof construction with which he is connected, and which is known as "Fox and Barrett's patent," part of which we give.

The objects accomplished by this system, whether applied to public buildings, dwelling-houses, warehouses, mills, or other structures, are, he said, as follows:—

To make each floor, as well as the roof of the building, fire-proof, so that fire can neither be communicated from one story to another, nor be introduced into the building by burning away the roof.

To avoid all lateral thrust, or weakening effect, upon the walls; and to distribute the weight over them, instead of concentrating it on certain points.

To secure the building from the attacks of dry-rot.

To give increased solidity, firmness, and durability to the structure.

To render the floors practically sound-proof, when finished with a boarded surface.

And to combine these advantages with great simplicity and economy of construction, and a much less thickness of floor than is usually required.

These objects are accomplished by forming the floors of the buildings of materials as imperishable as the walls themselves, the leading features of the system being, the substitution of girders and joists, either of wrought or cast-iron, for those of timber, and the employment of layers of incombustible materials, supported by, and consolidated with the joists; the whole, when combined, forming a solid fire-proof foundation, adapted to receive a finished surface, either of cement, asphalte, tile, slate, stone, or other material; or upon which foundation the ordinary boarded surface, upon light sleepers, or bevilled fillets, may be laid down.

The principle of construction has been already explained in our pages. The joists are fixed as the building proceeds, the ends being firmly built into the walls; and the floor is afterwards formed by light strips of wood, being first laid across from joist to joist, bearing on the bottom flange, and having narrow spaces between them. Upon these is spread a layer of coarse mortar, which is pressed down between the strips so as to form, with them, a rough and uneven surface for the pricking-up coat of the ceiling; the subsequent application of which thoroughly imbeds the strips in mortar. A layer of concrete is then applied, of the requisite thickness to insure the necessary rigidity in the floors. This thickness is determined by the nature of the building, the width of bearing, and the required degree of strength. The ceiling is applied of such a thickness as to perfectly imbed the flanges of the joists, and thus protect them from the action of fire from below. A fire-proof foundation is thus formed, which, when thoroughly consolidated by the perfect setting of the concrete, is of great strength and rigidity; while the pressure upon the walls is *strictly vertical*.

The finished surface of the floor is applied when the concrete is set and dry.

The strips, which answer the double purpose of a foundation for the concrete and a key for the ceiling, may be made of any non-combustible material instead of wood; but it will be seen that these strips are so placed that their ignition is impossible, as they are completely imbedded in the mortar, and have a superincumbent mass of concrete, which prevents the establishment of any current of air, and renders them practically proof against fire. This has been proved on several occasions. Amongst other materials that can be substituted for these wood strips, small draining-pipes may be mentioned; and if made of a triangular form, they give an excellent key for the ceiling.

The concrete is formed of the materials most readily obtained in the locality of the building, such as fine gravel or ballast, burnt clay, or broken brick, mixed with a proper proportion of good stone lime, the whole being laid on moist, and well trodden in.

For the finished surface of floor, besides the ordinary flooring-boards, cements of different kinds, such as Portland, Keene's, and Parian, may be used. Asphalte, metallic lava, slates, and tiles, in cement, have also been employed as a finished surface, both for floors and roofs.

In applying this system to dwelling-houses and similar buildings, the joists are first tested singly to bear weights equal to from 120 to 150 lbs. per square foot of floor; that test being in the case of the employment of cast-iron one-third of the breaking weight, and in the case of wrought or rolled iron, the elastic limit of the metal. For buildings of a different character and requiring stronger floors, the strength and the test are increased so as to meet the requirements of the structure. The joists are then fixed on the walls, and when built upon, they form a series of ties which greatly strengthen the building. A considerable accession of strength is given to the joists by their ends being thus firmly fixed in the walls; and every successive step in the process of construction tends both to develop additional strength, and also to protect the joists from the effect of impact or concussion.

There is of course a limit to which single joists can be carried on this system, but as rooms 24 feet in width have been constructed with them, and without the use of main girders, it is very rarely that the latter are required for dwelling-houses and buildings of the same class. When, however, the span much exceeds 20 feet, the adoption of girders, with minor joists bearing upon their flanges, is the most economical method. In this way floors of 60 feet span have been constructed, the girders having an intermediate bearing on columns placed 20 feet apart. Floors of 30, 36, and 42 feet span have also been constructed with girders and joists, without the aid of columns.

Some persons may possibly imagine that the principle may have been borrowed from the French system, described in Mr. Burnell's paper. Nothing could be more erroneous than such a supposition: a comparison of dates indeed at at once sets this question at rest, the patent having been taken out in 1844, ten years after its successful employment by the patentee; while, as I gather from Mr. Burnell's paper, the employment of the French system is comparatively of recent date.

In 1850 I visited Paris myself, with letters of introduction to various architects, only one of whom referred to the use of iron there. He told me that a building was then in course of erection, and recommended me to see it, which I did: it was the Hospice de la Republique, near the Northern Railway Station. The floors were formed by means of girders of wrought iron, consisting of two rectangular bars, the lower one straight, and the upper one arched or curved, both placed on edge, and the two occasionally tied together by vertical straps. These were placed about 5 feet apart: cross-bars 4 feet apart were carried at right angles with the girders, and three smaller flat bars on edge ran between each girder: spaces of about 4ft. × 15 in. were thus formed, and these spaces were filled in with pottery, slightly wedge-shaped, imbedded in plaster. dwarf walls were built on the top of the pots to receive timber joists, upon which the floor-boards were laid. The whole appeared to be a very expensive mode of construction, occupying a depth of about 18 inches for a span of 3⅓ metres or 11 feet 6 in. This was the only instance I heard of, at a period six years subsequent to the date of the patent. But independently of priority of date, it will be seen on close examination that the two systems differ both structurally and economically, the only point of resemblance being the form of the joists, which are alike, except that the French joist is made to taper towards the centre, or neutral axis.

In illustration of the method of applying this system in cases of extended bearings, where the use of girders is necessary, the drawings were exhibited, illustrating the application of the system with both girders and joists of cast iron, and showing the method of construction employed at a large flax-mill at Newry, an ironmongery warehouse at Bristol, St. Mark's College, Chelsea, the Metropolitan Convalescent Asylum, and various other public and private buildings; also the combination of wrought-iron boiler plate girders and cast-iron joists, as adopted at the recently-erected extensive additions to Guy's Hospital, where the rooms are from 21 feet to 30 feet wide. This application of the principle has been adopted in various public buildings (amongst which may be mentioned the Foundling and Brompton Hospitals, the new offices of the London and Brighton and the Bristol and Exeter Railway Companies, her Majesty's new Highland residence, Balmoral, &c.), 42 feet being the extreme width of bearing to which it has been at present carried; but there is no difficulty in extending it much beyond this, as the adaptation of boiler plate girders to this system of construction, combined with joists of rolled iron, provides for every possible contingency, whether as regards width of bearing, strength of floors, or liability to impact, or vibration.

After some calculations as to strength, Mr. Barrett gave the following statement of the approximate comparative cost of a floor for a room 12 feet square, and for one 20 feet square, constructed on the fire-proof principle, and with timber:—

	Room, 12 ft. by 12 ft.	Room, 20 ft. by 20 ft.
	£. s. d.	£. s. d.
Fire proof floor, formed with strong joists of rolled iron, and a cement surface	7 11 10	32 4 3
Deduct excess of iron in joists to reduce them to the strength of the French scantling ...	1 17 10	10 12 1
Cost of fire-proof floor ...	5 17 0	21 12 2
Add difference of cost between 1 in. flooring-boards and a cement surface 5s. per square	1 16 0	5 0 0
Cost of fire-proof floor with boarded surface...	7 13 0	26 12 2
Cost of timber floor pugged	8 15 4	31 12 3

These calculations are made with the price of iron nearly 50 per cent. above that of eighteen months ago, and much dearer than for many years past.

Mr. Barrett stated, in reference to the practicability of reducing the scantlings of the joists on his principle, that although it might not be desirable to reduce them to the French standard, he had no doubt rolled iron joists of an intermediate strength between those used in Paris and his own, might be employed with safety, and thus bring down the cost of a fire-proof floor with a boarded surface to that of an ordinary pugged timber floor. He concluded by observing, that it might be considered that he had a personal interest in advocating the English system. Undoubtedly as the proprietor of the patent, to a certain extent he had; but his interest in the patent was for a very limited period,—a period which would be totally inadequate to repay even one-half of the very large sum which had been sunk in establishing it. Independently of personal considerations, however, the subject was one of general interest; and as the losses by fire in this country were reckoned by millions of pounds annually, he might say it was one of national interest. Certainly, the general introduction of a system which must promote the use of iron (material for the production of which our resources were unlimited, and in the manufacture of which native skill only was employed) should be encouraged in every possible way.

Mr. Tite said, it appeared to him that the present question was a little involved in a discussion raised some time ago by the late Professor Cowper, who had brought before the Institute the wonderful merits of construction adopted in the Crystal Palace, and told them that they were behindhand in all inventions, and had to learn everything from the engineer, especially the use of iron. Now he, Mr. Tite freely admitted the ingenious application of familiar principles which the French system of flooring displayed; but the question of cost was probably the main reason why iron joists of this character had not been more extensively used. Architects had certainly been taught by the engineers to be more extravagant than they used to be, but to an architect the question of cost must be one of the gravest consideration. It was true that in Paris they had seen a great deal of the application of wrought-iron joists by Visconti and others, but he felt bound to claim a perfect acquaintance with this matter in his own experience of some twenty-eight years. There was, in fact, nothing new in the principle, either as respected the iron or the concrete. Mr. Tite then adverted to the early methods of forming floors; first by a row of beams placed side by side, the least dimensions downwards, and of an uniform substance, and afterwards by means of strong heavy girders or bearing beams of oak, producing the greatest possible rigidity. This system, introduced in Italy, was adopted by Sir C. Wren, and when (after the fire of London) oak became scarce, fir was used in the same way. This, however, being more elastic, was found to bend, and a system of trussing girders by the insertion of iron was adopted, and gradually carried to a great extent. Sir Robert (then Mr.) Smirke at length introduced the cast-iron girder, and the use of concrete (the latter in the foundations of the Penitentiary, which had failed). Feeling the defects of the old systems of flooring, and believing that they might be remedied by the employment of cast-iron girders, Sir R. Smirke, after consulting Mr. John Rennie, introduced the use of them, and had told him (Mr. Tite) that the first he used was of the extraordinary length of 34 feet, without a support between the walls. The next step was made by Mr. Farrell, a smith, who was employed under Sir R. Smirke at the Custom-house, and he, regarding cast-iron as a very brittle and dangerous material, proposed the use of wrought iron, for which he took out a patent; and between that system of Mr. Farrell's, and the systems now under discussion, there was, in fact, no difference whatever, except in the ingenuity of the means which had been brought to bear upon the latter. In France earthen pots or plaster were used with iron rods between the joists; in England concrete and wooden laths: but these were merely improvements on the patent of Mr. Farrell, who suggested that the space between the joists might be filled in with any fire-proof material. The joist adopted by him was of this form ⊥, and as he could not get rolled iron, he riveted the parts together. Mr. Tite stated, that he had used the system described many years ago in a large public school, where a cheap fire-proof floor was required, with complete success, and when he last saw this construction it was as perfect as when first erected. The space between the joists was in this case about 4 feet, and filled in with 4 inches and 6 inches Yorkshire landing, which gave a good upper as well as under surface, the interstices being filled with Roman cement, and the ceiling formed of the same material. This was applied to a space of 300 feet long, and on an average 15 feet wide. Important as this subject was, Mr. Tite proceeded to express his opinion, that the systems of flooring referred to were not applicable to architecture in all its forms. They might do for a range of offices, an hospital, or any building where plain ceilings were sufficient; but the architect had to consider decoration, and must apply his means accordingly; and it would often happen that the ordinary mode of construction introduced by Sir R. Smirke, with subsequent improvements, was better adapted to such purposes than novelties of more recent invention. With regard to the safety in the use of concrete, as a protection from fire, especially when the concrete was only a few inches in thickness, Mr. Tite expressed much doubt, considering it inferior to the York landings employed by himself as above mentioned. He was very glad the subject had been discussed, as it would be of the greatest possible advantage if a cheap and durable floor could be constructed, which should be fire-proof in the honest sense of the word.

Mr. T. H. Wyatt considered that the present was not a question of precedency, but of general applicability, and as he had been one of the first to use Messrs. Fox and Barrett's system extensively, and had employed it to the extent of 1,400 or 1,500

squares, he begged to say a few words in its favour. In the Wiltshire Lunatic Asylum, erected by him, it was essential that the estimates should not be exceeded. Originally a judicious system of pugging had been contemplated, but by the adoption of Fox and Barrett's system not one shilling had been added to the cost, and the results had been most satisfactory. He had tested the deflection of the joists employed, and found it very slight indeed, and he was convinced that any sound wall would bear the weight of this construction, amounting as it did to not more than 78 lbs. for each superficial foot of flooring. Mr. Wyatt confirmed the experience of Mr. Piper as to any needless doubts which might be felt respecting safety of the construction, until rigidity was imparted to it by the concrete filling in. This desirable result, however, was obtained in a most remarkable degree. In the building referred to he had used joists up to 16 feet bearing, but others of larger bearings since employed had been equally satisfactory. He had felt some misgivings as to the possible decay of the wooden strips resting upon the joists, but he believed that, as Mr. Barrett stated, they might with safety be removed as soon as the concrete had set. The only serious doubt was as to the action of any damp which might arise from the concrete, supposing the wooden floor to be laid covering it before it had had time to become thoroughly dry. He had used a boarded surface of floor with this system, though if he were building a house for himself he would prefer one of cement. With respect to the depth of the iron joists, he had examined Mr. Barrett's calculations, and was convinced they were free from all possible risk, and might be made from a considerably reduced formula, and yet be within the mark of safety. Mr. Wyatt then adverted to the action of a body of flame upon ordinary plaster, and described some experiments made by Mr. Hardwick at the St. Katharine's Docks, in which plaster slabs 1⅛ to 1¼ inch thick, screwed to the underside of the wooden joists, were exposed to violent flames from tar-barrels, and showed that very little fear need be entertained of the effect of fire upon a ceiling, even if the whole contents of the room were to become ignited.

Mr. I'Anson also spoke in favour of Fox and Barrett's system, and considered that, although both that and the French system might have some analogy to the old methods described by Mr. Tite, they showed a great advance upon these methods. The concrete and other substances were superior to York landing, inasmuch as they tightened up the joists, and gave its chief value to the construction. The elasticity of the joists, until they were filled in, was most remarkable, but in about six or eight months after completion the floor became perfectly rigid. He had employed Mr. Barrett's system in a large dwelling house, 45 feet by 26 in dimensions, and the cost of the iron did not exceed 90*l.*; the whole of the timber being saved.

After some remarks by Mr. Boulnois as to rigidity, Mr. Piper, visitor, said that his own gateway was covered with rolled iron joists, filled in with common York paving, and then (to meet the requirements of the old Building Act) covered with concrete so as to make a thickness of 14 inches. He had, however, ceased to use this method, observing that York paving was exceedingly destructible by fire, and that practically it did not furnish a fire-proof floor. With reference to the doubt suggested by Mr. Boulnois, he believed the patent floors would be found to move altogether, if at all; that there was in fact a close union between the concrete and the metal, and no distinction in the amount of vibration of each. A floor over a stable, subject to all the wear of a loft and granary, had stood for six years (covered with Portland cement) without the slightest disintegration. Mr. Piper concurred with previous speakers as to the resistance of plaster to the action of fire, and therefore considered the laths used by Mr. Barrett were perfectly safe.

Mr. Tite inquired what experience there had been of the action of fire on concrete. He apprehended if there were flint stones in it, the concrete would split and yield under the action of fire.——On this point there was some discussion.

Mr. Boulnois complained that insurance companies made no reduction in their charges where the patent was used. If the patentees proved it to be fire-proof this object might be attained.

Mr. Barrett said this rested with the proprietor of the building. The house in which his own offices were cost 3,000*l.*, or 4,000*l.* and was only insured for 800*l.* just to cover the little damage that could arise. Mr. Tite having referred to covenants to insure leaseholds to two-thirds the value, Mr. Wyatt said he had advised the Wiltshire magistrates not to insure their lunatic asylum; and Mr. Barrett said that in the case of the Royal Porcelain Works at Worcester, where his system had been introduced, the insurance had been reduced from 7*s.* 6*d.* to 1*s.* 6*d.* per cent.

Mr. C. H. Smith, visitor, referred to the causes which rendered some of the varieties of laminated York stone, used for fire-proof construction, more destructible by fire than others. Those termed self-faced, having been naturally divided, and containing more clay to absorb moisture, which would be converted into steam by great heat, and consequently split, were the most unfit for the purpose. Under ordinary circumstances he was of opinion that concrete, properly made, would bear a very considerable degree of heat, perhaps more than Yorkshire stone.

At the suggestion of the Chairman, the discussion was again adjourned.

THE CRITIC'S ABECEDERY.

ÆSTHETICS.
BEAUTY AND SUBLIMITY.
CRITICISM.
DEFINITIONS—DISCRIMINATION.

Æsthetics.—For a long time the word taste was generally used by all English writers on art, and it is not an improper or inappropriate one, since the conformity is great between that mental taste which is affected with, or which forms a judgment of, the elegant arts, and that sensitive taste which gives us a delight in every different flavour that pleases the palate. Though taste is not an inappropriate, yet it is a very inadequate, metaphor; and perhaps it is impossible to express the meaning of a thing very accurately by any figurative term. Not satisfied with it, the Germans adopted the beautiful Greek word "Æsthetics" in their exposition of the causes of the emotions produced by the contemplation of objects in nature and art. It is now brought into common use amongst us, and well that it is, when such an increased interest is felt for works of art, and when men need clear thoughts, definite expressions, and select words to give authority to their principles of judgment.

What made the Greeks—what made a Plato or an Aristotle—so pre-eminent as critics was the idea they endeavoured to carry out of developing all the powers of the mind in the greatest possible harmony and perfection. This made them great æstheticians. This gave them that universality of mind — without which no man can be a true critic—which enabled them to feel and to appreciate whatever was beautiful and grand. A one-sided or partial judgment would have hindered them from detecting beauties or discovering truths. The temple that a Callimachus or an Ictinus designed, they loved to contemplate, because they saw it was a perfect and finished system; because they felt how the whole of it was developed, in accordance with the principles and real æsthetic motives of Greek architecture.* But such is the blindness and frigid nature of some individuals as actually to question its claims upon our admiration. They are unmoved before it. They assert that its symmetrical proportions are not to be held up as a model of architecture. Another style of architecture has great attraction for them, and this bearing no resemblance to it, is therefore rejected as barbarous. They are excited probably before a Gothic cathedral: to them that is all perfection; far otherwise the classical, which is opposed to it in every respect. These persons are disqualified to judge accurately of the merits of a work they condemn.

My intention is to give a crust for the critics, and I shall quote frequently from the best writers, supporting almost every sentence advanced by some authority:—The Pantheon is not more different from Westminster Abbey, or the church of St. Stephen, at Vienna, than the structure of a tragedy of Sophocles from a drama of Shakspeare. Does our admiration of the one compel us to depreciate the other. May we not admit that each is great and admirable in its kind, although the one is, and is meant to be, different from the other? We will quarrel with no man for his predilection either for the Grecian or the Gothic. The world is wide, and affords room for a great diversity of objects. Narrow and blindly-adopted prepossession will never constitute a genuine critic or connoisseur, who ought, on the contrary, to possess the power of dwelling with liberal impartiality on the most discrepant views, renouncing the while all personal inclinations.†

Beauty and Sublimity.—Burke, Mengs, and other adherents of the *dogmatic* system make beauty to consist in mere shape. Coleridge stated the principle of beauty as "multiety in unity." "All the disputes," writes Schiller,§ "which ever reigned in the philosophical world, upon the conception of beauty, and which reign in part at the present day, have only this origin, that the inquiries commenced either not with a rigorous discrimination, or resulted in a combination not sufficiently perfect." Beautiful art, and that beauty in Greek architecture on which the mind rests with complacency, shows no parade of means; yet, like efficiency of character, its force is made visible only by its results. The motto of the artist should be, "*Ostendo non ostento.*" Yet, as Reynolds† said,—"When simplicity, instead of being a corrector, seems to set up for herself—that is, when an artist seems to value himself solely upon this quality—such an ostentatious display of simplicity becomes then as disagreeable and nauseous as any other kind of affectation. It is in art as in moral: no character would inspire us with an enthusiastic admiration of his virtues, if that virtue consisted only in an absence of vice: something more is required: a man must do more than merely his duty to be a hero. Those works of the ancients which are in the highest esteem have something beside mere simplicity to recommend them. Yet simplicity is our barrier against that great enemy to truth and nature—affectation." Beauty and sublimity are thus considered by Coleridge:‡ — "The Greek art is beautiful. When I enter a Greek church, my eye is charmed, and my mind elated. I feel exalted, and proud that I am a man. But the Gothic art is sublime. On entering a cathedral, I am filled with devotion and with awe; I am lost to the actualities that surround me, and my whole being expands into the infinite; earth and air, nature and art, all swell up into eternity, and the only sensible impression left, is 'that I am nothing.'"

Criticism.—The proudly-asserted opinion of an individual, whoever he may be, is not to be tolerated. We ask of men proofs of their powers of discernment. We ask of those who are in the habit of decrying everything, of robbing things of their best merits, of spoiling what they cannot equal or improve, whether they possess any other power than that of censuring wrong. We tell them that the failings they seek out, the flaws they pick at, may escape notice, or be lost in the general effect, and the work as a whole be admired in spite of them. We would remind them, that they owe to the best production of art the very rules they so imperiously lay down. The merits of a grand, magnificent work of architecture (*grosartich*), cannot be felt or understood by a mind that has no sympathy with it; and to possess even a cultivated judgment, classical taste, and poetic sensibility, are not always sufficient: in addition there are wanted all those qualities that went to make up and inspire the character of the old Freemasons. It is well to remember the advice of the Roman satirist;§ and what is said of verse, will apply equally to the rhythm and poetry of architecture. In the temples of the ancient world, a base is to be found in one example, a volute in another—here a moulding, there a capital, which may be curious, but yet faulty, and by no means deserving of imitation. We regret to see a base in one which gives the column an unsteady appearance, a cornice of too great projection, or some other member that injures the order; yet the architecture may on the whole be extremely beautiful, may have strong claims upon our admiration. In a small building, the slightest irregularity is disagreeable; but in a magnificent palace, or large Gothic church, irregularities are less regarded. In an epic poem we pardon many negligences that would not be permitted in a sonnet or epigram.

Definitions—Discrimination.—"Definition is, indeed, not the province of man: everything is set above or below our faculties. The works

* Wolff, in his "Beytage zur Æsthetik der Baukunst," &c. elucidates these.

† Schlegel's "Dramatic Art and Literature."

† 8th Discourse

‡ "Lectures on the Dramatists."

§ Hor. *Ars poetica*, v. 351.
"Verum ubi plura nitent in carmine, non ego paucis
Offendar maculis, quas aut incuria fudit,
Aut humana parum cavit natura."

and operations of nature are too great in their extent, or too much diffused in their relations, and the performances of art too uncertain and inconstant, to be reduced to any determinate idea. It is impossible to impress upon our minds an adequate and just representation of an object so great that we can never take it into our view, or so mutable that it is always changing under our eye, and has already lost its form while we are labouring to conceive it."* Notwithstanding this authority, we daily meet with persons who entertain the strangest views and most vague ideas on subjects connected with the arts, who startle us and make the world talk about their notions, for instance, of beauty and its agency, or art and its difficulties. We are expected to believe these individual notions, although they are opposed to the common sense of mankind. How many errors of judgment arise from want of discrimination! It is a faculty that has taken a very great part of the lives of men to acquire. It is not always easy to discern the nice distinctions between two persons actuated by the same vice or folly, or the relation between two things when opposed to each other, by which we judge of their agreement or difference. On this Fielding remarks:—"Every person can distinguish between Sir Epicure Mammon and Sir Fopling Flutter; but to note the difference between Sir Fopling Flutter and Sir Courtly Nice, requires a more exquisite judgment." Such writers as alluded to in the foregoing, haters of the cant of criticism, cannot be quoted too often. From them mock connoisseurs may draw warning. Among critics, some are only cynics; some only lovers of the fine arts, but wanting in learning, in observation, in the advantages derived from the conversation and practice of artists: these latter themselves ought to be the best judges, but they are not without their prejudices. Let all hesitate before condemning any particular style, or school, or artist, that is held in universal admiration. Fred. Lush.

* Dr. Johnson.

MODERN HOUSE-BUILDING.†

If our suburban villas were built detached, and on more spacious plots than generally given, the gardens would be larger and more airy: the growth of shrubs and flowers is greatly retarded by want of light and air. Many of the gardens approach more to large sunk areas or sunk courts; they are like cells without a roof or ceiling; they are cold, damp, and cheerless.

The amusements of a garden may not be understood by some, its pleasures may not be appreciated; the expense may be an obstacle to others; but no one can object to an abundance of light and air, both so important to the maintenance of good health.

The expense of a garden will not be so much where the air circulates freely and the sun shines, for the shrubs and flowers will grow in richness and luxuriance; an annual replenishing becomes unnecessary; besides, the eye is gladdened with the cheerfulness.

Bacon says, "God Almighty first planted a garden: and, indeed, it is the purest of human pleasures. It is the greatest refreshment to the spirits of man, without which, buildings and palaces are but gross handiworks."

What is the condition of the ordinary garden? In the front of the house we find a little bit of land about 20 or 30 feet long, and perhaps 10 feet deep, either flagged over, with grass growing between the stones, or else it is cut up by tiny gravelled paths, encircling beds of all sorts of shapes, and edged by discoloured box—it may be one piece of grass ill attended to. At the back of the house we have the garden 20 or 30 feet wide, and perhaps 100 or 150 feet in depth, surrounded by high brick walls, between which the sun scarcely ever shines. The commonest and most hardy flowers will barely grow; the shrubs, fresh and green when first transplanted, become in a few seasons as old bushes, little more than withered and dead or dying sticks; perchance a stunted fruit-tree may stand, not flourishing, not growing: the owner is rejoiced on the appearance of a few unhealthy leaves, albeit very late in the season: it flowers but seldom, and fruit is never looked for. The "golden-coloured walks" are black and dingy, the grass-plot any colour but verdant green. This is the condition of many of our gardens: and if the air around our dwellings be insufficient, or too impure to give vigour and support to a tree or flower, is it not evident that our own growth and health must also suffer?

I am writing, perhaps, that which many already know; but how many things do we know, and scarcely think on them, because they are so familiar and so simple. The mind becomes habituated to different scenes very readily, but bodily health does not. A cheerful, contented disposition will do much, but the evils of an unhealthy situation oftentimes do not show themselves until the constitution is irremediably undermined.

Another strong objection to be raised against rows of houses or coupled villas, which the eye can readily detect, is, that they are seldom in keeping one with another: one is painted, the adjoining house coloured; one has white blinds, the other green; one has balconies to all the windows, the other none; one has plate glass and a green painted door, the adjoining house common glass and a yellow door, intended, perhaps, to represent oak or wainscot—there is no order or regularity.

Again, let us look at the evils of an empty house next door, supposing that it remain untenanted for some time. A policeman, his wife, and of course family, are put in to take care of and show the premises; or else a hard-working couple, with near half a score of dirty little ill-bred children, and suffered to remain until a tenant can be procured; but mind you, gentle reader, on inquiry as to the efficient drainage or quality of the water, and so on, a mere shrug of the shoulders or a significant look will quietly drive away any disposed tenant. The occupant of the adjoining house has to undergo the annoyance of having as neighbours these several dirty, noisy, or mischievous children, or to endure the harrowing feelings aroused by the cruelties and barbarities of a savage mother to her little helpless and playful child; or the horrors engendered by the groans of a maltreated wife: ragged linen is hung out to dry, the windows are covered with dirt, dust, and cobwebs, the ground overgrown with weeds and thistles; stones, dead rats, or kittens thrown over the fence walls.

This is a slight sketch of some of the evils of having an untenanted, or rather an unlet house, next door.

To effect a change in those estates already covered with houses is almost impossible, and useless to expect; but let us hope that a different system will be pursued in regard to future building estates.

The remedy lies in the hands of the freeholder, who should be liberal in letting his land, and he who takes the land in large quantities to retail, must not be too grasping. It is wonderful to think on the enormous price of building-land: one can hardly reconcile the system pursued, namely, taking land by the acre, and letting it not only by the foot, but even by the inch.

Among many, he is esteemed the cleverest hand at laying out a building estate, who can show on paper by calculations the greatest return by ground-rents. The broad acres are intersected by roadways of the most tortuous lines; the plan is dotted over with almost countless red dots, signifying houses, to be. If the estate be bounded by a railway, the red dots thicken along this boundary, and are placed within a few feet of the line. Nice little bits are reserved—looked on as accommodation ground—not to be let at present; perhaps in a fit of unparalleled generosity, they may be thrown in, or may be turned into plantations—a mere delusion.

> "Sometimes, indeed, an acre's breadth, half green
> And half strew'd o'er with rubbish, may be seen;
> When lo! a board, with quadrilateral grace,
> Stands stiff, in the phenomenon of space,
> Proposing, still, the neighbourhood's increase,
> By 'Ground to let upon a Building Lease.'"

Let us look into one important point, in which many interests are concerned: the depreciation of house property in many of our suburban districts. Taking whole districts, it will be found that, generally speaking, the rents are lowered: there are certain exceptions in single houses where a higher rent is obtained, but there are then certain and particular circumstances belonging.

There is a large quantity of house property which was once well let, and now it is difficult to procure a tenant of a lower grade at a reduced rent. It must be admitted by all who have experience in house property, that rents more frequently "come down" than "rise."

There is one source of loss in house property; that is, the constant migration of tenants. I am alluding to our suburban districts, and to private residences only. These disadvantages do not arise from the continued improvements made in modern buildings, not that new houses are more convenient, or let at lower rents.

Building owners have much to consider, and more to do than placing houses as close as possible together. The greater number of this class of house are built for speculation, sometimes for investment: the former are run up as quickly as possible, not an hour lost, no matter what the season may be; they are built to sell. When a house is finished, few who purchase care about the foundations—drainage—thickness of walls—seasoned timber—if the rooms are tolerably large and airy, with plenty of bed-rooms; if there happen to be a couple of pigeon-holes squeezed into the roof for sleeping rooms, so much the more desirable; to catch the eye, and tickle the fancy, bold graining is brought into play—gaudy papers—the ceilings and cornices coloured in the "first style," like a harlequin's jacket—a little bit of gold moulding—one or two thick doors—a cupboard or two—these and other little trifles easily secure a purchaser, who ought to know that a well-planed board conceals an unsound floor—a panelled ceiling unseasoned timbers and lathing—plastered walls spongy bricks.

The "eye-trap" system is carried on to an immense extent.

If often happens that if these houses do not readily go off, they after a while become "blown on," they are a drug—the rents are lowered—and, if sold, it is at a sacrifice! There are hundreds who groan from having bought the sacrifice. Should the speculator fail to sell, his tenants, who will in these localities seldom be bound by a lease, frequently will hardly consent to a three years' agreement, soon discover many inconveniences and quit. The loss of a quarter or half a year's rent, perhaps more, is incurred, besides an outlay for patching up bad and defective work, which now begins to show.

These tenants migrate—they go to a new neighbourhood a little farther off; but then it is more airy—there is a nice field to look on—vain delusion! The house is just finished, it is clean—the floors are level—the staircase does not give way—the ceilings are unstained, there are no cracks in them—the walls have not yet settled; but in a short time this delightful residence is out of repair and dilapidated, and closely hemmed in by countless houses.

A little more care and attention, and a trifling extra amount of money in the first outlay, would realize a greater profit, and render the speculation more sure and the investment more safe.

Bad foundations, insufficient drainage, an imperfect supply of improper water, unseasoned materials, inferior workmanship, will, sooner or later, give their evidence. If those who intend to purchase or to rent house property were not to rely on their judgment only, but to seek the assistance of an able and experienced professional man, oftentimes his report would be adverse—no sale would be effected; he who built for sale only would be disappointed; eventually this scamping and pernicious system of building would find its end. Can any system be more absurd, than purchasing house property according to the then present rents? They make their own valuation; their erroneous calculations show on paper so much per cent.; but, in reality, they find to their cost, if not ruin, how painfully they have been misled.

Many risk the purchase-money to the extent of thousands on their own opinion, rather than have a professional opinion at a small cost. It would appear as necessary to obtain a report on the value, condition, and capabilities of property proposed to be purchased, as it is to have an inquiry into the title. Very often the deposit-money paid down to bind the bargain is forfeited, rather than hold on a doubtful title.

† From Alfred Lang's "Hints on Houses." London: Reid.

There are many villas erected without the assistance of an architect, conveniently planned, the exterior pleasing and comely, and the whole executed in a skilful and judicious manner.

The subject first to be considered in building is the site. On the selection great attention must be given. I am fully aware that the locality chosen is dependent on many circumstances. For instance, the occupation or pursuits of the intended resident; on family connections; on the convenience of the distance from London; on the mode of conveyance; on the prejudice of one situation being more healthy; on the surrounding neighbourhood being more select; whether fine views can be obtained from the windows, or whether there be pleasant drives and walks in the neighbourhood; the selection is under the influence of so many individual circumstances, that it is impossible to lay down one position as being more eligible than another. Strong objections may be fairly raised against one district, which very objections to some may prove to be great inducements to others. The immediate neighbourhood of a railway station, or the frequent passing of coaches or omnibuses—to some an annoyance, to others a great desideratum. The neighbourhood of manufactories and mills should be avoided, not only on account of the dense clouds of smoke constantly pouring forth, nor of the continual noise, nor the vapours, nor smells, but of the class of people usually employed; they are unpleasant and sometimes dangerous neighbours.

It is hardly necessary, perhaps, to say that the vicinity of all buildings where disagreeable and noxious trades are carried on should be avoided—chemical works, and suchlike.

The nature of the soil should be ascertained; and it is necessary not merely to be told but to be satisfied, that not only the immediate proposed building site is or can be drained, but that the surrounding land and buildings are already effectually drained.

If the ground bear the appearance of being newly formed, or there appear any indications to warrant the suspicion, strict inquiry must be made, even of "the oldest inhabitant," whether there ever were a pond or stagnant water. Many have been consigned to a premature grave from houses having been built and inhabited over a filled-up pond.

The properties, quality, and probable supply of water should be ascertained.

If the building site be chosen in a new or partly finished neighbourhood, as far as possible, all information should be gained as to the proposed manner of laying out and covering the surrounding land. If a high price be asked on account of certain advantages over adjoining land, it must be well weighed, whether these present advantages are likely to be permanent. It often happens that a fine view from a costly bow window, or an elegant verandah, is obstructed by the roof of a recently-erected stable. Sometimes a report is spread that on a little irregular piece of land immediately facing the principal windows of a respectable villa, a small beer-shop is to be built; the annoyance is only prevented by securing this land at an enormous price.

On large building estates it has been done, and the practice may still be continued, that only one portion is marked out for building purposes; and the inducements to purchase or rent land or a house may be the airy situation—the uninterrupted view—that it is and likely to remain free from the annoyance of being "overlooked;" but when the most eligible land is all let, much to the dismay of the residents, a notice-board appears, and the "ineligible" land lets quickly, in small frontages, at great prices, because there is already a highly-respectable neighbourhood, and there is a demand for shops.

It must not be expected that I shall immediately refer to, or particularize any case, but I can substantiate all I say. There are those who have done this, and much more; there are those who have smarted from these trickeries, and those who have gained by these deceptions.

Much may be done to prevent this, and many other evils which may be easily condemned, if the owners of building land were, as a preliminary, to have a careful survey made, and the land marked out and portioned, from which there should be no deviation on any account. The landowner should agree that this plan shall be carried out: there can be no just reason why he who lets land should not be under certain restrictions as well as he who hires it: the latter requires some protection. As an instance, we will imagine a building estate of some considerable extent, the roadways marked out, and a form of building agreement prepared: it is desired that in one road no house of business or shop shall be erected: on the good faith, many are induced to take portions of land and build their own residences; the various frontages let readily; good-built houses spring up in all directions. After a while, some shrewd, long-headed speculator comes in, and takes a considerable frontage, in consideration of which a certain latitude is allowed to him. He by degrees covers the frontage towards the road to be occupied solely by private residences, but reserves the corner plot abutting on another road, which is not under the same restrictions. When he has let or sold his houses, and the estate is well nigh covered, he runs up a house fronting this road, but makes the entrance to it from the other, and coolly applies for the signatures of the residents to enable him to obtain a license—perhaps the freeholder's name is the first on the list, as being the most important; expostulation is useless, as the entrance to the proposed public-house is from another road: he fails in obtaining his licence. He then opens this house as a beer-shop, and so it continues from year to year, until the licensing magistrates are led to see the actual want of another public-house.

THE ORIGIN OF THE FIRE BRIGADE.

Considering that your publication is one of much interest to every inhabitant of these islands who is so fortunate as to possess "a local habitation,"—and even so, prospectively, to those who hope to attain to such possession,—I do not think I shall be an unwelcome contributor to its interesting contents, in making known what, in all probability, led to the formation of the present efficient "fire brigade," in substitution of the previous system of each insurance office maintaining its own *peculiar* staff of "firemen" and engines, and acting independently of each other. The present seems to be a very fitting time so to do, considering the very calamitous fires which have lately taken place; the noble daring, and life-saving courage and energy of the brigade; the very effective operation of their combined and concentrated agency; and, moreover, that this is the most usual period for the payment of premiums on insurance, and for taking new policies. These several considerations may operate to increase the number of insurers, and give greater efficiency to the noble institution of the brigade.

About twenty-five years ago, your correspondent, walking the streets of London, met a "procession," consisting of the firemen of one of the offices, with one or two engines, and two or three drummers and fifers, and they paraded with all the grandeur consistent with the paucity of the solitary affair. He had frequently witnessed the same almost contemptible parade, as each office commemorated its institution in such singleness of ostentation annually. He was struck with the reflection, which previously had passed only transiently through his mind, that foreigners would think London, in all its riches, was but poorly, and very inefficiently, provided against conflagrations, if they witnessed one only of these institutional annual processions; and he thought how very different the case would appear if all the several insurance companies would agree *to combine in one general procession*, from Hyde-park to Tower-hill annually; the oldest offices leading, and all displaying, *at once*, the *total* provision existing, in men and engines, for subduing conflagrations in the metropolis and environs. That the idea might not be lost, he spoke about it to the secretary of that office which the poet Cowper notices as by its insurance-plates giving "thoughts of conflagration;" and that gentleman approving the notion, requested your correspondent to endeavour to carry it into effect, observing that, if any one *office* proposed it, the scheme would surely be opposed by the others; but that it would be different if an independent party moved in the matter; and he strongly solicited your correspondent to become that party; to which, strong in the good sense of the idea, he assented.

Your correspondent, therefore, wrote a circular letter to all the fire insurance offices, making his suggestion, and requesting each to signify "assent" or "dissent" thereto. Most of the offices wrote their "assent." Some wished to know what advance was made towards the plan, before giving definitive answer; two or three did not answer at all; but *not one dissented*. However, as the principal offices did not take the matter up warmly, the matter dropped, as to your correspondent acting further therein. Not so, however, *the idea*; for that, as a good seed, germinated, and bore the admirable fruit which we have now the advantage of in *combined action* against a fearful ravager. In a very few years afterwards, the "Fire Brigade" was instituted; fire-engine stations established in various parts; such men as *Braidwood*, *Connorton*, and others, equally judicious as brave, appointed to direct, and men as brave and daring as themselves to execute: no distinctive badge of office, no peculiar clothing of office, no isolated interest of office to protect, but a perfect and combined whole—a *unity* of "brigade" for the general public good—alike of the insurance offices and the assured.

W. D.

WATER SUPPLY AND DISEASE.

All social London has been in alarm; the press in hysterics, on the subject of water supply. There can be no doubt but that the river is wholly unfit for use, as a diluent for food, anywhere below Teddington; and that its purity is questionable throughout its whole course, seeing that Kingston, Richmond, Windsor, Staines, Reading, and many populous towns to Oxford, send their tributes of pollution into the natural outfall—the rich and royal river. But it is very doubtful that pipes and mains supplied from the Thames at Barnes, can be more noxious than those which drink in the pabulum at Hammersmith; and yet according to returns, we see that the mortality is reported as greater in some districts, provided even from lower reaches. The truth is, that the circumstances and condition of the population have more to do with the spread of contagion than even the supply of water: the close, ill-ventilated, and worse drained shores, are the places where cholera makes havoc, and the comfortless state of the inhabitants renders them in such lairs an easy prey to the destroying scourge.

Many of the clean, well-built quarters of the town, such as Bedford and Russell squares, and the vicinage, have had an immunity from the visitation. On the other hand, St. Pancras and Marylebone, both higher in elevation, and both also being full of fine and healthy edifices, have had their deaths, because they have more slums, and more poor inhabitants occupying squalid rooms in nooks where cesspools are the only vent for the absorption of mortal exuviæ. It would astound the public to know how many imposing terraces in the best suburban quarters, are also dependent for drainage on the cesspool system; and very many who now send for spring-water to the neighbouring pump, would loathe and nauseate the draught, did they but know the proximity of the well to the cesspool. People resident in such places have been, and, indeed, are frequently attacked with diarrhœa, but being in more easy circumstances, are enabled to attend to the premonitory notice, and to use timely specifics. Not so the poor: they, too, have the usual symptomatic notice: it is indured, like their poverty, and they perish. Tainted water is certainly most pernicious to all, and a considerable time must elapse before the various companies can complete the improvements now in progress, or take in hand other measures for a purer supply; but *every family* can *improve their water* by simply using *filtering-pots*.

As yet little has been said of the predisposing causes which render the populations of large cities more liable to attack. On the condition of the atmosphere, which is variable, and the relative quantity of oxygen gas which it contains, really depends the vital principle and the purity of the elements for the health of the

human race. This component of the medium in which we live and move is the great agent of *respiration* and *combustion;* the proportions being as 21 to 79, or about *four-fifths of nitrogen gas to one of oxygen gas.* As the oxygen vivifies, so the nitrogen destroys life! As these proportions vary, so the vital air is vitiated; and the suffusion of sulphuretted hydrogen or carbonic acid gases from cesspools destroys the vital principle and engenders disease.

A diminution of the proportion of oxygen in the atmosphere is evidenced at once by the languid burning of the fire on the domestic hearth: the electricity, so powerful in sustaining the animal system, is also diminished at the same time. So manifest is the effect of this diminution on fire, that when the proportion of oxygen is reduced from 21 to 18 (that is, only 3 per cent.), a candle will begin to burn feebly; but if the reduction be to 16, or only 2 per cent. more, then out goes the candle: in fact, the secret of a Bude, or of a sun light, is only an increased feeding supply of oxygen, which, if thrown in a jet towards a torch of flame, will render it so brilliant as to be unendurable by the eye. Now in the element of water we find about *nine-tenths of oxygen and one-tenth of hydrogen;* and as our aliment is altogether conveyed through this medium, of how much importance is it that the source of health and life should be preserved from contamination. The conservators of the Thames never can have turned a thought to evils which flow in fetid torrents, blackening and defiling the noble stream which Nature supplies and designs for the sustenance of man: it fluctuates and ebbs with every tide, becoming worse from year to year as populations increase; and none but the corporation of London, the water companies, or the London double-stout brewers, can have any interest in the Thames.

It mainly behoves every oppidan on the river's course to expurgate the stream, and to divert and utilize the sewage; for in its pure, limpid state, water, containing, as it does, so much oxygen, is a powerful agent in restoring the deficient electricity of the animal body, and in supplying the digestive and pulmonary organs, with the oxygen so essential to existence.

We say, therefore, take the most summary means possible to purify your *water;* filter it by all means,—always for drinking; but even for boiling your viands it should be cleansed from the abominations which, mixed up in their organic state, give out, when heated, vapours and odours distasteful to the senses and destructive of health.

A very inexpensive filtering-pot will cleanse enough for a family. Various houses advertise various machines in the *Builder* at various prices, dependent, of course, upon the size and finish: some will run off upwards of 100 gallons a day. One firm offer plain but effective machines so low as 6s.; and these will pass and purify five gallons daily; freeing that quantity from, at least, all organic matter.——Use them.

Quondam.

PROVINCIAL NEWS.

Spalding.—The gas works here it is said, have been offered to the local improvement commissioners for £13,000.

Edenham.—A stained-glass window, by Constable, of Cambridge, has recently been placed in the parish church.

Godmanchester.—A stained-glass window, by the same artist, has been put up in the parish church of this place also. The subject is Simeon with the child Jesus in his arms.

Cambridge.—In St. Andrew's Church, of this city, a stained-glass window, also by Constable, has been put up on the south side. Like the preceding, it is a memorial window.

Norwich.—The Norfolk magistrates are about to make extensive additions to the County Lunatic Asylum, at an estimated cost of about 20,000*l.* The plans have been already prepared, and the works are to be promptly proceeded with.

Hinckley.—A meeting has been held at the Town Hall, Hinckley, for the purpose of considering the propriety of establishing a corn-exchange. The hall is to be built at a cost of about 1,500*l.*, to be raised in shares of 2*l.* each, 200 of which were taken at the meeting. There was a good attendance, and the persons present seemed determined to carry the plan to its completion.

Leicester.—At a numerous meeting, held lately at Leicester, Lord Berners, in the chair, a committee was appointed to devise the best means of promoting the erecting of a corn-exchange in that town also.

Dudley.—All the shares but one of the district branch of the Metropolitan Association for the improvement of dwellings are subscribed for, and the first call on all but about six paid up. The general meeting of the shareholders took place on the 20th, when various gentlemen were elected on the permanent committee, all of them, with one exception, members of the local board of health.——The workhouse question in Dudley is at last decided, and a sub-committee of guardians appointed to select a site, &c. The contemplated public buildings will render the building trade in Dudley more brisk than it has been for years; a fair proportion of the control of which will be under the hands of a local architect not altogether unknown to our readers.——Some workmen's dwellings have just been erected at the extensive Corbyn's Hall Furnace, Dudley, for Mr. William Mathew, under the superintendence of Mr. Wigginton, architect, while the Corbyns Hall itself has undergone a thorough renovation by the same architect.

Newcastle-under-Lyne—Newcastle has formed another branch of the society above referred to, and has applied for shares to the amount of 10,000*l.*, while active means are being taken by a local lecturer to enlist the support of other towns in Staffordshire and Worcestershire.

Chichester.—The well-known bronze bust of Charles I., placed in a niche of Chichester Cross, has recently been removed for the purpose of having a cast taken of it for the Sydenham Crystal Palace. This has been done by Mr. Henry Farndell, under the direction of Mr. Butler the architect; and the bust has been replaced. The process has partially cleaned the surface.

Torquay.—A school is about to be built, by the liberality of Mr. Francis Man, at Kingskerswell, South Devon, a small village about three miles from Torquay. The design is by Mr. Edward Appleton, of Torquay, architect, and the school will be built of the native limestone, with Bath-stone dressings. The roof is open ceiled on the rafters.

Bristol.—A new church is soon to be commenced in St. James's parish, on a site behind the east side of St. James's-back, and extending to Union-street, where there will be a second entrance. For this site it is said 1,200*l.* is to be paid, and altogether there will be required for the building about 3,500*l.*, to be raised by voluntary subscription. It is proposed also to erect schoolrooms, for which sufficient ground will be reserved; a provision being made for the present to establish these without building. Sir John Kerle Haberfield, has contributed 50*l.* towards the work, and Mr. W. H. G. Langton, 100*l.*

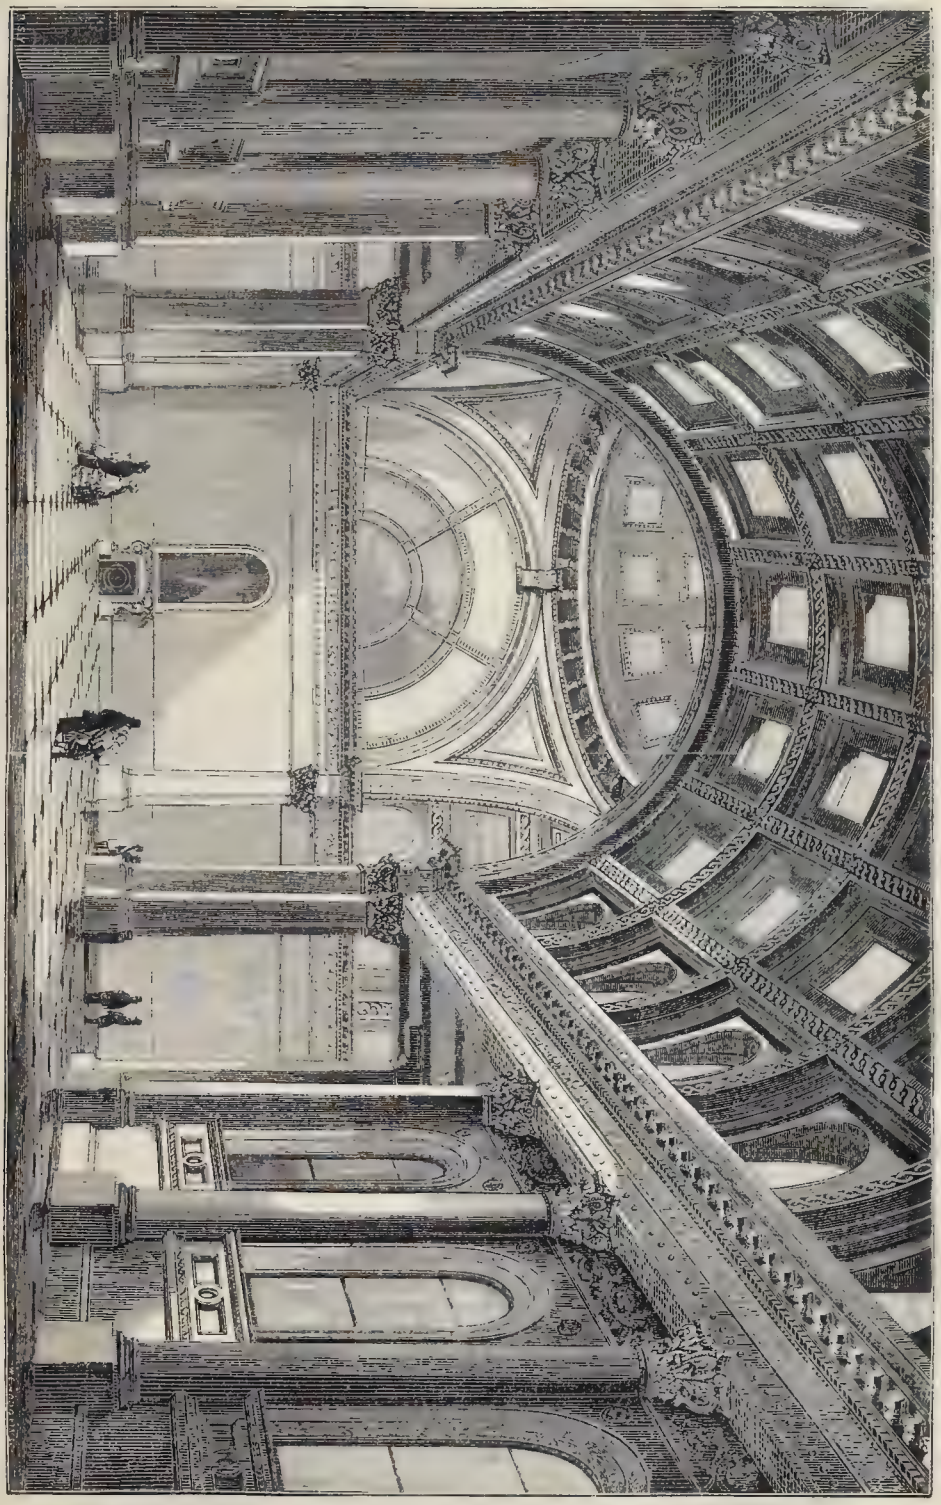
Cardiff.—The trade of this port is increasing so fast, that another, a third dock, is contemplated. Circulars have been sent to the principal landowners, merchants, and others, bearing the signatures of Wm. Crawshay, and other eminent iron and coal proprietors, convening a meeting to consider the proposal. The trustees of the Marquis of Bute are now constructing a large dock adjoining the Bute dock, but it is said that this will soon be too small. The proposed new dock will lie to the south-west of the town, in the mouth of the river Ely. The town of Cardiff would thus increase in another direction, placing the railway stations in the centre of the town.

Aberdare.—The Dean and Chapter of Gloucester have obtained powers to let the whole of their extensive glebe in this parish out on building leases. The glebe is a large flat space to the north of the new church. It consists, altogether, of nearly 30 acres of land. Mr. Hall, of Cirencester, surveyor, has laid it out into a town, consisting of several main streets, the principal street being 45 feet wide, and will consist entirely of shops.

Wolverhampton. — The Orphan Asylum on Goldthorn-hill is now almost completed. Its entire cost, independent of the endowment, will be about 6,000*l.*; of which 4,660*l.* have already been subscribed. This sum was the produce of subscriptions from about seventy individuals.

Chesterfield.—A bill is about to be laid before Parliament, to authorise the construction of a market-hall and public building at Chesterfield, and for the better regulation of the market. A capital of 10,000*l.* is to be raised by a public company.

Durham.—The *Durham Advertiser* reports us rather a pleasant piece of news, that from floods in the Wear, the Lumley lock has been swept away. The lock consisted of a sloping structure 12 feet 6 inches above the water level (below the dam), surmounted by a perpendicular wall 3 feet 6 inches high. From the sluice for about 22 yards towards the Lumley shore the entire structure has been swept away. The masonwork under the sluice is likewise shattered to pieces. It will take about 1,000*l.* to repair the damage already ascertained; but "we trust," adds our authority, "through the bishop liberally granting the fishery to the public, Lord Scarborough, or any other person, will be spared such a profitless expenditure."



Cockermouth.—The new church has already been injured, though it is said not very seriously, by lightning, which struck the iron-work at the top of the spire to which the lightning conductor was attached, dislodging it, and about 8 feet of the extremity of the spire itself. The shattered masonry fell on the roof of the transept, through which it passed, breaking one of the main and three of the common rafters. A portion of the falling mass struck one of the pinnacles at the base of the spire in its course, and broke off between 7 and 8 feet from the apex downwards. It is considered as a matter of astonishment, that a much greater amount of damage was not inflicted. As it is, the cost of its repair is estimated at about 20*l.* independent of the expense to be incurred by the erection of the necessary scaffolding. It would be interesting to know how the lightning conductor was arranged, what it consists of, how fixed, &c.

KILKENNY ARCHÆOLOGICAL SOCIETY.

The fifth annual meeting of the Kilkenny and South-east of Ireland Archæological Society was held at its apartments, Kilkenny, on Wednesday the 18th ult. Mr. Patrick Watters in the chair. Twenty new members were elected. The report and accounts for 1853 were laid before the meeting. The report announced the accession of 113 new members during the past year. Various presentations were received, and along with some of the more interesting and curious were written remarks (reported in the local *Moderator*), entering at some length into the archæological history of subjects connected with the donations. The secretary laid on the table the prospectus of a projected magazine for the "Kingdom of Kerry," and read a letter from the secretary of the Surrey Archæological Society, asking to enter into friendly relations with the Kilkenny Society. It was unanimously resolved that this proposal should be accepted.

The chairman said, that as the abortive scheme of a canal to connect Kilkenny with the tidal waters of the Nore was now nearly 100 years old, it might be held in some sort as an antiquity. He therefore proceeded to read to the meeting some extracts bearing on the subject, from the original books of the corporation in his custody.

In reference to the pagan cemetery on Ballon Hill, in the county Carlow, Mr. Graves said he had received some interesting communications from Mr. Richardson Smith, descriptive of renewed diggings in this veritable California of Pagan sepulchral remains. Papers were then submitted to the meeting.—On Tradesmens' Tokens of 15th century, by Mr Acquilla Smith, M. D., M. R. I. A.—On the Ormonde Coin, by the same.—On the Surrender of Ross Castle, Killarney, in June, 1652, by Mr. John P. Prendergast, Barrister-at-Law, &c.—On the Ancient Red Book of the Exchequer, Dublin, by Mr. James F. Ferguson.

THE STOCK EXCHANGE, LONDON.—Mr. ALLSOP, ARCHITECT.

[See p. 59, vol.

THE MASONS' PROVIDENT INSTITUTION.

The eighth annual meeting of the members and friends of this institution was held at Hawkstone Hall, Waterloo-road, on the 31st ultimo. On the motion of Mr. Godwin, who took occasion to express his sympathy with the objects of the association, and mentioned that Mr. Tite would have presided but for indisposition, Mr. Thomas Piper was voted to the chair. The report of the committee, which showed that the institution is in a satisfactory condition, although the number of members is certainly not so large as it should be, was received and adopted on the motion of Mr. Clay, seconded by Mr. C. H. Smith, V.P. It was afterwards moved by Mr. Bateman, seconded by Mr. Green, and carried, "That the services rendered to this institution by Mr. J. Whitehead, from its foundation to the period of his retirement in 1852, deserve the warmest thanks of this society; that a subscription be entered into in order that some suitable acknowledgment may be presented to him as an expression of the goodwill of the members of this society, and a memorial of his exertions in founding this institution, and acting as its very efficient secretary for seven years."

Thanks were given to the vice-presidents, treasurer, trustees, and other officers of this institution; and to Mr. Thos. Piper, for his able conduct in the chair, and for his readiness on all occasions to render services to the institution. The chairman, in his closing remarks, expressed a hope that employers and employed might meet more and more often in such associations as this, and come to such a mutual good understanding as to be willing to consult each other on all the important movements and concerns of life.

WOODEN ERECTIONS WITHIN THE LIMITS OF METROPOLITAN BUILDINGS' ACT.

Awards.—As considerable want of knowledge respecting the illegality of wooden erections and projections within the districts controlled by the Metropolitan Buildings' Act is still exhibited, or if not want of knowledge, wilfulness in wrongdoing, we think it desirable to publish the two most recent awards on the subject by the official referees. On the east side of Upper-street, Islington, midway between Tyndale-place and Cross-street, a wooden structure has been put up by Mr. John Walker, builder, for a photographic establishment for Mr. Oakshott. The district surveyor for South Islington remonstrated, and ultimately gave notice of irregularity, in reply to which the builder denied that the district surveyor had any control, as the erection was upon wheels. An information was accordingly lodged with the registrar of buildings. At the hearing before the referees, the builder admitted that the erection is about twenty-five feet in length, and twelve in width, and that the lower part of the vertical enclosures is constructed of boards, and the upper part and the roof of wood sashes filled in with glass; "and it further appeared that such erection purports to be supported on small wheels about fourteen inches in diameter, which are below the surface of the ground."

The referees awarded "that the said erection is a building within the meaning of the said Act first herein mentioned, and that the said John Walker, in building the said building, has built and constructed the external walls or enclosures thereof of wood, and not of bricks or stone, or of bricks and stone together, as required by Schedule D, part 2, of the said Act; and that the said John Walker has so built the external walls or enclosures, and the same now severally are contrary to the provisions, rules, and directions of the said Act; and we do hereby direct the said John Walker forthwith to amend the said irregularities."

Fees and expenses of the office, 1*l.* 12*s.* 7*d.* and fee of one guinea to the district surveyor, to be paid by the said John Walker.

In the other case, Mr. J. A. Hughes had put up a wooden balcony, and enclosure under, against the back external wall of a semi-detached house, No. 13, Douglas-road, Canonbury, district of South Islington, and no attention being paid to notice, the matter was sent to the referees. At the hearing, it appeared that the said house—

"Is a hereafter-built building, within the meaning of the Buildings' Act, and that the said projection consists of a balcony with an enclosed porch or verandah underneath, and a balustrade along the top of such balcony, and a flight of steps from the ground up to such balcony; and that the whole of such projection, excepting the lowermost eight steps, which are of stone, has been built of wood, and that the said James Alexander Hughes is the person by whom such projection has been built." The referees awarded "that the said projection is within the meaning of the said Act first herein mentioned, a projection from the rear external wall of the said building not forming a part of such wall; and that the said James Alexander Hughes has built the several parts of such projection, except the said lowermost eight steps, of wood and not of brick, tile, stone, artificial stone, slate, cement or metal, or other proper and sufficient fire-proof materials as required by the rules of Schedule E of the said Act; and that the said James Alexander Hughes has so built the said several parts of the said projection (except as aforesaid) and the same now are contrary to the rules and directions of the said Act; and we do hereby direct the said James Alexander Hughes forthwith to take down and remove the said projection, so far as the same has been built and is of wood."

Costs and expenses 1*l.* 12*s.* 5*d.* and one guinea to the district surveyor, to be paid by the said J. A. Hughes.

The award being disregarded, after numerous applications, the referees' certificate was obtained at the cost of 1*l.* 8*s.* 1*d.* more; and as the builder still treats the whole proceedings with contempt, it will be now the duty of the district surveyor to summon him before the sitting magistrates at Clerkenwell, where of course fresh expenses must be incurred. The issue our readers shall hear of.

STRIKES AND COMBINATIONS.

We did not anticipate great results from the conference arranged by the Society of Arts for the 30th ult. and so are not disappointed. The idea of offering "a neutral ground upon which both parties might fairly and temperately discuss the best modes of either preventing the outbreak of such disastrous quarrels, or terminating them as speedily and satisfactorily as possible to all parties, when they arise," was good, but by refusing to permit an adjournment, and to give another day to the matter, the council, as it seems to us, gave up the chance there was of obtaining some practical results from a consideration of the first day's proceedings. Lord Robert Grosvenor, M.P. presided. The room was quite full (delegates from many parts of the country were present, at some expense, we suppose), and excellent temper and feeling were preserved throughout. The council had divided the subject into the following propositions:—

"1. *Combinations.*—Are they objectionable, whether set on foot by employers or employed as a means of influencing the value of labour? Would a law of limited liability in partnerships tend to render such combinations unnecessary? Do they remove the questions with which they deal from the privacy of ordinary trade management, and place them under public cognizance? and, if so, how may that publicity be most simply and effectually secured? Ought any legislative provision, or other arrangement, to be made by which the right of association, if obviously exercised to the detriment of the community, might be controlled or neutralised?

2. *Strikes and Lock-outs.*—Should partial strikes, intended to take the masters of a locality in detail, be met by lock-outs? What other means are likely to be effectual in termiuating them?

3. *Wages.*—Does payment by piece-work alter substantially the nature of the relations which would exist between employer and employed were the latter day or weekly labourers? Can lists of prices for piece-work be equitably drawn up so as to meet the varied circumstances of different machinery, different management, different localities, and the constant progress of improvement? Ought manufacturers to bind together their associations within the limits of a minimum scale of prices for piece-work? Ought the operative to share beyond the market value of his labour in the increased productiveness of improved machinery?"

Each speaker was limited to ten minutes on each proposition, and with small exception, they all spoke clearly and to the point.

It was arranged that no motion should be put to the meeting except where entire unanimity prevailed. The only resolution put, in consequence, was, that a law to limit liability in partnerships is desirable, and this was carried unanimously. It is to be hoped that the expression of opinion thus gained may expedite such a law. The third proposition, important as it is, was not even mooted for want of time. There was a strong feeling in favour of boards of arbitration, but no motion on the subject was offered to the meeting.

FOREIGN ARCHITECTURAL AND ART INTELLIGENCE.

Munich.—The statue of Jefferson, 13 feet high, was cast on the 21st January, at the brass-foundry of the Bavarian capital. The metal required for it amounted to 10¼ tons. This statue is one of the five which will surround the equestrian statue of Washington (22 feet high), to be erected at Richmond, in Virginia, by order of the Government of the United States.

Deterioration of Popular Illustrations.—The *Cologne Gazette*, in noticing one of the pictorial popular works published in Germany, says that its portraits are caricatures, and other sketches just made at random. We are shamed, in this respect, by the sturdy and sterling woodcuts and engravings of the Middle Ages.

Leipzig.—Art Bequest.—The lately defunct distinguished art amateur, M. Consul Schlittes, at Leipzig, has bequeathed his picture-gallery and house to that city, on condition that the municipality build and maintain a museum for the preservation, increase, and public exhibition of his pictures. The representatives of the town have gratefully accepted that offer; and considering that the present playhouse is quite inadequate to the present exigencies of this large population, have resolved that a new theatre be built, and the present transformed into a town museum and picture-gallery. All the financial difficulties of these plans have been also, at once, removed, as another art-patron, M. Grassi, has lent the city 100,000 thalers, at 5 per cent. interest, during his lifetime, and to become the absolute property of the city after his demise.

The Molos in the Prussian Harbour.—As the construction of so many hydraulic works on the coast of the Baltic requires large masses of granite, the Prussian Government had made some experiments with the strata of the island of Bornholm for receiving the supply of that material thence; but as this has proved unsatisfactory, the quarries of the south of Sweden were proposed, and already a Prussian surveyor has found a spot yielding the necessary supply of granite slabs for the above works.

RAILWAY MATTERS.

The subject of railway accidents, and the necessity for the adoption of some means of mutual intercommunication between passengers and guards, and between guards and drivers, is evidently one of increasing interest and anxiety on the part of the public. The *Worcester Chronicle* gives railway directors and managers a warning word as to the personal consequences to themselves which continued neglect on their parts is certain, ere long, to excite. Coroners' juries are not much longer to be trifled with, they may depend on it, and the sooner they can see this clearly the more likely are they to discover some practicable mode of responding to the public outcry for precautionary measures. In the *Birmingham Journal*, too, of last week, along with the like indications of the coming storm, we observe some judicious remarks on the difficulties and drawbacks presented by various proposed modes of intercommunication between guards and drivers, and an account of Mr. Alfred Bird's invention, whereby hydraulic pressure is made available by means of gutta-percha tubes, joined in a peculiar way for lengthening or shortening the tubes according to the length of the train, and through which signals are to be made in connection with a special apparatus by the force of hydraulic pressure. In short, there is no want of inventions: on the contrary, railway directors and managers must have some trouble in deciding amongst the multitude of projects, not the least important and useful of which shakes off all mechanical appliance of telegraphic signals, and simply calls for a safe mode of transit for the guard from end to end of a train, so that he can personally communicate both with driver and with passengers, the latter of

whom often know more about impending accidents than the guard himself. One very obvious and essential arrangement, however, so far as regards the driver, is, that he ought to mind his engine alone, while a special officer really must be employed to look out ahead, as is the case at sea on board of every ship and why not on every train? For the prevention of collisions, a correspondent, Mr. E. G. Maddock suggests the addition at each end of a train of a truck fitted up as a fender, with cushions at both ends of gutta-percha tubing in coils, padded with tow or wool enclosed in a covering of leather, and in the intermediate space a powerful air apparatus, like bellows of several folds, to aid in breaking the concussion.

The receipts of the various railways do not appear to have been diminished by the impediments to locomotion occasioned by the late extraordinary snow-storm to the extent which might have been anticipated. For the week ending the 7th ult.—in the course of which the traffic of some lines was wholly suspended — the incomes of the eight companies having their termini in the metropolis, fell off 9,641*l.* only; and in the following week the comparison of their revenues with those of the corresponding period of last year presented no unusual features. When the character of the weather at the commencement of the month is remembered, this result must be especially gratifying to railway proprietors: at any rate, it indicates an extraordinary possession of physical courage and energy on the part of their countrymen.

HOUSE AGENCY AND AUCTIONS.

Lockwood *v.* Labudy.—This was an action brought in the Marylebone County Court, by Messrs. Lockwood, auctioneers and house agents, of Upper Baker-street, to recover 17*l.* 9*s.* under circumstances of some importance.

Mr. Bicknell, solicitor to the plaintiff, in opening the case to the jury, detailed the transaction as accorded with the plaintiffs' evidence. He said that the defendant, who is a Parisian banker, residing at 31, Park-row, Regent's-park, called upon his clients respecting the letting of a house, which house the plaintiffs had the lease of. It so occurred that the furniture of the house in question was to be sold by auction, and M. Labudy, being desirous of keeping some of the furniture, asked the plaintiffs if they could purchase some of the furniture by contract. He was told that it was too late, the sale having been announced by advertisement, and it was suggested that he could attend the sale and buy by any arrangement with his clients. M. Labudy objected to attend the sale, and it was arranged that one of the plaintiffs' clerks should attend the sale and bid for the defendant. The defendant then appointed a time to meet the plaintiffs at the house, and to value the articles he wanted. This being carried out, and the catalogue priced, the plaintiffs told the defendant their charge would be 5 per cent. upon the valuation of the furniture the defendant selected, which in the gross amounted to 349*l.* Prior to the sale coming off, the defendant engaged another auctioneer, Mr. Bingham, of Ryder's-court, and who effected the purchase instead of his clients. He contended that as the plaintiffs were instructed to purchase the furniture they were entitled to their commission upon their valuation and not upon the realization.

Mr. Simpson, solicitor for the defendant, urged upon the jury the extraordinary conduct of an auctioneer selling for a principal to a principal. It was impossible that he could do honourable justice to both his employers. His client, one of the first bankers at Paris, was of scrupulous integrity, and would deny on oath that he had promised to allow 5 per cent. to the plaintiffs for literally doing nothing. As a foreigner it was natural he should make some inquiries, and the only persons he could make them of were the plaintiffs, who had let him the house, and who had the furniture to sell. He characterised the claim as an exaction, and remarked that the plaintiffs might as readily have valued the furniture at 1 000*l.* and charged 5 per cent. valuation, as for 349*l.*

M. Labudy denied that he had entered into any such arrangement as stated by the plaintiffs. He said he merely asked them what he could buy certain things for, and they gave him a list upon which the prices were marked, and which came to 539*l.* In the meantime he called upon Mr. Bingham, and who upon going over the furniture, said they were valued greatly too high, and who eventually purchased the articles for him for 200*l.* When the plaintiffs offered to buy for him he felt extremely surprised at the impropriety of the offer, and told them he could not see how they could buy and sell too.

In cross-examination by Mr. Bicknell, M. Labudy admitted that Mr. Lockwood told him that if they purchased the furniture, they would charge 5 per cent

The Judge, in summing up to the jury, observed that he did not see it was incompatible with the duties of an auctioneer to value his sales beforehand for parties, or to employ his clerks to bid for other clients besides the vendor. The question then was, had the plaintiffs valued the furniture when they intended to purchase it, and were they to have 5 per cent. upon their valuation with the concurrence of the defendant?

The jury gave a verdict for the plaintiffs.

THE SPIRIT OF PROGRESS.

Sir Bulwer Lytton, in his speech at Leeds last week, referred to the milder spirit of humanity as honourably distinguishing this age from those which have gone before it. Now, even abroad, he said, in spite of intervals of civil discord and convulsion, we may observe the advance which has been made within the last sixty years. Take but a single instance. Compare the reign of terror in France at the close of the last century with that sublime and awful moment when law and order were rent asunder round the fallen throne of Louis Philippe: murder and rapine, seized with horror at their own first impulses, dropped the red flag of blood at the feet of Lamartine. But it appears that circumstances have perhaps allowed this country to take precedence here. It is this milder spirit of humanity which has raised up all those new questions, only heard of in the last century, affecting the condition of the people: it is this which seeks to carry health and cleanliness into the abodes of misery and squalor: it is this which has directed merciful attention even to the foes and outlaws of society, seeking to reform criminals rather than punish them: it is this which has introduced hopeful discipline into our prison-houses, and, except in rare cases, has struck the punishment of death out of our criminal code. The practical is the first thing we think of. Why, we did not even destroy the stage-coaches — they died a natural and peaceful death of themselves after we had constructed railways. But if the last century had discovered the steam engine, I believe they would have destroyed all the coaches before a single girder had been put down upon a single line. The last century sought to level: well, we seek to level also, but our levelling is in a different spirit, I trust,—not by pulling down the one class, but by lifting up the other.

Notices of Books.

The Freemasons' Quarterly Magazine. London: Routledge and Co. 1854.

Of late we have noted, in this long-established periodical, in which we take a special interest, the impress of a new head at work, associated with new as well old literary labourers; and we find an explanation of this in the part for April last, now, along with its brethren of '53, before us. Having reached something like a natural maturity of one-and-twenty-years, it was fitting time that it should enter into a new birth, and so it has. Its pages are now far more piquant and interesting than they have been, and this not to the initiated alone, but to all among the general public who take an interest either in ancient lore or in modern light literature. This, in truth, is an amusing magazine, in every respect suitable to the general reader; and it is something beyond this, even to him. He may here be led, by sudden flashes of a singular light shed even on ancient superstition, to see how close a connection Freemasonry has with religious principle. We want to see Masons doing something more than they do. A little less "rest and refreshment," and a little more energy and "labour," would be more consistent with the ancient practice of the craft. The brethren ought to be more cautious than they are in initiating some whose sole object is to be "filled with wine, wherein is excess," rather than "with the spirit" of truth, and so to convert the lodge into a mere set of "jolly companions every one"

VARIORUM.

The "Royal Geographical Calendar for 1854, by Augustus Petermann, Physical Geographer to the Queen," is an ornamental as well as useful sheet, designed and lithographed by Mr. Petermann, of 9, Charing-cross. It exhibits various routes of discovery by sea and land, and also a small map of the seat of war in Turkey and the Black Sea. The principal map-sketch consists of one having the north pole as its centre, and in which Mr. Petermann's own proposed *north-east* route is shown. In respect to this very hopeful route, by the way, we may here remark, that we have never observed one or two important features in such a route publicly noted; namely, that this is the very route which not only the warm "Gulf Stream" takes, past our own islands, and along by the Norwegian coast whose rigours it so markedly mollifies, towards and around the polar region, but also the very prevalent and warm south-west winds, which follow the same route; that, consequently, the isothermal line, which shows so vast a southern sweep of ice-bound territory and coast in the north of America, bends far to the north as it takes its eastern course to the north of Lapland; and that while the warm ocean current runs north-eastward, and doubtless circulates round the pole, a cold current sets in in the very opposite or returning direction; partly, at least, south eastward by the ice-bound coasts of northern America, issuing out through Davis Straits, and rejoining the warm current far to the south, and along the east coast of North America. When facts such as these are considered, together with the packing and pressure of the ice on the northern shores and islands of America, would it not appear as if the warm Gulf Stream and the warm winds also moving north eastward, periodically cleared that side of the arctic regions of ice, by melting it partly, and partly by carrying it along with them round the pole and then pressing it on again southwards upon the northern coasts of the *western* hemisphere as the stream issues forth, now itself a cold current, through Melville Straits, Wellington Channel, &c. and by Baffin's Bay into the Atlantic Ocean, as well as through Behring's Strait into the North Pacific? In this view our arctic navigators have braved precisely the most difficult passage while neglecting the easiest and most accessible: they have preferred going against the stream to running with it; plunging in ahead of the ice to following up behind it; and all simply because to go *westward* seemed to be the more obvious way to reach the *western* hemisphere, while in reality it was probably by far the most tedious and difficult.

The "Post Magazine Almanac and Court and Parliamentary Register for 1854," is a well-timed and useful sixpenny publication by Pateman of Wine Office-court, Fleet-street.

The "Statement of Mr. Lionel Gisborne's Design" is a pamphlet on the Thames Improvement, lately issued, with a map, by Stanford, of 6, Charing-cross. We are not aware of much being new in it, but every one who urges on this desirable work is doing good.

A tract titled "Aslit's Decimal Coinage; with a Proposal for decimalizing our Weights and Measures of Length and Capacity," and with gilt and silvered examples of proposed coins (Silverlock, Doctors'-commons, publisher), contains some sensible matter.

Last, but not least in importance, we have "Observations of a Solicitor on the Right of the Public to form limited liability Partnerships, and on the Theory, Practice, and Cost of Commercial Charters," by Mr. E. W. Field (Longman and Co. publishers). This pamphlet constitutes a reply to the list of queries put by the Government Commission on Limited Partnerships, and enters at some length into a subject which is growing in interest and importance, as all who heard the discussion at the Society of Arts on the labour question the other day must feel assured.

The Architectural and Archæological Society for Bucks.—The quarterly general meeting of this society has been held at Aylesbury, under new auspices, the Archdeacon of Buckingham, vice-president, in the chair. In the report read, a summary account was given of the society from its commencement Among recommendations made, one was to publish, periodically, a journal, to contain, with architectural notices, papers and notes illustrative of the history and antiquities of the county. The report, it is said, is to be circulated among the members with the first number of the journal.

Miscellanea.

THE LATE MR. W. A. NICHOLSON, ARCHITECT.—There has recently been erected in St. Swithin's Church, Lincoln, a monumental tablet in memory of this gentleman, by Mr. Milnes, of London: it includes a likeness in medallion, with a warmly-worded inscription, and at the base is sculptured a rent scroll.

ARCHITECTURAL INSTITUTE OF SCOTLAND.—The second meeting this season was held on Thursday in last week in St. Mary's Hall, Renfield-street, Glasgow. Col. Mure, M.P. for Renfrew, occupied the chair, and delivered an introductory address on the dignity and importance of the fine arts, especially the grandest of them all—architecture. Mr. Salmon read the paper of the evening, on Church Architecture. Mr. Salmon argued that the Renaissance was the best style for church architecture, inasmuch as it was durable without being ponderous, convenient and comfortable, in harmony with the object for which it was erected, economical and capable of indefinite improvement. An animated discussion on Gothic and Renaissance followed.

CONVERSAZIONE AT THE LEEDS CIRCULATING LIBRARY.—The committee of the Leeds Library, with a view to bring their valuable collection of books under more general notice, held a *conversazione* in the library, on Tuesday in last week, and the occasion, says the *Intelligencer*, was honoured and graced by one of the most brilliant and fashionable assemblies which we have observed in Leeds for some time. As the object of the committee was to obtain a more general recognition of the library, the *conversazione* was rendered as much as possible bibliographical in its character, and no extraneous attractions, as paintings, models, and designs, were introduced to withdraw attention. The large room was decorated by festoons and wreaths of evergreens. The president of the institution, Mr. W. S. Ayrton, delivered the opening address, which appropriately treated of libraries and books, and as appropriately concluded with an account of the means adopted for lighting the library with gas without destroying the bindings of the volumes. The Leeds gas, he remarked, was far purer than the London, but still it was desirable to take measures for its thorough ventilation: and this led to the "sun light"—an invention which, we may remark, combines two distinct ideas, namely, the acquisition of a soft and beautiful light shed *exclusively* from the ceiling, and hence falling from above on every object throughout the apartment, thereby contributing a *peculiar* effect which requires to be seen in order to be understood, and the idea of which was first suggested in the *Builder*, about seven years since, in a communication from "J. E. D." giving an account of an experiment made by him in the lighting of a theatre some years previously in Scotland: the other invention with which this has since been combined in the "sun light" appears to be due to Mr. Alfred King, of Liverpool, and consists in the ventilation of the sun light by a series of cones. After the president had concluded his address, the Rev. W. Sinclair read a paper on Constantinople, and the military resources of the Turkish empire; the Rev. Mr. Reynolds, one on the classification of the sciences; and Mr. Harrison, the recently-elected librarian, concluded the evening by reading a short paper embodying his personal reminiscences of Russia.

LECTURE BY SIR ROBERT PEEL.—On Tuesday in last week, Sir Robert Peel delivered a Lecture on the Progress of Society, social and intellectual, in the Town-hall, at Birmingham, in aid of the funds of the Midland Counties Association of Mechanics' and similar Institutions. The Hall was well filled. Mr. J. Baldwin, the Mayor, occupied the chair; and there were also present many members of the Corporation and others. Sir Robert Peel, who was received with prolonged cheering, commenced with a few modest remarks on his anxiety to do justice to the subject of his lecture, and with a slight programme; to which we must limit our report. He proposed to touch upon three great landmarks of history—the Crusades, the discovery of America, and the origin of the art of printing. In connection with the Crusades, he should be able to show how knowledge had its rise in Europe, and touch on the great abuses of the present day—the University of Oxford, the Corporation of the City of London, and Corporate reform—things more intimately connected than might at first sight be supposed. In relation to the discovery of America, he should trace the history of California and Australia. Then he should take printing, and show the advantage we derive from the diffusion of knowledge, whether in our intellectual resources, or our agricultural pursuits. Then he should attempt a brief history of education; and then finally attempt to draw a picture of peace and war, showing that peace is civilization and war retrogression. A pretty full account of Sir Robert's very lively lecture is given in the local *Journal*.

PHOTOGRAPHIC AND STEREOSCOPIC PROGRESS.—The interesting and beautiful science of sun-painting is making rapid and curious advances. A large bridge is being built over the river Volga by command of the Czar, who was so impatient to have it completed, that he made frequent long expeditions to the works that he might use nature's own stereoscoptics with the enkephalic images implanted in his own imperial "camera obscura." The architect, however, has now made matters more pleasant probably to all parties by preparing, twice a month, a pair of stereoscopic images of the works as they progress, which he forwards to the Emperor, who sits in his own study and sees through this new and curious sort of spy-glass how they are getting on at the Volga. Another new mode of making use of the phototype, consists in casting a magnified copy of a sun portrait on canvass for the aid of portrait-painters, who thus sketch from nature's sketches. In a recent sitting of the "Société d'Encouragement pour l'Industrie Nationale," at Paris, according to *Galignani*, it was stated that a photolithographic process, which has so long been desired, has at length been discovered. It was thus described:—An ordinary lithographic stone is taken, and a solution of *bitume de Judée* (Jew's pitch) is placed on it. A negative photographic proof is then put on it, and is pressed on the stone for a period which may vary from ten minutes to four or five hours. The page is then washed in pure ether, which soon evaporates. The figure is then found properly marked with its lights and shades, and it may be inked and drawn off as in ordinary lithographs. In the same sitting it was announced that a deaf and dumb man had discovered the means of painting photographic designs with a perfection not hitherto attained. A novel application of the combustion of zinc, it is said, has just been discovered by Mr. Wenham. "He takes fine zinc parings or shavings, and forms them into a pellet, which, when ignited, affords a brilliant and steady light for photographic purposes."

INSTITUTION OF MECHANICAL ENGINEERS.—The seventh annual meeting of this body was held on Wednesday week, at Birmingham. There was a numerous attendance, presided over by Mr. A. Slate, vice-president. The first business transacted was the election of office-bearers for the ensuing year. Mr. W. Fairbairn, F.R.S., of Manchester, was chosen president, and took the chair accordingly. The secretary then read the report of the council for the past year. It congratulated the members upon the satisfactory position which the Institute now occupied. The total number of members was now 216. The adoption of the report terminated the annual general business. The meeting then proceeded to the consideration of various papers. The first was "On an improved Water Meter," by Mr. C. W. Siemens, of London. The next was "On an Improved Locomotive Boiler," by Mr. Joseph Beattie, of London. The third was "On Berdan's Crushing and Amalgamating Machine for Gold Ore," by the secretary, Mr. Marshall—illustrated by models. "Bird's Patent Signal Apparatus between Guards and Drivers" was exhibited in operation in the meeting-room; but the reading of the accompanying paper was postponed, together with a paper on Mr. England's "Safety Apparatus for Working Mines." In the evening the usual annual dinner took place at the Queen's Hotel, Mr. Fairbairn again presiding.

AMATEUR LECTURERS.—Among the lecturers announced for the year at the Manchester Athenæum are the following members of Parliament:—Lord Stanley, Mr. Napier, Mr. Walter, Mr. Keogh, Lord Goderich, Mr. Isaac Butt, and Mr. Monckton Miles.

"MODEL LODGING-HOUSES MADE EASY."—Under this title a letter from the Rev. Richard Burgess of Upper Chelsea appears in the *Times*, stating that he had associated himself with some of his parishioners in purchasing the lease of a double house of 42 rooms, and adapting them to the use of separate families of the poorer classes, with various improvements and conveniences, at a cost in all of £300, and that they find the result so profitable that "in eight years, allowing for casualties and some loss of rent, the capital, with regressive interest at 5 per cent, will all be paid off." The tenements appear to be divided into single and double rooms and separate floors, at rents varying from 1s. 3d. to 4s. 9d. He says he cannot understand why this ready and practical mode of improving dwellings for the million is not extensively adopted. He recommends others to follow the example as a safe and profitable investment of capital. And although houses built for single families are not easily separable so as to constitute completely satisfactory dwellings for the poorer classes, they may certainly be made a most important and profitable intermedium between the worst classes of dwellings, not separated or provided with suitable conveniences at all, and the class of model dwellings which it is most of all desirable finally to substitute in place of both of these.

ILLUMINATED EVENING PROMENADE IN THE CRYSTAL PALACE AT DUBLIN.—An experiment was tried lately at the Dublin Exhibition building, with the electric light, which promises the possibility of crowning the glory of the Sydenham wonders, if applied to them even by fits and flashes as at Dublin, but much more so when a perfect steadiness and continuance of this artificial daylight shall have been effected, which doubtless it will yet be. The Dublin "Winter Garden" was opened for a night promenade on Tuesday week, with military, vocal, and organ music, and a brilliant illumination of the great central hall "at frequent and protracted intervals" with the electric light. The effect of the sudden revelation of the beautiful exotic plants, intermingled with statuary and other art objects, in the midst of imposing music, must have reminded not a few, we should think, of the 8,000 promenaders present, of their own favourite poet's prose yet poetical description, in his "Epicurean," of the sudden revelation of married light and music in the penetralia of the temple of the Egyptian hierophants to the eyes of the gazers in the vestibule, when the great gates were suddenly thrown open to the flying Ibis and the rushing vestals. The effect, at all events, is said to have been "exceedingly beautiful."

SUBURBAN VILLA AND VILLAGE ASSOCIATION.—A meeting of the members and supporters of this association, was held on 11th ult. in Exeter-hall. Mr. E. A. Lamb, magistrate of Sussex, took the chair, and explained the object of the society to be that of enabling the middle and working-classes of the metropolis to obtain healthy residences out of town, with gardens, at a less rent, including expenses of railway transit, than they now paid for unhealthy lodgings or dwellings in the confined localities of London, with the power of becoming owners of the property within seven years. The secretary read letters from the Earl of Shaftesbury and Mr. Peto, expressive of their concurrence in the objects, and their commendation of the aims of the institution. Dr. Hatfield, Mr. Campbell, Mr. Murrell, and other gentlemen addressed the meeting in support of the resolutions, and it was stated that share capital to the amount of 16,000*l.* had been subscribed.

TAX ON FIRE ASSURANCE.—A petition is now in course of signature for repealing, or at least greatly modifying the Govreument duty of 3s. per cent. on fire insurance. The pressure of the tax on the people is too generally felt to admit of a doubt that its repeal or modification would be a great boon.——A Correspondent "H. K." suggests that a great benefit to the country would result were the insurance-offices to fix an equal rate for all insurances instead of classing them in different heads and making hazardous or double hazardous at very heavy charges. "I have been informed and believe the Duke of Portland, who insures all his property, arranges with an office to take all at one equal rate without reference to the business carried on, and it is found to work satisfactorily."

PROGRESS OF BIRMINGHAM.—Within the last half-century, this town has almost tripled in magnitude. During the first forty years of the century, the average increase was 608 houses, with about 3,000 of a population, per annum: for the ten years ending 1851, the increase of houses was about 890 every year, of population nearly 5,000. For the fifteen months ending March last year, the increase in houses was 3,020, equivalent to an augmented population of nearly 15,000. A return of building plans registered from 1st January to 31st December, 1853, according to the Improvement Act, gives—Houses, 2 784; chapels, 3; synagogue, 1; schools, 5: warehouses, 23; manufactories, 22; malthouses, 4; stables, 7; sets of offices, 4; sawmill, 1; foundries, 3; workshops, 38; new shop fronts, 37; machine houses, 2; casting shop, 1; bakery, 1; bay (Bingley-hall), 1; additions and alterations, 56. This is exclusive of dwellings in the suburbs, estimated by the local *Journal* at probably 1,000 in number.

A NEW USE FOR GAS HEAT.—Mr. Hallewell, of Leeds, states that malt dried by gas yields 10 per cent. more of saccharine matter than when dried by a cinder fire.

ST. ANDREW'S CHURCH, ISLINGTON.—Sir,—In your mention of the consecration of this church you say that the design was obtained by competition, and that the cost has been 6,000*l.* whereas the competitors were restricted to a much smaller sum. Permit us to state this was not the case: the limit named to competitors in their instructions was 6,000*l.* and no allusion was made to a smaller sum. Further, allow us to state that the accepted tender for the church was 5,600*l.* and that the total cost of the building, including many additional works, has not exceeded 6,100*l.* THE ARCHITECTS.

*** Originally a smaller expenditure was contemplated, and it was the recollection of this we had in our minds. It is satisfactory to find the actual instructions were adhered to.

ROYAL SCOTTISH SOCIETY OF ARTS.—This society met on Monday in last week, in George-street Hall, Edinburgh, Dr Nachot in the chair, when a communication was read by Mr. Thomas Stevenson, C.E., on "Dipping and apparent or fictitious Lights." Several drawings were exhibited illustrative of this curious mode of marine illumination. Mr. Cowan, M.P., then gave a sketch of the various changes and improvements in the manufacture of paper during the last thirty years. He concluded his paper by stating that in the county of Edinburgh, which was a considerable seat of the paper manufacture, there were about twenty-four machines in operation. Supposing these machines travelled at the average rate of 36 feet per minute (some of them travelled at 50), and supposing that they worked fifteen hours a-day (some of them went day and night), this would be equal to about 147 miles of paper per day, about five feet broad. He believed that there were about 360 machines in Great Britain, producing daily about 2,160 miles of paper. The secretary read the description of a model of a small machine, producing a parallel motion in a perfectly straight line, invented by Mr. John Sang, land-surveyor, Kirkcaldy—illustrated by a model. There was next exhibited a bank safe lock, applicable to other securities, invented and patented by Mr. William Simpson, Bank of Scotland. The business was concluded with the exhibition of the action of artificial tourmaline by Professor Kelland, and of microscopic writing executed for him in Paris. On a spot no larger than the head of a small pin, the professor showed, by means of powerful microscopes, several specimens of distinct and beautiful writing—one of them containing the whole of the Lord's Prayer executed within this minute compass. In reference to this, and to our late notice of Layard's last work on Nineveh, where two remarkable facts in that work were brought together as probably connected, namely, that the national records of Assyria were written on square bricks, in characters so small as to be scarcely legible without a microscope; and that, in fact, a microscope was also actually found in the ruins,—it is an interesting circumstance that Sir John Herschell has since suggested that our own national records might be daguerreotyped and multiplied for preservation on a minute scale, perusible only by the use of the microscope.

NORFOLK AND NORWICH ARCHÆOLOGICAL SOCIETY. The annual meeting of this society was held at the Guildhall, Norwich, on Thursday in last week. The Mayor presided. The attendance was not numerous. The secretary read the report of the committee and statement of accounts, which is reported at length in the *Norfolk Chronicle*. Sir Willoughby Jones, Bart., was elected president for the ensuing year, in the place of Sir John Boileau, resigned. Other office-bearers also were elected; and Mr. Harrod then read a paper on the Yarmouth rolls.

PIPE JOINTS.—Allow me to point out a substitute for a very objectionable method of connecting the water-supply with closet-pans, namely, cement joints. I have for several years, at the East and West-India Docks, used about 4 inches of India-rubber tubing, inserting the lead pipe in one end, and drawing the other over the arm or neck of the pan, binding each end with two or three turns of copper wire. I thus obtain a perfect water-joint, durable and economical. —R. R.

TO REMOVE GREASE FROM PAPER.—Scrape finely some pipeclay, or French chalk, and on this lay the sheet or leaf to be cleansed, covering the spot in like manner with the clay or chalk. Cover the whole with a sheet of paper, and apply for a few seconds a heated box-iron, or any substitute used by laundresses. On using India-rubber to remove the dust, the paper will be found to be free of the grease.

PRICE OF HOME-GROWN TIMBER.—The advancing rates demanded for foreign timber during the past year, began to operate on the price of home-grown material. "We learn from the local roups now taking place," says a Fifeshire paper, "that an advance fully equal to 25 per cent. has been obtained on every variety of sound, well-grown timber, with a prospect of further increase."

"RAIL" TENDERS.—Tenders received for 1,000 rods post and rail fencing on the Finsbury Freehold Land Society's estate at Wood Green. Mr. Lambert, surveyor:—

	Oak Posts with Fir Rails.	Oak Posts and Rails.
Royeroft	£870	£782
May	767	634
Barrett (Sydenham)	750	575
Jeffrey	578	543
Phillips	625	525
Barrett (Clapton)	537	462
Brooks	533	462
Carlisle	499	450
Humphries	475	430
Martin	550	412
Marshall	585	435 (accepted)
Meaden	—	230

THE MASONS' UNION.—An attempt by threats to compel an operative stonemason at the Crystal Palace, Sydenham, to join the Masons' Union having been proved at the Lambeth Police Court on Saturday week, Mr. Nortou sentenced the threatener, Richard Wilcock, to a month's imprisonment with hard labour.

THE WATT STATUE, EDINBURGH.—Some delay in furnishing the pedestal for this statue prevented the inauguration from taking place, as had been originally intended, on the anniversary of Watt's birthday. The statue itself, however, is now almost finished, and has been exhibited to the public. Mr. Slater is the sculptor.

WORCESTER DIOCESAN ARCHITECTURAL SOCIETY. —This society made its first public appearance in a meeting held on 27th ult. at the Natural History Society's Rooms, Worcester. The bishop of the diocese presided, and a good many of the clergy and others were present. His lordship addressed the meeting in the outset, and Mr. E. A. Lechmere read a report congratulating the society on its prospects, and treating of its rules and objects, and especially of the preservation of architectural remains throughout the diocese, from numberless barbaritics and dilapidations. It was hoped that an arrangement might be effected with the Diocesan Church Building Society by which all plans for new churches, or restorations, which that society might be intending to aid by grant, would first of all be submitted to this association. They trusted that their funds would enable them to engage in the work of church restoration themselves, in which case their noble cathedral would claim a first place in regard. Indeed, they would not confine themselves to architecture, but would seek to promote Christian art in all departments, whether in sculpture, carving, glass painting, or otherwise. They viewed the establishment and success of a School of Design in this city with great satisfaction, and would consider how far it was practicable to set on foot, in connection with it, a school of working carvers and masons. In fact, they would take all means to imbue the public mind with a love of the beautiful, which was so intimately connected with the good and the true. Archdeacon Hone then addressed the meeting in the spirit of the report, the adoption of which he moved, and which motion was seconded by the Hon. F. Lygon, who, with Mr. E. A. Lechmere, will act as honorary secretary to the association. Other resolutions were moved and seconded, and all were unanimously passed, the Rev. Canon Wood, the Hon. and Rev. W. H. Littleton, Archdeacon Sandford, and various other gentlemen expressing their sentiments in favour of the objects of the association, a report of the whole being given in the *Worcester Herald*, to which we may refer.

FARM BUILDINGS: COVERED HOMESTALLS.—In the "Journal of the Agricultural Society" lately published is a communication from Mr. W. F. Hobbs, recommending covered homestalls instead of the ordinary farm buildings, as 10 per cent. cheaper, besides possessing other advantages. Plans by Mr. Day, of Worcester, architect, are given; but the idea of these is attributed to Mr. Oakley, the agent at Eastnor, where several have been erected. "The barn and granary are covered with a roof close boarded and tiled, but the yards, stables, &c., are covered with the Bridgewater roof-tiles, 14 inches square, and, when fixed, lapping over 2 inches; so that 100 of them make 100 square feet of tiling. Each one (although a security against rain or snow) acts as a ventilator."

PROPOSED CENTRAL COLLEGE OF DESIGN, NORTH STAFFORDSHIRE.—The design for this building is by Mr. Robinson, of Wolverhampton, and was selected from a number submitted in competition. The style is the Revived Italian. It has an ornamental centre, flanked by two plainer wings. The centre has a rusticated basement, supporting a façade of the Corinthian order, with detached columns and arched windows: the whole is surmounted by a group of figures emblematical of the union of the fine arts. The ground-floor contains an entrance-hall, serving as a statue gallery, and having on one side a large room for a museum of pottery, and on the other a similar one for the purpose of a library. At the extreme end of this hall is the lecture theatre, capable of accommodating from 250 to 300 students, with lecturers' room, &c. adjoining. The remainder of the ground-floor is occupied by the laboratory—a room for the study of technical classes, more especially for those of casting in metal, and firing of pottery—and a dwelling-house and office for attendant. The upper floor is principally occupied by the large studio, which is divided by means of moveable partitions into three compartments, for the painting, drawing, and life classes of the students When these partitions are removed it will form an additional room for the exhibition of works of art, or for lectures, &c.; adjoining this room are others devoted to ladies' and gentlemen's private classes, head-master's studio, and a room for the study of anatomy.

ELECTRO-TELEGRAPHIC PROGRESS. — Professor Faraday lectured on the electric telegraph at the opening meeting of the Royal Institution for the present season. He pointed out that no known substance is either a perfect conductor or a perfect non-conductor. Thus the insulated copper wires of the submarine electric telegraph, though covered with a thickness of gutta percha double the diameter of the wire, permit an appreciable quantity of the electricity transmitted to escape through the water; but the insulation is, nevertheless, so good, that the wire retains a charge for more than half an hour after connection with the battery has been broken. In the original experiments by Professor Wheatstone, it was found that an electric spark passed through a space of 280,000 miles in a second. Subsequent experiments have given different results, from different conditions of the conducting wires. It has been determined that the rapidity of transmission through iron wire is 16,000 miles a second, while it does not exceed 2,700 miles in the same space of time in the telegraph wire between London and Brussels, a great portion of which is submerged in the German Ocean. The retardation of the force in its passage through insulated wire immersed in water is calculated, the lecturer considered, to have an important practical bearing in effecting a telegraphic communication with America; for, in a length of 2,000 miles, three or more waves of electric force might be transmitting at the same time, and, if the current be reversed, a signal sent through the wire, might be recalled before it arrived at America. However, as men of science have not been uniformly correct in their anticipations as to *forces* necessary to the *crossing* of the Atlantic, it is to be hoped that not even Dr. Faraday's fear will prevent the farther extension of submarine telegraphy. Long before we have a transatlantic telegraph, we dare say that actual practical experiments of a less costly order will have fully and fairly decided this question. Already we have advanced several *steps*, and the next and more lengthened may be the Mediterranean line. From these, perhaps, the practicability or impracticability of a transatlantic line may be accurately deduced.

A NEW DODGE.—What do you think of the following advertisement as a mode of getting a connection?—"E—— S——, Architect, Surveyor, &c. No. —, —— street, begs to inform his friends, and parties about to build, that he intends to make NO CHARGES for the first twelve months." Can any one wonder at the style in which architects are treated?

TO BUILDERS AND PLUMBERS.

WANTS a SITUATION as Plumber, Painter, and Glazier. Understands bookkeeping and estimating.—Address, T. S. Mr. Markwell's, Bookseller, 46, Great Pitchfield-street.

TO MANUFACTURING IRONMONGERS, ENGINEERS, IRON FOUNDERS, &c.

AS CLERK or DRAUGHTSMAN, having a general knowledge of the iron trade, and disposed to make himself useful with the above.—Address, W. B. Mr. LOCKS, Newsagent, Gray's-inn-road.

TO BUILDERS, &c.

A THOROUGHLY competent SURVEYOR, MEASURER, ESTIMATER, &c. offers his services to Builders requiring temporary assistance in measuring, estimating, &c. upon moderate terms.—Address, M. A. Office of "The Builder."

TO MASONS, BUILDERS, AND OTHERS.

A PERSON, about 40 years of age, married, wishes for a SITUATION as FOREMAN or TRAVELLER. He has had upwards of 25 years' practical experience as a marble and stone mason, and is thoroughly acquainted with the general routine of building operations; can conduct correspondence, take out quantities, and cut and write letters for monumental work. Is of temperate and active habits, and would not object to go out of England to superintend works.—Address, INDUSTRIA, care of Mr. Locke 3, Wardour-street, Oxford-street, London.

A CLERK of WORKS is desirous of a RE-ENGAGEMENT; is a neat draughtsman. Country preferred. Terms moderate. References given. Address, M. M. M. Post-office, Essex-street, Islington.

TO ARCHITECTS AND BUILDERS.

A CLERK of WORKS, or BUILDERS' FOREMAN, is open to an ENGAGEMENT. The advertiser is well acquainted with Gothic work, and can produce unexceptionable references from various architects and builders Address, post-paid, to A. Z. No. 2, St. John's road, Reading, Berks.

AUSTRALIA.—TO CAPITALISTS, BRICKMAKERS, &c.—Wanted by a married Man, an ENGAGEMENT to go to Australia; has been fifteen years in his present situation, 9 years of age. Thoroughly competent in every branch of brick and tile making and burning. Address, with particulars, to P. P. care of Mr. Pullin, 3, Poland-street, Oxford-street.

AS BELL-HANGER, WANTED, by a Young Man, lately employed at the New Houses of Parliament. Address, G. W. 2, Agar-street, Waterloo-road.

A YOUNG MAN (aged 24), the Son of a Builder, a good draughtsman, competent to measure and value work, and thoroughly versed in all details of the trade, will be happy to treat for a SITUATION, in town or country, as CLERK of WORKS, or CLERK in CHARGE.—Undeniable references. Expectations moderate.—Address to C. W. care of Mr. Thissick, 16, Tottenham-court-road.

A MIDDLE-AGED, active Person, is ready to ENGAGE HIMSELF in CONDUCTING, SUPERINTENDING, or otherwise, any respectable firm or contract business.—The best of references and security can be given. Apply, A. T. No. 8, Unity-street, College-green, Bristol.

TO BUILDERS, PAINTERS, HOUSE DECORATORS &c.

A YOUNG MAN, who is a good Grainer, Paper-hanger, and Painter with a thorough knowledge of the business in all its branches, having had the management of large jobs, wishes for a similar ENGAGEMENT. Direct, A. Z. 4, Hemming's-row, St. Martin's-lane.

TO ARCHITECTS &c.

A DESIGNER, DRAUGHTSMAN, and good ARTISTIC COLORIST, OFFERS his SERVICES in the preparation of perspective views, the painting of backgrounds, and the introduction of landscape, also in general drawing and tinting. Terms very moderate. Specimens of ability can be seen by addressing A. Z. 29, Denbigh-place, Belgravia.

TO BUILDERS AND OTHERS.

A HANDY middle-aged MAN, used to the Bench and setting out working rods or jobbing, wishes EMPLOYMENT at 4s. per day, in town or country.—Address, F. F. 30, Little Russell-street, Bloomsbury.

A GENTLEMAN who has a good knowledge of, and has had considerable practice in, Gothic architecture and its accessories, desirous of meeting with an ENGAGEMENT as ARCHITECTURAL DRAUGHTSMAN. Address, L. L. 14, Cecil-street, Strand.

TO TIMBER MERCHANTS.

A GENTLEMAN of experience in the Timber and Hard wood Trade desires an ENGAGEMENT as TRAVELLER, with a first-class House, in or out of London.—Address, B. D. Office of "The Builder."

AS CLERK of WORKS, or OUT-DOOR FOREMAN. Wanted, a SITUATION as above. The advertiser brought up to the bench. Can give good references. Address, F. R. 8, Office of "The Builder."

TO CARPENTERS AND BUILDERS.

THE Advertiser has a Son between 19 and 20 years of age a carpenter and joiner, who is desirous of settling the remainder of his time in a respectable Shop, where he would have an opportunity of finishing his trade. Satisfactory explanation and references will be given.—Address, A. B. care of Mr. Martin, No. 2, Long-acre, London.

TO ORNAMENTAL WRITERS, DECORATORS &c.

THE Friends of a Youth, 17 years of age, who has started at the School of Design, and is possessed of a good knowledge of drawing, and somewhat advanced in the above branches, fluoresses, are desirous of placing him where he will have an opportunity of improving, and where by exertion he will earn some small remuneration.—Address, S. B. J. 1, Park-row, Blackheath Park. No objection to his being articled for three or four years.

TO CIVIL ENGINEERS AND LAND SURVEYORS.

THE Advertiser has had upwards of ten years' experience in Land and Engineering Surveying, as a Surveyor and superintendent of Surveyors employed on extensive surveys of towns for sewerage, improvement in all its branches and is now OPEN for an ENGAGEMENT. Testimonials and specimens of the first class can be produced. Salary not so much an object as permanency of employment.—Address, Y. Z. Office of the "The Builder."

TO NOBLEMEN, GENTLEMEN, AND OTHERS.

THE Advertiser, a middle-aged Man, who can be highly recommended, is desirous of obtaining a SITUATION as CHIEF CARPENTER, JOINER, &c., on an Estate, having filled similar situations some years past, but now disengaged. Is a thoroughly practical workman in all branches, including Cabinet and Upholstery Work, and has had the erecting and repairing of first rate Private and Farm-buildings.—Address W. D. Post-office, Long Cross, Chertsey, Surrey.

TO CIVIL ENGINEERS AND OTHERS.

THE advertiser, aged 21, who is a fair architectural and perspective draughtsman, has a knowledge of leveling surveying, plotting, plans, and ornamental writing and mapping, being also well versed in mathematics, is desirous of EMPLOYMENT. Not having been in an office, a small salary only is expected.—Address, A. G. Mr. Hookham's Library, Old Bond-street, London.

TO ARCHITECTS, BUILDERS, &c.

THE Advertiser wishes to meet with a SITUATION where he would have an opportunity of acquiring a practical knowledge of his profession, his attention hitherto having been principally confined to office duties, or employment during part of the day. He is a fair draughtsman: can measure up work, &c. Salary not a consideration.—Address, G. W. Porter's-lodge, Furnival's-inn.

TO PLUMBERS, BUILDERS, &c.

THE Advertiser, aged 40, is in want of a SITUATION as PLUMBER, or to take the three branches. Address J. P. 26, Mansion-house street, Lower Kennington lane. Good references given.

THE Advertiser, who is a neat and expeditious draughtsman, and has a thorough knowledge of detail and construction, is desirous of an ENGAGEMENT in an Architect's Office.—Address, G. G. 2, Slowcliffe street, King's-road, Chelsea.

THE HIGHEST STYLE OF ARTISTIC LITHOGRAPHY WILL BE FOUND IN THE WORKS PRODUCED BY

DAY & SON,

LITHOGRAPHERS TO THE QUEEN.

Landscapes, Architecture, Shipping, and Figure Subjects—Portraits direct from Life on Stone, or from Paintings, Drawings, or Daguerreotypes—Medical and Scientific Subjects, executed in a superior style peculiar to this establishment. Cartes copied.

The large Staff of Draughtsmen required by Messrs. DAY and SON to execute the

MAPS, PLANS AND SECTIONS, DIAGRAMS, &c. &c. FOR HER MAJESTY'S STATIONERY OFFICE,

Offers to Solicitors, Engineers and Surveyors, Stationers and Printers, through out the country, great advantages for the rapid and economical execution of their Lithographic If required, a plan received by the morning post may be lithographed and despatched by the return post.

To meet the growing demand upon

LITHOGRAPHY FOR COMMERCIAL PURPOSES,

Messrs DAY and SON have just erected the largest premises for the purpose in the world. In soliciting orders from Manufacturers and others for

PATTERN-BOOKS, SHOW-CARDS, LABELS, &c.

And every other description of Lithographic and Colour Printing, Messrs. DAY and SON promise a style of work of unequalled excellence, with economy and rapidity of execution. The smallest consumers of the productions of lithography in any part of the kingd m should apply to Messrs DAY and SON for estimates, and it will be found, owing to the extent of its Establishment, that the manifest advantages, viz. superiority of work, great speed, and moderate charges, can be secured with satisfaction and saving to the customer.

PRINTING IN COLOURS,

As perfected and practised by Messrs. DAY and SON, has assumed a position hitherto unattained for artistic excellence, rapidity of execution, and economy of production. The first and only perfect realization of a painting in colours "The Blue Lights" after Turner, executed at this establishment, secured for itself the designation of a Painting Print. Other examples of great merit, more particularly illustrating rapidity and economy of production, combined with artistic excellence, will be found in the three important works by

MATTHEW DIGBY WYATT, Esq.

Namely, "THE GEOMETRICAL MOSAICS OF THE MIDDLE AGES," "METAL-WORK AND ITS ARTISTIC DESIGN," and "THE INDUSTRIAL ARTS OF THE NINETEENTH CENTURY."

These works, although elaborately printed in colours and gold, have been sold at the price of uncoloured works. The last named, consisting of 160 plates, issued in Forty-eight parts of four plates, proves the possibility of adapting Chromo-lithography to Periodical Works to Book Plates, requiring long numbers cheaply and quickly and to Geological or other Coloured Maps.

Messrs. DAY and SON are prepared to estimate and undertake Works of any extent, and to meet every requirement as to quantity and speed, or necessity as to price.

STEEL AND COPPER-PLATE PRINTING OF EVERY DESCRIPTION.

LADIES, Amateurs of Drawing, will find the reproduction by themselves of their own sketches, by means of Lithography, a most delightful occupation for leisure time. Materials and instruction can be had of

MESSRS. DAY AND SON,
LITHOGRAPHERS TO THE QUEEN,
17, Gate-street, Lincoln's-Inn Fields, London.

LITHOGRAPHY.—C. MOODY executes every description of Lithography for professional purposes or the trade, Portraits, Landscapes, &c. sketched and lithographed, or copied from the roughest drawings; Engineering and Mechanical Drawings correctly drafted by experienced hands. Pencil Stones Chalks &c. supplied. Specimens of every class of work for inspection. Estimates given. Instructions afforded.—Lithographic Offices, 257, High Holborn.

AUTOBIOGRAPHY of B. R. HAYDON, Historical Painter. Edited, and continued to his Death, from his own Journals, by TOM TAYLOR, M.A. of the Inner-Temple, Esq.

"It is difficult to say in which sense the work before us possesses the greater interest, whether as a contribution to the critical history of art in England, during the first half of this century, or as an illustration of high moral truths, enforced by a terrible catastrophe. In either point of view it is one hardly be overrated. The artist and the moralist may alike pore over its pages, and learn from it lessons at once stern and profound. The editor has performed his difficult and delicate task in a manner which does him the highest credit."—*John Bull.*

London: LONGMAN, BROWN, GREEN, and LONGMANS.

PETER NICHOLSON'S PRACTICAL CARPENTRY, JOINERY, and CABINET-MAKING, Revised by TREDGOLD; being a new and complete System of Lines, for the Use of Workmen; founded on Geometrical and Mechanical Principles. Ten Parts at 4s. or in boards, 50s., containing upwards of 120 Steel Plates, and numerous Woodcut Diagrams.

2. PETER NICHOLSON'S PRACTICAL MASONRY, BRICKLAYING, and PLASTERING revised by TREDGOLD, both plain and ornamental, containing a new and complete System of Lines for Stone Cutting, for the use of workmen; the Formation of Mortars, Cements, Concrete, to which is added a variety of new designs for Mural Tablets, Tombs, Gravestones for Cemeteries, &c. &c; and a description of the various materials employed. Ten Parts at 3s. 6d. or in boards, 30s., containing upwards of Nine Steel Plates and numerous Woodcuts.

3. TREDGOLD and NICHOLSON'S Theoretical and Practical Treatise on the FIVE ORDERS of ARCHITECTURE; containing plain and simple Rules for Drawing and Executing them in the purest style; including an historical Description of Gothic Architecture. Illustrated by upwards of One Hundred Steel Engravings, executed by Artists of first rate talent, including numerous Diagrams, &c. Twelve parts at 3s. 6d. or in boards, 40s.

4. DESIGNS for COTTAGE and VILLA ARCHITECTURE, containing Plans, Elevations, Sections, Perspective Views, and Details, for the Erection of Cottages and Villas. By H. H. BROOKS, Architect. Beauti ully engraved on steel, with Directions for Building, and the estimated Cost of each Edifice. Twelve parts at 3s.; or in boards, 38s.

5. DESIGNS for PUBLIC BUILDINGS, consisting of Plans, Elevations, Sections, Perspective Views and Details of Churches, Chapels, Schools, Almshouses, Gas Works, Markets, and other buildings for public purposes. By S. H. BROOKS, Architect. Beautifully engraved on steel. Ten Parts at 3s. or 30s. boards.

6. THE HOUSE DECORATOR and PAINTER'S GUIDE; containing a series of Designs for Decorating Apartments with taste, and suited to the various styles of Architecture. By H. W. and A. ARROWSMITH, House Decorators to her Majesty. Ten Parts, at 3s.; or in boards, 28s.

7. THE HOUSE PAINTER, or DECORATOR'S COMPANION, containing a complete Treatise on the Art of House Painting, Graining, and Marbling; including the Origin of Colour, the Laws of Harmonious Colouring, the Manufacture of Pigments, Oils, Varnishes, &c. By W. M. HIGGINS, Esq. Accompanied by actual Specimens of Hand brush Graining and Marbling. Ten Parts, at 3s. or in boards, 32s.

THE ENGINEERS' and MECHANICS' ENCYCLOPÆDIA, a new and enlarged edition, comprehending Practical Illustrations of the Machinery and Processes employed in every description of Manufacture of the British Empire. Illustrated by upwards of 2,000 Wood Engravings. By HENRY HEDLEY, Civil Engineer, &c. The rapid progress of Mechanical Science has developed many of the important facts since the first publication, in lists of the Specifications. The Inventions and Discoveries recently made have engaged the sedulous attention of the Editor; for, as the value of each was tested by experiment, a description was accordingly prepared. By the selection of new articles, and care in the revision of old ones, this edition has now become systematically enriched, so that it may be received as fully and faithfully expressing "the existing state of Engineering and Mechanism, adapted to the wants of Practical Men." In two large 8vo. volumes, cloth, lettered, price 30s.

SHALL THE NEW STREET which is to form the grand communication between the eastern and western parts of the metropolis be straight or crooked? An Inquiry, with Suggestions.

By AN ARCHITECT.

London: JOHN WEALE, 18, Hig; Holborn; LETTS, SON, and STEER, 8, Royal Exchange.

CATALOGUE of BOOKS on Architecture and Engineering, civil, mechanical, military, and naval; new and old. Together with an incorporated list of members, &c. of the several learned societies for the promotion of architecture and civil and mechanical engineering, and an index of contents.

BUILDERS' PRICES, CORRECTED TO THE PRESENT TIME

This day is published, price 4s. a New Edition of

CROSBY'S BUILDERS' PRICE-BOOK for 1854: containing a Correct Account of all the Present Prices advised by the most eminent surveyors. Including the New Building Act, a New Plate showing the Sections of Walls for Dwelling-houses, Warehouses, &c. Also a complete List of Surveyors.

London, sold by WM. JOY, 44, Paternoster-row.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

It being universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLEY and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 8 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being translucent, blinds are unnecessary, and when used in Greenhouses no scorching occurs; its NON-TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Workshops, &c. for which purposes it is supplied in squares of all sizes, from 8 by 6 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.

N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate.—May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to

Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

GLASS.

THOMAS MILLINGTON, Importer of Foreign Sheet Glass, requests attention to the present Prices of Glass and Stock sizes, which are cheaper and better than those of English manufacture:—

BROKERS.—Messrs. Crosley, Brothers, 30, Cornhill, London.

CHEMICAL ADVISER.

Robert Dundas Thomson, esq. M.D. Professor of Chemistry in St. Thomas's Hospital, London.

MANAGER.

W. M. Stears, esq. 43, Moorgate-street, and Sydenham, Kent.

The calls will be 1l. per share on the 1st of each month.

The importance of the Crystal Palace for lighting which an engagement has been entered into, and the rising district consequently springing up around it, imperatively call for a large supply of gas.

A few observations will be sufficient to set forth the object and necessity of this undertaking, which holds out an unparalleled prospect of success.

One of the principal features in this project is the lighting of the Crystal Palace, and the number of lights required for that purpose alone will amount to thousands, besides an immense consumption of gas for warming the various departments of the building, for lighting the splendid refreshment-rooms, and cooking for the same; in addition to the above consumption, is that required for the magnificent hotels now building adjacent to the erected immediately adjacent to the Palace and there are a large and great business in the district, to which gas may be laid for the shops, inns, private mansions, and last, not least, that of public lamps, which are imperatively called for in all the approaches, as well as tunnels on the railway from the west end of London, under the Palace, and the station at Sydenham.

An eligible site has been secured, suitable for works of the first class, and which has been approved by the Directors of the Crystal Palace as being the most advantageous locality for the district.

The Company has been registered under the Joint-Stock Company's Act, and therefore will be taken in the deed of settlement, that no branch shall be responsible one for the other, or in any case beyond the amount of his shares.

The necessary steps have already been taken for forming the Company, and a considerable number of shares applied for by parties having property in the district, so that the operations will be brought into existence under most favourable auspices, and with a certainty of success, that will place the whole beyond the least speculation as an investment in capital. Calculations have been made from which the profits are founded upon years of experience in gas lighting, and there is every reason to believe that a handsome return will be immediately realized; and it is an incontrovertible fact that gas-works, when not exposed to similar competition (and which in this instance will be prevented), greatly increase the rate of profits in a few years after commencement.

The buildings will be erected in an ornamental style, and the apparatus of the most improved construction, so that the gas produced will be of the purest and most brilliant description, and in every respect suited to the special requirements of this undertaking.

Applications for shares to be made in the annexed form to the Provisional Directors of the CRYSTAL PALACE DISTRICT GAS COMPANY, at the OFFICES, 30, Cornhill, or to JOHN DOWNES, Esq. 38, Moorgate-street, London.

FORM OF APPLICATION FOR SHARES.

To the Provisional Directors of the Crystal Palace District Gas Company, 38, Moorgate-street.

GENTLEMEN,—I request you to allot me ..... shares of £20 each, in the above Company, and I undertake to pay the instalments on the same, or such smaller number as you may allot me, as called for, and to execute the necessary deeds when required so to do.

James J. Lambert, esq.	Rev. F. W. J. V. Very.
Henry Lawson, esq.	

This Society is established on the true and approved principle of Mutual Assurance. The funds are accumulated for the exclusive benefit of the Policy holders under their own immediate superintendence and control. The profits are divided annually, and applied in reduction of the current premiums.

The Annual General Meeting of this Society was held on the 26th of May, 1853, when a Report of the business for the last year was presented, exhibiting a statement of most satisfactory progress. It appeared that whilst the Assurances effected in 1851 were 41 per cent in excess of 1850, nearly 71 per cent in excess of those of 1849, and 140 per cent beyond those of 1848, the Assurances effected in 1852 considerably exceeded those of 1851, 325 new Policies having been issued in that year, covering Assurances to the extent of £ 1,061,000 the yearly premiums on which amounted to £ 36,092 15s. It also appeared that the transactions of the first five months of the present year were greater than those of the corresponding months of 1852, or of any preceding year, whilst during the whole period referred to, the claims arising from deaths were much below their estimated amount. A resolution was thereupon passed, continuing a reduction of 30 per cent. on the premiums payable on all Policies on the participating scale, on which five or more annual premiums had been previously paid.

Credit is allowed for half the Annual Premiums for the first five years.

The following Table exemplifies the effect of the present reduction:—

Age when Assured.	Amount Assured.	Annual Premium hitherto paid.	Reduction of 30 per cent	Annual Premium now payable
	£	£ s. d.	£ s. d.	£ s. d.
20	1,000	20 17 6	6 5 3	14 12 3
25	1,000	23 0 0	6 18 0	16 2 0
35	1,000	31 15 0	9 12 6	22 2 6
45	2,000	80 11 8	24 3 6	56 8 2

SPECIAL NOTICE.

SCOTTISH EQUITABLE (MUTUAL) LIFE ASSURANCE SOCIETY.

EDINBURGH . . 26, St. Andrew-square.
LONDON ..... 126, Bishopsgate-street.

TO SECURE THE ADVANTAGE OF THIS YEAR'S ENTRY, PROPOSALS MUST BE LODGED AT THE HEAD OFFICE OR AT ANY OF THE SOCIETY'S AGENCIES, ON OR BEFORE 1ST MARCH.

POLICIES EFFECTED ON OR BEFORE 1ST MARCH, 1854, WILL RECEIVE SIX YEARS' ADDITIONS AT THE ALLOCATION AT 1ST MARCH, 1859.

ROBT. CHRISTIE, Manager.
WM. NEILSON, Secretary.
WM. COOK, Agent.

126, Bishopsgate street, Feb 1, 1854.

INSTITUTED 1831.

SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY.—Incorporated by Royal Charters, and Special Act of Parliament.

Head Office Edinburgh 26, St. Andrew-square.

MANAGER—Robert Christie, Esq.

London 126, Bishopsgate-street, Cornhill.
Glasgow—163, St. Vincent-street.

The Scottish Equitable Life Assurance Society is an institution peculiarly adapted to afford Provision for Families. It was established in the year 1831, upon the principle of Mutual Contribution, the surplus or profit arising wholly and solely for the members; and the additions which have been made to policies at the periodical investigations of the Society all and effectively ensure the prosperous of the Institution, and the great advantages derived by its members. The following examples exhibit the additions already made:—

A policy for 1,000l. opened in 1835, is now increased to £1,368 9 4
A policy for 1,000l. opened in 1836, is now increased to 1,407 18 1
A policy for 1,000l. opened in 1840, is now increased to 1,297 15 7

The profits are ascertained and divided triennially amongst policies of not less than five years' duration

The annual revenue is upwards of 140,000l.

The amount of assurance in force is upwards of 4,000,000l. sterling.

The amount paid to the representatives of deceased members exceeds 500,000l. sterling.

The total amount of vested additions allocated to policies exceeds 600,000l.

The accumulated fund is upwards of 700,000l.

Loans granted to members to the extent of the Office value of their policies.

Copies of the annual report, forms of proposal, and all information may be had on application at any of the Society's offices in town or country.

ROBERT CHRISTIE, Manager
WILLIAM IVILLY, Secretary
Dec. 1853. W. COOK, Agent.
126, Bishopsgate-street, London

SOLICITORS' and GENERAL LIFE ASSURANCE SOCIETY, 52, Chancery-lane, London.

Subscribed Capital, One Million.

This Society presents the following advantages—

The security of a subscribed Capital of One Million.
Exemption of the Assured from all liability.
Participating and non-participating Premiums.

In the former 80 per cent or four fifths of the profits are divided amongst the Assured triennially, whether by way of addition to the sum assured, or in diminution of Premium at their option.

No deduction is made from the four-fifths of the profits for interest on Capital, for a Guarantee Fund, or on any other account.

Policies Free of Stamp Duty and Indisputable, except in case of fraud.

At the General Meeting, on the 31st of May last, a Bonus was declared of nearly Two per cent per annum on the amount assured, or at the rate of from Thirty to upwards of Sixty per cent. on the Premiums paid.

Policies share in the Profits, even if One Premium only has been paid.

Next Division of Profits in 1856.

The Directors meet on Thursdays, at Two o'clock. Assurances may be effected by applying on any other day, between the hours of Ten and Four, at the Office of the Secretary, at the Inspections and all other requisite information can be obtained

CHARLES JOHN GILL, Secretary

PELICAN LIFE INSURANCE COMPANY, established in 1797.

70, Lombard-street, City, and 57, Charing cross, Westminster.

DIRECTORS.

Robert Gurney Barclay, esq.	Kirkman D Hodgson, esq.
William Cotton, esq. F.R.S.	Thomas Hoi son, esq.

Jas. A. Gordon, M.D. F.R.S.	C. Hampden Turner, esq. F.R.S
Henry Grace, esq.	Matthew Whitbread, esq.

N.B.—No charge made for Policy Stamp.

The present seventh period, prior to the next division of profits, will terminate on the 2nd of July, 1854. All policies now effected and Rewards continued in force for five years on the participating scale, will share in the surplus.

For prospectuses and forms of proposal apply at the offices as above, or to any of the Company's agents.

ROBERT TUCKER, Secretary.

ALL POLICIES INDISPUTABLE

SOVEREIGN LIFE ASSURANCE COMPANY, 10, St James's-street, London.

No charge of policy stamps in future. Sums may be assured payable on attaining the age of 50, 55, or 60, or at death, should that event occur previously.

Advances made on real and on unexceptionable personal security, where the sureties are resident in London, or its immediate vicinity.

H. D. DAVENPORT, Secretary.

FREEHOLD BUILDING GROUND TO BE LET, in the Green Lanes, near Wo dgreen, Hornsey, at a moderate ground rent. The roads and surface drainage are being made. Money will be advanced to respectable parties. A few eligible Building Lots in front to the road 25 feet deep, 70 feet deep. To be sold by auction, by Mr. FOSTER, at the Auction Mart, on Monday next, at One o'clock precisely, unless previously disposed of by private contract, in one lot, the whole of the valuable freehold property, known as Mount Gate Villa, at the Clock-house, Tottenham, in the occupation of Mr. Thomas Hall, comprising a substantial and commodious residence, with coach-house, stabling, and other requisite offices, and a productive garden, containing by admeasurement 1 a. 1 r. 20 p. or thereabouts, and held for a long term of years at the low rent of £5 per annum. Particulars may be had at the Auction Mart; of Messrs. Sole, Solicitors, 3, Bedford-row; and of Mr. Foster, Auctioneer, 54, Cornhill.

BUILDING LAND, ISLEWORTH.—TO BE LET, on BUILDING LEASES for ninety-nine years, EIGHTEEN valuable and eligibly situate for the erection of first class villa residences, having double iron gates to the high road from London to Twickenham and the Star and Garter Windsor Hotel, and two miles and a half of the Isleworth and Brentford Stations on the loop line of the South Western Railway.—For plans and particulars apply to MOSES ADAMS and SON, Surveyors and Auctioneers, Isleworth.

BUILDING LAND, HESTON.—TO BE LET, on Building leases, for ninety nine years, in lots of 50 feet frontage, and the high road from Isleworth to Hounslow, a distance of three miles, of the depth of from 150 to 200 feet per annum, on the Great Western road, in the immediate vicinity of the Spring Grove Estate, in the parish of Heston, and within five minutes' walk of the Isleworth Station, on the loop line of the South-Western Railway. For plans and particulars, apply to MOSES ADAMS and SON, Surveyors and Auctioneers, Isleworth.

BUILDING LAND, TWICKENHAM. TO BE LET on BUILDING LEASES for Ninety-nine Years, 24 to 26, of LAND, with extensive frontages to the Richmond and Windsor Railway, and the high road from Isleworth to Richmond, in lots of 45 feet frontage with depths varying from 130 feet to 272 feet. It is very eligibly situate for the erection of villa residences, of from £70 to £150 per annum. About two Twickenham trains, and the St. Margaret's station, and within ten minutes' walk of the Twickenham and Richmond Stations. For plans and particulars apply to MOSES ADAMS and SON, Surveyors and Auctioneers, Isleworth. If the above be taken as a whole by any respectable man, it will be let at 25 per cent. less than if let in lots separately

PUBLIC-HOUSE, PUTNEY COLLEGE ESTATE.—A valuable SITE for a Public-house, with a large PLOT of GROUND for Stabling, TO BE LET, on Building Lease, upon very advantageous terms. Also several PLOTS for Shops and detached Houses. Apply at the Offices of G. MORGAN, Esq. 5 Chancery-lane.

BROCKLEY HILL PARK ESTATE, FOREST-HILL.—TO BE LET, on Building Lease or SOLD, several eligible lots of BUILDING LAND commanding a most extensive prospect, rivalling that seen from the Crystal Palace. A site has been appropriated for a church on the summit of the hill, in the centre of a proposed ornamental garden of nearly 5 acres in extent. The roads, garden, and drains are being formed. Advances will be made to responsible parties. Apply to GEORGE MORGAN, Esq. Architect, 5, Chancery-lane

ENFIELD. — RAILWAY TICKETS for FOURTEEN YEARS, TO BE LET, on BUILDING LEASES, or SOLD, eligible PLOTS of BUILDING LAND, immediately facing the Railway Station. The estate is high and dry, and stands on gravel. The roads and drains will be immediately commenced. Free passes to the railway for 14 years have been liberally conceded by the Eastern Counties Railway Company, to parties building on the estate viz. for each £10 house one free class ticket to the head of the line; and for each 30l. house, a second-class ticket to the head of the line. Apply at the Offices of Mr. GEORGE MORGAN, 5, Chancery-lane; or of Mr. A. A. SAWLER, Surveyor, Enfield.

FREEHOLD GROUND-RENT to pay FOUR PER CENT.—Apply to HENRY FLOWER, Esq., Architect, 17, Gracechurch street.

TO BUILDERS AND BRICKMAKERS.

TO BE LET or SOLD, a valuable piece of FREEHOLD LAND, near Holloway. There is good brick earth upon the ground already burned, and sufficient to make upwards of a million bricks.—Apply to WALTER JUSTICE Esq. Solicitor, 6, Bernard-street, Russell-square.

TO BUILDERS AND OTHERS

TO BE LET, on BUILDING LEASE, in the rear of the Westminster-road, eligible SITES for the ERECTION of SMALL RESIDENCES. A plan of the land may be seen, and further particulars obtained, on application at the offices of Messrs. WEHNERT and ASHDOWN, Architects, 62, Chancery-lane.

ISLINGTON, SHOREDITCH PARISH, BAINE'S DISTRICT, and TURNHAM-GREEN.—FREEHOLD BUILDING GROUND TO LET; term, Ninety-nine, at Two hundred pounds per annum. Apply to view to Mr. GREEN, Grove-road, Upper Holloway; HANNAM, Queen's-head, Brook-street, Queen's-road, Islington, Bellingham's District; Dalston; PHILLIPS, Countess-house, near Acton-lane, Highroad, Turnham-green; or Mr. D. HIGHAM, 23, Gresham-street.—N.B. Populated soil dry, roads and sewers made

BUILDING LAND, with BRICK-EARTH, TO BE LET, at WICKENHAM MIDDLESEX, TO BE LET, on Building Leases, for ninety-nine years, the Brick Field and Building Ground adjoining to Two Bridges, with extensive frontages to the Uxbridge high road and proposed new road of 2,000 feet, or thereabouts, together with the privilege of making bricks from brick-earth on the property.—For particulars, apply to Messrs. PALMER and NEATE SHIP, Solicitors, 4, Trafalgar-square; or Mr. ATWOOD, Surveyor, Moriake, Surrey.

CRYSTAL PALACE.—TO BUILDERS and OTHERS.—BUILDING GROUND TO BE LET on Lease, on the road from the American Station to the Crystal Palace, at Top Station, commanding a most splendid view of the Palace and the entire grounds of upwards of thirty acres with a beautifully undulated surface, and tastefully wooded, commanding extensive views to Sussex and Kent. Also a valuable Brick-field, with a roadway leading from Rockhampton-road to the Two Bridges, with extensive frontages to the Uxbridge high road and proposed new road of 2,000 feet, or thereabouts, together with the privilege of making bricks from brick-earth on the property.—For particulars, apply to Messrs. PALMER and NEATE SHIP, Solicitors, 4, Trafalgar-square; or Mr. ATWOOD, Surveyor, Moriake, Surrey.

CAMBERWELL.—TO BE LET on LEASE, a first-rate Freehold Corner Shop, with convenient newly-erected BUILDER'S PREMISES, consisting of Workshops, Drying-sheds, Stable, Chaise house, covers, Newpit, &c., with a convenient Dwelling-house and Office attached. Possession may be had at Midsummer next.—For full particulars apply to Mr. WM. WELLS, Crescent, Southampton-street, Camberwell. N.B. The premises are situate in the direction from London to the Crystal Palace, at Sydenham, and well calculated for any manufactory. A nominal premium only is required.

BUILDING LAND, with BRICK-EARTH. About THIRTY ACRES of LAND, in Islington, TO BE SOLD, or LET, in one lot or Lots.—Apply to Mr. PEACHEY, 1, Lombard-street, Eastcheap.

TO BUILDERS CABINET-MAKERS &c.

TO BE LET, good WORKSHOPS, three of which are close to Oxford-square. Apply to Mr. COUTE, 5, Grafton-street, Fitzroy-square, or Mr. NIGHTINGALE, 37, Fleet-street, Manchester-square.

LAND WANTED.—The Clapham Burial Board are desirous of obtaining a SITE for a BURIAL-GROUND containing about Eight or Ten Acres, and situate within three or four miles' distance from the Parish Church.—Communications to be addressed to Mr. C. F. MERRIMAN, 3, Nestor-terrace, Buildings, Clapham-common.

TO BUILDERS, MEMBERS OF BUILDING SOCIETIES, AND OTHERS.

TO BE SOLD, together or separate, FOUR FOURTY-RATE SEVEN-ROOM CARCASES, situated opposite the Newbury Arms, Maida-road, Kentish-town. Plans and sewer all complete. Lease for upwards of sixty years. Direct from the freeholder. Neighbourhood complete up to the carcases. Price 120l. Further particulars can be obtained of Mr. LEWIS, 71, Bayham-street, Camden-Town.

NEAR MONMOUTH.—TO BE LET on LEASE, from the 1st of May, the TUMP HOUSE, about two miles from Monmouth, beautifully situate on a declivity, facing the Wye, and commanding extensive and rich views. The residence, which is suitable for a highly respectable family, contains nine rooms, drawing-room, library, six best bed rooms, and four servants' rooms, with all necessary offices, coach-house, stabling for six horses, convenient farm-buildings, with good pleasure and kitchen gardens, and about 70 acres of prime meadow and orchard land, stocked with fruit-trees. It is approached by a private bridge, with lodge, from the village of Rockfield, and a right of shooting over about 1,200 acres adjoining will be granted. In the season, a pack of fox-hounds constantly meet in the adjacent covers. For particulars, apply to Messrs. SNELL, Alhemarle-street; or to J. W. PEPPERCORNE, Esq. Oatlands House, near Chertsey.

TO MANUFACTURERS, BUILDERS, AND OTHERS

TO BE LET at South Lambeth, in a public situation, a convenient HOUSE containing eight rooms, and other conveniences in thorough repair; with a piece of ground in the rear, nearly half an acre, adjoining, for the erection of a manufactory or workshops, with excellent drainage.—Apply to Messrs. BROWN and ROBERTS, Surveyors, 29, Throgmorton-street, City

HARROW-ON-THE-HILL. — A Plot of COPYHOLD LAND TO BE SOLD, containing eleven and a half acres, situate about a mile from the town, advantageous for building forms, 80l. For further particulars apply between the hours of eleven and one, at the Office of Mr. C. LAWS, Architect, 17, Clement's-inn, Strand

TO WHARFINGERS, BUILDERS, ENGINEERS, MANUFACTURERS, RAILWAY CARRIERS, &c.—TO BE SOLD, Freehold and part Leasehold, BRUNSWICK WHARF and DRAW-DOCK, many years in the occupation of Brock, Tilt, Slade, and Lime Trade, &c. Excellent residence, offices standing and warehouses in substantial repair. Area, nearly three acres, adjoining the South Western Railway Goods Station, with 340 feet frontage to the River Thames, and 140 feet next the high road leading to Wandsworth.—Apply on the Premises, or to Mr. T. M. NELSON, Architect, 3, Charles-street, St. James's-square.

TO LANDLORDS.

PENTONVILLE, ISLINGTON.—Wanted to PURCHASE or RENT, a MODERN HOUSE in thorough repair, with recent improvements, containing about eight rooms, in Holford-square or its vicinity.—Address, Mr. JONES, The Terrace Bank, Lincolnshire.

FINSBURY and GENERAL FREEHOLD LAND SOCIETY.

SCRIPTIONS ARE RECEIVED AT THE SOCIETY'S ROOMS, 444, WEST STRAND; BY ANY MEMBER OF THE COUNCIL; BY THE COLLECTORS, MR. T. BRITTAIN, 38, ROBERT-STREET, HAMPSTEAD-ROAD; AND MR. R. SIMPSON, 85, UPPER EBURY-STREET, PIMLICO; AND BY ALL LOCAL HONORARY SECRETARIES AND AGENTS.

bruary 1, 1854.

GEORGE GODWIN, } *Honorary*
LEWIS POCOCK, } *Secretaries.*

TODD'S PATENT METALLIC PROTOXIDE PAINT.

THE PATENT METALLIC PROTOXIDE PAINT now offered has been found, after the most severe trials, to be peculiarly efficacious in preserving Iron from Oxidation, Wood from Decay, and Masonry and Brickwork from Dampness. Applied to Iron, it unites with it most intimately, forming a complete coating; so that thus protected, it will be found equal to the best galvanized iron. Hence its great value to all Engineers and Iron Founders as an application to iron vessels, iron roofs, steam and water pipes, &c. &c. It adheres firmly to iron, even at a red heat. For stuccoed buildings it will be found to be effectual in preventing the discolourations formed by vegetation, and keeping out all dampness.

For terms, application to be made at the Offices of the Company, 12, Bishopsgate-street Within; or to the following Agents:—
Messrs. PITCHFORD, Island Lead Works, Limehouse. } LONDON. | Messrs. D. and G. BRYMNER ..... GREENOCK.
Messrs. G. and T. WALLIS, 64, Long-acre, ...

JOHNS'S PATENT PERMANENT STUCCO WASH. STUCCO CEMENT, AND STUCCO PAINT.

JOHNS'S PERMANENT WASH, WITHOUT SIZE OR OTHER CORRUPTIBLE INGREDIENT, is now fully established It has been adopted EXTERNALLY and INTERNALLY at some of the largest Hospitals and Asylums, and is acknowledged to be the most useful Coating Material in the trade, for its ADHESIVENESS, NON-ABSORBENCE, UNIFORMITY of COLOUR, and APPLICABILITY to small or large surfaces IT MAY BE EXPORTED TO ANY CLIMATE.

JOHNS'S STUCCO CEMENT. This Cement, which has been established many years, is now manufactured on such improved principles that its acknowledged advantages and its usefulness for INTERNAL as well as EXTERNAL purposes are unquestionable. IT NEVER CRACKS, BLISTERS, or VEGETATES; has no Caustic qualities, be mixed as stone in a few days, when it may be painted or papered; may be cleaned with a brush and water, and will STAND THE TEST OF ANY CLIMATE.

JOHNS'S STUCCO PAINT.—The merits of this Paint are so justly appreciated by the trade, for its ready affinity to Stucco, Brick, or other Rough surfaces; its dural ity, comparative cheapness (two coats being equal to three of lead paint, that it is of the first importance to the public generally, AND WELL WORTH THE ATTENTION OF SHIPPERS AND EMIGRANTS

Each Material in Casks of 1 to 5 cwt.
MANUFACTURERS,
PHILIP HARE and CO. 22, STEEL-YARD, UPPER THAMES-STREET.

HUBBUCK'S PATENT WHITE ZINC PAINT. The PERMANENT WHITE of the Ancients, previously confined by its cost to the use of the artist, is now, by Hubbuck's Patent, reduced to the price of White Lead

The principal characteristics of HUBBUCK'S ZINC PAINT are—Economy, Health, Beauty, and Durability.

Builders and Contractors find Hubbuck's Paint the only one adapted to all their purposes; possessing the great desirable union of economy, combined with as much covering power as a paint, it ranks alone. Contractors effect a saving of 25 per cent by using HUBBUCK'S ZINC PAINT

HUBBUCK and SON feel it necessary a caution should be circulated against imitations of their Paint. These manufactures, containing frequently pernicious ingredients are baneful to health and worthless in use, whilst the experience of the ocean tables in the production of paints is endorsed, but adopted. Its colour, purity appearance, but also by its delicacy of texture in the produce which is known to the painter to be all-essential. That an imposition be not practised, therefore, it is that the cask is marked with the name of the original manufacturer, thus—

HUBBUCK—LONDON.—PATENT.

not so marked, the reason may be inferred

Every information in the regular to be had of THOMAS HUBBUCK and SON, Paint and Varnish Manufacturers, Upper East Smithfield (opposite the London Docks, London.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is now called for permanency of colour, hardness, and brilliancy of surface. It is unaffected by atmospheric influences, vapours or emanations. Being completely innocuous and free from the pernicious effects of white lead it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Patent Zinc. If an adulteration has taken place in the oxide either in consequence of impurity in the material or many years use of it produce an imperfect oxide (protoxide, or the true white earth, the oxide contains substances calculated to injure in round work, it then produces a very inferior instead of a very superior paint, and the economy realized by the use of such oxide becomes a very expensive result to the owner of the premises painted with it.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil are sold with the VM mark—In Hull, to Messrs BUNDELL, SPENCE, and CO.; when ground in Oil by Messrs. T. B MORLEY and CO.; and by the Company's ordinary Agents In London Messrs CHARLES DUVAUX and CO. as wholesale agents, 6a, King-William-street, City; Mr. CHARLES JACKson, wholesale and retail agent, 5, Tottenham-court New-road, and 80, Upper Thames-street, City. In Manchester and Liverpool, by Messrs. LAWFORD and CO of 46, Norfolk street, Liverpool, who are also acknowledged Painters to the Company for Zinc Paints and undertake painting ships, warehouses, dwelling houses, &c In Leith, by Messrs. R. ANDERSON and Tudor bush ZINC OXIDES and PAINTS, in kegs 14s 21 and 28l. and upwards, to be had of the Company's Agents in Birmingham Newcastle Glasgow, Bristol, Dublin, Portsmouth, Dorchester, Bath, Poole and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast

The Company also employ an acknowledged painter in London who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 12, Manchester-buildings, Westminster

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs. T. and S. KNIGHT, 67, Borough street, Southwark, as their painters, who will be ready to execute any description of painting and decorating with the Pure Patent White Zinc Paint.

PATENT LIQUID CEMENT for Fronts of Houses, &c.—This valuable and economic material is always ready for use, simple in application, and only one-eighth the cost of oil paint. Fresh shades of any kind. For stable fronts it is pre-eminent, saving the appearance of fine cut stone, and 1 cwt. will cover 12 to 20 superficial yards. It is in casks, 1/2, 1, and 2 cwt. at 8s 16s. and 28s. each, casks extra.

PATENT PERMANENT COLOUR is particularly suited for halls, kitchens, sch ol-rooms railway stations &c as a substitute for oil paint as with regard to cheapness, it can be laid on with a brush over wood, oil paint, stucco, or any other surface. Sold in casks of 1 cwt at 15s 8 each.

PATENT ZINC PAINTS. These paints are ready mixed for use, requiring only to be stirred in oil, are ready for use and will last much longer than common Lead paints. They contain much larger proportion of the same quality. Will not blacken. Price 6s. per gallon, ordinary colours; Mineral chocolate brown, 5s.

Permanent Brilliant Black, for all kinds of outside work, barges &c. per gallon, 5s. per gallon

PATENT INDIA-RUBBER PUTTY, which never shrinks, but remains in a tough plastic state, and is permanently water proof Price 4s. per stone

DAMP WALLS—PATENT ELASTIC PAINT, an effectual remedy, by which they are rendered dry, permanently healthy, in one hour. Price 10s. per gallon, which will cover each finish about 150 square feet

PATENTEES, GEORGE BELL and CO Steam Mills, 2, Wellington-street, Goswell-street, London

PERMANENT ZINC COLOURS and WHITE. Emerald and Brunswick Green, Chromes, Reds, &c. all other Colours, as soon produced in Zinc as prepared with lead, and Co. per Cwt. These Zinc Colours are most brilliant, and never known to be exposed to any Gases. Will Water as Paper Stainers, they must find favour with them, as no other Zinc Colours ought to be used to compete in Art with genuine. The Prices, apply to the Patentee, JOSEPH K. GRAPLIN and CO. Zinc and Permanent Colour Works, Victoria-wharf, Regent's-park-basin, London.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not require to be damp-stuffed. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers, to be obtained from the Patentees, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

PORTLAND CEMENT WORKS, 5, BETHLEHEM, KENT.—Messrs ROBINS and CO. Manufacturers of the very best PORTLAND CEMENT for all purposes Cement is applicable, solicit a continuance of that patronage with which they have so long been favoured.—Orders received at Great Scotland-yard, and at the Works.

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs ASPDIN, ORD, and CO. have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery patented by Mr. ASPDIN much improved the quality of this Cement without any increase in price.

Elsewhere and for this are recommended to specify "Aspdin's Patent" lest inferior and worthless imitations be substituted. ASPDIN, ORD, and CO. beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland and is considerably cheaper.

A report of recent experiments made by Messrs. the extraordinary strength of these Patent Portland Cement, may be had at their Office, New Wharf Western gate, London; at their Works, Gateshead-on-Tyne; or from their Agent, Mr. HENRY ROBINSON, 21, Hunt-street, Liverpool.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mr. Pope's Premises, for Manufacturing the above CEMENT to meet the increasing demand for the same, is now supplied with any quantity by any person, either at his Works, St. Andrew's Wharf, Dorset-street, Eccleston-square, Pimlico, Southend-yard, West-minster Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above-superior CEMENT, being of uniform colour and quality (a desideratum never before attained in Portland Cements). It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack, consequently will always present both to the eye and touch the appearance of stone. It is the first cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be and contrary to the statements put forth by those who have hitherto had the monopoly.—Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for immediate use. These well known articles are dry quickly, and can be used upon within a few days. Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL—Light and Dark, equal to any made Manufacturers also, and dealers in Plaster, Parrs White Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Clay tiles, Otto Vases, Rigate &c. Paints, Stucco, &c. Marble Merchants and Importers of Portzoliano.

PARIAN CEMENT, for internal use, to be painted in a few hours, and papered within a couple of days.—CHARLES FRANCIS and SONS, Manufacturers of Roman, Parian and other Cements in use for building purposes, Nine Elms, London.

BLUE LIAS LIME.—NELSON and CO. beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders, and others connected with the building trade, to the superior quality of their BLUE LIAS LIME, the natural hydraulic properties of which, and the great cementitious union the same of lime yield for mortar, render it unequalled for sewers, sea-walls, docks &c and for concrete foundations. is a sufficient recommendation for the adoption of it in all works of the above description. It is also peculiarly adapted for stucco. Orders received by London Agents, BLYTH, BROTHERS, 38, South Wharf, Paddington, and at the Works, at cotton-fields near Southam, Warwicks. are.

GREAVES'S BLUE LIAS LIME.—The manner in which the above is ground renders the powder peculiarly adapted for Stucco Limeing Purposes. The adhesive property that is inherent in natural hydraulic lime, causes stucco to cure. The stucco is consequently capable of bearing the heaviest hits, and Contractors, of the above, is the best recommendation.

Glass, Cowpans, and Cole Blue Vitrified Bricks, Pipes, Junction Pieces, Bends, and Fire-bricks.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS, Stone Lime.

SCOTCH, DUNDEE, STUCCO, and other Bricks.

CHARLES RICHARDSON, 8, South Wharf, Paddington.

ATKINSON'S CEMENT, so long known and esteemed in London, for plastering purposes, is a quick-setting Cement, that requires no other mixing—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster; and Seel-street, Liverpool.

SEASONED FLOORING.—A large stock of dry WHITE and YELLOW FLOORING, prepared by machinery always on sale, at reduced prices as under, for cash

1-inch Yellow, per square.		1-inch White, per square.	
1-inch "	16s. "	1-inch "	17s. "
1-inch "	21s. "	1-inch "	19s. "

Dantzic Timber, ex per load.
Mouldings by machinery in very great variety.
ARCHBUTT and ATKINSON, St. Pancras Saw Mills, Old St. Pancras-road.

MUIR'S PATENT PLANING MACHINE.

SAW MILLS, GILLINGHAM-STREET, PIMLICO.

TIMBER of any size, PLANKS, DEALS, and BATTENS, &c. sawn on the most approved principles. Boards, &c. prepared, planed, and grooved, by Muir's Patent Machinery. The Mills have all the advantages of navigation and water-carriage, being conne ted with the Thames by the Grosvenor Canal. Goods fetched from the docks and carted home free of charge. Address to HENRY SOUTHAM,
Saw Mills, 6, Bingham-street, Pimlico.
N.B. Estimates given for Sawing and Planing.

A LARGE ASSORTMENT of WELL-SEASONED, DRY, PREPARED WHITE and YELLOW BATTEN FLOORING, also a large quantity of SCAFFOLD POLES FOR SALE, at a low price, at DRUCE'S, No. 2 Wharf, Queen's-row West, Chelsea. Bricks, Lime, Cement, Sand, Plaster, Slates, and Slate Slab, Tiles, &c. on sale at the lowest remunerative prices Goods landed and carted Ladders for sale Apply to H. P. DIXON and CO. as above. Great facilities for the prompt execution of country orders.

REDUCED PRICES.—EDWARD SIMMS late William Clewes, of Wilton-road, Pimlico Basin, begs to acquaint Builders and the Trade that he has now on hand at his Manufactory (the first of its kind ever established), a very large Assortment of Dry and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from 4 inch to 14 inch thick, panel to a parallel width and thickness, Also, Timber Deals, Oak Planks, Scantlings, Sash Sills, Mouldings prepared by Machinery, Laths, &c.—Apply at E. SIMMS'S late W. Cleeve's Flooring Manufactory, Wilton-road, Pimlico Basin.

PREPARED FLOORING, &c.—ALFRED ROSLING begs to inform parties shipping wood goods to the colonies that he can supply any quality or description at the lowest prices of the day, at 4 with the greatest possible despatch. Also mouldings in great variety. A large stock of Baltic deals kept in bond for export—Southwark bridge Wharf, Bankside

TIMBER WHARF, SAWING, PLANING and MOULDING MILLS, Belvidere-road, Lambeth.—The General Wood-cutting Company beg leave to inform their customers that the Company's additional charge of 2½ per cent on the mouldings as advertised on the 9th of November last is removed, from this date, consequently the prices will be those inserted in their Moulding List, as heretofore.
1st January, 18

TIMBER, DEALS, and FLOORING.—Builders and other consumers may effect a considerable saving in purchasing of Mr GEORGE WALLEN Timber Merchant, of Aldred-road, Barbican, Gravel-lane, Shadwell, which has a large well-selected stock in the docks, which he is determined to sell at the lowest remunerative prices for cash

By her Majesty's Letters Patent.

TO BUILDERS, &c.

Lithographs of the improved self-lubricating and various other constructions, with descriptions and prices attached, may be had on application.
Stud compression builders' cranks, as above, fitted with two handles, and wrought-iron braces and spindles, with set to throw in and out of gear.

Price	70s. each.
Stronger and larger ditto	6l. 10s. do.
Double purchase	8l. 8s. do.
Treble purchase	10l. 15s. do.

BARRETT, EXALL, and ANDREWS, Kidderminster Ironworks.
Bearing. Agents in London, DRAY and CO. Swan-lane.

PRIZE MEDAL, CLASS 22.
HIGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 100 to 350 feet; their efficiency and durability is by experience established.
The Equilibrium Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.
Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c
THOMAS LAMBERT and SON,
Brass and Iron Founders, Short-street, New-cut, Lambeth.

TO WATER COMPANIES AND PLUMBERS.
HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.
LEAD, IRON, and TIN PIPE.
JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

ANCIENT HOUSE FURNITURE

In order to supply the deficiency which has hitherto existed in Furniture suitable for the many Mansions that have been erected or restored in the MEDIÆVAL STYLES, Messrs. CRACE have directed their particular attention to this subject, in addition to their other works, and have prepared appropriate specimens in the various branches of Furnishing.
STUFFS for HANGINGS, in simple Worsted Damask, in Silk; also in Tapestry of Bauderkin.
CARPETS, plain or in rich Velvet pile, with appropriate Borders.
PAPER-HANGINGS of various kinds.
OAK CABINETS, Buffets, Octagon Library and Occasional Tables, Benches, Chairs, and other useful and approp iate Furniture
The whole of the above-mentioned Furniture, &c. is designed by the late Mr. A. W. PUGIN, Architect.
To render this Furniture generally available, a considerable portion has been arranged in the simplest manner, consistent with it ancient character.
14, Wigmore-street, January, 1853

THE LONDON PARQUETRY

STEPHEN GREEN'S IMPERIAL POTTERIES, LAMBETH.

IMPORTANT TESTIMONIALS
TO THE EFFICIENT WORKING OF
STEPHEN GREEN'S
PATENT SYPHON FLUSHING BASIN,
AND
SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.
GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.
HENRY J. UNDERWOOD, Architect.
R. S. HOGGAR, Engineer.

Royal Arsenal, Woolwich, June 24, 1852.
GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here which have been in use for upwards of twelve months, giving perfect satisfaction.
I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

WILLIAM NORTHEN'S
WHITE ENAMELLED STONEWARE,
UNION POTTERY, 14, VAUXHALL-WALK, LAMBETH, LONDON.

W. N. solicits an inspection of his IMPROVED WHITE ENAMELLED STONEWARE CLOSET PANS, being an entire new description of stoneware, perfectly vitrified and highly glazed, far surpassing anything of the kind yet offered to the public.
SAME PRICE AS BROWN STONEWARE—7s. 6d. Pan and Trap. WITH BLUE INSIDE, ENAMEL, 1s. extra.

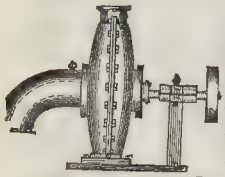
M medium.	

Sold by all the principal Stationers in town or country.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.
Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.
TUNED BY MACHINERY.
Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.
MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and hagged on a new system, which gives a superior tone and facility for ringing.

FOWLER'S IMPROVED WROUGHT PUMPS for CONTRACTORS, BRICKMAKERS, EXCAVATORS, and OTHERS.



The attention of this house for more than fifty years past having been almost exclusively paid to the manufacture of every description of pump-work for every variety of purpose, attention is respectfully requested to their very superior Wrought Pumps, with plain or sliding telescope suction, galvanized and togalvanized. A large stock of all sizes is kept ready to finish off to order, according to length required, at the shortest notice.
This description of Pump-work varying in almost every case, it is impossible to quote a general price, but the fullest particulars will be given on application.
A large stock of Wrought Pumps, from 3-inch single to double 15-inch barrel, is also kept on hire prepared for hand or steam power, on reasonable terms, at
BENJAMIN FOWLER'S
ENGINE-PUMP MANUFACTORY,
Whitefriars-street, Fleet-street, London.

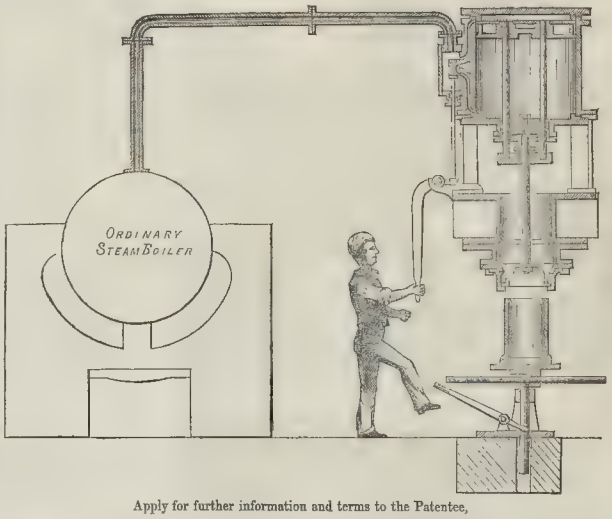
TO BUILDERS AND PLUMBERS.
The attention of the Trade is called to
JOHN WARNER & SONS'
PATENT VIBRATING STANDARD PUMP,

which is recommended . . the simplicity of its construction, and the ease with which it works.
By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and guides are unnecessary, rendering the price considerably less than pumps made on the old plan.
Beer and Water Engines for raising fluids from a depth not exceeding 28 feet; also, Garden Engines constructed on the same principle.
JOHN WARNER & SONS,
8, Crescent, Jewin-street, London,
Manufacturers and Patentees.

CENTRIFUGAL PUMPS.

Contractors, Builders, Engineers, Paper-makers, Brewers, Manufacturers, and all who may have water, or other liquids, to lift or to raise, will find it their interest to use these Pumps. For ECONOMY, EFFICIENCY, SIMPLICITY, DURABILITY, & POWER, they have no equal. Every information can be had on application to
GWYNNE and CO. Essex Wharf, Essex-street, Strand.

STEAM PUMPING ENGINES.—PATENT PORTABLE STEAM-ENGINES, from four to ten horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile-driving, raising materials, &c. &c.



Contracts taken for pumping any quantity of water.
JAMES BURTON & SONS,
Engineers and Contractors,
John's-place, Holland-street,
Southwark, London

PORTABLE STEAM-ENGINES.—TO CONTRACTORS. TO BE LET on HIRE, or for SALE, several strong and simple STEAM-ENGINES, mounted on wheels, without chimney, &c. complete, ready for immediate use, without any fixing, of 6-horse, 8-horse, 10-horse, 12-horse, 16-horse, 2-horse power, and upwards, adapted for pumping, winding, sawing, and general contractors' purposes.—Apply to MEDWIN and HALL, Engineers and Portable Engine-makers, 92, Blackfriars-road.

STEAM-ENGINES, of various sizes, from two-horse power upwards, always in stock, made on the most improved principles, and of the very best quality; single and double-purchase crabs also always ready for immediate use or exportation; saw benches and saw frames, with all the most recent improvements, and every description of machinery made to order by ANDREW McLAREN and Co. Windsor Iron Works, Windsor-terrace, City-road, and 174, Upper Thames-street.

TO BUILDERS AND CONTRACTORS.
FREDERICK GREGORY begs to call the attention of the above to his extensive stock of WATER-PIPES from 2 to 15 inches diameter, CHIMNEY-POTS, plain and moulded, RHUBARB, SEAKALE, and FLOWER-POTS, which for quality and price are equal to none. All letters addressed to FREDERICK GREGORY, Auctioneer and General Agent, Dorchester, will receive prompt attention.

LICENSES GRANTED
FOR THE USE OF
SPENCER'S PATENT;
VIZ. FOR
DIRECT-ACTION STEAM-PRESS, SOCKETING DIES,
(These Dies are used without crosses or arms);

DOULTON AND WATTS'S
REGISTERED CLOSET PANS IN
ENAMELLED STONE WARE,
LAMBETH POTTERY, LONDON.

These Closet Pans are manufactured in a new kind of stone-ware, HIGHLY GLAZED, vitreous, of a white colour, are much improved in form, and are used and recommended by the engineers connected with the General Board of Health.
The Traps are smaller at the inlet, gradually enlarging towards the outlet, as a security against the introduction of improper substances into the drain.
They may also be had turned down.
PRICE 7s. 6d. each,
The same as for ordinary stone-ware, and may be had fitted with copper fans of the best construction at 1s. 6d. each extra.

"THE BUILDER," OF NEXT WEEK,

WILL CONTAIN AN ILLUSTRATION OF

JENNINGS'S GULLY-TRAP,

IN SECTION,

Showing its applicability for street and other purposes, WITHOUT THE OUTSIDE IRON FRAME heretofore shown. This will enable the Patentee to sell his Gully-Traps AT A LOWER PRICE, and save much in carriage.

JENNINGS'S IMPERISHABLE WATER-CLOSETS.

ARCHITECTS, BUILDERS, AND PLUMBERS ARE INVITED TO SEE THIS CLOSET IN ALL ITS VARIETIES OF WARE, IN ACTION ON THE PREMISES.

Where also may be seen,

JENNINGS'S STREET GULLY-TRAPS, SINK, AREA, AND STABLE-TRAPS,

LAVATORIES, Angular or Square; URINALS, SLUICE-VALVES, FIRE-VALVES, HIGH-PRESSURE BALL, and other COCKS; JOINTS for Connecting Lead and other Malleable Pipes, without Solder; SHOES for Preserving the Corners of Shop Shutters, and securing them without a Bar; SUPPLY-VALVES to CLOSET BASINS, which combine the Waste and Service in one, and require neither Ball, Lever, nor Wire; and many other things necessary to comfort and health.

A BOOK, containing ILLUSTRATIONS, DESCRIPTIONS, and PRICES, can be had free, on application, or by post, if two stamps are sent, to

GEORGE JENNINGS,

ENGINEER AND BRASSFOUNDER,

No. 29, Great Charlotte-street, Blackfriars-road.

HENRY MILLICHAMP, Son-in-Law and Successor to THOMAS BULLOCK'

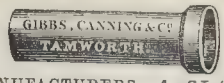
JAMES STIFF, MANUFACTURER of GLAZED STONE-WARE DRAIN PIPES, BENDS, JUNCTIONS, TRAPS, &c. 39, HIGH-STREET, LAMBETH, LONDON. Established 1751.

Water-Closet Pans, with Syphon Traps, 7s. 6d. each.

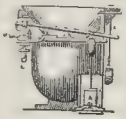
STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths.



The great advantages attending the use of these articles are now so generally understood, as to render any enumeration of them almost superfluous. Their cheapness, efficiency, and durability, are universally admitted; while the rapidly increasing demand for them proves their estimated superiority over every other kind hitherto before the public for similar purposes.

Inspection is invited to an assorted Stock of Drain Tubes, of every form and size, adapted to the various situations for which they may be required, as also to the WATER-CLOSET PANS OF IMPROVED CONSTRUCTION, and interior glaze, far surpassing any other manufactured of Brown Stone Ware.

N.B. These are made without the discharge-hole being turned downwards.

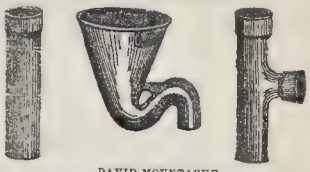


May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge; City-road Wharf, City Basin; Chelsea, Bermondsey; Danvers Wharf, foot of Battersea-bridge, Chelsea; Pratt Wharf, King's-road, Camden New Town TURNER & Co., South Wharf, Praed-street, Paddington; and at GOLWELL, Brothers, 32, Strydes-street Covent Garden.

Drawings and List of Prices will be forwarded free, on application.

MANUFACTURERS of GLAZED STONEWARE PIPES, Bends, Junctions, &c., also FIRE BRICKS, Vitrified Blue Bricks as used by her Majesty's Commissioners of Sewers., White Fire Clay, Facing Bricks, &c., &c. Agents.—CHARLES RICHARDSON, No. 6, South Wharf, Paddington, London.

GREAT SIMPLIFICATION and Economy in FIXING CLOSETS.



By the use of Underhay's Patent Regulators, the separate cistern, service-box, valve, cranks, and wires are dispensed with, making a closet as simple to fix as a bib-cock, and yet ensuring a perfect flush of water

The Manufacturers, CHARLES BOTTEN and SON, solicit a call from all parties interested, they having Pan, Valve, Self-acting, and Jennings's Closets fitted with this apparatus, and fixed for inspection, or will forward drawings of the same.

CHARLES BOTTEN and SON, Brass Founders, Engineers, Gas Meter and Fitting Manufacturers, Crawford passage, Clerkenwell.

VICTORIA POTTERY, LEIGH, NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE,

HAMPSHIRE.—Valuable Freehold Estate, in the parish of Christchurch, comprising a newly erected residence, with suitable offices, farm buildings, and cottages, and lands free of land, situate on both sides of the road between Burrowmouth and Christchurch, a highly picturesque and salubrious part of the county.

MESSRS. RUSHWORTH and JARVIS will SELL by AUCTION, at GARRAWAY'S, on FRIDAY, 24th MARCH, at TWELVE o'clock, in Six lots (unless previously disposed of by private contract), the STOURFIELD ESTATE, comprising a villa residence, with pleasure gardens and shrubbery, coachhouse and stabling for seven horses, farm yard, six labourers' cottages, and 185 a. res of land. The estate abuts on the south on the high road from Christchurch to Ringwood, and on the north on the Avon river, which is navigable for vessels of any burthen at the distance of nearly three miles, and from which point it commands fine views of the Isle of Wight, the Needle Rocks, Swanage, and the whole West Bay to the entrance of the Poole harbour. The property is distant one mile from the Christchurch Station on the South Western Railway, with passenger communication daily to Christchurch. Particulars and plans may be had at the Auctioneers' offices, Ringwood; at the Inns in Christchurch; of Messrs. Lewis and Lewis, Solicitors, Coppice-row, Wilts. Messrs. Lewis Woon, and Son, Solicitors, 6, Raymond-buildings, Gray's-inn; Mr. F. Scott Land Agent, 5 Charing-cross, and the Auctioneers, Saville-row, and 13, Change-alley, Cornhill, London.

SOMERS-TOWN.—To BUILDERS, CARPENTERS, Painters, Cabinet and Pianoforte Makers, and others.

MR. LEREW will SELL by AUCTION, on the PREMISES, No. 42, Burton-street, Somers-town, on MONDAY, FEBRUARY 13, at TWELVE for TWO HALF, about 1,000 yellow and white deals and battens, spruce and planed stuff, 50 squares prepared flooring, wood for battens, and other pine boards, wide ends, two sets of cabinet scrutoires, packing cases, old materials, &c. May be viewed the Saturday previous and catalogues had on the Premises, and of Lerew, Auctioneer, Carding-chambers, Hampstead-road, near the Euston station.

SALES BY AUCTION.

Building Materials of twenty newly-erected Houses, Batterses, conveniently situate for Land and Water Carriage. Second sale, to clear the ground for the Park.

MR. W. R. GLASIER is favoured with instructions by the Honourable Commissioners of her Majesty's Works and Buildings to SELL by AUCTION on the PREMISES, on TUESDAY, FEBRUARY 14th at TWELVE for ONE, all the valuable BUILDING MATERIALS of twenty newly-erected HOUSES, situate in Park-road, Albert-road, and Parish-lane, Batterses, and consisting of about 100 capital stock and other bricks, fir timber, flooring, slates, tiles, Yorkshire paving, deals and scahes, lead fixtures, trees, plants, roots and other effects. May be viewed two days prior to the sale, and catalogues had at the Office of Works, 12, Whitehall-place; of James Pennycross, Esq. 7, Whitehall-yard; at the Clerk of the Works' Office, Park-road, Batterses; at the Albert Tavern, Park-road; at the Swan, Batterses-bridge; at Garraway's, Change-alley, Cornhill; and of the Auctioneer, 41, Charing-cross.

TO BUILDERS AND OTHERS.

MESSRS. JACKSON and BASSETT have received instructions from Mr G Smeed to SELL by AUCTION, on THURSDAY, FEBRUARY 16, on the PREMISES at the Brick field, Sittingbourne Kent about 10,000,000 BRICKS, consisting of Stocks Shoppers, Place, and Paviors. Sale to commence at ELEVEN o'clock precisely. Catalogues may be had one week previous to the sale of Mr G. Smeed, Sittingbourne; and of the Auctioneers Sittingbourne.

Superior Chimney pieces of beautiful Statuary Marble, some richly sculptured, and Dove-tailed Iron Marble in great variety.

MESSRS. ROBINS will SELL by AUCTION, at their ROOMS, Pazzi, Coventgarden, on WEDNESDAY next FEBRUARY 8, at TWELVE, STATUARY MARBLE CHIMNEY-PIECES, some richly sculptured, suitable for first-class drawing-rooms; the others of a less expensive character, with trusses, fossil black, and Sicilian marble for dinner-rooms and libraries, and a great variety of vein marbles. On view in Covent-garden.

1,000,000 NEW BRICKS Shepherd's Bush

MESSRS. EVERSFIELD and HORNE beg to announce that they will SELL by AUCTION, early in MARCH, at the BRICKFIELD, SHEPHERD'S BUSH near Hammersmith, about a million of capital sound STOCK BRICKS, which will be arranged in lots to suit purchasers, to whom accommodation in the way of approved bills will be granted.—Auction and Estate Offices 40 Parliament-street, Westminster

WESTMINSTER.—Materials, capital Coach-house Gates, and Stable Fittings.—Lease of Premises, Prince-street.

MESSRS. EVERSFIELD and HORNE will SELL by AUCTION, on the PREMISES, Princes-street, Broad Sanctuary Westminster, on TUESDAY FEB 7, at TWELVE for ONE, the remaining portion of the valuable MATERIALS and FITTINGS of the Royal Mews, consisting of the iron stall-posts, racks, and mangers, seven pairs of capital coach-house gates, with Collings's patent hinges useful loft, and panelled doors, sashes, linings, &c.; large lined cisterns, lead piping, and other effects. May be viewed the day previous and catalogues had on the Premises, and of the Auctioneers, 40, Parliament-street, or Coal Exchange.

NEW FOREST, HANTS.—By order of the Commissioner in charge of her Majesty's Woods and Royal Forests.—TO BE SOLD by AUCTION at LYNDHURST by

MR. CHARLES NORTON, on THURSDAY, the 9th day of FEBRUARY, 1854 at TWO o'clock in the afternoon precisely, 1,200 loads of Sound and Hewn OAK TIMBER. The lots may be viewed, and catalogues and conditions of sale, with further particulars may be obtained on application to Mr. L. H. Cumberland, Queen's House, Lyndhurst, Hants

TO TIMBER MERCHANTS, BUILDERS, SAW-MILL PROPRIETORS, and OTHERS, requiring extensive Premises

MR. WARD will SELL by AUCTION, on the PREMISES, on THURSDAY, FEBRUARY 9th, 1854, at TWO o'clock precisely, the whole of the TIMBER YARD, situated in the Berm-bridge New road, Southwark, and within ten minutes' walk of London-bridge. These premises consist of a large shed, with convenient sash-room and garden in the front office, saw-pits, scaffolding for deals, drying-sheds, loft, veneer-room, stabling for seven horses &c. The covering nearly an acre of ground. The rent is very moderate, and the business carried on within these premises for the last fifty years, has been very successful and from the rising vicinity to the City and docks, would make it a most desirable residence for either a timber-merchant, or as a saw mill, which the neighborhood much requires, and which could be erected on in conjunction with the timber trade if required. For further particulars, apply to the Auctioneer, 8, Oxford-street

TO THE TIMBER MERCHANTS, BUILDERS, CARPENTERS, JOINERS, COACH AND PIANOFORTE MAKERS, SHIP BUILDERS, SAW-MILL OWNERS, AND OTHERS.

MR. WARD will SELL by AUCTION, on the PREMISES Bermondsey New-road Southwark, on THURSDAY and FRIDAY, FEBRUARY 9th and 10th 1854 at ELEVEN o'clock each day, the entire well seasoned STOCK of a TIMBER MERCHANT and BUILDER, consisting of Spanish mahogany, in planks, boards, and veneers, American ash and Birch 1 and and 1 inch, 2,000 dry yellow pine planks and deals, 2,000 white and yellow deals and battens

50 loads Baltic timber

150 English oak trees

50 loads of dry ash, elm, beech plank, quarters, and 1 fellees, slip stocks, dry prepared flooring boards moulding, &c.

Also the whole of the entire plant consisting of two powerful carriages, cant hook saws, circular saws, 4 pit saws, 4 crabs, lathes, trussing frames &c. On view one day prior and morning of sale. Catalogues had on the Premises and of the Auctioneer, 8, Oxford-street

A Freehold Brickfield to be sold, a short distance from London, on the Great Western Railway

MR. EDWIN FOX is instructed to SELL a valuable BRICKFIELD, in full work, capable of working ten stools. The earth is 9 feet deep. There are 18 acres contiguous, a siding on the railway, turn-table &c. &c. The plant is of the most approved principle and in thorough repair. A sample of the bricks can be seen by applying at Mr. Edwin Fox's Offices, 41 Chancery-lane, Bank

TO BUILDERS AND OTHERS.—Extensive Sale of Building Materials Batterses.

MR. F. HALL will SELL by AUCTION, on TUESDAY FEBRUARY 7th, and WEDNESDAY 8th, at TWELVE, on the PREMISES, near the Victoria Tavern, Falcon-lane Batterses, a large and valuable assortment of first-rate MATERIALS, consisting of lots of excellent Memel timber, of all lengths and sizes, bressummers, girders, long joists, 9,000 feet of capital nearly new scantling, 12 and 14 yellow flooring boards and battens, large chests, presses, dressers &c., sashes and frames, mantle-pieces, doors, marble hearths, iron and small deals, large pots, pans, and vats both out doors; stone pavier, for wood, &c. &c. May be viewed, and catalogues and on the Premises, at the Sale. Wanted to purchase, the Black Lion Church-street, Chelsea; and of Mr. F. Hall, Building Material and General Auctioneer, Chester-street, Kennington.

Building Materials, Westminster-road (Pimlico Sale).—To Builders and Others

MR. F. HALL will SELL by AUCTION, on THURSDAY, FEBRUARY 9, at TWELVE, on the PREMISES, opposite the Grapes Arms, Westminster-road, an extensive assortment of valuable MATERIALS, comprising first-rate timber, joists, quarters, planks, lintels and small scantling, fancy and other deals, battens and slabs, 3,000 feet of capital flooring boards, a large quantity of excellent moulding, lining, and other boards, glazed and stable partitions, glass in frames and other sashes, 2 fine cast-iron girders, 2 capital new cisterns, 2 ranges of kitchen fittings, and a great variety of other effects, recently selected for the building of the new church. May be viewed, and catalogues had on the Premises, and of Mr. Hall, Building Material and General Auctioneer, Chester-street, Kennington.

SALES BY AUCTION.

OLD JAIL YARD, CHELMSFORD. The remaining stock of PORTLAND STONE and other BUILDING MATERIALS, will be SOLD by AUCTION, on TUESDAY, FEBRUARY 7, 1854, on the GROUND, by

MESSRS. VALPY and STOKES, comprising ashlaring, blocks, slabs, cornices, plinths, stone arches, the imperial arms, elaborately cut in bold relief 7 feet by 3 feet; sixty new cement moulded balusters; a few scaffold poles and boards, blocks, chains, ropes, stone saws, sieves, barrows, and sundry tools.—Catalogues to be had at the Offices of the Auctioneers, Conduit-square, Chelmsford. Sale to commence at TEN for ELEVEN o'clock.

FREEHOLD LAND, TO SOCIETIES, &c. 397 Acres at Bagshot, only 17l. per Acre; 12½ Acres at Barnet, and 15 Acres at Walthamstow.

MR. WOOD is instructed by a Gentleman to negotiate the SALE of the above eligible ESTATES, their respective favourite localities possessing attractions which must of necessity prove particularly advantageous to buyers.—Apply at his Offices, personally only, 21, Acton-place, King-land-road, where plans may be seen.

MARBLE WORKS, 13, VAUXHALL-BRIDGE ROAD.—TO SCULPTORS, BUILDERS, AND MASONS.—TO BE SOLD, in consequence of the Proprietor's farm in the Premises having expired at Christmas last, and which must be cleared immediately, the large compleated stock of great variety of CHIMNEY-PIECES, MONUMENTS, HEAD-STONES, TOMBS, &c.; all kinds of Pedestals in Scagliola; oval do. for Groups; all the unmanufactured stock, consisting of 1,000 feet of black and gold slab, various thicknesses; Sienna, black, and every description of marble in block and slab; blocks and falls, crab, 3 turning lathes, 2 polishing frames, 2 trucks, 2 chaises, cart, 3 sets of harness, useful cob, rising 5 years old, chaff box, and stable utensils the whole to be sold together, or in lots selected by purchasers. On view from and after the 6th FEBRUARY, 1854.—THOMAS BINGHAM.

BRICKLAYER'S and BUILDER'S BUSINESS (WEST-END) TO BE DISPOSED OF (not on it). Mr PATCHING has instructions to SELL this well-established BUSINESS, with a connection amongst some of the first firms in London for general repairs, plumbing, joinery work, &c. References given, and parties personally introduced to the customers; and being an undoubtedly genuine concern, is a complete bargain.—Apply to Mr. PATCHING, Builders' Agent, 33, Cranbourne-street, Leicester-square.

TO PAINTERS, DECORATORS, &c.

TO BE DISPOSED OF, a very old-established BUSINESS at the west-end, with a first-rate connection. To any one with a moderate capital this is an excellent opportunity.—Apply by letter, prepaid, to J. M. 74, Piccadilly.

TO PLUMBERS, DECORATORS, GASFITTERS, &c.

TO BE DISPOSED OF, an excellent, old-established BUSINESS, with house, suited for a person of first respectability. For particulars apply to Messrs. JAMES GAY and COMPANY, 6, Laurence Pountney-hill, Cannon-street, London.

TO CARPENTERS AND BUILDERS

TO BE DISPOSED OF, the LEASE of PREMISES and WORKSHOPS, with Good-will of a Business in the above line, of sixty years' standing; also Stock-in-Trade. The Premises are capable of employing twelve Benches, situated in the neighbourhood of Lincoln's-inn-fields, in the centre of a good jobbing connection.—N.B. The Business and Stock in Trade may be had without the lease, and Work-bench at a moderate rental.—Apply at the Office of "The Builder."

CHESTERFIELD HOUSE and GROUNDS, some nine upwards of 21 ACRES of LAND, TO BE LET, on LEASE, for a Term of Years. For particulars apply to Messrs. ROBINSON and BARLOW, Essex-street, Strand; or to Mr. DECIMUS BURTON, 6, Spring-gardens.

FREEHOLD.—TO BE SOLD, in the immediate vicinity of Victoria-park, eligible PLOTS of FREEHOLD BUILDING LAND, facing the high-road from Victoria-park to Old Ford; for further particulars apply to Mr JAMES BROWN, the Marquis Cornwallis, Old Ford; or to G. CLARKSON, Builder, 7, Dalston-street, Pentonville.

FOUR LEASEHOLD HOUSES, to pay ten per cent. Rental, 32l. 10s. each, Nearly Completed, on the high road to Blackheath. Ground-rent, 11 per ann. A portion of the purchase-money may be left on mortgage.—Apply to Messrs. FLOWER and HYNAM, Architects, 17, Gracechurch-street, City.

TO BE SOLD, by Private Contract, by THOMAS COMPTON, a FREEHOLD RESIDENCE, delightfully situated at Reigate, Surrey, very near to the Parish Church, within ten minutes' walk of the Town, and of the Railway Station. The house is in every respect calculated for a large genteel family, having coach house, stable, garden, conservatory, pleasure and offices of every description in complete repair, with an excellent supply of both spring and rain water. Particulars and cards to view may be had on application to T. COMPTON, Estate Agent, 78, Coleman-street, City, and Enfield, Middlesex; and to Messrs. J. & J. NASH, Estate Agents Reigate.

TO CAPITALISTS AND OTHERS

TO BE SOLD several Handsome and Convenient Semi-detached Villas and Terrace Houses, situate on the Stratford and Mile-end Roads, Victoria-park, Kensington, having a View of the New Crystal Palace at Sydenham, and near to the site of the Great Exhibition; within three minutes' walk of the Kensington Gardens and Hyde Park Omnibuses and Cabs pass the doors every quarter of an hour. For full particulars apply at Mr. STREDDER'S Office, 12, Stanford-st. Kensington

OXFORD PAVING ACTS.—The Commissioners will proceed, on the 22nd day of FEBRUARY instant, to the ELECTION of a SURVEYOR under the above-named Acts. The Surveyor will be required to devote the whole of his time to the office. The salary will be 150*l.* a year. Persons desirous of becoming candidates for the office are requested to send their applications, accompanied with testimonials, to the Clerk to the Commissioners, on or before MONDAY, the 20th day of FEBRUARY, instant. Further particulars may be learnt on application to the Clerk.—By order of the Commissioners.

BAKER MORRELL, Clerk.

St. Giles's, Oxford, Feb 2nd, 1854.

COMPETITIONS.

TO ROAD ENGINEERS.

THE BOARD of HIGHWAYS of the Parish of Lewisham, Kent, are desirous of having the HIGHWAYS of the PARISH SURVEYED by a competent person, for the purpose of being furnished with a plan for putting the roads into an efficient state of repair, to adapt them to the increased and increasing traffic. The roads are about twenty-seven miles in extent. Measured plans are not required, but only a report after examination of the state of the roads in the various localities, the improvements and amendments recommended, and the proper materials to be used. Persons willing to undertake the business are requested to send their terms for the same, and, separately, their terms for superintending the carrying out of the plans recommended, to DAVID ROWLAND, Esq. 31, Fenchurch-street, London.—Further information wanted may be obtained from Mr. CORBETT, Assistant Surveyor, Lewisham.

TO ARCHITECTS.

THE NEW CHURCH and PARSONAGE at TULSE-HILL, BRIXTON, SURREY.—Architects desirous of submitting PLANS for the immediate ERECTION of the above BUILDINGS, may obtain full printed particulars on application to Mr. E. L. HAYWARD, Honorary Secretary to the Building Committee.—Plans to be delivered on the 13th MARCH, 196, Blackfriars-road, London.

CONTRACTS.

TO CONTRACTORS FOR PUBLIC WORKS.

CARDIFF SEWERS.—The Cardiff Local Board of Health are prepared to receive TENDERS for the EXECUTION of the WORKS connected with the GENERAL DRAINAGE of the Town of CARDIFF, comprising Brick Culverting, with Manholes, Side Entrances, Junctions &c. &c.

Plans, sections, specifications, and forms of Tender will be open to the inspection of Contractors at the New Guildhall, in the said town, between the hours of TEN A.M. and FIVE P.M. from the 14th to the 22nd day of FEBRUARY, 1854, both inclusive.

Printed forms of Tender may be had at my Office, and none others will be received.

Sealed Tenders, endorsed "Tender for Sewers" must be sent in to me on or before the 23rd of FEBRUARY, 1854.

The Local Board do not pledge themselves to accept the lowest or any Tender

By order, T. WATKINS, Clerk.

Offices of Local Board of Health, Cardiff.

BRISTOL LOCAL BOARD of HEALTH.

TO MASONS The Committee of the Bristol Local Board of Health hereby give Notice, that they are ready to receive TENDERS for the performance of the following Works for Three Years, from the 25th day of MARCH next, viz.

FOOTWAYS.

For the supply of Curb, Edging, Paving, and Pennanting of the best Hanham Stone, Pennsay, Welsh, or other Stone of equal quality; and for Setting and Laying the same in the Footpaths of the Streets, Squares, Courts, Yards, Lanes, Passages, and Places within the city and county of Bristol, at such times as the said Local Board of Health and their Surveyor may direct. The Committee have divided the said city and county into Four Districts, and any person or persons willing to Contract for doing the above-mentioned Works in all, or any, or either of the said districts, are requested to deliver sealed Tenders for doing the same on or before TEN o'clock on THURSDAY morning, the 2nd day of MARCH next, indorsed "Tender for Paving in District No. 1, 2, 3, or 4," and addressed, "To the Committee of the Local Board of Health, No. 13, Prince-street, Bristol," where a specification of the works, the terms of the contract, and a form of the Tender, and any other information may be obtained. Each contractor will be required to find two good and sufficient securities for the performance of his contract. The committee will not find themselves to recommend the acceptance by the Local Board of the lowest or any Tender, nor until inquiry and approval of the proposed sureties.

By order of the Committee,

JAMES HARRIS, Clerk.

Offices, 13, Prince-street, Feb. 10, 1854.

TO BUILDERS.

NOTICE is hereby given, that TENDERS for the performance of the branches of ARTIFICERS' WORK, hereafter mentioned, for the Ordnance Department, at the following stations, will be received at the Ordnance Office, Pall-mall, London, on or before the 16th FEBRUARY next, viz.:—At Portsmouth, Devonport, and Pendennis: masons, bricklayers, and paviors' work; carpenters' work and ironmongery; plasterers' and slaters' work; plumbers, painters, glaziers, and paperhangers' work; iron-founders, smiths, and coppersmiths' work. At Pendennis and St. Mawes Castles: masons, bricklayers, and paviors' work; carpenters' work and ironmongery; plasterers and slaters' work; plumbers, painters, glaziers, and paperhangers' work; iron-founders, smiths, and coppersmiths' work. Tenders will be received for all the above trades for each station, either at the schedule prices, or at one uniform rate, above or below those prices. Tenders will also be received for one or more of the above trades for each station, either at the respective schedule prices, or at uniform rates above or below those prices.—Conditions and schedules of the contracts may be seen, and forms of Tender received, at the Royal Engineers' Office, Devonport, and Barrack-master's Office, Pendennis Castle, on weekdays, between the hours of TEN and FOUR o'clock, after the 4th proximo, until the 14th proximo.

Royal Engineers' Office, Devonport, 24th January, 1854.

TO BUILDERS.

PERSONS willing to CONTRACT for TAKING DOWN and ERECTING the EAGLE TAVERN, Mile-end-road, may see the plans, specifications, and forms of Tender, by applying at Mr. HAYWARDS, at the above house.

TO BUILDERS AND OTHERS.

SEWER CONTRACT.—The Commissioners under the Walsall Improvement and Market Act, 1848, are ready to receive TENDERS for a MAIN SEWER, which is intended to be put down in Walsall, and to commence opposite the Stock Hotel, in Bridge-street, extending thence to the open space called the Bridge, across the said bridge, along that part of Bradford-street which extends from the bridge to the entrance of the meadows opposite the Turf Tavern, and thence along the eastern side of the said meadows, to and under Tuskey's lane, along the land occupied by Charles Baldersley, and into the brook thereto adjoining, the whole length being about 1,275 yards. The sections specification, and conditions of contract may be inspected at the Office of Mr. WOOD, Town Surveyor, Wolverhampton-road, Walsall. Payments on account will be made once a month. Sealed Tenders must be delivered at the Office of the Commissioners' Clerk, Bridge street, Walsall, by or before TWO o'clock in the afternoon of TUESDAY, the 28th day of FEBRUARY instant. The Commissioners do not pledge themselves to accept the lowest or any Tender, and the party whose Tender may be accepted, will be required to give security, with two sureties, for the due performance of his contract.

SAMUEL WILKINSON, Jun. Commissioners' Clerk.

Walsall, February 7, 1854.

SHROPSHIRE UNION RAILWAY and CANAL COMPANY. TO BUILDERS and CONTRACTORS.—The Directors are prepared to receive TENDERS for the CONSTRUCTION of a GOODS STATION and WAREHOUSE at Wellington. Plans and specifications may be seen on and between MONDAY, the 6th and SATURDAY, the 11th instant, at the Office of Mr. JOHN BEECH, the Company's Engineer, at Wellington. Tenders, sealed and endorsed, must be delivered to the undersigned, at the Offices of the Company, Tower-wharf, Chester, not later than noon, on MONDAY, the 20th instant. The lowest Tender will not necessarily be accepted.

ROBT. S. SKEY, General Manager.

Chester, February 1, 1854.

CONTRACTS.

THE CONSERVATIVE LAND SOCIETY.

TRUSTEES.

Viscount Raneleigh.
The Hon. Colonel Lowther, M.P.
W. Thomas Beach, Esq. M.P. Alderman.
J. C. Cobbold, esq. M.P.

TO ROAD CONTRACTORS, &c.—The Executive Committee are prepared to receive TENDERS for CONSTRUCTING the ROADS and DRAINAGE on the Enfield Estate, Middlesex. The drawings and specification may be seen at the Offices of the Surveyor, Mr. GEORGE MORGAN, on and after SATURDAY, FEBRUARY 18, between the hours of TWELVE and FOUR. Tenders are to be sent in on or before TWELVE o'clock, on FRIDAY, FEBRUARY 24, addressed to the Surveyor, and endorsed, "Tenders for Roads, &c. Enfield Estate." The Committee do not bind themselves to accept the lowest or any Tender.

By order of the Committee,

33, Norfolk street, Strand, February 8, 1854.

RE-SEATING of the PARISH CHURCH of ST. MARY, AYLESBURY. The Committee are desirous of receiving TENDERS from persons wishing to CONTRACT for executing the FITTINGS to the CHURCH, according to the plans and specifications, which may be seen at my Office, in Aylesbury. Further particulars will be furnished on application to Mr. SCOTT, Architect, 20, Spring-gardens, London. The specifications are divided into 4 separate headings, for each of which a separate Tender is required, stating by the parties and sent in to me, sealed up, on or before SATURDAY, the 25th instant. The Committee do not bind themselves to accept the lowest or any other Tender. By order of the Committee,

Aylesbury, February 1, 1854. R. H. BENSON, Hon. Sec.

PARISH of SAINT PANCRAS.—SOUTH-WESTERN DISTRICT.—To PAVIORS, MASONS, DUSTMEN, SCAVENGERS, CARMEN CONTRACTORS for STREET-WATERING, Lime, Gravel, &c.—The Commissioners for Paving, &c. this district will MEET at their office, 21, Highbury-terrace, Islington, on FRIDAY, 24th FEBRUARY, inst. at SEVEN o'clock in the Evening precisely, to receive TENDERS for the above-mentioned WORKS. For further particulars and printed forms of Tender, as to the time when the same will be received, apply to Mr. CONINGHAM, Surveyor, at the Office, as above, where forms of contract may be seen, the expense of contract to be borne by the contractor. The committee do not pledge themselves to accept the lowest or any Tender.

R. A. CUNNINGHAM, Clerk.

Feb. 7, 1854.

TO BUILDERS, IRONFOUNDERS, AND ROAD-CONTRACTORS.

ISLINGTON EXTRAMURAL CEMETERY. The Burial-board for the Parish of St. Mary, Islington are ready to receive TENDERS for the ERECTION of LODGES and BOUNDARY WALLS, and ENTRANCE-GATES, IRON-RAILING and FENCING; and for forming roads, footpaths, and drainage, and planting the 30 acres of ground, part of Highgate Farm, in the parish of St. Pancras. SKAIFE is also Agent for Morewood and Rogers's Patent Galvanized Tinned Iron, both flat and corrugated; also for Morewood and Rogers's Patent Galvanized Tinned Iron Tiles, for exportation; and Plumbic Zinc. Portable Emigrants' Houses and Substantial Stores supplied at moderate prices, and on the shortest notice. An allowance to the Trade.

212 SAFES.—MILNER'S HOLDFASTS, fire-resisting by means of the only perfect non-conductor, vaporisation, are the strongest, best, and cheapest, because the only effectual safeguards against fire, robbery, or violence, for ledger, deeds, cash, or valuables. Lord Chief Justice Campbell, in summing up on the late trials for infringement of MILNER'S SAFES, was pleased to observe:—"He must say he had been astonished to find such strong evidence of their usefulness; up to this hour he had no idea that there were any human means of so fearfully preparing papers from the action of fire. It was a comfort for me to know that there was such an invention, by which valuable documents might be rendered secure, notwithstanding the calamity of fire." As to whether it is useful, it appears to be allowed on all hands; IT SEEMS TO BE A MOST MARVELLOUS PRESERVATION AGAINST FIRE of the water remains remaining in the safe, and the contents receive, AND THE VERY CALAMITY BRINGS THE CURE, for the heat releases the water of moisture, and then it is turned into steam, and the steam moistens the substance that is to be preserved, AND SO IT IS AN EFFECTUAL GUARD AGAINST FIRE.—Milners' Patent Safe Works, Liverpool. London Depôt, 57A, MOORGATE-STREET, City, London.

G. C. ADKINS and COMPANY,
LEAD MERCHANTS,
HEATH LEAD WORKS, BIRMINGHAM,

6-inch Bell-Ward Mortice, with best Furniture and Patent Spindles, 3s. 6d. each. Light Elliptic and Register Metal, 14s. per cwt.

Dr. Arnott's Ventilators, 4s. 6d. each.
An extensive stock of bar, rod, hoop, and sheet iron.

THE REGISTERED DORSET STOVE.—This STOVE is peculiarly adapted to the Warming of CHURCHES, CHAPELS, CONSERVATORIES, HALLS, OFFICES, &c. The Fuel used is Charcoal, the noxious Gas of which is carried off by means of a descending flue, in a way that no heat is wasted, or flue visible. The effect is produced not by radiation from a heated surface, but by a current of air passing through tubes not so heated as to burn the air

ITS PECULIAR MERITS ARE AS FOLLOW:—

First.—All carbonic acid gas generated by the combustion of char coal, is carried out of the apartment, thereby rendering the use of charcoal as a fuel perfect harmless.

Second.—The great amount of heat created by a small quantity of fuel

Third.—The little attention required, and the regularity of burning

Fourth.—Its adaptability to thorough ventilation by circulation

Fifth.—The body of this stove be so formed of two cylinders, with a space between them for condensing and carrying off the gas, renders it perfectly free from danger when placed contiguous to any combustible material

*** Every information will be forwarded on application to the Patentee, Mr. J. HICKS, Architect, South street, Dorchester.

COPY OF TESTIMONIALS

We, whose names are hereunto annexed, being the Minister, Churchwarden, and Inhabitants of the parish of Ranesworthy, in the county of Gloucester, having witnessed the effects of the DORSET STOVE, do hereby certify that the trial of its efficacy for warming the air of our parish church, and keeping it free from damp, has been fully tested during the last two months. We find that a quantity of charcoal, amounting to about three pounds in weight, is found to be sufficient for keeping up a moderate warmth during seven hours. We further beg to state it as our opinion, that the peculiar simplicity in the construction of the apparatus, together with its inexpensiveness, is an additional recommendation. It is, moreover, easily kept in any common building. These considerations, together with its perfect freedom from smoke, or other offensive smell, added to the small amount of trouble in lighting the same (especially as no care in tending it after wards is required), secure it from occasioning the least noise or interruption during the time of divine service. It seems also, from its perfect safety, to be well adapted for entrance halls in private houses.

J. C. RICKS, Incumbent
THOS. SMITH, Churchwarden.
SAMUEL GAINER.
GEORGE CHANDLER.
THOS. BUCKINGHAM.
GEORGE PULLIN.

Dorchester, Februare 23rd, 1852.

SIR,—I beg to inform you, as agent for the Dorset Stove, that we have every reason to be satisfied with the trial it has had in our church. It imparts and diffuses an equal and sustained temperance, and is unaccompanied with any drawback in the shape of escape of gas, indeed in this latter particular, I should say it possesses an advantage over every other stove with which I am acquainted. The moderate consumption of fuel is another recommendation. You are quite welcome to use my name as one who has tried and approved the invention.

I am, sir, your obedient servant.

WILLIAM BULLER, Rector of Holy Trinity, Dorchester.

Mr. Thomas Wood, December 9th, 1851.

SIR,—I have much pleasure in stating that the Dorset Stove has been used in the parish church of Cerne Abbas, which is one of the largest in the country of Dorset, and I may add one of the dampest, and our stove has been found sufficient to render the church perfectly dry. If this testimonial should be of any use in extending the benefits of the Dorset stove, I hope you will employ it for that purpose.

I am, sir, your obedient servant.

ALEXANDER WILLIAMS, Vicar of Cerne Abbas.

Mr. Wood, Agent, Dorchester.

CALORIFERE.—Gold Medal, Paris Exhibition, 1849.—A 200,000 cubic feet room warmed by hot air only, at 65 degrees Fahrenheit, in burning 7lbs. of coal per hour. The most complete safety against fire, the healthiest and most powerful warming, without any machinery, are obtained by BOILEVES'S PATENT CALORIFERE. The constant supply of fresh air carried out instantaneously, by a new well-improved process, all damp or vitiated air, that makes it very desirable for churches, schools, theatres, hospitals, manufactories, clubs, houses of any size, laundries, and green houses. The Calorifere has been adopted by his Grace the Duke of Bedford, at Woburn Abbey by several architects, and it may be seen in operation in many places in London and country.—Apply per post, to T. BOILEVE, French Engineer, 85, King William-street, City.

WARMING by HOT WATER.—Churches, Chapels, Public and Private Buildings, heated with hot water from 80 to 100 degrees, upon the most approved principle, by WILLIAMSON, Engineer, Coventry. N.B.—A guarantee given with each apparatus.

NEW HOUSES OF PARLIAMENT.—DEFRIES'S GAS STOVES, RANGES and BATHS, just completed for two Rooms in the above building. A great variety in stock upon the same principle. Gas Baths may be obtained for three-halfpence. Gas Cooking and Heating Stoves for all classes, from 10s. Defries's celebrated Regent stove. Manufactories removed from Hampton-street to St. Martin's-lane to more extensive premises, New-road, near Albany-street.

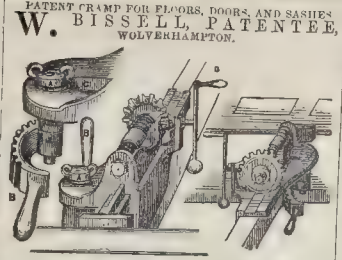
WARMING by HOT WATER.—J. W. EEKS and CO. KINGS-ROAD CHELSEA, HOT WATER APPARATUS MANUFACTORY, whilst respectfully soliciting the attention of architects, builders, &c. to their superior apparatus for warming churches, mansion-halls, offices, and public buildings, by the circulation of hot water in pipes, beg to call particular attention to the scientific statement in the "Builder" of Jan. 14, 1854, which fully bears out the able address of the Rev. H. J. Bigge's, delivered at a meeting of the Architectural Society, wherein Mr. Bigge shows that heating by hot water is truly the only effective system applicable to warming churches and other large buildings.—Messrs. JOHN WOOD and SON, 37, St. Paul's Churchyard, London, street, Liverpool; 16, Market-street, Manchester; and Horsley-fields, Wolverhampton.

buildings. It is free from all objections, is economical in working, and produces perfect ventilation with a uniform comfortable warmth throughout the largest buildings.—Messrs. JOHN WOOD and SON will guarantee their Hot Water Apparatus for thirty years from date of contract.

STEPHENSON and PEILL, 61, Gracechurch-street, London, and 17, New Park-street, Southwark, Manufacturers of COPPER CYLINDRICAL and Improved CONICAL BOILERS, and Conservatory and Horticultural Builders, other wood or iron, respectfully call the attention of the nobility, gentry, nurserymen to their simple but efficacious method of conveying water by Hot Water. From the extensive works they have executed, references of the highest respectability can be given, and full particulars furnished on application.

HIGGS and GEORGE, Wholesale and Export Ironmongers, Agents for the sale of the Patent Night Nails, Cannon-street and Lodge hall, London (Removed 1st, 1850, Borough) HIGGS and GEORGE beg to acquaint their friends and the public that they have rented to let a large and central Iron-mongery, and the Patent Wrought Nails, for the benefit of the home and export demand.

BUILDERS, CARPENTERS, UPHOLSTERERS, SMITHS, BELL-HANGERS, AND THE TRADE IN GENERAL.



WHOLESALE IRONMONGERY

WAREHOUSE, 18, Blandford-street, Manchester-square (facing out of Baker-street, Portman-square), where a large stock is kept on hand for the execution of any order. A large stock of HAN YOUNG, Birmingham and Wolverhampton, Agent and Partner.

PATENT CRAMP FOR FLOORS, DOORS, AND SASHES

W. BISSELL, PATENTEE,

WOLVERHAMPTON.

AA. A set screw and pin moving in slab C, to regulate for any thickness of joist, from 4 to 4 inches.

B. An eccentric notched lever, to be turned and pressed against the joist.

Lay the cramp upon the joist close up to the board, move the set screw in the slab up to the side of the joist, then fix the set screw firm. Turn the notched lever B against the joist, then by turning the handle D, the lever will gradually fix itself and hold the cramp firm: the greater the strain, the more rigidly, by its eccentric action, will the lever hold. The Patentee, in asking the attention of Builders and others, assures them that his cramp possesses great advantages. It is a BENCH cramp of the best kind, and as well suited for doors and sashes as for floors. From its superior mechanical principles, it has greater power, and will be found to be more quickly and safely used than any yet brought out, and at the same time it is light and portable.

IMPORTANT TO ENGINEERS, TOOL MAKERS, &c

ALDIS'S REGISTERED VULCAN FLOOR-CRAMP.—E. A. begs to call the attention of Engineers, Tool-makers, &c. to his newly invented FLOOR-CRAMP, as being the most compact and powerful ever yet brought out. The superior advantage which this cramp possesses over all others consists in its being so readily adapted to its work requiring merely to be laid upon the joist and commence work upon it, when by its self acting principle it instantly fixes itself, thereby requiring less than half the time usually occupied to other cramps. It can be operated to any joist, from 2 to 4 inches in thickness, and can be worked quite close to any wall in a space of 7 inches, which it is impossible to do with any other cramp: it is at the same time light, portable, and not expensive, considering its important qualities, which renders it far superior to any other ever yet invented. The inventor being a practical man, has laboured to produce an article worthy of attention.

N.B. Parties wishing to purchase the above invention, can apply personally or by letter to 31, North-street, Manchester-square, London, where full particulars may be obtained.

TO BUILDERS, CARPENTERS, CABINET-MAKERS, &c.

JOHN DALE, 18 and 19, Chiswell-street, Finsbury-square, respectfully invites the above Trades to the inspection of his immense stock of ironmongery, which cannot be surpassed in variety, quality, and cheapness by any house in London.

Elliptic Stoves, double backs, 3d. per inch, and upwards.

Kegister Stoves, 5d. 6d. 7d. 8d. and 9d. per inch.

Self-acting Ranges, with circular ovens and back boilers, best wrought bars and bright fittings:—

6-in. Mortise, white China Furniture, 3s. 6d. each.

J. H. BOOBYER (late STURCH and BOOBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stanhope-street, Clare-market, London.

RECENT TESTIMONIALS

of the practical worth and efficient security of

CHUBB'S LOCKS AND STRONG-ROOM DOORS.

CHUBB and SON beg to lay before the public the two following Letters, which they have lately received, as all further proof of the security of their Manufactures:—

Unsuccessful Attempt upon the Strong Room of the London and North-Western Railway, Liverpool.

"London and North-Western Railway Company,
Liverpool, May 14th, 1851.

"Gentlemen,—I have much pleasure in giving testimony to the efficiency of the Iron Doors and Locks of your make, which secure the Strong Room at this office, and which completely baffled the efforts of one or more burglars to get at the money chest on the night of Thursday last, although it is evident that considerable force was used to break open the door.

"I am, Gentlemen, your obedient servant,

"GEO. PALMER.

"Messrs. Chubb and Son."

From Mr. Otway, Superintendent of Police, C Division.

"8 Great Vine-street, May 3, 1851.

"Gentlemen,—I have the pleasure to inform you that having one of your Locks on the street door of a shop lately occupied by being robbed last night. The thieves broke open all but no succeeding, has so damaged it that I have sent it to you for inspection, and shall feel obliged if you will have it repaired.

"I am, gentlemen, your obedient servant,

"C. OTWAY, Superintendent C Division of Police.

"Messrs. Chubb and Son."

CHUBB'S LOCKS, with all the recent Improvements; Cash, Deed, and Paper Boxes of all sizes; Fire-proof Safes and Chests; Iron Doors and Frames for strong Rooms; fitted with the Detector Lock. Complete Illustrated Lists, with Prices and Sizes, will be sent on application.

CHUBB and SON, 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley-fields, Wolverhampton.

TO RAILWAY COMPANIES, CONTRACTORS, AND BUILDERS.

JAMES LAURIE and CO. Warehouse, Cousin-lane, Upper Thames-street, supply Railway Chairs and Sleepers, Fishing Pieces, Bolts and Nuts, Spikes, and Tie, Bars, Columns, Girders, Socket Pipes, Rain water Pipes, Gutters, Railing and Palisading Bars, and all kinds of Iron Castings. Also, Henderson's Patent Derrick Cranes.

GAS CHANDELIERS and BRACKETS.—The increased and increasing use of gas in private houses has induced WILLIAM S. BURTON to collect from the various manufacturers all that is new and choice in Brackets, Pendants, and Chandeliers adapted to offices, passages, and dwelling rooms, as well as to have some designed expressly for him; these are now ON SHOW in one of his TEN LARGE ROOMS, and present, for novelty, variety, and purity of taste, an unequalled assortment. They are marked in plain figures, at prices proportionate with those which have tended to make his Ironmongery Establishment the largest and most remarkable in the kingdom, viz. from 18s. 6d. (two-lighted) to 16l. 16s.

WILLIAM S. BURTON has TEN LARGE SHOW-ROOMS all communicating, exclusive of the shop, devoted to the show of GENERAL FURNISHING IRONMONGERY (including Cutlery, Electro-silver, plated and japanned wares), Iron and brass bedsteads, so arranged and classified that purchasers may easily and at once make their selections.

Catalogues, with engravings (sent per post) free. The money returned for every article not approved of.

39, OXFORD-STREET (corner of Newman-street), Nos. 1 and 2, NEWMAN-STREET, and 4 and 5, PERRY'S-PLACE.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,

THE LEAR GARDEN LEAD WORKS, SOUTHWARK,

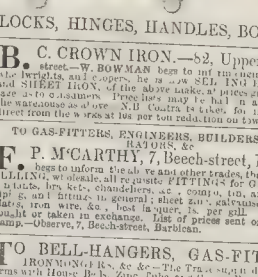
Invite the attention of Manufacturing Chemists to their Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER.

Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

GEORGE and SAMUEL CUTLER, WENLOCK IRON WORKS, 8, Wharf, Wenlock-road, City-road, London, Contracts for Custom Tanks, Gasholders, Purifiers, and all descriptions of Gas Apparatus; the works are fee complete, and manufacturers of Corrugated and all kinds of Iron Roofing for Railway Stations, Sheds, Warehouses, &c. &c. executed on the most reasonable terms. Ship Tanks, Steam and Range Boilers, and every description of Smith's Work of the best materials and workmanship. N.B. Improved Slide Valves, Cross Bars, and Screws, and Bolts, and Nuts, of all sizes, kept in stock.



BUILDERS, Contractors, Carpenters, and others, are invited to inspect the stock of NAILS, TOOLS, BRASS, AND GENERAL IRONMONGERY, at PEARS and STEDALL'S, Nos. 5 and 6, BROAD-STREET, BLOOMSBURY.

The prices will be found the lowest, and the stock one of the largest in the trade. A price list sent on application.

HART AND SON,

WHOLESALE AND EXPORT IRONMONGERS AND MANUFACTURERS,

53, 54, & 55, WYCH-STREET, STRAND.

LOCKS, HINGES, HANDLES, BOLTS, &c.

B. C. CROWN IRON.—82, Upper Thames-street.—W. BOWMAN begs to put into engineers, smiths, and wrights, and coopers, he is now SELLING IRON, HOOPS, and SHEET IRON, of the above make, at prices greatly advantageous to consumers. Price lists may be had on application at the warehouse as above. N.B. Contracts taken, for iron supplied direct from the works at less per ton reduction on town prices.

TO GAS-FITTERS, ENGINEERS, BUILDERS, DECORATORS, &c.

F. P. McCARTHY, 7, Beech-street, Barbican, begs to inform the trade he and other trades, that he is now SELLING, wholesale, all requisite FITTINGS for GAS WORK—pipes, cocks, brackets, chandeliers, &c., composition, and iron gas plates, iron wire, &c., best lacquer, 1s. per gill. Old metals bought or taken in exchange. List of prices sent on receipt of stamp.—Observe, 7, Beech-street, Barbican.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Zinc, Tube and Copper Wire, Gas Pendants, Brackets, and Joints, of all descriptions for fitting, in the rough. Bells cast, Tin Composition, and Brass Tubing, Cocks, Dead Weights, &c. for Patent Regulated Gas Taps for Picture Rods, &c.

Superior Relief Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. at

BLUNDELL EVELEIGH'S, Brass and Bell Foundry and Metal Warehouses, Nos. 11 and 12, Charles-street, Long-acre, London.

SAW-MILL MANUFACTORY, Chelsea, London. WORSSAM and CO. invite the attention of all concerned in sawing, planing, and moulding wood to the simplicity and superiority of their machines over those now in use, which are built and arranged at a cheap expense. Drawings and prices sent on application. Estimates given for complete saw mills for exportation or otherwise.

WIRE STRAND FENCING, as furnished with all its fittings, by R. S. NEWALL and CO. having secured the unqualified approval of practical men, is considered by many the best fence for park and farm inclosures, or subdivisions, for young plantations, and is now used instead of any kind of hedges, for road-side and other fencing.

The PATENT WIRE STRAND FENCE possesses an economy, security, and durability, not to be found in combination in any other fence hitherto introduced. This fence, as fitted by R. S. Newall and Co., offer the model of a fence of the character in the Slopes and Home-park, at Windsor, has the ignominy of a combustible ruin, and is, under any variation of temperature.

N.B. Estimates given at so much per running yard, for fencing, and complete Sets of metal sketches, or any other particulars, will be forwarded on application.

OFFICES.—Gateshead-on-Tyne.
2, Strand, London.
62, Hyde-park-street, Glasgow.
27, Dale-street, Manchester.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

It being universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLEY and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 8 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, it is in are annece sary, and when used in Greenhouses no sc rching ensues; its NON-TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Worksh ps, &c for which purposes it is supplied in squares of all sizes, from 8 by 6 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.

N.B. The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate.—May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to

Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

THOMAS MILLINGTON

Begs to inform ARCHITECTS, BUILDERS, and the Trade that he supplies the following articles of the best quality and at the same time upon the lowest terms:—

JAPANESE EXHIBITION.—The first importation from Japan is NOW OPEN for EXHIB at the Gallery of the Society of Painters in Water Colours, 5 or their own paintings.—Admittance, after Saturday, 1s

TODD'S PATENT METALLIC PROTOXIDE PAINT.

THE PATENT METALLIC PROTOXIDE PAINT now offered has been found, after the most severe trials, to be peculiarly efficacious in preserving Iron from Oxidation, Wood from Decay, and Masonry and Brickwork from Dampness. Applied to Iron, it unites with it most intimately, forming a complete coating; so that thus protected, it will be found equal to the best galvanized iron. Hence its great value to all Engineers and Iron Founders as an application to iron vessels, iron roofs, steam and water pipes, &c. &c. It adheres firmly to iron, even at a red heat. For stuccoed buildings it will be found to be effectual in preventing the discolourations formed by vegetation, and keeping out all dampness.

For terms, application to be made at the Offices of the Company, 12, Bishopsgate-street Within; or to the following Agents:—

Messrs. PITCHFORD, Island Lead Works, Limehouse, } LONDON. | Messrs. D. and G. BRYMNER ..... GREENOCK.
Messrs. G. and T. WALLIS, 64, Long-acre, ...

JOHNS'S PATENT PERMANENT STUCCO WASH, STUCCO CEMENT, AND STUCCO PAINT.

JOHNS'S PERMANENT WASH, WITHOUT SIZE OR OTHER CORRUPTIBLE INGREDIENT, is now fully established, and has been adopted EXTERNALLY and INTERNALLY at some of the largest Hospitals and Asylums, and is acknowledged to be the most useful Colouring Material in the trade, for its ADHESIVENESS NON-ABSORBENCE, UNIFORMITY OF COLOUR, and APPLICABILITY to small or large surfaces. IT MAY BE EXPORTED TO ANY CLIMATE.

JOHNS'S STUCCO CEMENT.—This Cement, which has been established many years, is now manufactured on such improved principles that its acknowledged advantages and its suitableness for INTERNAL as well as EXTERNAL purposes are unquestionable. It NEVER CRACKS, BLISTERS, or VEGETATES; has no Caustic qualities, becomes as hard as stone in a few days, and when it may be painted or papered; may be cleaned with a brush and water, and will STAND THE TEST OF ANY CLIMATE.

JOHNS'S STUCCO PAINT.—The merits of this Paint are so justly appreciated by the trade, for its ready affinity to Stucco, Brick, or other Rough surfaces; its durability, comparative cheapness (two coats being equal to three of lead paint, that it is of the first importance to the public generally, AND WELL WORTH THE ATTENTION OF SHIPPERS AND EMIGRANTS.

Each Material in Casks of 1 to 5 cwt.

MANUFACTURERS,

PHILIP HARE and CO. 22, STEEL-YARD, UPPER THAMES-STREET.

HUBBUCK'S PATENT WHITE ZINC PAINT. The PERMANENT WHITE of the Ancients, obviously confined by its cost to the use of the artist, is now, by Hubbuck's Patent, reduced to the price of White Lead. The principal characteristics of HUBBUCK'S ZINC PAINT are—Economy, Health, Beauty, and Durability.

Builders and Contractors find Hubbuck's Paint the only one adapted to all their purposes; possessing the great desideratum of economy, combined with its high excellence as a paint, it must be one. Contractors effect a saving of 25 per cent. by using HUBBUCK'S ZINC PAINT.

HUBBUCK and SON feel it necessary a caution should be circulated against imitations of their Paint. These manufactures, containing frequently pernicious ingredients, are baneful to health and worthless in use, whilst the inexperience of these imitators in the production of pigments is evidenced, not alone by the coarse dirty appearance, but also by the deficiency of that body in their produce, which is known to the painter to be all-essential. That imposition be not practised, therefore, notice that the cask is marked with the name of the original manufacturer, thus—

HUBBUCK——LONDON——PATENT.

If not so marked, the reason may be inferred.

Every information in the circular to be had of THOMAS HUBBUCK and SON, Paint and Varnish Manufacturers, Upper East Smithfield (opposite the London Docks), London.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphurous or any other fumes or emanations. Being completely innocuous and free from the pernicious effects of whitelead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of manufacture, or by mixing with oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy resulted by the purchaser of such oxides comes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull, by Messrs. BUNNELL, SIDNEY'S, and CO.; when ground and dry by Messrs. MORLEY and CO.; and by the Company's Grinding Agents, London, Messrs. CHARLES DEVAUX and CO. wholesale and retail agent, 8, Tottenham-court, New-road, and Upper Thames-street, City. In Manchester and Liverpool, by Messrs. LAWFORD and CO. of 49, Norfolk-street, Liverpool, who also acknowledged Painters to the Company for Zinc Paints, undertake painting ships, warehouses, dwelling houses, &c. Bristol, by Messrs. R. ANDERSON and CO. Timber-bush. Dry COLOURS and PAINTS, in Kegs of 14, 28, and 28 lbs. and upwards, may be had of the Company's Agents in Birmingham, Newcastle, Liverpool, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Hull, Leeds, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 12, Manchester-buildings, Westminster.

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs. T. and S. KNIGHT, of Great Suffolk-street, Southwark, as their painters, who will be ready to execute any description of painting and decorating with the Pure Patent Vieille Zinc Paint.

PATENT LIQUID CEMENT for Fronts of Houses, &c.—This valuable and economic material is always ready for use, simple in application, and only one-eighth the cost of paint. It will not decompose or wash off. For beauty it stands eminent, giving the appearance of fine cut stone, and 1 cwt. will cover 400 to 500 square feet. Sold in casks of 1, 2, and 3 cwt. at 8d. and 21s. each, casks exclusive.

PATENT PERMANENT COLOUR is particularly suited for kitchens, school-rooms, railway stations, &c. as a substitute for paint, is without smell, dries in an hour, and may be applied to wood, oil painted, stucco, or any other surface. Sold in casks of 1 cwt. at 15s. 6d. each

PATENT ZINC PAINTS. These paints are ready mixed for use, economical, unchangeable in colour, greatly superior to, and will cover much longer than common oil paints, and will cover a much larger surface than the same quantity of white lead paint. In 1lb. per gallon, ordinary colours; Mineral chocolate brown, 5s. per gallon; Permanent Brilliant Black, for all kinds of outside work, 5s. per gallon; Park railing, &c. 3s. per gallon

PATENT INDIA-RUBBER PUTTY, which never shrinks, but runs in a tough plastic state, and is permanently waterproof. 14s. per stone

DAMP WALLS.—PATENT ELASTIC PAINT, an effectual remedy by which they are rendered fit for papering or finished in colours. Price 10s. per gallon, which will cover and finish 150 square feet.

The PATENTEES, GEORGE BELL and CO. Steam Mills, 2, Wellington-street, Goswell-street, London.

PERMANENT ZINC COLOURS and WHITE. Emerald and Brunswick Greens, Chromes, Blues, and all other Colours, are now produced from Zinc, at prices to render them an advantageous substitute to the Lead, Tin, and Copper Colours. These Zinc Colours are most brilliant and never change by exposure to any Gases, Salt Water, &c. on Ships and Machinery, also for all kinds of House Painting, better but Zinc Colours ought to be used to insure durability, economy. For Prices, apply to the Patentees, Messrs. GEO. EVELIN and CO. White Zinc and Permanent Colour Works, Limehouse-wharf, Regent's-park-basin, London.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. Manufacturers of the very best PORTLAND CEMENT for all purposes. Cement is applicable, solicit a continuance of that patronage with which they have so long been favoured.—Orders received at Great Scotland-yard, and at the Works

---

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs. ASPDIN, ORD, and CO. have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery (patented by Mr. ASPDIN) much improved the quality of this Cement without any increase in price.

Engineers and architects are recommended to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cement.

ASPDIN, ORD, and CO. beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as P. rtland, and is considerably cheaper

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office, New Wharf, Westminster, London; at their Works, Gateshead-on-Tyne; or from their Agent, Mr. HENRY ROBINSON, 31, King-street, Liverpool.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS adjoining Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality (a desideratum never before attained in Portland Cements). It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combines well with which its eminent hydraulic properties stamp it at once as the first cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly.—Manufactured by R. CHEAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses.—These well known hard stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL. Light and Dark, equal to any made. Manufacturers also, and dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging &c. Paints, Stucco, &c. Marble Merchants and Importers of Portolano.

PARIAN CEMENT, for internal use, to be painted in a few hours, and papered within a couple of days.—CHARLES FRANCIS and SONS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London.

BLUE LIAS LIME.—NELSON and CO. beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders, and others connected with the building trade, to the superior quality of their BLUE LIAS LIME, the natural hydraulic properties of which, and the great estimation in which this kind of Lime is held for buildings in wet and damp situations, such as wharf-walls, docks, &c and for concrete foundations, is a sufficient recommendation for the adoption of it in all works of the above description. It is also peculiarly adapted for stucco. Orders received by—London Agents, BLYTH, BROTHERS, 16, South Wharf, Paddington; and at the Works, Stockton-fields, near Southam, Warwickshire.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS Cements of the best quality

SECONDS, PAVIORS', STOCKS, and other Bricks.

CHARLES RICHARDSON, 6, South Wharf, Paddington

ATKINSON'S CEMENT, so long known and esteemed in London, for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster; and Seel-street, Liverpool.

ROMAN and OTHER CEMENTS. Manufactured by J. M. BLASHFIELD, successor to the Patentees, PARKER and WYATT, who, in 1796, first introduced PARKER'S ROMAN CEMENT; also Tarras and Portland Cements, English and French Plaster, Terra Cotta Chimney Pots, Trusses, &c.

Manufactory, Mill Wall, Poplar; Depôts, Commercial-road, Lambeth; and Paddington-basin.

THE CRYSTAL PALACE DISTRICT GAS COMPANY.—Capital 50,000*l.* in 5,000 Shares of 10*l.* each.—Registered Provisionally under 7th and 8th Vict. cap. 110.—Temporary Offices, 38, Moorgate-street, London.

TRUSTEES.

Sir John William Lubbock, Bart. Mansion House-place.
George Henry Barnett, esq. 62, Lombard-street.

DIRECTORS.

G. P. Pocock, esq. Log Hall, Old Ford, Middlesex.
Peter Le Neve Foster, esq. Society of Arts, London.
Edward Roberts, esq. M.D. Farnborough House, Sydenham.
Henry P. Stephenson, esq. A.I.C.E. 10, Tourlow-place, West Brompton.
Erasmus Wilson, esq. F.R.S. Henrietta-street, Cavendish-square.

AUDITORS.

W. Quilter, esq. (Messrs. Quilter, Ball, and Co.) Coleman-street.
Benjamin J. Chapman, esq. Palace Distillery, Bromley, Middlesex.

BANKERS.

Sir J. W. Lubbock, Bart. and Co. 11, Mansion House-place, Messrs. Barnett, Hoares, and Co. Lombard-street.

SOLICITOR AND SECRETARY.

John Downes, esq. 38, Moorgate-street, and Bromley, Kent.
BROKERS.—Messrs. Crosley, Brothers, 30, Cornhill, London.

CHEMICAL ADVISER.

Robert Dundas Thomson, esq. M.D. Professor of Chemistry in St. Thomas's Hospital, London.

ENGINEER.

W. M. Stears, esq. 43, Moorgate-street, and Sydenham, Kent.

The calls will be 1*l.* per share on the 1st of each month.

One of the principal features in the Project is the Building of the Crystal Palace, with the large and populous district arising around it. An eligible site is secured, suitable for works of the first class. The Company has been registered, and all the necessary steps taken for commencing the plant forthwith.

Prospectuses may be had, and applications for shares made to Messrs. CROSLEY, BROTHERS, 30, Cornhill, or at the temporary Offices of the Company, 38, Moorgate street, City.

JOHN DOWNES, Secretary to the Company.

Feb. 6, 1854.

THE CRYSTAL PALACE DISTRICT GAS COMPANY.—Offices, 38, Moorgate-street, London.

No FURTHER APPLICATIONS for SHARES in the above Company will be received after MONDAY, the 20th of FEBRUARY inst.—By order of the Board,

Feb 6, 1854. JOHN DOWNES, Secretary.

THE CRYSTAL PALACE DISTRICT GAS COMPANY.—The projectors of a gas company under the above title having repeatedly advertised in the *Times* and other papers, and also in their prospectus, that "an arrangement or agreement has been entered into for supplying the Crystal Palace," thereby implying that such arrangement or engagement had been entered into on behalf of the projected company, NOTICE IS HEREBY GIVEN, that NO ARRANGEMENT or ENGAGEMENT has been entered into with or on behalf of the above projected company, for lighting the Crystal Palace. The only contract for supplying gas to the Crystal Palace has been, and still is, with the Sydenham Gas and Coke Company.—By order of the Board of the Sydenham Gas and Coke Company,

EDM. ROUSE, Secretary.

No. 1, Great Guildford-street, Southwark, Feb. 7, 1854.

GUTTA PERCHA TUBING.—May be buried for years, without injury, and it is therefore valuable for conveying water, chemicals, &c. It is peculiarly valuable for liquid manure, drain, and soil pipes. Being a non-conductor, it is not affected by the frost of winter or drought of summer, like metal or leather. Its strength is extraordinary, the small half-inch diameter tube having resisted a pressure of 250 lbs. on the square inch, without bursting. The smaller sizes may be had in 100 feet, and the larger in 50 feet lengths. The joints are easily made. As a conductor of sound it is most valuable for conveying messages in lieu of bells. ELECTRIC TELEGRAPH WIRES INSULATED WITH GUTTA PERCHA. The GUTTA PERCHA COMPANY, Patentees, 18, Wharf road, City-road, London.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals

TUNED BY MACHINERY.

Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing, at one shilling the foot.

R. S. NEWALL and CO's Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world

OFFICES.—Gateshead-on-Tyne.
152, Strand, London.
67, Hyde-park-street, Glasgow
27, Dale-street, Manchester.

TABLES OF THE AREA, ETC., OF CIRCLES.
A New Edition, in post 8vo, price 6s.

A SERIES of TABLES of the AREA and CIRCUMFERENCE of CIRCLES; the Solidity and Superficies of Spheres; the Area and Length of the Diagonal of Squares; and the Specific Gravity of Bodies, &c. To which is added, an Explanation of the Author's Method of Calculation of these Tables. Intended as a Facility to Engineers, Surveyors, Architects, Mechanics, and Artisans in general.
By CHARLES TOMLINSON.
The Second Edition, much revised and extended.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

NEW AND IMPROVED EDITION OF DR. URE'S DICTIONARY, BROUGHT DOWN TO THE PRESENT TIME
In two volumes, 8vo., with nearly a thousand woodengravings, price 42s.

DR. URE'S DICTIONARY of ARTS, MANUFACTURES, and MINES: containing a clear Exposition of their Principles and Practice. The fourth edition, much enlarged and corrected throughout, and with all the additions rendered necessary by the progress of Mechanical Improvements," brought down to the present time, and incorporated in the Dictionary; most of the articles being entirely rewritten, and many new articles now first added.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

THE PRACTICAL DRAUGHTSMAN'S BOOK of INDUSTRIAL DESIGN.
By WILLIAM JOHNSON, Lat. Of 47, Lincoln's-inn-fields, and Glasgow.
In royal 8vo. with 24 plates.

*** This work being now completed, subscribers are requested to complete their sets with all dispatch, as the Parts cannot be had at the publishing price from and after the 1st of May next.
London: LONGMAN and CO. 39, Paternoster-row.

THE LONDON CORPORATION COAL TAX.
Now ready, in royal 8vo. price 2s. 6d.

AN EXPLANATION of the ORIGIN, PROGRESS, and OPERATION of the LONDON CORPORATION COAL TAX, constituting at present an Annual Charge of above 187,000l. or a prime necessary of life throughout the whole Area of Country within 20 Miles of the General Post-office.
By JOHN DICKINSON, Esq. F.R.S.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

A TREATISE on the LAW of SEWERS, including the Drainage Acts. Second Edition.
By H. W. WOOLRYCH, Esq. Barrister-at-Law.
London: STEVENS and NORTON, S. SWEET; and W. MAXWELL.

SHALL THE NEW STREET which is to join the great communication between the eastern and western parts of the metropolis be a THOROUGHFARE or a CRESCENT? An Inquiry, with Suggestions.
By an ARCHITECT.
London: JOHN WEALE, 59 High-holborn; LETTS, SON, and STEER, 8, Royal Exchange.
Price Sixpence.

SIXTEENTH YEAR.
Now ready, price 6s. with a Portrait of the late M. Arago,

THE YEAR BOOK of FACTS in SCIENCE and ART for 1854: exhibiting the most important Discoveries and Improvements of the Past Year in all Branches of Science and the Arts.
By JOHN TIMBS.
"It enables us to learn at once something of what has been done in any particular line of research, and to obtain the necessary data for further investigation in nearly every instance the author's exact statement is given."—Athenæum.
DAVID BOGUE, Fleet-street.

NEW PATENT LAW (15 & 16 Vict. c. 83).
THE CIRCULAR of INFORMATION, with full particulars and recommendations and facility of protection for inventors for the United Kingdom, foreign countries, and colonies, free by post for One Postage Stamp, or 6d. by letter, prepaid, to Mr. PRINCE, Patent Office, 4, Trafalgar-square, Charing-cross, London.

WESTMINSTER ABBEY or VICTORY.—NELSON at the BATTLE of ST. VINCENT. LEGGATT, HAYWARD, and LEGATT beg to inform their patrons and friends, that they have Baker's splendid historical picture of NELSON RECEIVING the SWORDS from the vanquished officers on the Quarter-deck of the "SAN JOSEF," on the memorable 14th of February, 1797, at the Battle of St. Vincent is NOW on VIEW, at their Gallery, 79, Cornhill.
"Most circular, per se, and Wintour."—Messrs. Leggatt had the honour of submitting to her Majesty and the Royal Illustrious Prince Albert, Baker's painting of Nelson receiving the Swords of the officers on the Quarter-deck of the San Josef after the Battle of St. Vincent.
In consequence of the unfavourable state of the weather, the picture is exhibited by gaslight, and may be viewed from Ten till Five.

DECORATIVE PAINTING.—Messrs. BRENSEN and KUCKUCK, decorators to his Majesty the King of Hanover, in all respects to inform architects and the public, that they have considerably increased their establishment with a number of artists from Germany, and are now enabled to undertake, on the shortest notice, the interior embellishments of private and public buildings, castles, &c. in most fashionable style.—Apply to BRENSEN and KUCKUCK, 38, Piccadilly.

DECORATIVE ARTISTIC PAINTING.—Mr. F. SANG, from the Royal Academy at Munich, whose works may be seen in the leading public and private buildings in the metropolis and the country, begs to call the attention of the nobility and gentry to his new and improved STYLES of ARTISTIC EMBELLISHMENTS of INTERIORS, in the modern and ancient styles. Address, Mr SANG, 38, Parkmall, London.

LITHOGRAPHY.—C. MOODY executes every description of Lithography for private and public use, the finest Portraits, Landscapes, &c., Sketches and Lithographed or engraved on the Metal Drawings, Imprimerie, and Specification Drawings correctly detailed by experienced hands. Presses, Stones, Chalks, &c. supplied. Specimens of every class of work for inspection. Estimates given. Instructions afforded.—Lithographic Offices, 267, High Holborn.

WATER COLOUR DRAWINGS.
S. and J. FULLER beg to invite the patrons of WATER COLOUR ART to view their extensive collection in which many choice specimens of the best masters in figure Landscape, Marine, and Cattle, may be observed in a distinctional, are on view: they also beg to offer their large collection where an elegant present is selected, and to name that a folio of ten original drawings by various masters, can be selected, from thirty guineas and upwards.
Gallery of Fine Arts, 34 and 35 Rathbone-place.

WATER-COLOUR DRAWINGS.—FINE ART SUBSCRIPTION GALLERY. The Gallery contains a great collection of ORIGINAL WATER-COLOUR DRAWINGS, by the most eminent and favoured artists of the present day, on figures, landscape, cattle, and flowers, also, early and progressive studies in pencil and effect; and offers great advantages to those who have desire and inclination to study, or obtain the art of painting or sketching from nature.—S. and J. FULLER, Rathbone-place. Terms sent post free.

PASTEL OR CRAYON PAINTING
S. and J. FULLER beg to invite those ladies furnishing the Boudoir or Drawing room to view a collection of highly-finished and decorative PASTEL PAINTINGS, by Mr. BROCHART, of Paris, who has obtained great success in these beautiful MATERIALS. The various departments have been most carefully supplied with the best material and workmanship; and many novelties in brushes, colour-boxes, and sketch books.
Colour-boxes of the newest and best adapted sizes.
Brushes in every form, and made to express every touch.
Colours in cakes, tubes, pans, and bottles.
Papers of every texture, substance, and tint.
Pencils in lead, chalk, and of all every shade.
Sketch books, panels, and compressed blocks.
Also mounting boards, drawing boards, drawing instruments, and a numerous variety of articles appertaining to the studio and tourist.—Gallery of Fine Arts, 34 and 35, Rathbone-place.

DRAWING MATERIALS.
S. and J. FULLER beg to invite the Artist and Amateur to their extensive and well-selected assortment of DRAWING MATERIALS. The various departments have been most carefully supplied with the best material and workmanship; and many novelties in brushes, colour-boxes, and sketch books.
Colour-boxes of the newest and best adapted sizes.
Brushes in every form, and made to express every touch.
Colours in cakes, tubes, pans, and bottles.
Papers of every texture, substance, and tint.
Pencils in lead, chalk, and of all every shade.
Sketch books, panels, and compressed blocks.
Also mounting boards, drawing boards, drawing instruments, and a numerous variety of articles appertaining to the studio and tourist.—Gallery of Fine Arts, 34 and 35, Rathbone-place.

FRAMING DEPARTMENT.
S. and J. FULLER beg to call the attention of the public to this department of their establishment—a great choice and endless variety of tastefully decorated Frames in the Florid, Greek, Elizabethan, Gothic, and all the modern patterns of ovals, circles, and other forms, adapted to every class of picture, drawing, or print. Miniature frames in imitation ormolu and chased metal gilding, they have brought to great perfection; they are enclosed in a rosewood case and glass, lined with velvet, and present a great variety of suitable and elegant patterns. Their new method of mounting drawings, of which a large selection is always ready to suit the above frames, gives a far fitter nor offers before, as most pictures can be framed complete in a few hours' notice.—Gallery of Fine Arts, 34 and 35, Rathbone-place.

THE FOLDING DINING-ROOM SCREEN. A handsome and comfortable piece of furniture in satin wood, with four panels, well finished and French polished, about 6 feet high by 2 feet wide; affords endless amusement in decorating. S. and J. FULLER beg to apprise the public that they have always ready for immediate use, also an endless variety of Prints and Scraps. The most useful as may have the first mentioned, in every class of Art, historical landscape, figure, sports of the field, and many humorous subjects, to pass agreeably a leisure hour.—Gallery of Fine Arts, 34 and 35, Rathbone-place.

THE HIGHEST STYLE OF ARTISTIC LITHOGRAPHY WILL BE FOUND IN THE WORKS PRODUCED BY
DAY & SON,
LITHOGRAPHERS TO THE QUEEN.
Landscapes, Architecture, Shipping, and Figure Subjects—Portraits direct from Life on Stone, or from Paintings, Drawings, or Daguerreotypes—Medical and Scientific Subjects, executed in a superior style peculiar to this establishment. Colour copied.

The large Staff of Draughtsmen required by Messrs. DAY and SON to execute the
MAPS, PLANS AND SECTIONS, DIAGRAMS, &c. &c.
FOR HER MAJESTY'S STATIONERY OFFICE,
Offers to Solicitors, Engineers and Surveyors, Statisticians and Printers, throughout the country, great advantages for the rapid and economical execution of their Designs. If required, a plan or proof by the morning post may be lithographed and despatched by the return post.

To meet the growing demand upon
LITHOGRAPHY FOR COMMERCIAL PURPOSES,
Messrs. DAY and SON have just erected the largest premises for the purpose in the world. In soliciting orders from Manufacturers and others for
PATTERN-BOOKS, SHOW-CARDS, LABELS, &c.
And every other description of Lithography and Colour Printing, Messrs. DAY and SON beg to assure a style of work of unequalled excellence, with economy and rapidity of execution. The smallest as well as the largest establishments will find it to their interest to apply to Messrs. DAY and SON for estimates, and it will be found, owing to the extent of this Establishment, that it will be found, owing to the extent of this Establishment, that its unrivalled Plant, viz. superiority of Machinery, great speed, and extensive character, can be secured with satisfaction and saving to the customer.

PRINTING IN COLOURS,
As perfectly and expeditiously by Messrs. DAY and SON, has assumed a position hitherto unattained for artistic excellence, rapidity, of execution, and economy of production. The first and only perfect reanimation of a painting in colours on "The Blue Bridle" after Turner), executed at this establishment, secured for itself the designation of a Painting Print. Other examples of great merit, more particularly illustrating rapidity and economy of production, combined with artistic excellence, will be found in the three important works by

MATTHEW DIGBY WYATT, Esq.

Namely, "THE GEOMETRICAL MOSAICS OF THE MIDDLE AGES," "METAL-WORK AND ITS ARTISTIC DESIGN," and "THE INDUSTRIAL ARTS OF THE NINETEENTH CENTURY."
These works, although elaborately printed in colours and gold, are executed at the price of the hand-coloured ones. The estimated, consisting of 180 plates, issued in Fortnightly Parts of four plates, for testing the ability of executing the above lithographs to Persistent Workers—to Book Plates requiring long numbers cheaply and quickly—and to the enlarged or reduced Map.
Messrs. DAY and SON are prepared to estimate and undertake Works of any extent, and to meet every requirement as to quantity and speed, if necessary so to proceed.

STEEL AND COPPER-PLATE PRINTING OF EVERY DESCRIPTION.

LADIES, Amateurs of Drawing, will find the reproduction by the printers of their own Sketches, by means of lithography, a most delightful occupation for leisure time. Materials and instruction can be had of
MESSRS. DAY AND SON,
LITHOGRAPHERS TO THE QUEEN,
17, Gate-street, Lincoln's-Inn Fields, London.

IMPERIAL LIFE INSURANCE COMPANY, 1, OLD BROAD-STREET, LONDON. Instituted 1820.
SAMUEL HIBBERT, Esq. Chairman.
WILLIAM R. ROBINSON, Esq. Deputy Chairman.
The SCALE OF PREMIUMS adopted by this Office will be found of a very moderate character, but at the same time quite adequate to the risk incurred.
FOUR-FIFTHS, or 80 per cent. of the profits, are assigned to policies every fifth year, and may be applied to increase the sum insured, to an immediate payment in cash, or to the reduction and ultimate extinction of future premiums.
ONE-THIRD of the premium on insurances of 50l. and upwards, for the whole term of life, may remain as a debt upon the policy, to be paid off at convenience; or the Directors will lend sums to that amount upon the security of policies effected with this Company for the whole term of life, when they have acquired an adequate value.
SECURITY. Those who effect insurances with this Company are invested by its subscribed capital of 750,000l. of which nearly 150,000l. is invested, from the risk incurred by members of Mutual Societies.
The satisfactory financial condition of the Company, exclusive of the subscribed and invested capital, will be seen by the following statement:—
On the 31st October, 1853, the sums assured, including bonus added, amounted to £2,563,000
The premium fund to meet these 800,000
And the annual income from the same source, to... 109,000
Insurances, without participation in profits, may be effected at reduced rates.
SAMUEL INGALL, Actuary.

SPECIAL NOTICE.
SCOTTISH EQUITABLE (MUTUAL) LIFE ASSURANCE SOCIETY.
EDINBURGH ..... 28, St. Andrew's-square.
LONDON ..... 126, Bishopsgate-street.
TO SECURE THE ADVANTAGE OF THIS YEAR'S ENTRY, PROPOSALS MUST BE LODGED AT THE HEAD OFFICE, OR AT ANY OF THE SOCIETY'S AGENCIES, ON OR BEFORE 1ST MARCH.
POLICIES EFFECTED ON OR BEFORE 1ST MARCH, 1854, WILL RECEIVE SIX YEARS' ADDITIONS AT THE ALLOCATION AT 1ST MARCH, 1859.
ROBT. CHRISTIE, Manager.
WM. FINLAY, Secretary.
M. COOK, Agent.
126, Bishopsgate-street, Feb. 1, 1854.

INSTITUTED 1820.
SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY—Incorporated by Royal Charters, and Special Act of Parliament.
Head Office—Edinburgh, 28, St. Andrew-square.
MANAGER—Robert Christie, Esq.
London, 126, Bishopsgate-street, Corahill.
Glasgow, 163, St. Vincent-street.
The Scottish Equitable Life Assurance Society is an institution peculiarly adapted to afford Protection for Families. It was established in the year 1831, upon the principle of Mutual Contribution, the surplus or profit being wholly divided among the members, and the additions which have been made to policies at the periodical investigations of the Society afford satisfactory evidence of the prosperity of the Institution, and the great advantages derived by its members. The following examples exhibit the additions already made:

A policy for 1,000l. opened in 1832, is now increased to	£1,368	9 6
A policy for 1,000l. opened in 1836, is now increased to	1,307	18 1
A policy for 1,000l. opened in 1840, is now increased to	1,297	15 1

The profits are ascertained and divided triennially amongst persons of more than five years' duration.
The annual revenue is upwards of 140,000l.
The amount of assurances in force is upwards of 4,000,000l. sterling.
The amount paid to the representatives of deceased members exceeds 500,000l. sterling.
The total amount of vested additions allocated to policies exceeds 600,000l.
The accumulated fund is upwards of 750,000l.
Loans granted to members to the extent of the Office value of their policies.
Copies of the annual report, forms of proposal, and all information may be had on application at any of the Society's Offices, in town or country.
ROBERT CHRISTIE, Manager.
WILLIAM FINLAY, Secretary.
M. COOK, Agent.
Dec 1853. 126, Bishopsgate-street, London.

ALL POLICIES INDISPUTABLE
SOVEREIGN LIFE ASSURANCE COMPANY, 48, St. James's-street, London.
No chance of paper stamps in future. Sums may be assured payable on attaining the age of 30, 55, or 60, or at death, should that event occur previously.
Advances made on real and on unexceptionable personal security, where the sureties are resident in London, or its immediate vicinity.
H. D. DAVENPORT, Secretary.

QUANTITIES, SPECIFICATIONS SCHEDULES of PRICES, WORKING DRAWINGS, &c. copied, lithographed, or printed.
PLANS, ELEVATIONS, DRAWINGS of MACHINERY, &c. lithographed or engraved.
BUILDERS' and CONTRACTORS' ACCOUNT-BOOKS.
DRAWING PAPERS; ditto, mounted and continuous.
TRACING PAPER and CLOTH; ditto in lengths.
GENERAL STATIONERY, for the use of BUILDERS, ARCHITECTS, SURVEYORS, and ENGINEERS at the lowest current rates.
WATERLOW and SONS, 65 to 68, London wall; and 49, Parliament-street, London.
Contracts for the supply of large establishments.

TO ARCHITECTS.
COMPETITION and other DRAWINGS.—Mr. THOMAS S. BOYS, Member of the New Society of Painters in Water Colours, and Author of the Picturesque Architecture of Paris, Ghent, Rouen," &c. and of "London as it is," offers his services in Painting Watercolour Landscape Perspective Views, Interiors, &c. From the long experience he has had in such subjects, he is fully aware of the points essentially necessary to be attended to. Drawings and designs lithographed in a superior manner.—Address, Mr. BOYS, 29, Albany-street, Regent's-park.

BILLS of QUANTITIES, &c. Lithographed with the greatest celerity, and on the lowest scale of charge. Maps, Plans, &c. reduced or enlarged. Architectural Sketches and Working Drawings executed in the most superior style, plain or tinted, with accuracy and despatch.—UNIQUE and DAGUERREOTYPE, Architectural and Engineering Lithographers, and Printers, 23, BEDFORD STREET, COVENT-GARDEN, LONDON.

SURVEYING, ARCHITECTURAL, and ENGINEERING ESTABLISHMENT.
For preparing Gentlemen for Surveyors, Architects, Engineers, Levellers, Draughtsmen, Measurers, Valuers, &c. and for giving EVENING INSTRUCTION, in Architectural, Civil Engineering and Mechanical Drawing, Colouring, Perspective, Mathematics, Mechanics, Specifications, Estimates, Quantities, Preparing Contracts, &c. &c. Terms very moderate. For prospectuses, &c. apply at the Offices, 24, Guildford-street, Russell-square.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER HANGINGS is CROSSE'S WHOLESALE WAREHOUSE, 3, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

The Builder.

SATURDAY, FEBRUARY 11, 1854.

TWO questions will attract a more than ordinary share of attention in the session of Parliament which has just begun its labours. The one is a matter of foreign policy—he Eastern question; the other is a question of lomestic policy—the condition of the working lasses. On the first of these topics we are not alled upon to express an opinion: if we were, would be to denounce in no measured terms he murders already committed through the ndefinable conduct of a capricious despot. On ne second subject, however, we may take ave to speak our mind, as we have often one before. We are sure in the present ate of affairs the smallest assistance will be adly received by those who have at heart the rosperity of the working classes; even although at should come from the non-politico-onomical columns of the *Builder*.

We take a practical view of things. From gh-flown theories respecting the "social onomics of the industrious orders" we anti-ate but little. Society has progressed steadily roughout every phase of English history; and believe society will continue to progress twithstanding the melancholy predictions of e lachrymose school of political economists. ur present purpose is to correct, if we can, a r popular misapprehensions on the subject of ikes. We do not know much of the "labour vement," as it is called, in Lancashire; but know from experience a great deal about the our movement in London. We presume t the spirit in both cases is the same; and r remarks in that event will apply to both ses.

In the first place, some people imagine that ikes are always a coercive measure for obtain-; high wages. This, however, is a mistake. e most obstinate and protracted strike per-ps which ever occurred in London—the strike the masons at the Houses of Parliament—ginated from objection to the conduct of a eman. The bakers' strike was an effort to ancipate themselves from a state of slavery. e tailors' strike was to effect an entire destruc-n of the sweating system. The bricklayers' ke was a resistance to task-work. The hatter's ke was to effect a limitation of apprenticeships. ere are some tradesmen who will strike if they prevented from working by gas-light; and re are others again who will strike if they required to lift a hammer after the sun goes n. The man's-men among the shoemakers n out in a body if they only get boys' shoes nake; and the woman's-men set off to North-pton by the next train if their employers do find them in silk cord and bristles. The ineers' strike, indeed, with others of that s which professed to seek a proper distribu-of labour, had a direct bearing on higher es; and the object here was easily perceived, ough it was studiously concealed. But we ve that a very large proportion of the strikes ch distinguish the labour movement, arise from motives of aggrandisement than from nse of the *rights of man*, which the work-g classes, rightly or wrongly, seem to think e fallen upon their shoulders to defend their method of reducing the abstract phi-ophy to practice is extremely simple and ditious. There is a large parlour in a well-wn public-house—the Bricklayers' Arms in stminster, the Hole-in-the-Wall in Fleet-et, the Swan-with-the-Three-Necks in opsgate-street Without. There are five-wenty, perhaps, of the universal brother-hood. There are likewise five-and-twenty pots of porter and five-and-twenty pipes. There is a president, a vice-president, and a secretary. Jack Harris keeps an eye to the door. The proceedings commence with a preliminary statement of grievances from the chairman. There are speeches made *pro* and *con.*; and motions and amendments; and a putting of the previous question. There are cries of order, order; hear, hear; chair, chair; loud cheers; hurrah! There are certain periphrases in use, particularly with respect to the word *strike*, which is seldom made use of. A mysterious-looking individual usually makes the speech of the evening. He begins with some vague general proposition, and then flies into the regions of the gods. He, for one, believes in the doctrine of universal brotherhood—that he and his comrades therein assembled are members of a mighty republic—that kings and priests are human inventions—that nature made no man superior to another, asked no man to serve another, gave no man a right to enslave another—that the working classes of this empire have been too lax in asserting their rights—and that the present insidious attempt of their employers to cause them to work overtime is just an attempt to forge another link in the great chain of human slavery! But shall he basely stoop to sell his freedom? Shall he sacrifice the principles of civil and religious liberty? No. He would rather be a dog, and bay the moon, than such a Roman! The speaker resumes his seat amid long-continued cheering. His conclusions may rest on false premises. His reasoning may be somewhat obscure—his arguments appear somewhat unphilosophical. But that is no matter. He is seen to be in earnest; his declamation passes for eloquence; and he has no difficulty in carrying the meeting. Next week it is announced in the papers that a general strike has occurred among the members of a particular trade, in consequence of a shameful attempt by their employers to force them to work overtime.

It is generally believed that such a strike as this is due to the instigation of one or more crafty and selfish demagogues. But this, we think, is another mistake. Demagogues are undoubtedly to be found in the ranks. But their influence alone would be insufficient to produce any great movement were the more intelligent portion of the working classes not too frequently of the same mind. In that parlour may be found men who are the first mechanics in the civilized world,—men who construct the steam-engines and the railways, which have made our country great—men who are capable of reproducing the delicate tracery of the windows in the Old Abbey, upon the windows of the New Houses at Westminster,—men who are familiar with the gilding and interior decoration of Grosvenor-square and Hyde-park-gardens. Some of our readers may feel disposed to doubt this; but they may depend on our information; and those who are best acquainted with the working classes will add their testimony to ours.

And, in truth, if we carry our observation a little higher, we shall find some analogies in the highest ranks of society, which amply bear us out in the statement. We have only to shift the scene from the Bricklayers' Arms to the House of Commons. The circumstances, indeed, are widely different. The place of meeting is not a large parlour in a public-house, but a large room in the most splendid Gothic structure of modern Europe. There are to be seen not five-and-twenty poor working men, but 600 English noblemen and gentlemen of high standing and great wealth. The porter and the long pipes are not there; but there are refreshment rooms, and rooms where honourable members smoke cigars; and besides there is a tacit permission to suck oranges during the heat of debate. There is a chairman, too, who seldom speaks, but whose time-honoured patronymic serves to distinguish the highest officer in the great Commons House of England; and there is also a doorkeeper, who goes under the name of Gentleman Usher of the Black Rod. In all this, it will be seen, there are certain differences from our former assemblage; but these are merely the refinements of civilization; and in other respects the analogy holds good. Is there no false political economy propounded there? Are no demagogues of any description to be found there? Is there no such thing as interruption and vociferous cheering? Is Mr. Gladstone not *a little* periphrastic in his delivery? Is Mr. Disraeli not somewhat of a mystery man? Do ministers never entertain apprehension for a union,—not, indeed, of the working classes, but of the two sections of the opposition? And are there not in some preconcerted moves of parliamentary tacticians as many disengenuous practices as we find in a common trades union? We are afraid when we come up so close as this we shall be regarded as carrying our analogy too far. But the identity of the psychical manifestations is indisputable.

We might go on to draw our conclusions, but our readers may do that for themselves. Our only object has been to clear away some of the mist which obscures this particular point of the question of the working classes. We hope our intentions will not be misconstrued. We are not desirous of political controversy; but we shall be gratified if the members of the legislature, when making their inquiries on the subject of strikes, revert for a moment to their parliamentary experience for their principles, and treat the working classes, who are struggling upward amidst all the tumult and uproar (and making, it is to be regretted, many frightful mistakes), with that consideration which they give to a political opponent.

LATEST EXCAVATIONS AT NINEVEH.

EVERY great nation appearing on the scene of the world possesses arts, letters, and monuments, particularly its own. Thus, profane and sacred history has preserved the recollection of a nation which, nearly 4,000 years ago, flourished on the banks of the Euphrates. But whoever, a few years ago, would have spoken of an *Assyrian art*, would have been considered insane. The aspects for a recovery of these monuments were very slight indeed, as the ruins of Babylon had been used during the lapse of 2,000 years as a quarry, whose even *secondary* buildings have long sunk into dust. Suddenly M. Botta appears with a slab of Assyrian hieroglyphics; since which time discovery has followed discovery, led both by French and English, amongst whom Mr. Layard was the most enterprising and successful. Of late, however, the French Government has made some renewed attempts, by which the whole complex of Assyrian art, especially its architecture, has been brought into a perfect system. The excavations of Khorsabad, those of the hillocks of Nineveh and its environs, present now three *groups* of buildings worthy of every attention.

The *ensemble* of ruins in the environs of Khorsabad consists of a large rectangular space of great extent. A very regular elevation of the terrain shows the situation of the walls which encompassed the city, and which extends to 2,000 mètres at each side. From distance to distance small conical hills mark the spot where towers or fortified gates were defending the walls. M. Place knew that M. Botta had not excavated these little elevations, and therefore paid great attention to this task. The first objects found consisted of some smaller articles of agate, marble, and cornelian; however, of such preservation and polish, as if they had only now issued from the hands of the artist. In another of these hills was found a sort of large staircase, or rather a series of succeeding terraces made of burnt and inscribed bricks Below the lowest of these terraces was a double. *souterrain*, of whose destination and use no idea could yet be formed. It is built with great

accuracy and mathematical correctness, and will form a sort of enigma to be solved by further examination. Incisions, which were made in the east side of this hill, led to the discovery of brass hinges and pins, which belonged to doors, of which nothing but the metal and the stones in which these were fixed had remained. In consequence of a lucky hit, M. Place arrived through the door at a hall which has received the name of the "Magazine of (water) Pitchers." No idea can be formed of the quantity of vases found in this locality: they were of all shapes and sizes—pitchers large and small, broad, narrow, compressed, and contracted at their orifice. Most of them had been broken by the weight of the earth which fell and rested upon them; still M. P. discovered some which were perfect and will form the nucleus of a collection of Assyrian Ceramic art. They were filled with clay, which, however, had become so hard, that it was impossible to remove it, without, in many cases, breaking the vases. Some contained articles made of cast-copper, amongst which were some heads of gazelles, faithfully resembling those represented on the bassi rilievi, and M. Place thinks that they were used for bailing out the wine or oil contained in the pitchers.

The introduction of earth in all these halls, galleries, and vases is the more curious, as it is by no means of a powdery form, but quite compact and hardened. It is most probable that it is the produce of the walls, which, having tumbled down, and been soaked and dissolved by the rain during centuries, have become finally precipitated and hardened. On the eastern side of the walls is another hall which M. Place had excavated. It contained pitchers, 1 mètre 64 high, and the red precipitates found at their bottom prove that these halls were the wine-cellars of the old monarchs of Assyria. M Place examined all parts of the palace, and wherever he found the subterraneous galleries, he perceived that the Assyrian architects had used both the pointed and round arch. He subsequently discovered the marble steps of a staircase, which led from the halls both upwards and downwards. The steps are 5 mètres long and 40 mètres high, and, in proceeding onward, a long colonnade was discovered. These columns, the first discovered in Assyrian monuments, are formed of a very compact clay, combined in groups of seven, and each encompassed by a double pilaster. They are painted in chalk, or covered with a sort of black stucco, like the clay columns of Pompeii. Several groups of these columns have been already laid bare, without the end of this colonnade having been reached. These excavations being made by means of deep tunnels, did not permit yet of examining the capitals of the columns. But, there is no doubt that these terraces and colonnades constituted part of the exterior decorations of the palace, which must have presented a grand aspect.

M. Place next directed his attention to what M. Botta had called "the ruined building," but had left it unexplored. He therefore opened his *trenchés* towards the front of one of these halls, but soon came to the conviction, that far from being what may be properly called a *ruined building*, this part of the palace was in the way of construction at the time the whole became a ruin. M. P. says: "Some stones are not yet polished: on the garment of one of the figures we perceived a blotch of that black colour, with which the beards of the sculptured figures were painted, and which had not been removed. The cuts of the chisel appear, when the superjacent earth is taken off, as white and sharp as in a work just left off. Nowhere here is the vestige of a conflagration to be observed; on the contrary, the colours are everywhere of a lustrous and fresh appearance. Thence, I argue, that this large, hitherto unexplored space, which surpasses in size that of the entire palace, laid bare by M. Batta, is the ruin of a more modern building, probably in the act of being constructed." Some of the sculptures, of which photographs have arrived in Paris, were painted black, red, or with a splendid ultramarine. Some of the Basalt bassi-rilievi are upwards of 1½ *mètre* high, and are partly of an execution equalling that of the best art periods of ancient Greece.

Amongst the more minute objects discovered are some cylinders, whose inscriptions are of the same kind as those on the large bulls. They contain apparently an enumeration of all the titles and conquests of King Sargan: another enumerates the monuments, temples, palaces, gateways, columns, &c. erected by the same King."

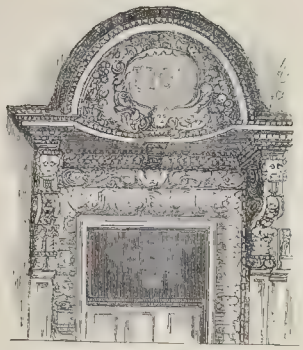
On inspecting the circumvallation of the city, M. Place remarked on the south-west side a pretty high hill, adapted to another unexplored mound of the same size, and equalling in extent of area that of the large palace. Two trenches, cut in the sides of the hill, one in the direction of the town, the other towards the open country, led soon to the discovery of two parallel walls constructed of the hardest limestone. Following up these walls, a broad, semi-circular vault of bricks was discovered. There could be no doubt that this was the upper part of the gateway, to which led two entrances and a cyclopean road. The gateway is 10 m. 33 high, and 3 m. 10 broad; and never could it have been presumed that Assyrian workmanship could have accomplished a work of such accuracy and sterling construction.

But it is not a single palace or palaces which await here further examination, but a whole Assyrian town may yet be discovered and exhumed, because in the inscriptions published by Botta, occurred a passage, often repeated by King Sargan:—"I have built a city, which bears my name: in this city I have built a palace for myself, temples for the gods, with the dwellings of their priests, barracks for the soldiers, markets for the merchants, and houses for the servants."*

* "Revue des deux Mondes."

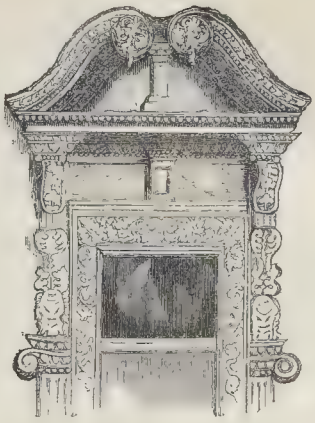
OLD DOORWAYS OF LONDON HOUSES.

Many of the doorways of Old London, put up about the time of Charles I. Charles II. and Queen Ann, have remained with but little alteration. The old window-frames have been replaced with others of a more modern and convenient description — plastering and other matters have disguised the style of the brickwork—cornices and mouldings have been removed, and in other ways so much change made, that often the doorway is all that remains to show the antiquity of many London houses. Even the oldest of the doorways of domestic dwellings, which have come under our notice, do not go back to a very remote period. This, in a great measure, is the effect of increased traffic, and the movement of fashion rendering it necessary that the basement of houses, formerly of a better sort, should be converted into shops or offices: this, together with the ravages of the "Great Fire," seem to have caused the destruction of every London house-door, prior to the date of the reign of Queen Elizabeth, with the exception of a few broken fragments.



It is curious to notice the decline of the use of carving in our residences, in proportion to the extent and style of its application in the churches. At the beginning of the reign of Henry VIII. the carver's art was applied more or less to every useful article. The ships of war and the spinning-wheels, knitting-sheaths, handles of knives, and daggers, were alike carefully wrought. The elaborate carvings and decorations of the reigns of Queen Elizabeth and James I. are familiar to all: from ceiling to floor, the rooms in the better sort of houses were decked with paneling and ornament: in like manner the staircases, balconies, and entrances were covered with picturesque and often suitable devices. On the doorways of taverns were carved, with the grape-vine, figures of Bacchus, &c. "Even the ducking-stools," says Smith, in his "London Antiquities," "were sometimes appropriately carved with appropriate devices. Mr. Gayfere, abbey mason, informed me, that he recollected a ducking-stool, preserved within the premises of purgatory, which had been used by the burgesses of Westminster, on the shores of the Thames. Stocks were also carved. I recollect those of St. Martin's-in-the-Fields having a most excellent carving of a stout fellow flogging a culprit. The only pair of stocks remaining in London, are those opposite the watch-house in Portugal-street, belonging to St. Clement's Danes." (This volume was published in 1815.)

The carvings of Grinling Gibbons on the screen of St. Paul's Cathedral, and in other places in London and elsewhere, spread a taste for a similar description of decoration; and although, within the space of the ravages of the fire, few attempts were made at ornamentation, there are still some exceptions. The doorway, No. 2, Laurence Poultney-hill (of which we give a sketch), is part of a double entrance, which is boldly designed and freely executed. Above one of the doors is the date 1703. In the drawing-room of this house there is a beautifully-carved marble mantelpiece, the ornaments composed of corn, fruit, and flowers: the forms are true to nature and artistically grouped. There is also a ceiling of scrollwork and flowers, in the centre of which was formerly a well-executed painting, of an appropriate subject. Many of the plaster decorations of this period, not only in the churches but also in large mansions and public halls, are so well applied and so excellent both in design and execution, as to be worthy of a careful examination by the student of domestic architecture. In some of Wren's churches the plaster devices, gracefully, and without disturbing the breadth of effect, carry the ornament throughout the design, answering the purpose of the varied tints of a fine picture, which, without destroying the important features, prevent any large masses from appearing plain, poor, and insipid. In the invention of the large masses of carving and plaster-work, which were so much in use from the time of Charles I. to that of the beginning of the reign of George III. there was evidently an artistic spirit directing the workmen. Joseph Wilton, the Royal Academician, designed the royal state-carriage at present in use; and with Carlini carved the heads of the river gods in the front of Somerset House. His daughter married Sir William Chambers, the architect. Cipriani was frequently employed in preparing designs for the ornamental parts of buildings. As a draughtsman, he ranks high in the arts; his works, in the opinion of Fuseli, "displaying fertility of invention, grace of composition, and seductive elegance of form."



To go back, however, to the time of Gibbons, the distinguished carver, to whom we have already referred, who was the founder in this country of a peculiar style of sculptural art, applied in particular to useful purposes; he was, indeed, the first to adapt the forms of nature to the style of architecture at his age in use. Considering the importance of Gibbons in his department of art, it might, perhaps, not be without its use to quote from "Evelyn's Diary," the following particulars respecting this clever and most industrious man. Evelyn, the man of taste of his time, found the young carver by accident in Deptford, not far from his own residence, and describes his interview as follows:—

"18th Jan. 1671.—This day I first acquainted his Majestie with that incomparible young man Gibbons, whom I had lately met with in an obscure place by meere accident, as I was walking neere a poore solitary thatched house, in a field in a parish neere Says Court. I found him shut in; but looking in at the window, I perceived him carving that large cartoon or crucifix of Tintoret, a copy of which I had myself brought from Venice, where the original painting remains. I asked if I might enter. He opened the door civilly to me, and I saw him about such a work as for ye curiosity of handling, drawing, and studious exactness, I never had before seen in all my travels. I questioned him why he worked in such an obscure and lonesome place. He told me that it was that he might apply himselfe to his profession without interruption; and wondered not a little how I had found him out. I asked if he was unwilling to be known to some greate man, for that I believed it might be turned to his profit. He answered, he was as yet but a beginner, but would not be sorry to sell off that piece. On demanding the price, he said 100*l.* In very earnest, the frame was worth the money, there being nothing in nature so tender and delicate as the flowers and festoons about it; and yet the work was very strong. In the piece were more than 100 figures of men, &c. I found he

SERLE'S-PLACE, LINCOLN'S-INN-FIELDS.

was likewise musical, and very civil, sober, and discreet in his discourse. There was only an old woman in the house. So, desiring leave to visit him sometimes, I went away.

Of this young artist, together with my manner of finding him out, I acquainted the king, and begged that he would give me leave to bring him and his work to Whitehall, for that I would adventure my reputation with his Majestie that he had never seen anything to approach it, and that he would be exceedingly pleased, and employ him. This was the first notice his Majestie ever had of Mr. Gibbons."

On the 1st March in the same year, Evelyn says, "I caused Mr. Gibbons to bring to Whitehall his excellent piece of carving, which being come, I advertised his Majestie—who asked me where it was, I told him in Sir Richard Browne's (my father-in-law's) chamber; and that if it pleased his Majestie to appoint whither it should be brought, being, though of wood, heavy, I would take care for it. 'No,' says the king, 'shew me ye way, I'll go to Sir Richard's chamber;' which he immediately did, walking along the entries after me as far as the ewrie, till he came up to the room, where I also lay. No sooner was he entered, and cast his eye on the work, but he was astonished at the curiosity of it; and having considered a long time, and discoursed with Mr. Gibbons, whom I brought to kiss his hand, he commanded it should be immediately carried into the Queen's side, to shew it to her. It was carried up into her bedchamber, where she and the king looked on and admired it again: the king being called away, left us with the queen, believing she would have bought it, being a crucifix; but when his Majestie was gone, a French pedling woman, one Mad. de Boord, who used to bring peticoates and fanns and baubles out of France to the ladys, began to find fault with several things in the worke, which she understood no more than an asse or a monkey, so, as in a kind of indignation, I caused the person who brought it to carry it back to the chamber, finding the queene so much governed by an ignorant French woman; and this incomparable artist had only his labours for his paines, which not a little displeased me, and he was faine to send it down to his cottage again. He not long after sold it for 80*l.* though well worth 100*l.* without the frame, to Sir Geo. Viner.

"His Majestie's surveyor, Mr. Wren, faithfully promised to employ him, I having also bespoke his Majestie's work for him at Windsor, which my friend Mr. May, the architect there, was going to repair universally."

Mr. Wren proved a better patron to Gibbons than the Queen; and Gibbons soon, under his own directions, and also by the work of his hands, produced important results in connection with English art.

The old doorways of London of the date of the reign of Queen Ann were, in many instances, very fanciful; and at this time ship-carving, &c. not having gone out of use, there was, no doubt, an extensive demand for these architectural decorations. Mr. Smith, to whose book we have before referred, says, "Ship-carving, which was in its height of splendour in old Vandervelde's time (he died in 1693, aged eighty-three), has of late years been gradually sinking; and I find by the strictest inquiry below bridge, that, although there were not less than 300 ship-carvers in the beginning of our present Majesty's reign (George III.), there are absolutely now not more than fourteen, including three masters, viz. Mr. H. White, of King's-stairs, Rother-

hithe, Greyfoot and Overton, and Pageants, Rotherhithe. I was in hopes when among those persons that I should have been able to have learned something concerning the carver of the figures commonly called Gog and Magog. All I was able to gain was copies of them of half their size in elm, by Mr. H. White, above mentioned, which had been put up a few years ago against a public-house, called the 'New Giants,' opposite St. John's, Horsleydown. It appears that the Guildhall giants were favourites on this spot, for in the same street there is another public-house called the 'Old Giants,' but this sign is only a pictorial illustration. Ship-carving is mostly executed in elm." We have already in the *Builder* alluded to the artist who executed the Guildhall statues of Gog and Magog. The following quotation gives the particulars of an object which many have seen with great interest.—

"The coach of Queen Anm," says Smith, "was extremely heavy in its ornaments, but the panels were beautifully painted by Sir James Thornhill. A friend of mine, Mr. Renton, is in possession of a part of one. This coach survived Kings George I. and II. and was used by our present king (George III.) when he first went to the House of Lords, and also on his marriage; after which it was broken up; and Sir William Chambers recommended the late Joseph Wilton, esq. R.A. and Mr. Pugello, to conduct the building of the present carriage, which was executed on the site of the late Mr. Mahou's house, in Queen Ann-street East. The model was executed from Sir William's design by Laurence Anderson Holme, a Dane, who in 1765 gained a premium, from the Society of Arts, of 147*l.* for the best statue in marble. The greatest part of the carving of the coach was executed by Nicholas Collett, a little man, who from his superior ability was honoured by Mr. Waldron, the actor, with the characteristic epithet of a 'Garrick of a carver' (Mr. Waldron was originally a wood-carver). Mr. Cipriani painted the panels, and received 800*l.* for his performance. The bill for the coach was 8,000*l.*; but it was taxed, and the real cost was 7,564*l.* 4s. 4½d. The odd pence arose from the ribbon-weaver's bill. It was first used Nov. 15, 1762."

After the above date, a Mr. Collett is mentioned, who was employed to carve a horse for "the late Mr. Hackett, of Long-acre, as large as the life, for the purpose of showing the harness upon; and this he modelled, from actual admeasurement, from one of the King of Hanover's stud, called Beauty. He also carved a portrait of the same animal for the armoury of the Tower of London. The faces and hands of Queen Elizabeth, and some other wood-work, were carved by the same artist. William Collett was the inseparable companion of Gainsborough the painter, and his subjects were chiefly selected from the domestic-animal fables of Æsop, and now and then to be met with in the tablets of chimney-pieces: one design of this kind was often repeated—it was a shepherd's boy, eating his dinner in the midst of his flock, under the shade of a tree, with his dog begging by his side."

About the end of the last century, wood-carving received a check from the introduction of a composition, principally produced by a man of the name of Barker. Before this period it had been rendered cheap by the French ornaments of *papier-mâché*. The father of Joseph Wilton, the sculptor, already alluded to, had a manufactory of it in Edwards-street, Cavendish-square; and a person of the name of Barbell had another in James-street, Covent-garden.

Elevation of the Working Classes.—A small village, to consist of about twenty cottages, and a spacious lodging-house, in the Tudor style of architecture, and combining every comfort and convenience, has just been commenced by the Duke of Newcastle's directions at Hardwicke. In the same locality another class of work designed to provide future occupation for the tenants of the cottages has been begun. The land, which is now wet, marshy, and unprofitable, is being thoroughly drained and will shortly be converted into irrigated and fertile meadows on the plan carried out with such signal success on the neighbouring estates of the Duke of Portland.

THE BRITISH INSTITUTION.

The collection of works of modern artists now exhibiting at the British Institution, Pall mall, is not particularly satisfactory: the walls are hung with many dreary mediocrities, and the points of interest are few and far between. It has been suggested to us that if the directors were to open their rooms *after* the decision on the pictures sent to the Royal Academy, instead of before it, they would obtain a better collection than they do now. Inasmuch, however, as the object the directors are supposed to have in view is to provide artists a place for exhibition, without cost, at a time when the other galleries are not open, it is not likely that the suggestion will be attended to.

Creswick, R.A. has a nice presentment of two lines by Mrs. Howitt (1):—

"By the bright little streams, that gladly run
Awhile in the shadow, and then in the sun."

Frost's two contributions, 5 and 24, are exquisitely painted,—miniatures in oil; and close to these are several other of the noticeable pictures in the collection. "Coiners," by Inskip, (22), "Scheveling Shore," by E. W. Cooke, R.A.; "Fruit" (30) and (180), by Lance; and "Harvest Home" (50), by Linnell, a wonderful piece of colour. The latter, and John Gilbert's "Sancho Panza informing his Wife of his coming Dignity" (509), are to our mind the two "cleverest" pictures in the collection: the most charming is certainly Sant's "Youthful Artist" (148). Near this, Ansdell has a good specimen of his particular art, called "The Interrupted Meal" (158). Glass has a large picture in three compartments (325), "A Raid on the Scottish Border,—the Rendezvous, the Return, the Rescue,"—not easily connectible, which is inferior to his "Moss-Troopers", but, nevertheless, good. 458, by J. E. Collins, "Lisette," and 189, by Alex Johnstone, "Peggy and Jenny," have marks against them in our list, and there are some charming landscapes by J. Danby (429), T. Danby (64), J. Wilson, jun. (138), Jutsum, J. Holland, L. J. Wood, Branwhite, G. Stanfield, and others. G. E. Hering's works demand praise, though they please less than some of his previous pictures; and as to Sir George Hayter's "Arrest of Cardinal Wolsey for High Treason" (73), it is to be regretted that the artist himself was not arrested before he committed such treason against truth and beauty as is here exhibited

---

THE ORIGIN OF GEOMETRY, AND ITS USEFULNESS.

"Geometry is a mathematical science; it teaches the properties of surfaces, and the relations of magnitudes. In an extended sense it is the science of demonstration."—Dr. Mayor.

Geometry is a word derived from the Greek, and in its native signification stands for no more than the measuring of land; for which rules have been given to ascertain its surface, or any portion of it, by distances and dimensions, either on it or within it. Although this was the original purpose of geometry, it is now used as a science for finding of quantities, extensions, and magnitudes, abstractedly considered, without any regard to matter. For the place of its origin we might go back to the antediluvian world, and ascribe a knowledge of it to Cain, when he laid out the first city in the land of Nod. However, it will be more reasonable if we seek for its origin in the present world: perhaps at Thebes, in Upper Egypt.

This ancient city, the Sheba of Scripture, now no longer existing, oriental travellers tell us, was situated upon a level plain, near the borders of the Arabian desert. Homer, describing it in the "Iliad," in its palmy days, says it was surrounded with an immense high and massive wall, with 100 gates! not a vestige of which walls or gates of this primitive city can now be found. See "Herodotus," vol. ii. p. 12, who states on the authority of the Egyptian priests that "when Sesostris became monarch of Egypt, after the reign of Cambyses the Persian, about 1,356 years before our era, he portioned out the lands of his dominions, and made a regular distribution among his subjects. Here he assigned to each Egyptian a square piece of ground, and his revenues were drawn from the rent which every individual annually paid him. Rain being a phenomena in Egypt, the river Nile to irrigate the land annually arose and overflowed its banks, which continuing to do so for some weeks, at last filled all their adjacent reservoirs. On the waters ebbing, it was frequently found to have effaced the limits of their inheritances, by carrying away the landmarks or boundaries of property which had been set up, and which, in the time of Moses, if removed by a rapacious person to increase his own possessions, he was visited with severe punishment ("Cursed be he that removes his neighbour's landmark. And all the people shall say, Amen." — Dueteronomy, chap. xxvii. v. 17.)

Whoever were sufferers by the floods were permitted to make the king acquainted with their loss, when certain officers were appointed to inquire into the particulars of their case, that no man might be taxed beyond his ability. When property thus became confused, recourse to geometrical division was adopted, in order to determine the limits of their possessions. Thus we have the origin of geometry. If we further consult Diodorus Siculus, Strabo, Ptolemy, and Plutarch, it will be traced to its present maturity.

Euclid, an original writer on the subject of geometry, was born at Alexandria, in Egypt, about 300 years B.C. where, in the time of the Ptolemies, he taught mathematics; and by applying himself to subtile inquiries, there inseparably arose from a practice altogether mechanical a science that now holds the first place among all others, as it includes the greater part of mathematics, and is generally preferred to logic, in teaching the art of reasoning: hence "Euclid's Elements" is now become a standard work for students in the abstract arts and sciencies, and for constructing and developing superfices and solids upon parchment, paper, or any other substance, the apparent superficies of any equal or unequal angled figure, whether circumscribed by right lines, angular, or curvilinear ones of contrary flexures, situated horizontally, perpendicularly, or in an inclined position. Thus, geometrical dimensions consist chiefly in lines, surfaces, and angles, and of solid bodies, which last are not to be considered in respect of the quality of their matter, but of the extension of their parts.

That geometrical or mathematical maps were at first adopted in measuring and delineating portions of the terrestrial globe, we may be further certain of, if we refer to the sacred Scriptures (see Joshua, chap. xviii. verse 4, *et seq.*), where we are informed that "Joshua sent three men from each of the seven tribes into Canaan, or land of promise, with orders to spy out, examine and describe what they saw, and enter it in a book." No doubt the Israelites had made themselves acquainted with geometry, while they were in Egypt.

The Lacedæmonians were also acquainted with the science of geometry. They inform us that Aristagoras, prince of Miletus, desiring to have a conference with their sovereign, he appeared before him with a tablet of brass in his hand, upon which was inscribed every known part of the habitable world, with the sea and the rivers. Now, this must have happened 504 years before the Christian era, for the passage of Aristagoras to Lacedæmon took place in the first year of the 69th Olympiad (see Herodotus, "Terpsichore," vol. iii. p. 167).

The provinces of geometry are now almost infinite, for few of our ideas of objects but may be represented by lines of geometrical construction,—astronomy, as well as geography, navigation, fortification, naval architecture, geometrical projections, horizontal and vertical combinations of the details in civil architecture, perspective, isometrical and stereometrical projections, with mechanism or works of machinery: in a word, all the precise and accurate arts and sciences are alike dependent upon it, for all speculative truths consisting in the relation of things, and in the relations between those relations may all be referred to lines superficies, and solids; consequently by geometry truth must be established and errors detected. Finally, without a theoretical and practical knowledge of geometry, no invention whatever of a mechanical nature can be carried out, or clearly conveyed to the imagination of others.

By its aid, united with trigonometry, military

engineers are enabled to take the plans of places, measure all distances of objects from one another, and their altitudes, carrying their measures into places that are only accessible to the eye, occasioned by intervening rivers, and marshes where they cannot be passed. The architect by this science is taught how to lay down his many-sided plans, draw his elevations, and form his sections, as well as to describe the multangular, geometrical, or polygonal figures in the heads of Gothic windows, intervening between the varied mullions. The builder is also informed how to construct his floors, positions, and roofs; and the operative mechanic how to execute the works committed to his charge. It also aids the historical painter in forming his architectural backgrounds, who should no more neglect its rules than that of the anatomy of the human figure (see "Alberti on Painting," book iii.). Harrison, the historian, speaking of the science of anatomy so necessary to be understood by the painter, makes this quaint remark:—"In the numberless muscles, arteries, and tendons of the human figure, there appears to be more geometry or construction than in all the artistical engines in the world." Well might the Psalmist observe, "we are fearfully and wonderfully made."

Gaspard Monge, a professor of geometry in the Polytechnique School at Paris published a valuable work on geometry for the use of his pupils during the consulate of Napoleon Bonaparte, which is so excellent a production as to have induced me some years since to translate the programme, which Mr. Limbird, of the Strand, published in the *Mirror* in the year 1827. Monge urges the necessity of making geometry a branch of the national school, and points at the beneficial results that would arise therefrom.

"To draw the French nation," he says, "from the dependence which even in the present day it is obliged to place in foreign industry, it is necessary, in the first place, to direct the national education towards the knowledge of those objects that require a correctness *which hitherto have been totally neglected*. For our artists to become from their youth familiar with geometry, and to be in a condition to attain it, it is necessary in the second place to render popular the knowledge of a great number of natural phenomena that are indispensable to the progress of industry; they will then profit for the advancement of the general instruction of the nation. It is also requisite to extend among our artists the knowledge of the advancement of the useful arts and that of machinery, whose object is either to diminish manual labour, or give to the result of labour more uniformity and precision.

This art has two principal objects in view; the first, to represent with exactness in drawings which have only two dimensions—length and breadth — objects which have three — length, breadth, and thickness, and which are susceptible of a strict definition. Under this point of view, it is a language necessary to the man of genius when he conceives a project, and to those who are to have the direction of it; and, lastly, to the artists who are themselves to execute the different parts. Finally, the object of descriptive geometry is to deduce from the exact description of bodies all that necessarily follows of their forms and their respective positions. In this sense, it is a means of seeking truth, as it offers perpetual examples of the passage from what is known to what is unknown; and as it is always applied to objects susceptible of the minutest evidence, it is necessary that it should form part of the plan of a national education!" We shall contribute then to give an advantageous direction to education, by making our young artizans familiar with the application of practical geometry to the graphic constructions which are necessary to the greater number of the useful arts, and in making use of this geometry in the representation and determination of the elements of machinery, by means of which man, by aid of the forces of nature, reserves for himself in a manner in his operations no other labour than that of his intellects.

Lastly, observes Monge, hitherto we have had no well-composed elementary work on that art in France! because until this time learned men have taken too little interest in it, or at least it has only been practised in an obscure manner by persons whose education has not been sufficiently extended, and who were unable to communicate the result of their lucubrations. A course of lectures simply oral would be absolutely without effect. It is therefore necessary, for the course of descriptive geometry, that practice and execution be joined to the hearing of methods; thus pupils will be exercised in graphic constructions of descriptive geometry. The graphic arts have general methods, with which we can only become familiar by the use of the rule, the square, and the compass. Amongst the different applications that may be made of descriptive geometry, there are *two* which are remarkable, both for their universality and their ingenuity: these are the constructions of *perspective*, and that of sciography, or the strict determination of the *shadows*. These two parts may scientifically be considered as the completeness of the art of describing objects, and geometry the basis of every practical architect's education.

R. BROWN.

PHOTOGRAPHY AND THE PHOTOGRAPHIC SOCIETY.

THE members of the Photographic Society held their first annual meeting on Thursday, the 2nd. And firstly, because we take a great interest in the success of photography; and secondly, because the principal proceedings of the evening were but an echo of the photographic article which appeared in the *Builder* of the 21st of last month, we will give a brief report of what took place. The president, Sir Charles Eastlake, having taken the chair, the financial statement and the report of the council were read, and ordered to be entered on the minutes, printed, and distributed. The former was satisfactory, showing a considerable balance in hand: the second was brief, announcing that the society now consisted of 370 members. The interest of the evening arose out of the discussion of two motions, of which notice had been given, by Mr. Rippingham. The sixth "rule" of the society ran thus,—"That the president, one of the vice-presidents, and one-third of the council shall go out of office annually, *and shall not be re-eligible* until after the expiration of one year." The hon. mover contended that it was unwise in the society thus to tie its hands, and after a long discussion it was determined that *the whole* of the *non re-eligibility* clause should be rescinded.

The consideration of the next motion, "That no person practising photography professionally, or selling his pictures for profit, nor any dealers in photographic chemicals, materials, or apparatus, should be eligible for election *on the council*," was introduced by Mr. Rippingham with much earnestness and ability; but to report his speech would be to do little more than to reprint our article already alluded to. Suffice it to say, that having dwelt with much force on the danger to the society of allowing the traders and professional photographers to take seats in the council, he illustrated his argument by a reference to a well-known harmonic society, in the formation of which he had taken a very active part, and which, so long as it was composed of, and governed by, amateurs, flourished and prospered, but had dwindled and lost importance from the moment when *the profession* began to take a part in the management. He then alluded to the fact that the council of the society had sought to lay the foundation of this fatal influence, by introducing the names of professional photographers into their proposed list of members for the ensuing year; and wound up by an anxious appeal to the meeting to support him in his endeavour to avert the impending ruin. The motion was seconded by Mr. Hennah, who declared that, being himself a professional photographer, he felt and admitted that he could not conscientiously take a seat in a council in which he should *feel it his duty* to the society to do all in his power to *spread* a knowledge of those facts *which he had so deep an interest in keeping to himself*. Mr. Knight, dealing very largely in photographic materials and apparatus, spoke to the same effect, and in entire approbation of the proposed system of exclusion; which, being put to the vote, was declared by the president to be carried by a large majority.

But now arose a serious difficulty. The question was asked, "Where could the line be drawn between the professional photographer making and *selling his pictures for profit*, and the *amateur* who *sold* his pictures?" Mr. Fenton, the honorary secretary, came forward, and declared that as he sold his pictures for profit, he was, of course, ineligible for the council; and he resigned his seat accordingly. Mr. Peter Le Neve Foster said that he was in the same predicament, selling his pictures for profit, though he had *as yet* made none; and Mr. Rosling, the treasurer, declaring that he came within the same category, it became evident that if the resolution were allowed to stand, the ranks of the council would be thinned to a most alarming and inconvenient extent. The chairman therefore suggested to the mover the expediency of recalling the resolution, and of leaving to the discretion of the council; the practical working out of the wish so unequivocally expressed by the vote of the meeting. Mr. Rippingham objected, that the resolution had been fully discussed and carried, and that he felt so firmly convinced that if the trade once got a footing in the council, the ruin of the society was inevitable; he could not consent. Whereupon it was suggested that the losing party had a right to demand a poll, which being assented to by the chairman, a *division* took place, and the late decision was reversed, the original motion being negatived, also by a large majority. The doors of the council being thus thrown open to the photographic trade, and the printed list of the eight new members recommended by the council containing the names of parties interested in that trade, the meeting, which had just so kindly opened the door, determined, nevertheless, that not one of them should pass the threshold; and accordingly, from a laudable unwillingness to make any invidious selections from the house-list, passed it over altogether, and re-elected the whole of the old council.

This was, perhaps, under the circumstances, the best thing that could be done; but it may well be doubted whether a council, of which *more than one-third* are non-residents, and consequently non-attendants, *not a single one of whom resides within one hundred miles of the place of meeting*, can be considered as a useful working committee having to mature and consolidate a new association. Let us, however, hope that by a prodigal use of the penny-postage on the part of the non-residents, and a straightforward and zealous distribution, by the home-members, of the information thus transmitted, or to be obtained from any other quarter, or by any other means, photography will be benefited, and the society made to prosper. Let the council bear in mind that their first duty is to have no *photographic secrets*, and they may then rest assured that the society, which can only be held together by a conviction that they are associated *for the sole purpose of mutual instruction*, will support them.

"RAILWAY LOANS."

UNDER this heading Mr. Charles Hill, a member of the Stock Exchange, whereof we spoke last week, and one-while sheriff of London, has published a letter to the Chancellor of the Exchequer which deserves the serious attention of those who regulate the monetary transactions of the country.* Things may be so *large* as to be invisible to the ordinary eye, equally with things too small (extremes meet), and we need then the aid of the mental *megas*cope, if we may coin a word,† of one who has mastered the subject to bring such within our view. National finance is one of these, and accordingly effects are constantly seen in this department for which the cause is so far out of sight that the multitude do not even ask if there be one. They will do well to avail themselves of Mr. Hill's megascope.

* "Railway Loans. A few Words to the Chancellor of the Exchequer on this Subject as a Point of Finance." By Charles Hill, Esq., F.S.A. Fellow of the Statistical Society, &c. London: Mann Nephews, Cornhill. 1854.

† *Mikros*, small; *megas*, large.

The main object of Mr. Hill's valuable pamphlet is to show the disastrous effect on the market produced by the present borrowing powers possessed by the railway companies. First pointing out that money is laid out under two heads, namely, where it is advanced at fixed interest and for limited periods,—and, secondly, where invested permanently and at uncertain or certain interest or profit,—he arrives at the conclusion respecting that which returns to its possessor, either by reimbursement at short intervals, or by other parties being willing to take (as in the stocks) the security off his hands, "that however the amount of the money so employed may vary at different periods, at any one time it has a limit. It is also transparent, that as the demand approaches this limit, the rate of interest rises; and as the demand diminishes, it is readily advanced at lower rates. If either bills of exchange are few, or exchequer bills few, or stock not offering, of course the rate of interest will fall; but if they exceed, either separately or together, the supply of money, then the interest rises, the merchants are inconvenienced or ruined, and the Government is embarrassed. If either being in excess would produce this result, how much more would it be caused by the introduction of another security competing for this money, equal in value, and exceeding in amount all the commercial paper under discount at any one time at the Bank, exceeding all the exchequer bills in circulation, and approaching in extent all the public funds that are floating and changing hands."

Now the railway companies have loans on undoubted security to the extent of about 80,000,000*l.* borrowed for periods varying from one to ten years, and, taking an average, about 20,000,000*l.* has to be reborrowed or borrowed annually. "The Government, then, has about 19,000,000*l.* of exchequer bills falling due each year; and the Bank of England has under discount, on the average, less than 15,000,000*l.* of commercial bills: other parties, in the gross, have of course a great deal more. Still, admitting into competition a demand of 20,000,000*l.* on equal security would seem, and is, an awful folly and calamity, wholly unjustifiable so far as the financial operations of Government are concerned, and iniquitous and unjust to the commercial community having bills of exchange to discount." The writer urges, with much force, that compelling the railway companies to raise this money permanently (and thus make it address itself to the second species of money that may be continuously invested), would not be an injury; but, if reasonable liberty were allowed them in the mode of raising it, a permanent advantage and boon, and would afford immense relief to the money market. Mr. Hill thinks the directors of every railway actually constructed should be prohibited from renewing their bonds, but should be compelled to raise the amount in fixed and permanent stock. Had this been done, he says, prior to the last proposal for the reduction of the interest on the national debt, it would have facilitated, if not secured, the success of that operation. "Surely the merest tyro in finance does not want to be told, nor need an argument be adduced to illustrate, the relief to be afforded to the money market by the absence of a first-class yearly borrower of 20,000,000*l.*"

In France the mistake has been avoided:—"While the right of admitting the railways to borrow money is conceded, it is not borrowed for limited and fluctuating periods; but, on the contrary, when once borrowed, an arrangement is made by which a portion of the 'obligations' are redeemed by lot every year, with a bonus, out of the income of the company. Hence, once borrowed, there is an end of the effect on the value of money, as the companies are not in the market month by month, as borrowers, but liquidate half-yearly a small portion of their loans, till the whole is extinguished."

The subject is one of very great importance (especially if we are to have *war*), and the knowledge Mr. Charles Hill is known to possess in this and cognate studies justly entitles him to be heard, and will doubtless command the attention of the public.

LODGING-HOUSES FOR THE LABOURING CLASSES.

Several years back this subject was treated in the *Builder*, and had widely spread, and been carried into practice, before the Prince suggested an improved plan for the accommodation of the middle orders (if that phrase be admissible) of industry. In a recent article on that subject, which seems to have met general approval from the press, it was suggested that the most pressing demand urges us forward, not only to the improvement, but to the creation and erection of *homes*, on behalf of the really working class of labourers, who on the average receive not more than 18s. a week in wages. These people dwell everywhere in the metropolis: they are porters, carters, bricklayers' and plasterers' labourers, warehousemen, and a long line of industrials, distinguishable by no intelligible words. They must live near their callings, and every room of every lane, and court, and mews, and slum, teems with them. They cannot choose more remote lodgings, though cheaper and wholesomer, for time constrains them: bound to work from 6 a.m. to 6 p.m., often later, every mile of added exercise abates their strength by a meal's meat. To pay railroad or omnibus fares out of such earnings, is an impracticability—to support a family (though ever so small), almost equally so.

Let any one compute the cost (if but for experiment) of maintaining on 18s. a week, say four mouths, a father, mother, and two children: 3s. for one room; 4s. for bread and flour (under 12 ounces per diem for each person); 1s. butter, suet, and lard; meat (4 lbs.) 2s.; tea and sugar, 1s. 6d.; milk, 1s.; cheese as a substitute for meat, at their meals, per week, 8d.; potatoes and vegetables (if only for soup), 1s. *Coals, at this season*, would consume all the rest; but allow 1 cwt. at the ordinary retail cost of *other years*, 2s.; the sum total makes 16s. 2d. Here we have a disposable balance of one shilling and tenpence, and this is to supply candles, soap, *beer*, tobacco, not to mention clothing and any little addenda incidental to the moveables of even one chamber. Some may think that many of the last-named articles are luxuries—others that they are necessaries—beer to brace the nerve of labour — soap to maintain bodily health, through open pores and clean linen; light to keep alive the intellect, to encourage domestic application and communion: the difficulty will be in the choice for indulgence: since 1s. 10d. will only supply either beer, or soap and candles, therefore all the rest must be expunged. And yet robust health is indispensable to the labourer for the continuance of his toil and wages. It is so they struggle on, and this mode of explanation, perhaps too candid, can alone exemplify their battle for life.

It is true that very many, regardless of pining children, drink and smoke 5s. or more: what, then, is *their* case? But it is not the object to impeach bad habitudes in the wretched—their very distress impels them: no, the object is to calculate, to examine, and discover how we can provide for the million of poor families just in this condition, not only a cheaper *home*, but how, by combining under aggregate management the comforts of clean, healthy, well-ventilated, drained, lighted, and warm chambers, abodes may be provided, as assuredly they can, for every son and daughter of toil.

It is necessary to refer back to the *Builder* of January 7th, to show (under authority) that a living-room and two sleeping compartments, with water, and all the accessories essential to a comfortable home, inclusive of a *common cooking kitchen*, washhouse, and drying room or yard, may be provided for 3s. 1d. per week; but the details of a plan suggested by the same architect and builder, for altering ranges of two or more old houses, were not given; and this latter mode of supplying the place of by-streets and lanes, demolished to make way for new streets, seems to be the most immediate and the most practicable remedy for the evil complained of.

This plan is to take at a rental ranges of old houses (containing ten or twelve rooms each), to convert the staircases of every other house into lobbies and accessories for each separate floor; to break communications through the party-walls on every story; to clear off and clean the walls; in some cases to add a story, or where the curtilages admit of it, to enlarge the houses, and, in all cases, to convert the basement story into common kitchens, laundries, and cellars.

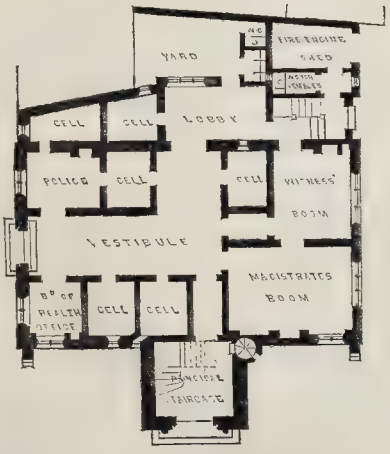
If the rental of each house, on a repairing lease, be 50*l.* (and this for central position is a full allowance: for suburban sites it might be 35*l.*), suppose taxes to be 12*l.* add thereto the interest of 150*l.* per house, as the outlay on repairs and additions, at 5 per cent. the total amount is 69*l.* 10s. or say 70*l.* a year, for five commodious suites of apartments, consisting of three rooms each, with closets, presses, and the other comforts of civilized life in higher spheres: this could be done then at 14*l.* a year for each family; but if you divide these, perhaps, too spacious, and therefore too luxurious, suites of chambers in halves, the accommodation will far surpass anything to be found, not only in Seven-dials, but even in all Soho (such as are let to working people), at a rental of only 7*l.* yearly, or about 2s. 8½d. weekly!

It is not in leading nor in secondary streets that such houses can be had at such low rents, but in by-lanes, where middlemen and lodging-letters rent them in pairs or by the dozen, sub-letting the tenements at cent. per cent. profit, crowding together as many as the police and the late merciful law will allow. No repairs beyond covering in the roof, no cleansing, is ever done in those lairs, which, while they yield doubtful refuge to the occupants, spread certain contagion in the vicinage. These dens must be improved or swept away!

Without the supervision of parochial or district boards, knowing the circumstances of their proper localities, no general improvement of dwellings can be assured. The police may thin out the swarms of teeming poverty—may remove heaps of refuse, or periodically report cesspools; but without general and combined action, sanitary precautions cannot be carried out. Legislation, too, must interpose, and obligate landlords to stop up and drain off cesspools which are most noisome and pestiferous even in some of the most attractive quarters! At a time like this, while cholera impends, being extended, although temporarily subdued, it is criminal to omit or neglect any and every precaution. In every province of England, Ireland, Scotland, Wales, the disease slumbers only to awake in redoubled virulence with the coming summer's sun.

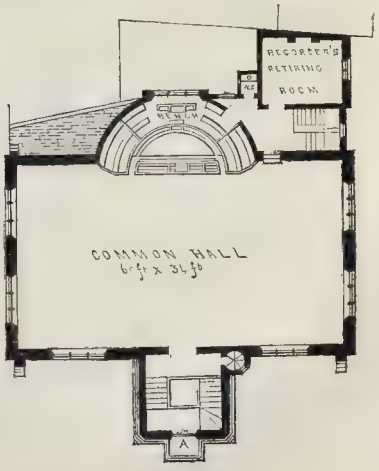
Reform in these particulars will be hailed by the poor with a cordial acclaim: although passive and patient, they are not insensible of the occasion. As instruction advances, their intelligence grows with the meridian light of science. They, too, have eaten of the tree of knowledge, and "they know that they are naked."

Quondam.



NEW TOWN-HALL, BANBURY.

This building, now in the course of erection from the designs of Mr. Bruton, of Oxford, is intended to supply the several wants of the town, and to combine a common hall, police-station, and offices for the local board of health, and has a magistrates' room and retiring-room for the recorder and the County Court judge. There is also a sitting-room for a resident policeman over the engine-shed, and bed-rooms above the recorder's room. The basement contains cellars, which it is proposed to let for mercantile purposes. The building is to be heated with hot water, and the spiral top to the tower is open and serves for an extracting shaft. This also will contain a coil of hot-water pipes to promote summer ventilation. The balcony over the principal entrance will serve for nomination at elections, and for addressing a larger audience than the hall will contain. For concerts, &c. the hall is expected to seat 600 persons, exclusive of performers. Mr. Chesterman, of Abingdon, is the builder.



Armagh Cathedral.—This edifice was reopened for divine service on Sunday before last, after having undergone various alterations. The organ has been removed from the southern transept to the northern, near the choir. Gutta-percha tubes also communicate with both divisions of choristers.

BANBURY TOWN-HALL.—MR. BRUTON, ARCHITECT.

GROUND PLAN.

FIRST-FLOOR PLAN.

PROVINCIAL NEWS.

Croydon.—Thirty builders at Croydon having been applied to for tenders for proposed alterations and additions to the Butter-market there, the following tenders were given in:—

Mr. Waters	£230 0
Mr. Ellershaw	225 0
Mr. Kent	220 0
Mr. Brasstead	168 10
Mr. Buce	148 15
Mr. Harris	142 15

The architect, Mr. J. Doughney, had estimated the expenses of the contemplated alterations at about 140*l.* Mr. Harris's tender was accepted.

Ashford.—It has been resolved at a vestry meeting, to consider the propriety of taking down the old church, and erecting a new one on its site, instead of repairing the old one, as at first proposed. Contributions, amounting to 900*l.* have already been promised towards the new building, should the architect's advice to erect a new one be carried out.——By the way, nothing appears to have been done as yet towards realizing the extensive building plan on land belonging to Sir Edward Dering, of which we some time ago gave particulars in the *Builder*. It is to be hoped that a promising speculation, such as the one in question, will not be lost sight of.

Oxford.—The following were the tenders for boundary-walls and iron railing, &c. on the Park-town estate, near Oxford, as advertised in our columns; Mr. S. Lipscomb Seckham, architect:—

	Walls and Curbs.	Iron Railing.
Hill and Smith	—	£444 5
Castle and Son	£760 0	—
Gardiner and Son	609 0	390 0
Grafton and Hood	—	385 0
Young and Co.	650 10	—

Messrs. Gardiner and Son's tender for the walls, &c. was accepted, and Messrs. Grafton and Hood's for the railing.

Winchester.—St. John's Church, which has been under extensive repair, is now completed. The church, according to the *Hampshire Advertiser*, has been completely restored, the roof having been rebuilt, and the old, unsightly, whitewashed ceiling replaced by a plain stained roof. The old pewing has also been removed, and stained oak seats substituted, increasing the accommodation. The organ has been removed from over the ancient rood-loft, to the west end. The old windows have been cleaned, and several ancient specimens of stained glass brought to light. The eastern window has been removed, and a stained glass one substituted, the subject being a full-length figure of St. John, with emblem. The artist is Mr. Evans, of Shrewsbury, and the expense has been defrayed by the minister of the parish (the Rev. F. Swanton) and his relatives. The cost incurred in carrying out the alterations (amounting to upwards of 600*l.*) has been met by borrowing money on properties belonging to the parish. The works have been executed by the Messrs. Govers, who have taken possession of the ancient font dug up in the church during the repairs, and which they refuse to give up, on the ground that it is "old material," to which they are entitled according to the terms of their contract. The parochial authorities are, consequently, rather puzzled how to act in the affair. The *Advertiser* also states that the extensive repairs in progress at the Hospital of St. Cross are nearly completed. In addition to ordinary work, the church and buildings have been drained.

Bristol.—A meeting of the clergy of this city was convened on Thursday before last, in order to consider the best course to be pursued now that the burial-grounds of Bristol have been closed by order of Government. It was suggested by a majority that the spare ground of the Arno's Vale Cemetery should be taken or purchased by all the city parishes in common, and used by them as a sepulchre. The churchwardens seem to think that a separate piece of ground for the small central parishes should be purchased on the north side of the city, and that Clifton, St. Philip's and Redcliff, with Bedminster, should also have separate cemeteries. To have all the funerals pass through the city to Arno's Vale, they thought would be an injury, as many would object to a succession of gloomy *cortèges* along the line leading to a cemetery, used by all the city.

Bedminster.—Hebron Chapel, built by the Wesleyan Reformers, was opened on 21th ult. It has been built from a design by Mr. H. Crisp, architect, on a site in Back-lane. It is a plain building, of a simple Italian style, with freestone basement in front, freestone dressing and Pennant stone walling forming the upper stories of the front. The sides are quite plain: the interior also is plain, the sittings compactly arranged. There is a gallery at one end only; but side galleries can be constructed without interfering with windows or fittings. The body of the chapel will contain about 470 people, and the galleries 110. The total cost is somewhat more than 1,200*l.*: of this sum 600*l.* have been secured on mortgage of the building, at 4 per cent. interest. Mr. Isaac Ryder gave the plumber's work for the cost of materials, and the gas-fittings gratis, besides the use of a large organ at a nominal rent of 10s. a year.

East Retford.—The parish church is now in course of restoration. The interior has been gutted, and the floor lowered throughout, exposing the surbase of the pillars. The foundation-stone of the new portion has been laid, and the walls are nearly 6 feet in height. Much wants doing at the south transept, not contracted for, and the chancel is greatly out of repair.——A new station for the accommodation of the traffic of both the Great Northern and the Manchester, Sheffield, and Lincoln lines of railway at Retford, is about to be erected near the junction of their two lines; and in the meantime a temporary platform and booking-office are being constructed, and a suitable approach to both the present stations is being formed, so that in a short time the public may hope to find the long-standing grievance at this point of the Great Northern route removed.

LONDON STREETS.

"Can such things be, and overwhelm us like a summer cloud, without our special wonder?"

Is it impracticable to cleanse the streets of the metropolis, and stop the spread of the dirt nuisance? There was a time when the city was considered the dirtiest part of London; but now the west-end may truly be said to *take the shine* out of all. It may be to the interest of some parties that our principal thoroughfares, subject to the severest wear and tear, should be constructed as turnpike or country roads; but it is an unjust tax upon others, and causes a public nuisance: it is also a disgrace to the intelligence of the parties employed. During the last two or three years the condition of the streets from Westminster to Charing-cross has been truly disgraceful: Parliament-street especially appears to have been selected for carrying out certain unscientific experiments upon a grand scale.

First came the Commissioners of Sewers, who stopped the traffic for some months, created an amount of dirt and discomfort visible for a mile around, and ended by laying down tubular drain-pipes to convey the mud into the sewer beneath. These pipes, however, proved too small to carry off the tons of granite which passed into them: they quickly became choked, and were taken up. Similar pipes were relaid, more broken stone added to the road, and similar results obtained. This interesting experiment continues, but with what advantage I have not yet ascertained.

After the aforesaid commissioners came sundry gas, water, and telegraph companies, each in turn breaking up the road, and continuing their operations from time to time. At the latter part of last year the Chartered Gas Company again opened up the road throughout for the purpose of laying down a monster main from their works in the Horseferry-road. This was effected as far as Charing-cross by the end of the year, since which time eight separate openings have been made in the road, between Bridge-street and Charing-cross, mostly for the purpose of making good defects. The excavation is now proceeding simultaneously with the *repairing* of the road.

It is certain that new mains may occasionally be requisite, and that repairs will be needed; but there must be something discreditably wrong in design or execution, when it is found necessary to open the same ground so frequently. It may also be observed, that there are two points in this route where the traffic is most dense, viz. around the statue at Charing-cross, and at the junction of Bridge-street and Parliament-street, consequently any obstruction there is proportionably felt, yet these are the parts most frequently disturbed.

The road thus broken up is filled in and metalled over as rapidly as possible, and before it is consolidated is again opened: the ground, from being soft, retains the moisture, the moisture assists the attrition of the loose metal, and the latter is quickly converted into that celebrated metropolitan mixture which gives such *character* to the place and its inhabitants.

The imperfect manner in which the gas-pipes are laid down, and the consequent escape of the gas into the surrounding soil, impregnating the latter with its foul products, is a rapidly increasing and serious evil, and will ultimately become a very difficult sanitary question to deal with. Surely it is time that these errors were corrected: this indifference to the health and interests of the community is a disgrace to our legislation, and a stain upon our national character.

As you are always ready to aid a good cause, let me entreat your assistance in drawing the attention of the proper authorities to this subject.

Observer.

SHALL THE NEW STREET BETWEEN THE EASTERN AND WESTERN PARTS OF THE METROPOLIS BE STRAIGHT OR CROOKED?

The unsatisfactory results of street-making of late must be matter of common observation, and will, it is hoped, be a sufficient apology for this attempt to elucidate the above question before the Legislature shall have sanctioned a proposal for part of a new street which would be no better than the newly-formed Gresham-street, or than the line of Bow-street and Endell-street, while in importance it is perhaps beyond any modern street improvement.

The proposal of a new street from Long Acre at its junction with Endell and Bow streets to Cheapside or St. Paul's, or to both, is admitted to be the best which can be generally suggested for meeting the necessities of the east and west traffic, and to have every capability of becoming perhaps the noblest street improvement in the metropolis; but there seems now danger of its becoming equally crooked and objectionable with the two newly-executed lines of street above mentioned.

It is obvious that the Commission (1847) gave only a *secondary* consideration to the proposed street, their *main* attention being directed to the finding a site for the new Record Office. That such a street should have had such secondary regard, will probably be matter of regret to the public, if they shall find it, after a great outlay, an opprobrium to the age, and an astonishment to our more successful neighbours in Paris.

The portion now coming before Parliament was straight in the plan No. 1, referred to in the Report, but is now proposed in the shape of a bow, merely for the sake of the new Record Office.

Another reason for the crookedness of the *proposed* street (and it is surely an unworthy and uneconomical reason) arises from the system so commonly adopted of choosing second and third rate streets which lie nearly in the line, and then joining and widening them, in preference to driving an entirely new street through fourth and fifth rate property.

It is submitted, then, that if this small portion should now obtain the sanction of the Legislature, a great practical evil would be the permanent result, as it would scarcely admit of remedy by our successors.

The main necessity being a relief to Ludgate-hill, which is the more required by the prospect of the opening of Cannon-street throughout, the portion of the lines which it is submitted should be first executed is a straight high level line from St. Paul's-churchyard to Holborn, at a point a little eastward of Fetter-lane. This, with the setting back of the railings round the Cathedral, would afford much relief, taking off

all the traffic from and to the Great Northern, North-Western, and Great Western Railways, and the north-western parts of the metropolis. It will evidently appear also, that it would much relieve Newgate-street, and lead to the avoidance of Holborn-hill by much of the traffic from Cheapside.

Altogether, besides the advantage of straightness (and, therefore shortness), it is submitted that 20 or 30 per cent. at least would be saved in outlay, while additional means would fall in of recovering part of that outlay by the double frontages obtained in and by the increased value of frontages in a well-formed street.

One other suggestion may, perhaps, be allowed, —Why should not the scheme, after being fully determined upon, and the general conditions of its execution settled, be handed over to private enterprise in the manner found so advantageous in France and other countries? It might be carried out by a company with profit, whereas to the authorities, such works are always found to leave a heavy loss, such as the 200,000*l.* admitted deficiency on Cannon-street.

ROBERT HESKETH.

THE STATUE OF RICHARD CŒUR DE LION.

As this popular production of the Baron Marochetti has been placed, in effigy only, on a tentative site, it may be allowed for a wanderer to express an opinion.

Whether the vicinage of the Houses of Parliament be the best suited for a colossal equestrian statue or otherwise, it is perhaps needless to inquire, since the *arbiters* have decided upon that point, as they did when the gaunt scenic spectre was placed on the triumphal arch. The latter was the acme of absurdity,—the position of the crusader, the bathos of bad taste. One is elevated in mid air, only wanting the wings of a Pegasus to make it appropriate, the other, as viewed from the main thoroughfare, in a hollow, overshadowed by lofty buildings, having more the aspect of a monumental tomb which has survived its fellows.

If placed in the quadrangle at all, most certainly it ought to be on the more elevated point, nearer the open space, farther from the dark shadowing mass, which to some extent it occults, but does not adorn.

The Greeks and Romans placed their statues, as well as triumphal arches, and even their tombs, on the wayside. We are merging into the practice. In such case let the equestrian statue be drawn up opposite to the senator on foot, in St. Margaret's churchyard. He will stand out in bolder relief—will be more in view of passers-by—more disconnected from parliamentary influence,—having also in view the cathedral, for whose ancient creed he fought. Artists, who like to see good things well applied, may possibly be induced to express their opinions on this matter: they may affirm or negative the suggestion.

PASSIM.

THE LONDON ART UNION.

THE second number of the *Journal of Industrial Progress* contains an article on "Art-Unions," pointing out from the results of the London Art-Union and the late Royal Irish Art-Union the advantages of the plan which gives the rights of selection to the prizeholder over that wherein the committee select. This admission from Dublin will be satisfactory to those who, through good repute and ill repute, have maintained its truth. The engraving of the London Art-Union for the subscribers of the current year, "Wind against Tide," by Willmore after Stanfield, will be ready for distribution next week, and we strongly advise our readers to subscribe early. It is an exquisite engraving, worth much more than the whole amount of the subscription. We may mention that the equestrian statuette of the Queen, by Mr. Thorneycroft, which was submitted to her Majesty and the Prince last week, and elicited warm commendation, is being executed for the Art-Union of London in bronze, and will form most covetable prizes. The execution of the horse is particularly excellent. The council of the Art-Union have several new points under consideration.

MACADAMIZED ROADS FOR TOWNS.

INSTITUTION OF CIVIL ENGINEERS.

AT a meeting, January 31, Mr. James Simpson, president, in the chair, the paper read was "On Macadamized Roads, for the Streets of Towns," by Mr. J. Pigott Smith. The writer, as surveyor to the corporation of Birmingham, has under his charge about 150 miles of street road, and 50 miles of turnpike road.

The parties chiefly interested in having good roads, were shown to be the owners of carriages and horses, and the ratepayers, at whose expense the roads were originally constructed and subsequently maintained. For both these classes, "cheap roads" (*i.e.* those of small first-cost), were contended, generally, to be the dearest; horse-power being uselessly expended, carriages destroyed, and constant repairs to the surface of the road being necessitated. Any undue increase of tractive power, was shown to fall, indirectly, on all who purchased any commodities conveyed through the streets, and the annoyances and hindrances to commerce, arising from ill-paved, or ill-kept, muddy, dirty, and noisy streets, were patent to all. The necessity was thence deduced for having the roads and streets so constructed, that the surface should be firm, even, and smooth, without being slippery, and be free from mud, or dust, or loose stones.

To attain this, the foundation should be of firm material, well consolidated, and perfectly drained, then covered with stones, broken to uniform dimensions, well raked in and fixed by a binding composition of grit, collected during wet weather by Whitworth's sweeping-machine and preserved for the purpose. This binding being regularly laid on, and watered, if in dry weather, would, in great thoroughfares, consolidate the new metal in a few hours, preserving the sharp angles of the stones, which assumed all the regularity of a well-laid pavement, with a considerable saving of material, and a firmer crust than by the ordinary method, of allowing the vehicles to pass, for many days, over the uncovered surface of the new stones, grinding off the angles with a deafening noise, and forming dust, or mud, to be carried on to the footpaths and into the houses and shops.

Instances were given of the advantages of this system, of using the grit for binding, which should, however, be that collected by the sweeping-machines, and not mere slimy mud. A street in Birmingham, subject to great traffic, had been thus perfectly made and consolidated in five days, whereas, under the ordinary system, three months would have been required to produce the same effect.

Rules were given for keeping the surface in perfect travelling order, for picking off all loose materials, for sweeping and never scraping, for preserving the profile of the surface and getting rid of all lodged water, for light watering in dusty weather, and heavy watering when there was adhesive mud, that could not be otherwise removed by the long brushes of Whitworth's sweeping-machines, which were contended to be indispensable for keeping roads and streets in good repair, and for preventing the nuisances of mud and dust.

The system employed in London, of heavy watering without removing the mud, or of scraping and of hand-sweeping and lifting by shovels into carts, was shown to be bad and expensive. The loss of speed, and the extra power required to be exerted by horses drawing carriages over street surfaces in the state of those in London, were shown to be as much as twenty-five per cent. as compared to the work done in Birmingham. The employment of a better system, combined with the use of the sweeping-machines, had been productive, at Birmingham, of an economy of nearly one-third of the materials employed for the construction and repairs of the streets and roads.

Instances were given of the actual results of the system of washing and sweeping parts of the Quadrant, Regent-street, where the method had been proved to have produced superior effects, but prejudice had induced obstinate adherence to the old system, to the annoyance of the public and with the derision of all foreigners who visited the metropolis. The actual state of all the leading thoroughfares could vouch for the justice of the criticism on the present metropolitan system.

The greatest amount of wear and tear of macadamized street surface in Birmingham was shown to be 1 inches per annum: the average might be therefore taken at 2 inches: the cost of maintenance was fourpence per superficial yard, and that of watering and cleansing was twopence, giving a total of sixpence per yard per annum. Paving cost fifteen shillings per yard: it required to be renewed once in fifteen years, and the cleansing cost about one halfpenny per yard. Paving was, therefore, about double as expensive as macadamizing at Birmingham.

It was, therefore, contended that macadamized roads and street surfaces, if properly constructed and carefully managed, well water-cleansed for mud and watered for dust, brushed, or swept by machinery, maintained with an uniform surface, and not permitted to become degraded, were well adapted for towns and cities of average traffic, and for many localities in and around the metropolis. [If the opinion of owners of carriages in and about the metropolis were taken at this moment, we are disposed to think the verdict would be different.]

STYLE.

MUCH to my satisfaction, I find by a paragraph in your last week's "Miscellanea," that there has been read at the Architectural Institute of Scotland, a paper by Mr. Salmon, not only, as it seems, in favour of Renaissance, but actually recommending it as the best style for church architecture. It will doubtless displease many, it being apparently now quite settled that Gothic is not merely the best, but the only suitable style for churches.

That it is the most *convenient* one may be granted, inasmuch as it bears a ready-made stamp and unmistakeable character, which it would require some ingenuity to miss. But then adherence to precedent is now so insisted upon for it, that its former vitality is quite destroyed. Should fresh conceptions for any different treatment from that already established for the style present themselves, they must be sternly resisted. A standard of excellence already attained is set up, which, so long as it must be rigorously adhered to, to approach is difficult—to surpass, impossible.

Quite the contrary is the case with Renaissance, for that style—and it is surely a great advantage—affords no models for our general church architecture at the present day of such universally recognised authority, that they may not be deviated from with equal freedom and impunity. The more unsatisfactorily such style has hitherto been treated for edifices of the kind, all the less difficult is it to improve upon previous examples—to remould it, to accommodate it fearlessly to the actual requirements of the Protestant ritual and service.

One great error in the application of the Greco-Romano or any modern classical style to churches, has been the retaining far too much of mediæval plan and practice. Whereas in Gothic, windows are eminently characteristic, expressive, and decorative features, in the other style they are precisely the reverse, since not only do they contribute nothing to design, but are positive blemishes in it,—as far at least as internal effect is concerned, and according to the manner in which they have hitherto been treated. If side windows there must be in churches, at any rate let them be rendered ornamental, and not mere gaps in the wall, filled in with the paltriest glass and rudest mode of glazing. We know very well now, however, that such unsightly apertures can be dispensed with altogether for such structures as churches, which may be far more efficiently lighted, and more artistically also, by admitting light from above. No experiment is required in order to satisfy us of this,—as would at one time perhaps have been the case, because we saw not a few successful instances of it; and among them may be quoted as pre-eminently successful and most charming, the glorious interior of the Madeleine, at Paris.*

Z.

* We do not wish to be understood as sharing in the desire of our correspondent to see the style of the Renaissance adopted for our churches.—ED.

ROAD FROM BROMPTON TO THE PARKS.

The Rev. Dr. Irons presided at a numerous meeting of the inhabitants of Brompton, held on the 8th inst. to concert measures for carrying the Bill through Parliament to open a thoroughfare from Brompton-square to the Kensington-road, through Prince's-terrace. Mr. Digby Seymour, M.P. and others addressed the meeting, and a committee was appointed to collect subscriptions, and take all the steps that may be necessary. The importance of the proposed improvement, indeed, the absolute necessity for some such means of communication, is obvious to all. The Royal Commissioners of 1851 will, we take for granted, use all their influence in support of the measure.

It appears that the Kensington Improvement Commissioners, whilst agreeing with the scheme as a great local advantage and public improvement, object to its title, as appearing an amendment upon their Act. They object to be made the executive, to levy the sums required, &c. in the Brompton ward. It is proposed, therefore, by the promoters, to strike out two or three of the clauses, and guarantee to the commissioners that the whole cost of getting the Bill through Parliament shall be paid for by private contributions. It is much to be hoped that the Commissioners may not be betrayed by this accident into actual opposition to the measure. Should they be so, they will unquestionably regret it deeply hereafter. They ought to give their most earnest aid to the measure, which has for its object a much more important improvement of the district over which they have control than any which they have yet been able to effect under their Act.

PRESTON TOWN-HALL COMPETITION.

We understand that the first prize of one hundred guineas for the best plan for the New Town-hall Buildings, about to be erected in Preston, at a cost of 30,000*l.* has just been awarded to Mr. William Hill, architect, Leeds; and the second prize, of fifty guineas, to Mr. William B. Gingell, architect, Bristol. There were forty-nine competitors. Mr. Stewart, architect, of Liverpool, was the professional adviser of the Building Committee.

IMPROVEMENTS IN THE CITY.

We learn that the Commissioners of Sewers connected with the Corporation of the City of London, acting upon the powers granted to them in the City of London Sewers' Act, 1848, have purchased the site of a large house at the corner of Panyer-alley, Newgate-street. The Commissioners have bought this ground for the purpose of preventing another erection, it being their wish to throw the site into the public way as soon as they can get the opportunity. The *Advertiser*, says,—"It is not, as it ought to be, generally known that the piece of ground at the top of Cheapside, on the Newgate-street side, which for so many years has been a disgraceful blank in the City, does not belong to the Corporation, but to the Woods and Forests, it being part of the Post-office estate. The refusal of the authorities to part with it has for years prevented the improvements upon that spot, which the Corporation have long been desirous of making."

We have heard a report that the Post-office authorities are treating for the sale of their building in St. Martin's-le-Grand, to an eminent firm of Manchester Warehousemen: how true it may be we will not say.

Haymarket Theatre.—Some very effective scenery has been painted by Mr. Callcott and Mr. O'Connor for "Guy Mannering," revived here for the appearance of Miss Cushman as *Meg Merrilies*. The first scene, "The Public Room of Mrs. M'Candlish's Inn," with the group in the chimney-corner; "A desolate Moor," and "The Gipsy Encampment," may be particularly mentioned. There is also a cliff scene, with a heavy sea, which has considerable merit. It is not sufficient praise to say that Miss Cushman surpasses all her predecessors as the wild, faithful *Meg*. Her attitudes are a series of pictures; and the power and pathos she throws into the part render it a remarkable piece of acting, perfect of its kind. Compton materially assists, and Mr. Galor sings pleasantly. Mr. Buckstone is indefatigable.

BATHS AND WASHHOUSES FOR THE LABOURING CLASSES.

We get from the report of the secretary to the Committee for Promoting the Establishment of Baths and Washhouses the following

RETURN FOR THE YEAR 1853.

Name of the Establishment.	Number of Bathers	Number of Washers	Total Receipts. £.	s.	d.
In Metropolis.					
1. The Model, Whitechapel	156,110	42,589	2,976	7	8
2. St. Martin-in-the-Fields	155,418	46,337	3,007	5	10
3. St. Marylebone	155,627	37,161	2,498	2	3
4. St. Margaret and St. John, Westminster ...	111,392	66,644	2,204	12	5
5. Greenwich	61,782	8,815	995	11	4
6. St. James, Westminster	111,870	35,829	2,038	10	11
7. Poplar.....	41,490	10,714	845	15	10
8. St. Giles and Bloomsbury (opened June 30,	83,810	21,051	1,546	3	0
Totals.....	877,699	269,040	16,112	9	3

Another table shows the steady increase of the revenue derived from baths and washhouses in London from the commencement of the undertaking in 1846:—

	£.	s.	d.
The aggregate receipts at nine establishments in the metropolis, inclusive of the George-street establishment, during 1853 amount to	18,213	5	8
1852—Eight establishments	15,629	5	8
1851—Six establishments	12,906	12	5
1850—Four establishments	9,823	10	6
1849—Three establishments	6,379	17	2
1848—Two establishments	2,896	5	1
1847 } Ditto	3,222	1	5
1846 }			
Showing an increase in 1853 over 1848 of ...	£15,317	0	7

Success has attended the recent experiment of providing first-class washing departments at the St. Giles, Bloomsbury, establishment,—and the result has proved the necessity there exists among many of the middle classes for such accommodation,—which, besides benefiting them, may materially assist the income of the establishments.

NOTES OF PROGRESS IN THE SIZE, FORM, AND POWER OF SHIPS, &c.

Modern ideas on the subject of naval architecture and its adjuncts appear to be expanding towards a worthy co-ordinance with the majesty and vastness of the ocean on which all advancements in this branch of science are displayed. The following scraps of intelligence may prove interesting at the present moment when our national talk has come to be more about naval tactics than almost anything else. The immense steam-ship *Himalaya* lately completed by the Peninsular and Oriental Company, is 40 feet longer than the leviathan war-steamer, the *Duke of Wellington*. Nine immense boats hang over her sides: the engine-room looks like a large manufactory: the tunnel for the shaft of the screw, in ordinary vessels about big enough for a man to crawl along, is almost as large as a railway tunnel. The ship is as long and wide *as a London street*, and a person at one end of her cannot, with the utmost powers of his voice, make another hear at the other end. Calshot Castle, the ancient defence of Southampton harbour, might be stowed away in her hold. The fittings of this vessel are superb; the curtains for the saloon costing three guineas, and the damask five guineas, a-yard. The engines are expected to give immense speed, enabling her to take 2,000 passengers to America in a week, or 2,000 soldiers to the Cape in three weeks. She is prepared, in case of war, to carry guns for her defence; but these, it is thought, would be quite unnecessary, as she would run down any man of war, and a vessel would be only too glad to get away from her. Have we not here the germ of the idea of a new and fearful species of naval engine of war,—an ocean battering-ram with iron head and bows! The *Himalaya* cost 150,000*l.* She left Southampton lately, to proceed on her trial trip to Alexandria. —— Several patents have been taken out for the propulsion of vessels by hydraulic pressure against the back water, thereby forcing the vessel forward, a principle some time since noted in our columns. Mr. Higginson has patented a plan on a somewhat similar principle, termed by him "hydraulic pressure steam navigation," on which patent a company has been formed, and it has been publicly stated that fifty miles an hour can be obtained. Mr. Higginson, according to a contemporary, has actually obtained forty miles an hour out of an old tub of a vessel in which he placed his machinery! A new vessel is now being got ready to launch, which will settle this important question. The principle of the system of propulsion, patented by Mr. Gwynne, is the suction of the water through a tube at the bows of the vessel by two of Gwynne's centrifugal pumps, by which also the liquid is ejected at the stern, propelling the vessel forward with a speed, it is anticipated, very far surpassing anything yet accomplished by paddle-wheel or screw. His system comprises a two-fold source of power—first, from the partial vacuum, caused by the indraught of water at the bows of the vessel, alone causing it to advance, filling up the displacement of water; and, secondly, the very much greater force engendered at the stern by the rapid ejection of the water, adding to the velocity of the vessel in the same direction. —— A new steamer which is warranted to run from New York to Europe in five or six days, is nearly completed at New York. This vessel is simply flat and sharp, with a good model for running fast in smooth water. She is made unusually strong, by having her timbers strapped diagonally with bars of iron, and by iron keelson extending from keel to deck, excepting in the central part devoted to the engine. —— The Queen's new yacht will be built of solid mahogany, upon the diagonal planking system. The principal dimensions are:—Length over all, 315 feet; length of keel, 300 feet; breadth, 40 feet; and depth of hold, 22 feet. A high rate of speed is anticipated from her form in combination with Penn's oscillating engines, with 28 evolutions, giving a speed of 16 or 17 miles an hour. The tonnage of this yacht is estimated at 2,400.——Some shipmasters at Plymouth wanted to know if it were advisable to sail for the Elbe; they put the telegraph in operation, and in an hour's time were informed that the Elbe was full of ice, and unnavigable; so they resolved to wait at Plymouth for some time longer. —— The sails of the *Great Republic*, spreading 28,000 yards of a suit, were completed by the sewing machine in six days: by the old process of hand sewing, it would have taken 1,200 days for the same work.

BEAUFORT DOCK AND WAREHOUSES AT SWANSEA.

On a piece of land bordering the new floating dock, Swansea, the Duke of Beaufort has caused a side excavation to be made, and fronted by a timber jetty, leaving an open water-way 40 feet in width, to give access from the general float; and around this private berthage he has built a range of eight stacks of warehouses. They are erected in a substantial manner, and can be occupied either together or separately, each warehouse being provided with a staircase, enclosed with brick partitions the whole height. The upper floors are calculated to carry the weight of any goods usually stored on timber floors in the course of business. These warehouses contain 1,239,257 cubic feet inside the walls, and cover a superficial area of 116,200 feet. Mr. J. N. Baylis, of Swansea, was the architect; Messrs. Haward and Nixon the builders. New wet docks, consisting of a half-tide basin and inner dock, containing together eighteen acres, are also in progress, and will be completed in about eighteen months; so that it is confidently expected the port of Swansea will be second to none in the Bristol Channel. Swansea, as is well known, is the chief seat of the copper-smelting business, and it already has a large trade with Australia and other foreign parts; and also with Aberdare and Merthyr. Model lodging-houses are much needed in Swansea. A correspondent from this place complains that the authorities there are rather talkers than doers. He says,—"If I were the Chancellor of the Exchequer, I would bring in a Bill to compel every corporation in the kingdoom to *sell* every inch of land or real estate they hold (save their town-hall and any other public building), and invest in Consols: it would have two good results,—save a vast deal of jobbery, and give the present generation of burgesses some relief from local rates; but above all, it would enable the Government to reduce the rate of interest in Consols (if they ever again go up to par), as the Court of Chancery and the corporations would then be full one-fourth of all the stockholders, and so not be able to "dissent."

"The Apple Blossom."—Mr. Hunt's drawing of the "Apple Blossom" has been charmingly reproduced in chromo-lithography by Messrs. Hanhart.* It has been ably executed on the stones by J. Coventry: all the varying tints of the blossom are admirably produced, and so, too, is the down in the bird's nest. At the present moment when flowers are scarce this drawing is more than ordinarily gladdening to town-cooped eyes. It gives a promise of Spring and carries the mind out of smoke and mud into the orchard and the garden bursting into new life and beauty. It is one of the pleasantest pieces of colour printing we have ever seen, having none of that sickly tone which sometimes prevails in such works.

Notices of Books.

VARIORUM.

MR. TIMBS's "Year-book of Facts, for 1854,"* has a notice and portrait of Arago. It is full of interesting matter, culled, as usual, with due acknowledgment, from our own pages and those of contemporaries. We are looking now for Mr. Timbs's work on "London," which must be nearly ready.

An able little treatise on an exceedingly curious and interesting subject, appears in the "Traveller's Library" of Messrs. Longman, namely, a little shilling volume on "Indications of Instinct," by T. Lindley Kemp, M.D. The evolution of what is very indefinitely and vaguely termed "instinct," is here traced from the very lowest orders of even vegetable creation to the highest manifestations of animal life; and the detail of facts is narrated in a way to insure the interest of even the most indifferent reader, who will not find himself much entangled in philosophical disquisition, although a thread of theoretical connection runs through the whole. An hour or two spent in the perusal, will enhance the interest which all must feel in the manifestations of that sub-conscious order of *ratio*-cination, if we may so call it, or of measurement and adaptation of forces and their ratios, usually termed instinct, but which, even in insect life, such as that of the ant, is, in some instances, and if so, why not in others in the same creatures, admitted to partake strongly of the nature of reason? Second only to the interest excited by a contemplation of the spider, as he pounces on his victim, and in a moment binds every limb with cords, as he twirls him round and round, and finally envelopes him in his winding-sheet, and leaves him there, for future purposes already clearly in view,—second only to the study of such actions, or of such as those by which the dog displays his sagacity, his affection, and fidelity, or his jealousy, envy, greed, and cunning, his provident spirit, or his various other mental qualities, good or evil,—is the perusal of a well-written little treatise such as this is, on the subject of *ration*al or relational action in living nature.

"The Charities of London in 1852-3," by Mr. Sampson Low, jun. and published by Low and Son, of Ludgate-hill, is an important and useful report of the operation, resources, and general condition of the charitable and religious institutions of London, with an introductory analysis. The charities of London are a monument of honour to the metropolis and the nation. The subject of this report comprises no less than 530 charitable societies, with an aggregate amount disbursed during the year of 1,805,635*l.* Many other and minor charities and gifts are not included even in this noble dispensation. This little volume will no doubt be extensively patronized by the benevolent who abound amongst the upper and middle classes of London.

A pamphlet, titled "Colchester Castle not a Roman Temple," with an appendix, by the Rev. E. L. Cutts, B.A. has been published by Bell, of Fleet-street. Essentially this is a review of the Rev. H. Jenkins's theory, in contradiction to which the Rev. Mr. Cutts maintains, and with better reason, that it was a Norman fortress.

"As to a Mediator in the matter of Strikes and Locks-out, and a Medium for arranging and adjusting present and future Differences," is a tract by Mr. Luke Hansard on this vexed question, in which the author endeavours to treat of it with strict impartiality and considerate regard for the interests of both parties in the dispute; and in this spirit what he has to say merits a respectful reception from both. Our only fear is, that it proceeds more from the heart than the head of the amiable author.

The "Home Companion," and the "Family Friend," both published by Orr, of Paternoster-row, chance to come next in order. The "Home Companion" is a new modification, apparently, of an old periodical, with pretty numerous illustrations, not a few by Gilbert, an artist who must surely either be at work night and day, or find his unfinished task of the evening done to hand for him in the morning by some fairy helper, so multifarious and unceasing are the efforts attributed to his pencil. The "Family Friend" continues to sustain its interest as the ladies' tidy little favourite Friend, or the tidy little lady's favourite Friend, which is much the same thing.

An "Account of the present deplorable State of the Ecclesiastical Courts of Record, with Proposals for their complete Reformation," by Mr. W. D. Bruce, Barrister-at-Law, F.S.A. &c. (Adams, Parliament-street, Westminster), comes opportunely, while, if we mistake not, alterations in some of the Ecclesiastical Courts are already contemplated.

One of Orr's Household Handbooks, No. 2, just issued, is on "Household Medicine and Surgery; Sick-room Management and Cookery for Invalids," Part I.,—rather a ticklish subject to be meddled too much with, especially by an anonymous author, but one which affords room for a great deal of judicious as well as safe advice and information as to symptoms and management, short of dabbling in the doctor's department; and a good deal of this sort of useful advice and information seems to be here given by a competent adviser.

* London: David Bogue.

Miscellanea.

THE ELECTRIC TELEGRAPH COMPANY.—The usual half-yearly meeting of this company was held last week at the Central Station, Founders'-court, Lothbury, Mr. J. L. Ricardo, M.P. in the chair. The chairman, in moving that the report of accounts be adopted, said it had always been the policy, if he might so call it, of the directors of this company to enter into mere details as little as possible, as the knowledge of those details was generally made use of against them. The chairman, therefore, proceeded very successfully to mystify the public on the subject. The receipts showed a balance in favour of the company of 18,444*l.* 1s. 3d. being within 500*l.* of 9 per cent. (for the half-year, it appeared). Their receipts for the past year, he said, amounted altogether to 56,919*l.* There was "an item in the *capital* account of 172,040*l.* 7s. 7d. 'due from sundries.' That was due from various railway companies, and some calls which were over due, 26,000*l.* of which had since been paid, and including a sum of 79,000*l.* due from the International Telegraph Company." To show the increase of traffic he must state that in 1849 the number of messages of the public which were paid upon was 45,000; in 1850 they were 65,000; in 1851, 99,000; in 1852 they were 212,000; and in 1853 they amounted to 350,500. In the Post-office he found the same increase. In 1845 the letters numbered 271,000,000; in 1853 they were 411,000,000; and there was every reason to suppose the correspondence of the electric telegraph would increase in the same proportion. In allusion to the International Telegraph Company, the chairman declared the "system" of that company to be "admirable," in proof of which he "begged to mention the fact that her Majesty's Speech was known at the Hague before it was known at Liverpool" (through the "system," doubtless, of "the Electric Telegraph Company"). "A dividend of 7 per cent. on the profits for the *half*-year ending the 31st December last,"—that is, we presume, unless in this instance the mystification has unfortunately gone forth in the wrong direction, a dividend at the rate of 14 per cent. on the profits of the *whole* year,—was then declared and agreed to,—nothing being said as to bonuses, &c.

METROPOLITAN SEWERS.—A committee appointed by the Marylebone Vestry to inquire into this subject, with a view to future legislation, recommend that the construction of all sewers should be taken out of the hands of builders, and done by the officers of the commissioners, and that all house-drains should be constructed under their supervision. The committee make the following proposition:—"Were the City of London and each of the metropolitan boroughs—Greenwich, Finsbury, Lambeth, Marylebone, Southwark, Tower Hamlets, and Westminster—to appoint by election each three Metropolitan Commissioners of Sewers, and these twenty-four commissioners to elect and appoint four adequately remunerated professional commissioners, all of ten years' standing in their professions—a barrister to act as chairman, a civil engineer, an architect, and a medical officer, being a Fellow of the Royal College of Physicians or the Royal College of Surgeons, London; the twenty-eight commissioners would form a board based on popular representation, combined with talent legal, engineering, architectural, and medical, able to meet all possible questions on sewers, sewage, and drainage. One-third of the twenty-four representative commissioners to go out of office annually, but to be eligible for re-election."

EDUCATIONAL EXHIBITION.—The council of the Society of Arts have determined to hold an Educational Exhibition in the month of June next, when the conference of the representatives of its various affiliated institutions, now amounting to 335 in number, will take place. The council have already sought the aid of her Majesty's Secretaries of State for Foreign Affairs and for the Colonies, with the view of obtaining models of the schools of primary instruction approved by the departments of public instruction in France, Holland, Prussia, Switzerland, Denmark, Sweden, Canada, and at Washington, New York, or Massachusetts; and specimens of every article authorised to be used in the different classes of schools recognised by each state, as well as of the writing, drawing, needlework, printed examination papers, &c. done in the schools. The council have also asked to be furnished with copies of the codes of public instruction in force in each country, and they promise to publish, at the time of the exhibition, an English synopsis of the whole.

THE FILE TRADE.—Various meetings of masters and men have been held of late, as to the future arrangements in this trade, in respect to apprentices, prices, &c. in which the employers are endeavouring to come to an amicable understanding with the employed on these important points. The workmen appear to be endeavouring to restrict the number of apprentices to be taught, proposing that one only in place of two, for each master, or each partner in a firm, shall be recognised. Meantime the operations of the workmen themselves seem to be likely to be restricted by a greater power than even they are in the trade. A working mechanic in Glasgow, it is said, has brought into successful operation an invention for the cutting of files by machinery. The machine has been seen in operation by several Sheffield gentlemen practically acquainted with the trade, one of whom says—"The file machine appears to answer very well. The files already tried are as good as those cut by hand. I shall be able to send you some samples of them to-morrow." The machines will not cost more than 7*l.* to 10*l.* each.

IMPROVEMENT OF AGRICULTURAL LABOURERS' DWELLINGS.—An adjourned meeting of the association lately founded at Edinburgh, was held on Thursday week in the Agricultural Museum, George-the-Fourth's-bridge, at Edinburgh; the Duke of Buccleuch in the chair. Sir John Forbes, on behalf of the committee appointed at last meeting, read a long report, giving suggestions and rules for the sanction of the meeting. The Marquis of Tweeddale moved the adoption of the report, which motion was seconded by Lord Kinnaird, and approved of. A list of office-bearers, with the Duke of Buccleuch as president, was proposed by Sir J. D. H. Elphinstone, and unanimously approved of. After a few remarks from Sir George Sinclair, the meeting separated.

THE IRON AND COPPER TRADES.—The iron trade is in a prosperous state notwithstanding the prospect of war; but the high price of coal is regarded with much anxiety, and there is a talk of the necessity of opening new mines. The iron masters in the Birmingham district, consider that if the iron trade is to be kept in that district, coal must be had at a price much lower than it still is notwithstanding the diminution of household consumption since the cold weather went away. Blast furnaces, nevertheless, are on the increase. Prices remain nominally at the rates fixed at the quarterly meetings. Of copper the average standard is 148*l.* 19s.

THE THREATENED DESTRUCTION OF CITY CHURCHES.—We continue to receive numerous letters on this subject, all expressive of but one feeling,—that of regret, that such a project should have ever been conceived. We are glad to learn, however, that if any thing further be done in the matter, each case will be tried on its own merits, and that there is now no immediate danger of the wholesale destruction which was threatened.

PATENT CAISSONS.—In the Court of Exchequer a case was lately decided in which Mr. Bush, the patentee of a mode of building and working under water, sued Messrs. Fox, Henderson, and Co. for infringement of patent. The defendants pleaded that the invention was not new; and the question was, whether the mode of constructing a caisson according to the plaintiff's patent, so as the workpeople below the surface of the water might be supplied with air, was a novel invention. The specifications having been put in, the plaintiff and two witnesses were called in support of the case, but on cross-examination they admitted that the plaintiff's caisson only differed from another one previously in use as to the mode and manner of employing it and the place in which it was to be used, one being used on land and the other in water. The verdict had been given for the defendants by the Chief Baron. Mr. Justice Coleridge delivered the judgment of the Court, holding that the direction of the Chief Baron was right, and affirming the judgment of the Court below.

The Proposed New Law Courts.—At a recent meeting of the trustees of Lincoln's-inn-fields, it was moved by Alderman Copeland, "That the trustees deem it desirable to entertain the proposition for building the law courts in the centre of the fields." The motion was supported on the ground of the great increase of value that would thence accrue to the property in Lincoln's-inn-fields; also, of the saving to the fund destined to be appropriated to the erection of the new law courts. Other non-resident proprietors of houses in the square supported the proposition, because the value of the chambers there would be deteriorated by those proposed to be established near the law courts, if erected, as had been suggested, in the neighbourhood of the Strand, the eligibility of which site was called in question. On the motion being put from the chair, Professor Owen moved an amendment, "That the trustees for maintaining and adorning Lincoln's-inn-fields do not deem it desirable to entertain any proposition for building the law courts in the centre of the fields, such proposition tending directly to deteriorate the sanitary condition of the metropolis by destroying airy and ornamental garden space, and, indirectly, by obstructing the improvement of London, in doing away with the necessity of acquiring more open space for the erection of the law courts in the present over-crowded vicinity of Lincoln's-inn-fields." The amendment was supported by observations on the important influence of open and planted space in counteracting the bad atmosphere of a smoky and ill-sewered populous city, and Professor Owen reminded the trustees that, whatever their votes might be, public opinion, he believed, would effectually nullify any resolution tending to the destruction of a space so fortunately preserved in the centre of London. Alderman Copeland thought, on the contrary, that public opinion would be in favour of a plan which would save so much public money as that which was the subject of his motion On the question being put, the amendment was negatived, and the original motion was carried.

Fire through Flues at New York.—The new City Hall, in which several law courts were held and various public offices were located, was almost entirely destroyed by fire on the afternoon of the 19th ult. The fire broke out in the upper story, and burnt from the roof downwards, extending to the first story from the basement before the firemen were able to reach and master it. It was caused by a defect in one of the flues, in which too great a heat was maintained.

Commission of Metropolitan Sewers. In answer to Mr. W. Williams, who asked when the promised Bill to create a new Commission of Metropolitan Sewers would be brought in, and said, "I am induced to ask the question from the deeply-felt anxiety of the metropolis—especially at the south side—that no time shall be lost in bringing forward that measure," —Viscount Palmerston replied, "I hope at an early period of the session to bring in the Bill my honourable friend has mentioned—a Bill that will constitute the Board of Sewers Commission, infusing into it the principle of local administration."

Alleged Frauds on Mr. Mare, of Blackwall —Two foremen sawyers lately in Mr. Mare's employment have been committed for trial at the Central Criminal Court on a charge of defrauding their employers in respect to returns of work done, or alleged to be done, in ship-mouldings, &c. by machinery, for superintending and carrying on which they had been retained in employment while a great number of hands were dismissed.

A New Mode of "Restoring" Pictures.—Some of the old portraits of kings and councillors in the Bristol Council-house have of late been undergoing a renovating or cleaning process, in course of which, according to the *Bath Chronicle*, a poor daub of a picture was washed entirely off one canvass, and a picture disclosed beneath which is believed to be one of C. Van Seen's, and worth 400 guineas; while in another instance a portrait of Charles II. by a sort of "dissolving view," resolved itself into another, representative of his predecessor, James II.

Swallowing Melted Iron.—An operative at the Belfast Iron Works while lately sucking the air out of a pipe through which molten iron was to pass, a usual custom in the process, swallowed some of the melted mass, receiving terrible internal injuries.

Newport Cemetery Competition.—At a meeting of the committee for the proposed cemetery at Newport, Monmouthshire, to decide upon the merits of the plans submitted, the designs of Messrs. Johnson and Purdue, of London, were selected. There were nine sets of plans and drawings submitted, and there were ultimately three selected for the committee's recommendation, viz. those already named and others, by Messrs. Wehnert and Ashdown, and Messrs. Habershon. The site is but a short distance from the town, and possesses a charming view of the Bristol Channel, with the scenery around.

Timber in Flues.—A few days ago the house belonging to Sir Charles Des Vœux, in Belgrave-square, ran a risk of being totally destroyed, through a wood plate running into a flue. A word or two on this subject would be useful.—J. N.

Remains of Ancient London. – Under the foundations of the Old Excise Office, in Broad-street, now being removed, a tesselated pavement *in situ* has been partly uncovered. The portion cleared out, we understand, is the centre of the border of a large pavement belonging to an apartment probably thirty feet square. Mr. Clifton, the architect, it seems, has guarded against the chance of its destruction. As soon as the whole area has been opened up, opportunities will doubtless be given to inspect the remains.

The New Metropolitan Cattle-Market.—The Markets Improvement Committee connected with the Corporation of the City of London, have inspected the works of the new cattle-market in Copenhagen-fields, and they report that the arrangements are favourably progressing, and that the brick foundations of the walls and buildings intended for the market and its purposes are nearly completed. Five plots of ground have been laid out for public-houses: three are to be of the ordinary kind, and two of them fitted up as hotels. These are in a comparatively forward state, and it is the intention of the Corporation to apply at the next annual licensing meeting for licenses to them. According to the *Morning Advertiser*, in addition to their inspection of the ground and the buildings in progress, the committee received and opened tenders for the building of the banking-houses, which are to be placed in the centre of the immense area forming the square for the cattle-market. There were five competitors, Mr. Wilson, the contractor for the previous works, being the successful applicant. The amount of the tender was about 29,000*l*. There was but little difference between the amounts sent in by the different contractors. Mr. Chadwick will shortly commence the paving of the area, and the making of the roadway of the market. The committee calculate that they will be in a position to lay the first "stone" of the principal range of buildings in the course of a few weeks from the present time.

Artificial "Petrifaction" of Wood.—We will not vouch for the strict accuracy of the following recipe, but it may be suggestive towards rendering wood incombustible, though probably not a true "petrifaction," even though accurate, the mineral, stony, or petrous matter being entirely substituted in the place of the vegetable matter in true petrifaction. "Take equal quantities of gem salt, rock alum, white vinegar, calx, and pebble powder Mix all these ingredients together and there will be an ebullition. When this subsides, throw in the wood, or any other porous matter, and let it soak for four or five days, at the end of which time the petrifaction will be complete."

Fusing Iron –Mr. Wm. Ireland, of Leek, has taken out a patent for a means of feeding the melting furnace, by which flame is prevented appearing above the charging door during the time of charging, and until the time of blowing down.

Bristol Archæological Society. — The first meeting of this newly-formed Association was to have been held on Wednesday in last week, but the weather having been very unfavourable, and sufficient publicity, it was thought, not having been given to the intention, the mayor, in concurrence with from forty to fifty ladies and gentlemen present, adjourned the meeting till the 11th inst. when Mr. Nash was to read a paper illustrative of some of the objects of the Society.

Tax on Sanitary Improvement in Dublin. – The Pipe Water Committee of the corporation of Dublin threaten to carry out a strange power they appear to have acquired by Act of Parliament, to tax one of the most useful sanitary conveniences in dwellings, to the extent of 1*l*. 6*s*. to 1*l*. for every separate *infringement*, shall we call it, of their Act. The retrogressive influence of such a tax is very obvious. The impost is preposterous; and we hope that the ridicule and wit of such local papers as the *Warder* brought to bear upon the supporters of such an enactment will very shortly reduce it to a dead-letter.

The new Washing-machine —In reference to a new apparatus for washing and wringing clothes, and worked either by steam power or otherwise, on a large scale or a small, invented by Mr. John Moseley, the *Birmingham Journal* says, that in an experiment witnessed by its reporter at Birmingham, the machine effectually washed and wrung a miscellaneous collection of foul linen, &c. in a quarter of an hour, which no strong woman could have done in less than a day. The machine "takes in the washing" at one end, passes it under a series of "dollies" working in a trough of water, and afterwards subjects the articles to the action of rollers, which act as rubbers; finally turning them out at the opposite end perfectly washed and wrung.

The Timber Trade.—The annual circulars of Mr. James Houghton, Mr. Edward Chaloner, Messrs. Duncan, Ewing, and Co., Messrs. Farnworth and Jardine, Messrs. A. F. and D. Mackay and Co., and Messrs. Holme, Slater, and Crook, says the *Liverpool Journal*, appeared on the 1st instant. They all bear testimony to the great prosperity of the trade during the present year, and agree pretty well in the anticipation of its continuance for the next twelve months. The increase in the Canada trade has been considerably over that of all preceding years, the quantity of hewn timber and deals imported being together equivalent to 364,000 loads, against 290,600 loads in the previous year, at that time the largest on record. In the trade of the Baltic last year, 129 vessels, of the tonnage of 40,554, were employed, whilst in the British North American trade, 498 vessels, with a tonnage of 377,629, were employed. "The imports of the past year," says Mr. Chaloner, "show a total of 441,614 loads, against 342,400 loads in the previous one, being an increase of 29 per cent.; the consumption 372,450 loads, against 374,183 loads, or a decrease of 5 per cent.; and the stock 210,027 loads, against 140,863 loads, or an increase of 49 per cent. under each head." Messrs. Farnworth and Jardine, advert to the apprehension of a diminished supply from Russia and Finland, in the event of war.

Improved Dwellings for Plymouth.—Exertions are being renewed at Plymouth to induce the inhabitants to raise a capital of 9,000*l*. by loans secured on the property and income of model lodging-houses to be erected in a similar manner to that adopted in the public baths and washhouses and other establishments there, and upon which it is confidently expected that a return of 4 per cent. per annum will be realized. The *Devonport Independent* has recently published a report of a committee appointed at the beginning of last year, giving estimates and other particulars; and adds a list of gentlemen who have expressed their intention to take an interest in the object in view.

The Income-tax.—A question for the consideration of landlords and builders arises out of the operation of the Income-tax Acts. It is well known that thousands of persons living in London and other large towns are compelled to take houses much larger than they want, for the simple reason that there are very few small ones. They let off what they cannot occupy in unfurnished lodgings, and charge those who take them a proportionate rent,—making no profit, but submitting to it as an inconvenience, which cannot be remedied. But it turns out that what is so let off is considered chargeable with income-tax, just as if it was profit. Now this is an absurdity and injustice which I did not think it possible any Englishman could commit, until I found myself actually so charged. I appealed to the Commissioners for East Brixton, who insisted on its being so charged; otherwise my average earnings have not been 85*l*. per year, of which I offered to take oath; but by adding the amount received from lodgers, they bring me within the operation of the Act. Now this is oppression, for I have to pay house duty, and, with rent and other taxes, I am now at 25*l*. per annum as my share of house dues, which is quite enough to pay out of from 82*l*. to 85*l*. per year.—A Working Man.

ADVERTISEMENTS.

AN ARCHITECTURAL DRAUGHTSMAN is desirous of a RE-ENGAGEMENT in town; understands preparative, the setting out of working and finished drawings, &c. Salary moderate. Address, A. B 9, Elizabeth-street South, Pimlico.

TO ARCHITECTS.

A CLERK of WORKS is desirous of a RE-ENGAGEMENT; is a neat draughtsman. Country preferred. Reference given.—Address, M. M. M. Post-office, Essex-street, Islington.

TO ARCHITECTS, SURVEYORS, AND BUILDERS.

A YOUNG MAN, who is a fair and neat draughtsman, wishes to meet with a SITUATION. Salary moderate. Good references given. Address, C 59, Huntingdon-street, Thornhill-square, Islington.

TO ARCHITECTS, &c

AN ASSISTANT, who has just completed an engagement as Clerk of Works, wishes for a similar APPOINTMENT, or as ASSISTANT in the Office. He is capable of making finished and working drawings, and accustomed to the general duties of an architect's or civil engineer's office. No objection to the country. Address, A. Z care of Mr. Bignell, 8, Farringdon-street, City

TO BUILDERS AND SMITHS.

A YOUNG MAN, aged 30, who has had sixteen years' constant practice in every description of building, in work, staircases, &c. wishes for an ENGAGEMENT in the above lines, or is willing to take a JOB, to find labour only. No objection to the country. Apply, pre-paid, Y Z Dolling's Library, 47, North-street, Maida hill.

TO TIMBER MERCHANTS.

A GENTLEMAN of experience in the Timber and Hard wood Trade desires an ENGAGEMENT as TRAVELLER, with a first-class House, in or out of London.—Address, B. D. Office of "The Builder."

A STAIRCASE HAND of twenty years' practice is in want of a RE-ENGAGEMENT, or would not object to take work by the piece. Any satisfactory reference will be given.—Address, prepaid, to J. K 1, Church-row 1, Bridge-road, Battersea.

TO ARCHITECTS

A PRACTICAL SURVEYOR would be glad to enter into an ENGAGEMENT with Architects to take off, supply bills of quantities, measure and value work, &c. Highest common sals offered. -Address, B. C 88, Hercules-buildings, Lambeth.

TO BUILDERS.

A PRACTICAL SURVEYOR, Measurer, Estimater, Valuer, Draughtsman, and thorough Accountant, offers his services to Builders requiring assistance. Terms moderate.—Address, A. M. Office of "The Builder."

TO ARCHITECTS AND SURVEYORS.

AN Assistant is desirous of meeting with a RE-ENGAGEMENT either of the above offices Unexceptionable references can be given. Address, free, to H. R. 15, Devonshire-street, Queen-square, Holborn.

TO ARCHITECTS, ENGINEERS, AND SURVEYORS.

A FIRST-RATE DRAUGHTSMAN is in want of an ENGAGEMENT He is an excellent designer, artistic colourist, and perspective draughtsman, thoroughly understands construction, and is a good leveller and surveyor Address, X. Y. V. Post-office, Upper Sydenham, Kent.

TO ARCHITECTS, CIVIL ENGINEERS, &c

A CLERK of WORKS, fully qualified to manage extensive works, is now DISENGAGED. Satisfactory testimonials can be produced, together with a recommendation from an architect with whom the advertiser has acted as clerk of works for extensive works for some years. Address, Y. O. U. Mr. Vedy's, Bookseller, Battersea.
